Aspects of the Monroe Doctrine in Venezuela

EXACTLY a century ago James Monroe was with Livingstone in Paris negotiating with the representatives of Napoleon for the scant privilege of depositing merchandise at the mouth of the Mississippi for reshipment, or, at best, for the purchase of a mere strip along the river, which was then practically closed to our commerce. The negotiations ended unexpectedly, before the end of the year 1803, by the proposal of the sale of the entire Louisiana Territory to the United States. This was the first premise of the Monroe doctrine, which it is not so generally remembered Monroe had himself a part in establishing. Livingstone wrote: "From this day the United States take their place among the powers of first rank; the English lose all exclusive influence in the affairs of America." The second premise was established to our own satisfaction in the administration of Monroe as President; and the conclusion seems now to be generally accepted by European powers. A century begun with the purchase of Louisiana has ended with England, Germany, and Italy praying the arbitration of the United States in the peaceful settlement of their quarrel with a small South-American state. A few years ago arbitration was asked by one of these under a certain compulsion; now it is voluntarily solicited by all. It is an enviable tribute to American diplomacy.

By what motives the powers were actuated in this request it were ungracious to ask. If self-interest were alone the motive, it would still be as encouraging as if the step were taken for purely altruistic reasons (something not to be imagined). What is of importance is that European nations, from whatever domestic motive, have been constrained, both by the position of the United States in this hemisphere and by the integrity and sanity of her diplomacy, to entrust to her Chief Magistrate the adjudication of their claims. This is not in itself a formal recognition of the Monroe doctrine, but it would seem to give added color to a policy of acquiescence in our position. Perhaps it has only forestalled an immediate and final settlement of the question; but it is more reasonable to believe that there is no serious disposition on the part of the European nations to begin the forcible partition of another continent.

It is true that Germany and Italy have had little extra-European territory to satisfy their earth hunger. They have had to be content with the crumbs which have fallen from the feasting of England, France, and Russia upon Africa, Asia, and the islands of the seas. Their eyes have naturally been following the streams of emigration to South America, and have no doubt looked enviously upon the unoccupied or undeveloped parts of that continent. It is easy to believe that under the direct and responsible guidance of these and other European peoples South America would more rapidly develop; it is a question, however, if, under such protection as this doctrine affords, the backward, turbulent people which now control the continent, are not ultimately to work out a better destiny, not only for themselves, but for the world at large.

THE FIRST STATE DINNER OF THE SEASON IN THE NEW WHITE HOUSE

On December 18 President and Mrs. Roosevelt entertained seventy people at dinner in the newly renovated state dining-room in the White House. All the lower floor of the mansion, with the exception of the Blue Room, is now completed, and after the dinner the distinguished guests went through the rooms, admiring the beautiful renovations in the old house

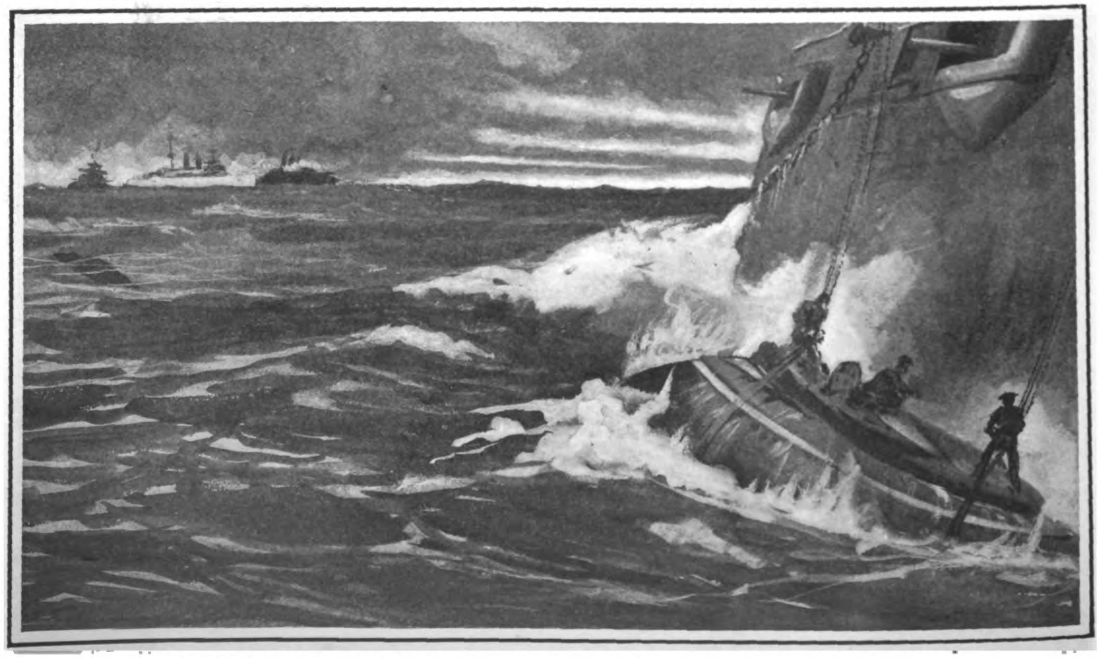
Official Trial of "Moccasin"
Discharging a torpedo at target 150 feet long representing the vitals of a battle-ship

Progress Under the Sea

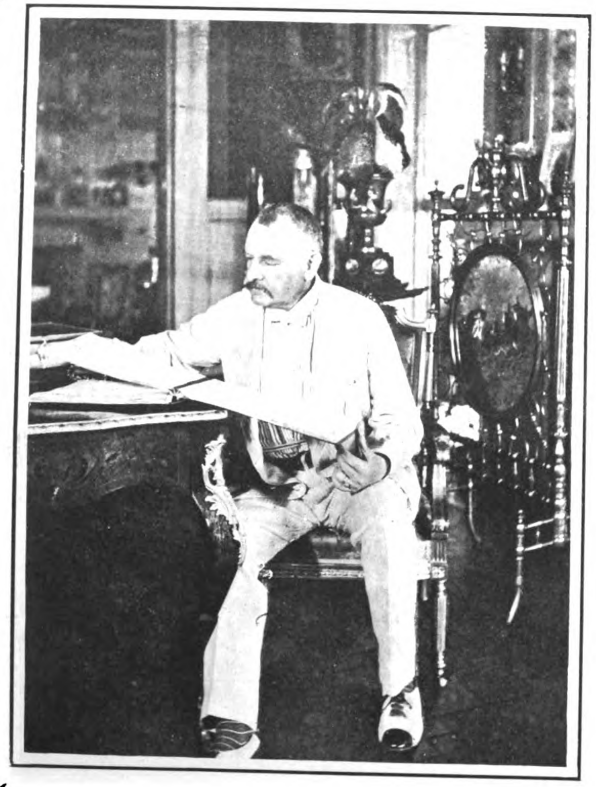
THE recent official trials of the *Adder* and *Moccasin*, the two submarine torpedo-boats which have just been added to our navy list, pronounce the doom of the surface torpedo-boat. In the history of warfare there has always been some method or weapon designed to weaken the enemy's power of resistance by making him morally afraid. This factor has of late years been supplied by the surface torpedo-boat, which has performed the same office for the modern navies as, for example, the painted dragons and the beating of tom-toms for the Chinese; and they have proved equally valuable. When the passing of each naval engagement found the results from the torpedo-boat to be *nil*, its much-vaunted moral effect naturally decreased, and there remained only some such incidents as the recent performances of the new submarines to give it its *coup de grace*. The fact that these boats have not only met the severe specifications of the Navy Department, with a handsome margin to spare, but that they have revealed a reliability hitherto unsuspected, has won over the doubting naval experts who know that a weapon, to be permanently useful, must produce some result more tangible than mere moral effect.



The one feature of the recent trials which impressed itself most strongly upon those present was the ability of the boat to maintain an accurate course when completely submerged.

A comparison of the official trial of the *Moccasin* with the requirements of the contract will demonstrate how well it was fulfilled. The programme for the speed and torpedo trials provided for a run of two miles under water, with a turn, the boat to rise at the conclusion of the run, and discharge her torpedo at a submerged target 150 feet long, representing that portion of a battle-ship containing her vitals and protected by the heaviest armor, the ends of the target being indicated by flags. During the run, required to be made at an average speed of seven knots, the boat was allowed to rise, to take observations, three times, but the interval of visibility could not exceed one minute. The Board of Inspection and Survey reported to the Secretary of the Navy that, after the *Moccasin* made her first dive, she steered a straight course midway between the flags marking the course, and at the end of the mile made a complete circle about the third pair of flags, and then headed toward the range flags denoting the target. Instead of being visible for one minute each time she rose, as allowed by contract, she was visible the first time thirty-five seconds; the second time, thirty seconds; and the third time, when she emerged to aim her torpedo, only thirty-five seconds. The Board states that during the run the vessel maintained a course at right angles to the target and midway between the range flags, and that her torpedo was discharged "*approximately toward the middle of the space between the target flags, the heading of the vessel being approximately normal to the target, so that an accurately regulated torpedo should have struck the middle of the target.* The torpedo, however, sheered sharply to the left, the trajectory being a well-defined curve, and passed about fifty feet to the left of the left flag indicating the target." It was, therefore, not the *Moccasin's* fault that she did not make a bull's-eye.

These results place the United States far in the lead of other nations in the development of submarine warfare. Although several other nations have from time to time conducted desultory experiments, our only serious rival in this field has been France, who now has either in service or under construction forty-four boats. But despite the great public interest displayed in the subject throughout France, and the inducements offered in the shape of prizes by the government, the inferiority of the French boats, as compared with the American, is marked.



England is not considered our rival in the contest for the most successful design, for the reason that she has accepted the American theories governing the construction, and has adopted the Holland type invented by Mr. J. P. Holland. Six boats have recently been finished for the English government, and five more are under construction at the works of Vickers' Sons & Maxim, the company owning the English patents.

The distinct advantage possessed by this design over the French consists of the ability to manœuvre more quickly. As these vessels cannot always hope to approach their prey wholly undetected, and as they must frequently rise for observation, a short interval of visibility is essential to safety from gun fire.

New Method of lowering the new Submarine Boats from Battle-ship in actual Warfare

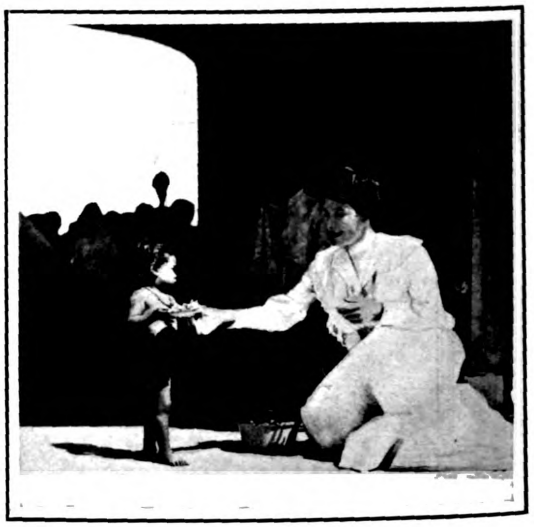
The Man of the Hour in Venezuela



HERBERT WOLCOTT BOWEN, the United States minister to Venezuela, who is receiving such high praise in England, Germany, Venezuela, and the United States for his diplomatic course during the past few weeks, has been continuously in the service of the State Department for twelve years. Beginning as consul, he has risen through every grade in the service up to his present rank of envoy extraordinary and minister plenipotentiary; and every President except Roosevelt has promoted him. He has served as consul and consul-general at Barcelona, Spain; minister resident and consul-general and envoy extraordinary and minister plenipotentiary to Persia; and now as minister to Venezuela. In 1896, when the agitation in Spain against the United States began to assume unpleasant proportions, Mr. Bowen was considered by the Barcelona police authorities to be in constant danger of assassination, such was the feeling against this country and all her representatives. During this period nineteen mobs appeared before the consulate, and on several occasions Mr. Bowen faced them at the risk of his life. On the day after the declaration of war he was escorted over the frontier on a train guarded by soldiers, being the last American official, if not the last American citizen, to leave Spain. At Venezuela, Mr. Bowen has had a peculiarly trying time. During most of his term the revolution of General Matos against President Castro has been in progress, but he has kept on such good terms with the Venezuelan President that now the latter seems to seek his advice on all matters of state, as though he were the very Venezuelan Minister of Foreign Affairs. It speaks well for Mr. Bowen's fitness for a diplomatic office, that England, Germany, Holland, Italy, the United States, and Venezuela are all gratified with the services he has rendered to each. Mr. Bowen is now in the prime of his powers. The son of the late Henry C. Bowen, editor and proprietor of *The Independent*, he was born forty-six years ago in Brooklyn, New York. He received his education in the Brooklyn Polytechnic Institute and at Yale University, where William H. Taft, now Governor of the Philippines, and William H. Hunt, now Governor of Porto Rico, were among his classmates. He was also graduated later at the Columbia Law School with the degree of LL.B. *cum laude*. Although Mr. Bowen practised law only a few years before entering upon his diplomatic career, he has always kept up his interest in legal matters, and while he was at Barcelona wrote a short manual on "International Law," which has received considerable praise both her and abroad. He is also an accomplished linguist, speaking and reading, besides his native tongue, Spanish, French, German, Italian, and Persian. In the present connection Mr. Russel, the able secretary of the American Legation at Caracas, should not be forgotten. To no small degree has he contributed to Mr. Bowen's recent successes. He is now in charge of the British Legation, which Mr. Bowen has reopened under the Stars and Stripes, in order that all the foreign subjects who have sought refuge with him may be comfortably and safely housed. During the past summer, when the revolution had brought so many Venezuelans to the verge of starvation, Mr. Russel and Mr. Bowen rendered timely aid to the poor of Caracas with food and other necessities. In many cases this aid was distributed to the poor,who came in crowds to the door of the Legation.

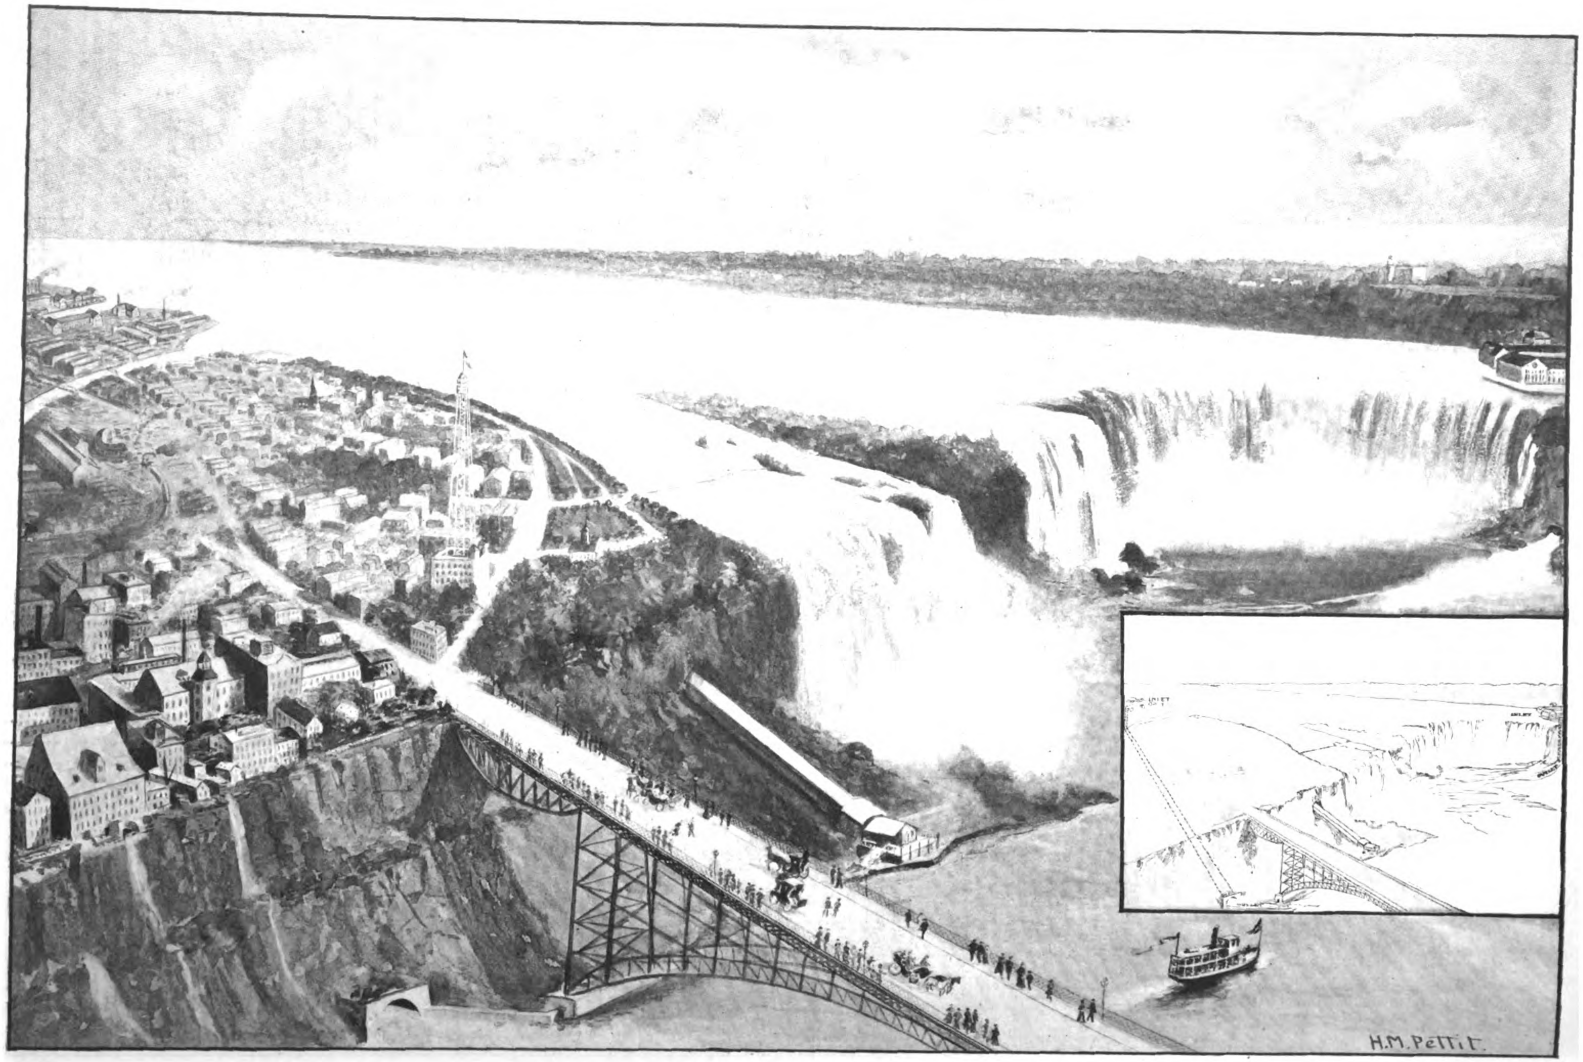
Mr. Kelly



Blocking out the Horse in Clay

Mr. James E. Kelly at work on his heroic equestrian statue of General Fitz-John Porter, to be placed in Haymarket Square, Portsmouth, New Hampshire

The New Statue of General Fitz-John Porter

THE designing and making of the new heroic statue of General Fitz-John Porter, which, when completed, will be placed in Portsmouth, New Hampshire, the old home of General Porter, have been entrusted to Mr. James E. Kelly, the well-known sculptor, of New York. The proposal to erect a statue to General Porter was made by one of the general's admirers and friends. Thirty thousand dollars were given for the purpose. The choice of Mr. Kelly to carry out the work, in view not only of his prominent position in the art world to-day, but on account of his wide experience in this particular field, cannot be too highly approved. Beginning with the well-known statuette of "Sheridan's Ride," most of Mr. Kelly's work has been done through the inspiration of military subjects. Apart from the groups representing military scenes, like his "Call to Arms," and so on, Mr. Kelly has modelled busts or statuettes of many of the most famous civil-war commanders, as well as those of a great number of our modern military men of prominence. The field is in a sense one that he has made his own, and his success makes him most eminently qualified to carry out the present commission. In all his work where it has been a question of modelling an equestrian statue Mr. Kelly has accomplished the rare result of showing the alliance between the figures without subordinating the principal motive of character. In this case the sketch of the statue was made and approved by General Porter himself. Shortly before his last illness the general expressed the desire that Mr. Kelly, who had already modelled a bust of him, make the sketch of him in war-time. This was done, and the sketch as drawn was enthusiastically praised by the general. This sketch is the one that has been used in developing the finished design of the present statue. It is particularly fitting that the old home of the general should be chosen. It is the one place of all others where the statue should stand. Those who recall the bitterness in the army career of General Porter, especially his friends, will undoubtedly accept the placing of the statue in this place as the most thorough vindication possible in a material way of the career of one of our great national heroes.

THE FUTURE OF NIAGARA

Few people begin to realize the possibilities of Niagara Falls in commerce even now after the power-house on the American side has proved its practical value. On the Canadian side another huge plant is under construction, and the chances seem to point to the erection of a series of plants along both banks of the river in the near future. This drawing represents both the American and Canadian plants, and on page 31 the reader will find an interesting article on the possibilities of the great falls

Type of Descendant of Mound-Builders

The Andross Urn

Ojibway Family Group

Descendants of the Mound-Builders

MANY scientists have persisted in the belief, up to this time that the mound-builders, like the cliff-dwellers, were wiped out in remote times, either by natural causes or by superior tribes. The late Professor David Swing advanced the theory that their mounds were constructed in the Ohio and Mississippi valleys as refuges in times of flood. Others held that the higher mounds were watch-towers, because they often contained no remains. It remained for Mr. Harlan I. Smith, of the American Museum of Natural History, New York, to announce that the Ojibway, or Chippewa, Indians living in the Saginaw Valley of Michigan to-day, are manufacturing many of the same objects and have much of the same culture as he excavated from the mounds near which they are living, and are, therefore, the descendants of the mound-builders. Further, traditions of the Chippewas, he affirms, state that in early times another people, Sacs and Fox, had a great village at the junction of the Shiawasse and Tittabawasse rivers, that the neighboring tribes united in a war of extermination and destroyed many of the villagers, burying them in two large known conical mounds. The remainder escaped to Iowa, where their descendants still reside.

The Smith Expedition excavating a Mound

The exact location of these strangers leaves the Chippewas with a clear and ancient title, extending back through the remotest historic times. It is readily conceivable that, as times changed and the aborigines came in contact with the whites, their culture changed to meet the new conditions and to procure the necessaries of life. They abandoned many of their manufactures as such products became useless. The chert arrow-points, and the rude factories where they were forged as weapons, gave way to more modern arms secured by exchange. Pottery-making became extinct in the presence of cheap modern utensils of tin or iron, readily obtained. So, too, disappeared the spear of the savage, stone hammers, knives, hoes, drills, pipes, ornaments, and so on, before the advent of better materials of the whites. To-day these people gather wild rice in almost the same manner as their forefathers. To invade the marshes and convey the product inland, canoes are used, which are different in form and construction from those used by their ancestors. Pappooses are still carried on the back, but in baskets which the women now make after modern patterns. Women's clothes of cheap prints have replaced the skins of the chase; and the men have doffed the coon-skin to rise to the dignity of the "plug" hat of the white trash. Clay pipes have replaced the ornamented stone. Among ethnological discoveries, few have been more important than these of Harlan I. Smith. They clear away one of the great mysteries as to who the mound-builders were and what were they like. Their mounds, as is clear, from the human skeletons found, were graveyards, where warriors were laid with their arms ready for the happy hunting-grounds, and where the women were buried with their pottery and wares, ready to keep house in the better world. No doubt, when the mystery of the mounds of the Ohio and Mississippi valleys is cleared up, they will be found to have had a similar origin. The mound-building peoples found, with prophetic exactness, the best and most-favored spots in the regions where their crude civilization developed. The roads they built were of little importance. They made no great thoroughfares, because they did not require them, and because the great pioneers in road-building—the vast herds of buffalo, which were not known to them as they were to the Indians, their descendants—had not yet shown the way toward possible expansion and development. The broad paths broken through the forests, across the continent, and over the summits of the water-sheds by the buffalo herds, made possible the migration of the mound-building tribes, and the Chippewas of the Saginaw Valley in Michigan are the direct descendants of these migratory peoples. As has been conclusively shown by the discoveries of the American Museum, their civilization, apart from the natural changes of environment and of contact with new peoples and new conditions, is the same. The discovery throws new light upon a little-known race, and points the way to still more important researches into the history of early American peoples.

An old Industry Revived

COMMENT

CONGRESS will be in session again on Monday next, after the holiday recess. With the exception of a few days devoted to eulogies on the late Senator McMillan and on some Representatives, the business of legislation can be carried on uninterruptedly for the space of two months. Last year at this time Congress had the year before it, and it actually worked for three months, accomplishing, however, nothing more than the passage of the general appropriation bills and some crude legislation for the Philippines,—for which there is now crying need of radical amendment, as its principal author, Mr. Lodge, admits. If the spirit of the last session prevail in this, we shall have the same fruitless outcome. At the same time, a new spirit certainly prevails, and it is clear, as we pointed out at the opening of the session, that Congress is evidently at the command of the President, except on the great issues, and there is no doubt he can have much from the House, the Republican Representatives feeling grateful to him for re-election, and he is stronger than he was in the Senate. The work of the session, therefore, begins briskly. The House of Representatives passed the Philippine tariff bill before the holiday recess. This bill reduces duties from 75 per cent. to 25 per cent. of the Dingley rates. The larger rate was established at the last session in obedience to the decision of the Supreme Court's decision in the insular cases. It is interesting to note that this year the Democratic minority has acted more rationally than did the Democratic Senators last winter. Then, the objection to the Foraker amendment, which granted a reduction of 50 instead of one of 25 per cent., was opposed by the Democrats, because they would have nothing but free trade for the islands.

In the Senate, the Committee on the Philippines has agreed to report a bill establishing the gold standard in the archipelago. Congress was urged to make this provision at the last session, but it found the subject difficult, and was therefore content to leave bad enough alone. The consequence is that the insular government lost $1,000,000 during the year on the depreciation of the Mexican dollar, and it is to be hoped that the action of the Senate committee foreshadows the result in the two Houses. The Cuban reciprocity treaty gives so many advantages to the American producer and manufacturer that the Senate promises a speedy ratification. It is indicative of the President's power over the House that it seems inclined not to insist upon its right to pass upon the treaty. As a matter of fact, the House is unanimously of the opinion that changes in taxation cannot be effected by a treaty to which the House has not assented. In order to save its face, and to gratify the President, who disputes its constitutional law, and is probably wrong in doing so, a suggestion is made that the House pass a bill providing for the same reductions of tariff duties on Cuban goods as are provided for in the treaty. The House has also passed a bill appropriating $500,000 to enforce the Sherman act. This was pure demagogy. At first Representative Bartlett, a Democrat, suggested $250,000, and Mr. Hepburn replied with an amendment making the sum $500,000. It was simply a bipartisan race to catch the popular favor which it is thought that the President won by his anti-trust speeches. On the whole, the President's leadership seems to hold on the subjects that are coming before Congress in which its members are not deeply interested, but the overshadowing question, that of trust regulation, remains. Senator Hoar has presented the title of a bill, and has vaguely outlined its provisions. As we have thought, the Senator is yet very far from going as far as the President desires to go, and it is clear, so far, that, amiable and even subservient as Congress is in its new relations with the President, the majority is not inclined to give him his head on the trust question, nor on the tariff, nor on the currency.

The protest of the small body of Gloucester fishermen has killed the Hay-Bond reciprocity treaty which promised a profitable commerce with Newfoundland—a notable proof that Congress is not to follow the President against the opposition of certain interests. Still more selfish is the action of the owners of coasting-vessels, who were aroused by Congressman McCall's suggestion that the navigation laws might be suspended for thirty days for the relief of the coal consumers of the Eastern States. The coastwise trade has certainly taken advantage of an opportunity for oppression. Freight charges on coal from New York to Boston have been made higher than the charges from Glasgow and Liverpool to New York. So harsh have been the conditions imposed by the New England vessel-owners that one coal-dealer in Salem, Massachusetts, found that his cargo from a coal port had cost him $3 50 a ton. In consequence, the people who are asking for coal, but who cannot afford to enrich the water carriers in a single season, are behind Mr. McCall's request for a short suspension of the navigation laws which exclude foreign vessels from our coasting trade. The idea is to increase the competition in the carrying trade for the purpose not only of bringing down freight, but of increasing the supply of coal in the New England ports. To this benevolent movement the vessel-owners object. They want to keep the victim for their own particular plucking. They see an opportunity for coining the distress of others into money, and they insist that Congress shall leave them their pound of flesh. The worst of it is that Congress seems inclined to accede. The fundamental morality of the doctrine of protection and commercialism is that profit is the most sacred thing in the world, and that no business interest must be touched for the saving of life or for the betterment of the soul.

The case submitted for the United Mine Workers to the Anthracite Coal Strike Arbitration sitting in Scranton was not completed quite so quickly as was expected at the time

when our last number went to press. Before the commission took a recess, however, and adjourned to Tuesday, January 6, it had time to hear considerable evidence from the non-union workers. For three days the arbitrators were deluged with proofs that men who ventured during the recent strike to exercise the inalienable constitutional right to sell one's labor when, where, and how one pleases were subjected not only to boycotting and terrorizing, but to actual maiming and killing. It was shown that after the wife and little children of a non-union worker had been chased from their home, the house and its contents were destroyed by fire. All the testimony relating to such outrages will, of course, be set forth by the arbitrators in their report, and is likely to have an effect upon public opinion for which the strikers are unprepared. Those who have watched the proceedings carefully from day to day express the belief that Mr. Mitchell and his coadjutors have failed to convince the arbitrators that the United Mine Workers need either a higher rate of wages or shorter hours of labor. More than one company has shown that its average payments to miners exceed by a tenth or more the six hundred dollars which Mr. Mitchell described as an adequate annual wage for a miner, while there was an abundance of evidence that, as things are now, the contract miner works only from two to six hours a day, and that even the laborers employed by a miner seldom, if ever, stay in the mines seven hours. On the whole, it looks as if publicity and the rigorous impartial investigation which Mr. Mitchell professed to want are unlikely ever again to figure among the demands of American labor-unionists. It was the labor leader who insisted, it will be remembered, upon arbitration, and he will thus have no reason to complain if he is hoist with his own petard.

We hope that Congress, which has been so swift to provide second salaries for officeholders employed in functions for which there is no constitutional warrant, will show itself equally expeditious in passing the Army and Navy bills, which recent events have proved to be simply indispensable if adequate preparations are to be made for the national defence and for the maintenance of our national policy. We refer, of course, to the measure which, by creating a general staff, would place our army on a level with the most vigorous military organizations of the European continent, instead of leaving it in the disconnected, not to say chaotic condition the deplorable results of which were exposed in our late war with Spain. Everybody acquainted with the improvements in military mechanism made by von Roon, von Moltke, and others during the last forty years, knows that a general staff represents not only the brains of an army, but also the nerve system by which intelligence and volition are telegraphed to all parts of the machine. Should we drift into another war before a drastic reform has been made in this direction, the present Congress will be held to a stern account, for it will have sinned not only against light, but in the face of a startling warning.

In view of what has just taken place in the Caribbean, and of the contingencies which it is now plain may confront us when we have built the Panama Canal, we take for granted that Congress will agree to an appropriation for at least two more battle-ships and two more armored cruisers. That is not all by any means, however, that the American people will expect Congress to do for the navy. Of what use will additional war-ships be if there are no officers and men to handle them? A comparative table compiled by Mr. Long, late Secretary of the Navy, showed that at the present time a first-class American battle-ship has only seventeen officers, as against twenty in Germany, twenty-six in France, and thirty-three in England. The total strength of officers and men of all ranks and ratings in 1900 was in the United States only 23,453, against 25,804 in Italy, 26,108 in Japan, 30,386 in Germany, 39,546 in Russia, 49,775 in France, and 114,880 in Great Britain. It is true that the English figures include marine infantry, whereas marines are not comprehended in the figures for France or the United States. It is certain that on the 1st of July, 1904, our navy will require upwards of 600 officers more than are on the register to-day; and they will not be forthcoming, simply because Congress has hitherto failed to adopt the urgent proposals of the Navy Department for remedying a grave and growing source of weakness. Should a war break out and some of our best ironclads have to lie in harbor uncommissioned for lack of officers and men to handle them, our people will know how to place the blame exactly where it belongs,—namely, on the shoulders of the present Congress.

Thoroughly to be commended is the resolution introduced by Mr. Hepburn in the House of Representatives just before the recess, a resolution inviting the Secretary of State to submit a detailed report of the expenditures of the Panama Canal Commission. The Walker Commission,—so called because headed by Admiral Walker,—has expended, it seems, over one million dollars in the prosecution of its inquiries, and, according to the official information thus far available, nearly $700,000 has been disbursed for the pay of officers and employees, including the pay of laborers hired in Central America. In view of the disclosures made by Senator Morgan, it is fitting that every item of this expenditure should be scrutinized by the people's representatives. Mr. Morgan asserted in the Senate that members of the commission had received, by way of compensation, one thousand dollars per month for a period of two and one-half years, besides all their expenses, which were liberally estimated. During that long period they had spent, he says, less than eight weeks on the isthmus. Under the circumstances, reasonable persons will concur with Senator Morgan in thinking that disbursements to be made hereafter in connection with the proposed interoceanic waterway should not be left to the discretion of the Executive, but should be fixed beforehand by Congress. He suggests that five thousand dollars a year, the salary of a United States Senator, should suffice for a canal commissioner, and that the latter should be obliged by law to spend a definite fraction of each year on the isthmus, where his supervisory functions are ostensibly performed. We must acknowledge that effectual precautions of the kind cannot be too promptly taken when we call to mind the monstrous wastefulness, to say nothing of flagrant embezzlement and bribery, by which the Lesseps Canal Company was disabled. If the detailed report which Mr. Hepburn has rightfully demanded shall show that our government has evinced a tendency to lavishness in the compensation given for even preliminary inquiries, the necessity of providing safeguards against future extravagance will be generally recognized.

It is a pity that the reciprocity treaty with Cuba could not have been ratified by the Senate before the recess, but we presume that the ratification will speedily take place after the reassembling of Congress. The treaty, as signed by President Palma, is not so favorable to the United States as Cuba would willingly have made it a year ago, nor is it as favorable as the draft which General Bliss laid before the Havana authorities. He proposed that, in return for reducing the Dingley dues on Cuban products twenty per cent., Cuba should grant tariff reductions ranging from fifty to seventy per cent. on a long list of articles produced in the United States. The largest reduction conceded to any American commodity in the treaty, as finally agreed upon, is forty per cent., but, with the conceded reductions in our favor, we certainly should be able to compete with foreign purveyors for Cuba's import trade, especially when we keep in view our far greater proximity to the island. An immediate ratification of the treaty is most desirable, not only in order to discharge a moral obligation and to stimulate Cuban industries, but also because it is regarded on both sides as a condition precedent to the concession of coaling-stations by the insular government. A naval and coaling station on the south coast of Cuba is urgently needed for the control of that part of the Caribbean which adjoins the projected Panama Canal. For the same purpose the Venezuelan island of Margarita is almost equally essential, and we could not, therefore, suffer Germany or any other European power to take possession of it.

We have formerly referred to the recklessness with which both parties in the House of Representatives, vying with each other in the effort to conciliate the labor-union vote, combined to pass the Eight Hour bill, without any regard to its effect on the efficiency of the national defence at a critical conjuncture. We suggested that the leaders of the House, while shirking their own responsibility, looked forward, probably, to an exhibition of more common-sense and forethought on the part of the Senate. If such was their expectation, they

have not been altogether disappointed. The House bill, it may be remembered, prohibited any man engaged on government contract work from laboring more than eight hours a day, no matter how he might be willing or eager to spend his leisure time. When the bill came up for consideration before the Labor Committee of the Senate, representatives of the firms engaged in building war-vessels and furnishing armor-plate to the United States appeared, and testified that they would be unable to do any further work for the government if the conditions prescribed by the House of Representatives should be embodied in law.

Fortunately, the Senate Committee has since received an object-lesson in the high-handed demonstrations of British and German squadrons against Venezuela, the scope of which has been, no doubt, materially affected by the presence of the large American fleet under Admiral Dewey in the Caribbean. In other words, the fact has been driven home to the dullest perception that the Monroe doctrine is not worth the paper on which it was penned unless we possess a navy strong enough to enforce it. There is now not a single patriotic man in Congress who has not awakened to the possible significance of the huge additions being made to the German navy, and who is not keenly alive to the necessity of increasing our own war fleet as quickly as possible. To choose such a time for depriving ourselves of the services of our native ship-builders and armor-plate manufacturers by prescribing intolerable conditions would be one of those inexpiable blunders that are worse than crimes. The Labor Committee of the Senate has shown itself less blind to its duty than was the House. So largely has the bill been amended that its scope is limited to a very few industries, and an effort has been made to protect the manufacturers who are engaged in supplying materials to the government. The infringement of a workman's constitutional right to spend his leisure time as he pleases has also been limited to a provision that only eight hours a day shall be given to government work. Even in its amended form, however, the bill is objectionable, on the ground that it imposes restrictions which might paralyze our means of making prompt preparations for national defence in a sudden and grave emergency. Luckily the measure, as reported, is certain to receive searching discussion in the Senate, and its possible bearing on the welfare and safety of the republic will not be overlooked.

A correspondent of the Philadelphia *Ledger* moots a question which, beyond a doubt, is ripe for general discussion. Is it reasonable or becoming that this great republic, which, as the late Mr. Mulhall, the well-known British statistician, pointed out, is now considerably richer than the United Kingdom, or, in other words, richer than any other nation on the globe, should require its President to discharge the manifold, arduous, and responsible functions of his high office for the relatively meagre stipend of $50,000 a year? We call the stipend relatively meagre, because the President of the French Republic, who is elected for seven years, receives $250,000 per annum, and because even the thinly peopled and comparatively poverty-stricken Dominion of Canada allots $50,000 a year to its Governor-General. Nor should it be for a moment overlooked that, by comparison with the American Chief Magistrate, the President of the French Republic and the Governor-General of Canada are mere figure-heads, restricted, for the most part, to the stage-business of executive headship, the real powers and duties of administration being entrusted to a Prime Minister. From one point of view, indeed, an American President may be said to have no minister at all, for the members of his cabinet, being accountable, not to the House of Representatives, but to himself alone, and dismissible at his option, might be described as private secretaries, unprotected by a civil service law. President Loubet might go to sleep in the midst of a national crisis, for he is not personally responsible for any of the acts of the French ministers. His chief function is to entertain. The same thing may be said of the Governor-General of Canada. Outside of his decorative function, all he has to do is to sign the bills that are put before him by his cabinet: the hard work of administration is performed by Sir Wilfrid Laurier and his colleagues. Yet, although, under our Constitution, we hold our Chief Magistrate to a rigorous and exclusive responsibility, and although we exact from him more than all the work discharged by M. Loubet and Premier Combes combined, we pay him only a fifth of the sum deemed commensurate with the dignity and services of a President of the French Republic. That is to say, having begun by delegating to our Chief Magistrate powers and duties far ampler than belong to any European sovereign, with the exception of the Czar of Russia, we proceed by implication to assert that the task of guiding the destinies of the United States is less onerous, less momentous, and less deserving of reward than is the management of American banks and corporations, not a few of which pay their presiding officer a salary equal or superior to that of the President of the United States.

The King has prorogued Parliament for the holidays, which are to be protracted until February 17. His speech, which was read in the House of Lords, is an attempt at a history of the past year, rather than a forecast of the future. One might almost call it a budget of regrets and hopes. The most serious regret is over the Venezuelan difficulty, and we cannot doubt his Majesty's sincerity when he expresses his sorrow that Venezuela's many sins should have made this action inevitable. He alleges "unjustifiable and arbitrary acts against British subjects and property" as the cause of the war, and very innocently relates that, finding that Germany had also complaints to make, he decided to make common cause with Nephew Willy in an attempt to sit upon the South-American republic. If the regrets are chiefly about Venezuela, the hopes mainly hover over Africa, from the Nile to the Cape. We are still left in doubt as to the fate of the so-called "Mad" Mullah, who will probably demonstrate that he is very much alive, or, if he decides to stay dead, will doubtless drop his mantle on the shoulders of an equally "mad" successor, so that the rumors of war will still re-echo among the sands and jungles of Somaliland. Roseate hopes for the future of South Africa are added, and a string of very pretty compliments paid to the angel of peace in the form of Mr. Secretary Chamberlain, whose departure and difficulties we have already enlarged upon. There are more hopes about the Anglo-Chinese treaty, which is to secure valuable facilities and advantages not only for England, but for the world, and the Delhi Durbar is made the centre of a new rainbow of promise for India, where, by-the-way, an occasional renewal of the Deluge would be something of a boon. The King is even optimistic about the alliance with Japan, and speaks of Italy as co-operating with him in Abyssinia, so that, instead of the splendid isolation of the past, his Majesty may now boast that he has allies to burn.

Very significant as a symptom of the real motive force in the Venezuelan quarrel is the attitude of the German press, which has recently been filled with jubilations over the fact that the Monroe doctrine has been "blown sky-high" by the events at La Guayra and Porto Cabello. This expression is echoed by the press of Italy, which is rubbing its hands over Uncle Sam's discomfiture. It is not enough to say that the course of events will show that these good people have been somewhat forehanded with their self-congratulations; the point is that we are thus openly let into the secret of Germany's true feeling; and it is evident that the whole nation is solidly ranged beside Kaiser Wilhelm in his determination to blow our foreign policy into the air. Kaiser Wilhelm's distrust of the United States, or, rather, his apprehension of danger from our commercial and political expansion, is notorious, and has been expressed in many speeches and conversations. And there cannot be the smallest doubt that Austria and Italy agree in this with Germany, and regard our claim to exclude them politically from the New World, at the very time when we are pushing our way into the affairs of the Old,—gaining territory in Asia, and even interfering in the domestic concerns of Europe, as in Turkey and Roumania,—as a piece of intolerable arrogance, which must be snubbed at the first opportunity. A significant piece of news coming from Germany sheds additional light on this attitude of mind. It is well known that nearly all the production of Germany is now controlled by trusts, or, as they are called there, Kartells,—there being nearly three hundred in existence. About three-quarters of these have now established a "trust of trusts," with the avowed intention of contesting and driving back the "American invasion" in the German markets. This is, of course, not a mere speculative proposal, but the result of years of bit-

ter experience and loss, and the German government, in the person of Count Posadowsky, fully sympathizes with the plans of the manufacturers. It is easy to see how this persistent pressure in Germany itself might inspire a longing to "blow the Monroe doctrine sky-high."

A son of the Marquis de Rudini is on his way to South America to search for El Dorado, or, perhaps he himself would say, to open up the El Dorado he has already found. He assures the world at large, and the Brazilian government in particular, that the Acre syndicate has no political purpose whatever, but is merely a company which has great faith in the wealth of that country, and is anxious to develop it commercially, not only on Bolivian, but also on Brazilian territory. He suggests that the best way to prove there are no ulterior designs upon Brazil in the Acre venture would be for the Bolivian syndicate to absorb some large and valuable concessions adjoining the Acre region, but which lie in what is indisputably Brazilian jurisdiction. We confess that we fail to see how this could reassure Brazil. She fears an attack on the sovereignty of the South-American republics, through the concession made by Bolivia, and to put certain territories of her own into the same position of menaced sovereignty hardly seems to us to be the most likely way to remove the fears of Brazil. However, the Marquis Carlo de Rudini is hopeful that he will be able to put the whole question before Brazil in a light so roseate that all her objections will vanish away, and he incidentally reveals the fact that he himself is the concessionary of certain valuable territories near Acre, but within the limits of Brazil. He is trying to bring about a merger with Sir Martin Conway, Mr. Whitridge, and the Acre syndicate. He even hopes to build roads and railways from the hidden treasure-house of Acre to the Madeira River, whence steamboats can carry its boundless ransoms down the Amazon to the ocean. The young marquis has a vision of immense fortunes to be gained in Bolivian cattle, rubber, gold, diamond mines, and so forth, with which his El Dorado is liberally stuffed. In this context, it is interesting to recall the present attitude of Italy towards Venezuela, and the exultation of the Italian press that the Monroe doctrine is an exploded fiction, a ghost that has been laid.

Recent advices from Spain are more reassuring. After a series of cabinet crises, a ministry has just been formed which, it is agreed on all hands, bids fair to be stable and enduring. Spain needs a Waldeck-Rousseau to combine the strong and able men of all parties in a ministry of talent; but in the mean time a condition of relative tranquillity seems fairly assured. We are also informed that the young King is toning down, or, to quote the words of our new ambassador to Austria, Mr. Bellamy Storer, has "acquired a repose of manner," which he apparently was much in need of during the first months of his reign. Mr. Storer also vouches for the fact that Alfonso has not "gone back on his mother," as Scotty Briggs said of Buck Fanshawe, or, if we remember rightly, "has not shaken his mother," was the exact phrase used. A warm tribute to the character and qualities of the Queen Mother is paid by the same high authority, who calls her "one of the best sovereigns Spain has had for centuries." Meanwhile the King's cousin has been arrested in a gambling-hall, and has retorted by challenging the prefect who caused his arrest. This opens up a picture of alarming possibilities for a distinguished official within our own city limits: Suppose that Mr. Doe, should that elusive gentleman be captured, were to reply by sending his seconds to Mr. Jerome, or that the big chief were to favor our Mayor with a like attention! But then the good sense of the Anglo-Saxon opposes martial challenges between individuals, though still tolerating much the same kind of thing between nations. Mr. Storer is responsible for the statement that a very amicable feeling for the United States is not a remote possibility in Spain, and that already there is far less ill-will towards us in the peninsula than might be reasonably expected. We wish the new ministry good luck, and hope the young King will continue to cultivate that repose of manner which befits the figure-head of a state, however gay and wicked he may feel inside.

A very high authority on international law, and especially on the significance and the reach of the Monroe doctrine, has given us his opinion on the request of the allies that the President act as arbitrator between them and Venezuela. His name, if we might mention it, would carry conviction to most minds. He takes the ground that the President ought never to act as arbitrator in any dispute in which that doctrine is involved. The reason is that this country must always be a party in interest in any such controversy, and it is a fundamental rule of legal ethics that one must not be a judge in one's own case. When a South-American country, like Venezuela, is embroiled with a European power, there is always danger, until the controversy is settled, that the United States will be brought into the quarrel. Even after judgment is rendered, this danger must continue. If, for example, in such a case as the attack of the allies upon Venezuela, the President, acting as arbitrator, should decide in favor of the South-American country, he could not escape the suspicion that he was moved by motives different from those which should govern a judge. The defeated parties would almost inevitably feel that he had been moved by his sympathy for the American party to the controversy, and that his judgment had been warped by the consciousness of his assumed duty to protect the American power from the slightest injustice.

The consciousness that such a suspicion existed would make the President quick to scent injustice. Such a suspicion of his motives, although it is not incompatible with perfect honesty, is harmful to a judge, and is properly dreaded by him. It is a suspicion which the President ought not to invite, and which the country, if it saw that it was inevitable, would not like to have him invite. Again, if the judgment should be in favor of the claimants, and they were thereby authorized to proceed to the collection of their claims, we might soon be placed in a false position. It is one thing for us to stand by and say to a European power: "You may fight out your quarrel with this American nation, but you must not take from it its territory"; and it is quite another thing to say, as judge: "Your debt is just, but you shall not employ the uttermost power of war and conquest for its collection." Would not the creditor power then be justified in responding: "You say, as judge, that our claim is just, but you threaten to become an ally of the judgment debtor, and prevent our collection of the debt if, in order to do so, we find it necessary to go beyond the limit of compulsion which you have set; in that case, the only just course for you to pursue is to guarantee the collection?" The course of wisdom, then, is to avoid the imputation upon our honor, or the pecuniary responsibility, by keeping clear of the quarrel until our own interests compel our intervention. The proposed intervention is excusable on no other ground than that our interests are affected. Therefore, in every controversy between a European and a South-American power, we are liable to become a party, and one who may become a party in an action is necessarily barred from being a judge.

The folly of England's alliance with Germany has been striking. There is no doubt in well-informed circles that Germany has sought to test the disposition of this country, and to discover the extent to which we can be led away from our insistence upon the Monroe doctrine. It is true that the German Emperor has recognized the validity of our rule that no European power shall permanently occupy new American territory; but he is eager to know if that is our real limit, and if we will always defend even that assertion. He shrewdly obtained the aid of England in this enterprise. On the other hand, the statesmen of Great Britain are convinced that it is for their interest, and especially for the interest of the Dominion of Canada, that the Monroe doctrine shall be upheld against Continental Europe, and that it shall mean much more than we have declared it to mean. For example: England would have us assert that no European power shall be permitted to take, or to occupy, a South-American state on invitation of the people of that state. To that extent our own official utterances have not yet gone. When, therefore, we consider England's enormous interest in maintaining the integrity of the Monroe doctrine, and the comparatively paltry nature of the claims of its citizens against Venezuela, and even of the slights suffered by British marines

the alliance with Germany is seen to be a folly which demands explanation.

Not only does this alliance of Germany and England endanger English interests on this continent, but it is incongruous; it is opposed to the policy of the government, and it threatens to overturn what British administrations have been working for during more than a score of years. It is not probable, of course, that great harm will result from the affair to endanger the growing friendship between the two nations, but trained statesmen would have avoided the possibility of arousing popular distrust in this country, or of joining England with Germany in American imaginations. That the alliance is radically opposed to British policy, and to English sentiment, which is thoroughly loyal to this country, is shown by the outbreaks of criticism in Parliament and in the press. The whole affair is so strange, as well as foolish, that it is necessary to find the explanation for it below the surface. The truth is, as we have good reason to believe, that the primary responsibility rests upon the King. He was persuaded by his nephew, the Emperor, that the alliance could not involve him with this country; he was made to feel "like doing something"; he committed the nation; and Mr. Balfour's government has attempted to help him out. This was folly on Mr. Balfour's part, a folly that cut two ways, for, not only does it endanger friendly relations with the United States, it comes dangerously near being an unconstitutional recognition of the King's right to govern. The German Emperor's influence with his uncle is great, and in the direction of inducing him to assert himself, and Mr. Balfour was caught napping when he permitted the Emperor to prevail in this Venezuelan affair. For the sake of the King and of the Conservative party, Mr. Balfour ought to see to it that this does not happen again.

We are accustomed to look upon the Chinese as a race of very inferior mental and moral endowment: indeed, the popular opinion of them among the white races is that they are not very far removed, in the scale of being, from the higher animals. Now and again something happens to disturb our fixed ideas on this subject. We read some wise aphorism from Confucius, or come upon a Chinese poem instinct with delicate emotion, or are set wondering by some Chinese speech or essay in our periodical literature. Wu Ting-Fang, the eminent ambassador of the Celestial Empire to this country, has done much to give us a truer conception of the mental and moral quality of his countrymen, and in his own person he is a striking witness to the error of our general notions. In the January number of HARPER'S MAGAZINE he writes a polished and dignified article, full of quiet, deep wisdom. He claims that in intellectual endowment the Chinese are not inferior to any other people in the world. Only, their way of looking at life is different from that of Western peoples. As Aristotle said, man's natural and universal aim is happiness: it is in the means that we are generally mistaken, not in the end. The Chinese aim at happiness, just as the Americans do. The two peoples try to attain to it by utterly divergent roads, and Wu Ting-Fang clearly points out the divergence. The Americans believe it is to be reached by way of a feverish activity, in work and in play; the Chinese, by content and repose. Which is the happier nation? asks the writer. We are almost persuaded by his argument that China is, and a doubt rises up in the mind as to whether we in our Western world have not, after all, taken the wrong road. But we are quickly reassured. We know that, in a general way, our course is surely marked out for us by original temperament and natural environment—a combination which some call destiny—and that we could follow no other. The same is true for the Chinese. But the point we wish to make here is that a nation which knows how to be happy—that is, a nation which, by the proper use of such free will as it has in the matter, adequately fulfils its destiny—is worthy of respect and consideration.

How far is a man justified in turning the imperative necessities of his neighbors into his own exceptional pecuniary profit? Sometimes this is an academic question, so-called; to-day it is a practical one. If there is anything that folks need this winter more than anything else it is fuel. But because they need it so much, prices creep up, and up, and up. The mine-owners say it costs them but little more than in the past; the transportation companies declare they are getting no more out of it; the dealers, as a rule, asseverate that their own profits are but pitiful. Still, somewhere in the transit from mine to bin there are mysterious accretions of cost, until the best mathematics the luckless buyer can muster will figure nothing but that in the windings of the journey a special and extraordinary profit is made to trickle into somebody's pocket. Buyers mildly protest, with no worse word than "robber"; but they are told that this is the natural working of the law of supply trade. Scarcity of supply, excess of demand, rising prices—these go together as water flowing over the cliffs of Niagara clouds the river below in spray. Does a lucky or foresighted man succeed in winning a few extra thousands of dollars out of his countrymen who must keep warm in their houses—or their shops? He is part of the order of the universe, and his gains are decreed by the laws which govern the movement of all human affairs—possibly the movement of the planets. He would display idiocy and defy destiny were he to give up or refuse these exceptional gains and content himself with modest profits. This is the tide, taken at the flood, which may lead him to fortune. And yet,—there was a plain man in a New England town who said No. He had a different idea. Coal was scarce, to be sure; prices might be made high, and the profits were tempting. But he did not see his way clear to take them. He would do the best he could with his townspeople. They should have their coal, as far as he could supply them, at a moderate advance, no greater than the usual profit. He couldn't make up his mind to excessive gain forced out of the dire need of the community. Possibly he was an idiot, blind to his own opportunity. Even so, it is more cheery to believe that he may have been ahead of his time, and that he was trying to realize in present practice a principle that will yet govern the world of trade more certainly than the law of supply and demand—the principle that business will be better off when human beings are treated as human beings, and not as so many opportunities for making more money when they get into a tight place.

President Wilson of Princeton is afraid neither of trusts, nor of labor unions, nor of too much concentration of government. "I believe," he says, "in the utmost freedom of combination in a free country. There is no people so able to form combinations as the American people. We are born lawyers. There is no race that produces a people who are so capable of self-government, because there is an inborn sense of the power of combination." Dr. Wilson has the advantage of some observers in that he not only reads the newspapers, but has studied and written American history. To forecast the future, it is necessary to know the past. Dr. Wilson is pretty good authority on the past of the American people, and ought to be reasonably well qualified to guess what is going to be good for them.

Mr. Kipling and the London *Times* between them can give effective expression to any opinion on which they agree. They have agreed in thinking ill of the British-German partnership to coerce Venezuela, and Mr. Kipling has put their common sentiment in verse, which the *Times* has published. It is good verse, worth reading—and probably worth cabling—for its own sake as verse. As politics, it is at least candid. Mr. Kipling seems not to care who knows that he is out of humor with the Germans. He makes his rowers of the British war-galley say:

> Look south, the gale is scarce o'erpast
> That stripped and laid us down
> When we stood forth, but they stood fast
> And prayed to see us drown.
>
> The dead they mocked are scarcely cold;
> Our wounds are bleeding yet;
> And ye tell us now that our strength is sold
> To help them press for a debt!

This is rough speech, and rougher follows. When we remember that English is a mother-tongue of the German Emperor, it is conceivable that feelings have been hurt in Berlin.

It is a solemn truth—a truth universally recognized and long since beyond palliation or denial, that the facilities for hauling the working-people of New York back and forth between their residences and the places of their employment

are inadequate. Everybody thinks so who tries to get down town before nine o'clock in the morning, or up town after five in the afternoon, or tries to get from Brooklyn and home again, or reads the newspapers, or sees the public vehicles go by in the "rush hours." Things are bad enough in good weather when all our means of transportation are at their best; and in times of snow and ice, when there is bad going, they are so bad as to make news faster than the papers can print it. The community is fully alive to its hardships, and earnest in procuring any abatement that is possible. The Mayor and most of the branches of the city government, the Merchants' Association, the Citizens' Union, members of other organizations, the newspapers and the people who write letters to them, are all bent on the amelioration of existing hardships. All propositions take one of two forms. They either suggest that the elevated and surface railroads shall put on more cars, or that travel shall be a little better distributed through the day. The roads think they are running all the cars they can possibly manage. It looks as though they were doing their best, but appearances sometimes mislead, and it is possible that vigorous stimulation may result in getting better service out of them than their officers believe them capable of rendering. They are asked to perform the impossible. Perhaps they can't, but certainly they won't unless it is urgently expected of them. As for the other remedy—the better distribution of travel—that is being applied by such individuals as can apply it. Workers who can go up town at four, go at four, and go comfortably. Nobody waits until five or six unless he must. One correspondent suggests that whereas now a great number of stores and offices open at nine and close at five, it would help matters if half of them opened at 8.45 and closed at 4.45. It might help a little. So it would help if more of the city's work was done at night and less in the daytime. But nothing is going to help very much until the tunnel is opened. Those of us who survive the next five months will see a better state of things, for the summer exodus comes with June, and the tunnel may be working by October.

Dr. Lorenz, unless he changes his plans, will sail this week for England on his way home. He has had a wonderful visit in this country, which he has traversed from ocean to ocean, making himself everywhere welcome by works of skill and mercy, by kind acts and kind words, by ready appreciation of hospitality, and indefatigable willingness not only to do what he could to relieve suffering, but to teach his methods, as far as possible, to our surgeons. He seems to have pleased every one with whom he has come in contact, and especially to have quite won the members of his own profession, who have nothing but admiration and good words for him. His visit will undoubtedly have an effect here on the treatment of the dislocations to which he has chiefly devoted himself, but the impression the layman gets from reading about his operations is that it is one thing to know how he does his wonders, and quite another thing to imitate him. His method is simple, but the strength and the skill with which he applies it are both prodigious, and have been acquired by years of practice. Still, to show that a thing can de done is two-thirds of the battle. What a surgeon from Vienna can do, surgeons in America will do: it is only a matter of time. If Dr. Lorenz comes back next year, as he suggests, that will be so much gain. His inexhaustible good-will is his most significant characteristic. He seems to have the real missionary spirit: to be desirous to go where he can do the most good. He is the more likely to come back here because the field is so great and the laborers so hospitable to new ideas.

The American Methodists undertook to raise a Twentieth Century Thankoffering Fund of twenty million dollars, and have succeeded. Dr. Edmund M. Mills, who was detailed to take charge of the work, gave out a week ago that the money would all be subscribed by the last day of the year. Nearly eight millions is to be used for educational purposes. Another eight millions will go to pay church debts, and is expected to pay them all. A million and a half is to be set aside as a fund for aged and infirm ministers, and, apparently, another large sum is to be devoted to hospitals. Among the contributors, Dr. Wells says, are "many wealthy sons of Methodist ministers, one giving $400,000, an amount which it would have taken his father a thousand years to earn in the service of the Church." The statistics of the wealth of the sons of Methodist ministers would probably make interesting reading. They don't all get rich, but most of them get a good education, sound moral training, and a better than average chance to inherit the earth. Doubtless they acquire their full share of it.

Mr. Charles Francis Adams, who does not mind speaking unexpected thoughts when he has them to speak, has been telling his friends in Charleston that the fathers built the civil war into the Constitution when they framed it. They could not reconcile State sovereignty and national sovereignty, so they put them both in, and started them on their long journey. Some of them foresaw the result; some didn't. They did the best they could do. With consummate skill, says Mr. Adams, they proposed a contradiction in terms—a divided sovereignty. But sovereignty had to be somewhere. "From the moment the fathers sought to divide the indivisible the result was written on the wall. . . . As I read the record and understand the real facts, in case of direct and insoluble issue between sovereign State and sovereign nation between 1788 and 1861, every man was not only free to decide for himself, but had to decide for himself; and whichever way he decided he was right. The Constitution gave him two masters. Both he could not serve, and the average man decided which to serve in the light of sentiment, tradition, and environment." It was an irrepressible conflict, as Mr. Seward said. This generation easily takes that view of it. It was settled, Mr. Adams thinks, by steam and electricity, and not until 1861 had these instruments become so serviceable to man as to make him equal to the unprecedented task then undertaken and accomplished. Before that time, the Southern Confederacy, if it had attempted to secede, must have succeeded. This last is an interesting Adams opinion which is open to amiable academic discussion, but the former conclusion—that there was little to choose between the legal argument of the North and the legal argument of the South will excite few denials from persons less than fifty years old.

In scanning the list of the dead for the year 1902 there are not many names that stand out distinct and monumental. Of such, in the light of the present, are these: Cecil Rhodes, Rudolf Virchow, Zola, Thomas B. Reed, and Samuel Rawson Gardiner. Rhodes, whatever his methods may have been, ethically appraised, was a statesman with an imagination and an empire-builder; Virchow was a benefactor of his race, vastly prolonging man's life and happiness by his scientific discoveries; Zola, both as a story-teller and as a citizen of France, revealed a passion for truth which was great compared with that of most of his French contemporaries; Reed had an intellectual and ethical equipment comparable to his physical superiority over most men of his time, and he lived long enough to know that his place was secure in the list of great parliamentarians; and Gardiner was, in the opinion of some, the greatest of historians next to Gibbon and Thucydides. If the boys of the English-reading world were to vote as to the death of the year causing the most irreparable loss, it is not certain whether their verdict would not fall on G. A. Henty's name. Of men who had lived so long as to be forgotten, and yet who once were famous as poets, we gave one to the list—Thomas Dunn English—and Great Britain the other—Phillip James Bailey. Of men of letters prematurely taken off we mourn Frank Norris; the Scotch, George Douglass Brown—the former's *The Octopus* and the latter's *The House with the Green Shutters* marking them as men potentially great. Of editors, the brilliant and mordant Godkin of *The Nation* and the sane and conservative Scudder of *The Atlantic* have read their last proof and penned their last exhortation. Two of Great Britain's most loyal and serviceable diplomats—the Marquis of Dufferin and Lord Pauncefote—have been promoted to heavenly courts. Our naval list is much less rich in valor, intellectuality, and a lofty sense of duty by the premature death of Admiral Sampson. The world of art misses the living presence of B. Constant, J. G. Vibert, Tissot, and Mesdag, and the Christian Church mourns prelates and preachers as notable as Cardinal Ledochowski, Archbishops Corrigan, Feehan, and Croke, Bishop William Taylor, and Doctors Talmage, Newman Hall, and Joseph Parker, and Rev. Hugh Price Hughes, while American Jewry mourns Chief-Rabbi Joseph Jacob, a leader among its people.

Germany and South America

THE Berlin Foreign Office has given our government assurances that Germany has no intention of acquiring territory in South America at the expense of Venezuela. Nobody disputes the present sincerity of those assurances. To-day Germany, single-handed, is not strong enough at sea to carry out, against the wishes of the United States, any project of territorial aggrandizement in the quarter named. Neither would England countenance such a project; a disclosure of it would cause her promptly to withdraw her squadron from the Caribbean, just as in 1861 she recalled her war-ships from Vera Cruz when she learned that Napoleon III., with whom she had previously co-operated, had in view the conquest of Mexico.

For the moment, therefore, neither the Latin-American republics nor the upholders of the Monroe doctrine have anything to fear, except the establishment or confirmation of a precedent that may have dangerous consequences hereafter. What position the German government may take a dozen or fifteen years hence, when, by means of the vast sums already appropriated, her navy shall have been enormously increased, is an entirely different question. No one can doubt that the attitude of the German government toward South America will then be shaped by what it believes to be the interests and wishes of the German people.

It is, therefore, a matter of deep interest and grave importance to forecast what those interests and wishes are likely to be, and to this end it will be obviously useful to mark what they are even now. As it happens, a good deal of light has been thrown quite recently on both these points by two publications, namely, a letter addressed to President Roosevelt by Mr. Emory G. White, an acknowledged authority on South-American affairs, and an article contributed to *Die Zukunft*, the most influential weekly published in the German tongue, by Maximilian Harden, who, as the readers of Busch's book are well aware, was one of Bismarck's most devoted henchmen, and who, since his patron's death, has been a zealous advocate of Bismarckian ideas. Being at the head of a business house which has extensive connections throughout South America, and having personally resided for several years in Spanish-American republics, Mr. White is qualified to testify as to the extraordinary influence acquired by Germans in those countries, an influence by no means limited to commercial and financial affairs. He points out that in Chile, for example, where, ten years ago, most of the foreign trade was in the hands of the English, and where English banks predominated, it is now recognized by the English themselves that they must retreat and surrender most of Chile's commerce to Germany. To-day, moreover, the German banks are far the strongest in that republic, and, practically, control the financial situation and the mines.

Nor is this all. The German General Koerner was placed at the head of the Chilian army, after the civil war which brought about the downfall of President Balmaceda, and the result is that not only the army, but the navy has been, to a large extent, reorganized on German principles. In Argentina also the Germans are gradually ousting the English from the position of ascendency which the latter formerly occupied, while in Brazil the province of Rio Grande do Sul is virtually a German colony, so far as the dominant element of the population is concerned. Mr. White computes that already in South America the German-speaking inhabitants number nearly a million, and they are rapidly increasing. He further testifies that the political and financial influence acquired by Germans is persistently used to discriminate against representatives of the United States. The Germans in South America, he says, laugh at the Monroe doctrine, and make no secret of their belief that Emperor William will go on elsewhere, as he has done in Venezuela, under the pretext of collecting a debt, and, if he refrains from annexing territory, will virtually hold Latin-American republics in his grasp by means of mortgages which they are unable to discharge. According to Mr. White, the demonstration against Venezuela was artfully contrived to discover how far the United States would permit foreign powers to go in the coercion of minor American commonwealths; and, through the personal influence exercised by Emperor William over his uncle, King Edward VII., the British Foreign Office was persuaded to serve as a cat's-paw in the business.

Such is the evidence given by a trustworthy American citizen who thoroughly knows the countries about which he testifies. From his exposition of the magnitude which German interests have already attained in South America, we can infer what they are likely to become a dozen or fifteen years hence.

Now let us turn to Mr. Maximilian Harden, and note how those interests and their relation to the Monroe doctrine are regarded by intelligent and patriotic men in Germany. After quoting Captain Mahan to the effect that the Monroe doctrine is antiquated, Mr. Harden asserts that it was practically renounced when our government undertook to interfere with European spheres of influence. He thinks that he finds examples of interference in our violent seizure of the Spanish West Indies, and of the Philippines, in our participation in the expedition against China, and in Secretary Hay's note with reference to the Roumanian Jews. He accuses President Roosevelt of reserving to himself the right to poach on the Old World, while refusing to Europe the privilege of doing a little poaching in the New.

Under the circumstances, he contends that Germany, instead of bowing and scraping before Uncle Sam, should say right out that she looks upon the Monroe doctrine, not as binding, but as exploded. The doctrine should be buried, he says, and, if the United States are unwilling to acquiesce in the interment, they may expect to have a war upon their hands sooner or later. That Mr. Harden is not the only German who looks forward to such a contingency may be inferred from the fact that in 1896, when Mr. White went to Venezuela, he found that a German army engineer, Baron von Steuben, had undertaken to travel all over South America on a map-making tour. Mr. White adds that Germany now has in her possession maps on which are noted all the points of strategic value on the South-American Continent. It is well known also that, as lately as last summer, Emperor William sent his gunboat *Falke* up the Amazon River for reconnoitering purposes.

We have thought it worth while to set forth this concurrent and cumulating testimony from very different sources in order to indicate how large German interests in South America already are, and what political deductions are likely to be drawn from them when the German government shall be able, or think itself able, to draw them with impunity. Only blind men would disregard such warnings. The first duty to the nation is to build and maintain a navy equal at least in size and strength of that of the German Empire.

The President as Arbitrator

AT the hour when we write it is uncertain whether President Roosevelt will accept the proposal made by Great Britain and Germany that he shall act as arbitrator in the controversy pending between them and Venezuela, or whether the two European powers will ultimately acquiesce in his suggestion that the amount and validity of the claims against the South-American republic shall be referred to the international tribunal at The Hague. The fact that Venezuela was not represented at the Peace Conference, and did not sign the resultant Convention, does not, of course, preclude the adoption of the plan of settlement favored by our State Department, for the Convention itself provides that the jurisdiction of the permanent court created by it may be extended to controversies between signatory and non-signatory powers, if both parties agree. It is understood that the real objection of the Berlin and London Foreign Offices to such a disposition of the case is the apprehension that President Castro might pay but scant deference to the decision of The Hague tribunal, and that, consequently, the unpleasant business of coercion would have to be resumed. Both Great Britain and Germany, on the other hand, profess to be convinced that the Venezuela Executive would feel himself morally constrained to comply with a decision rendered by the President of the United States.

There are obvious reasons for Mr. Roosevelt's reluctance to discharge the function of arbitrator. In the first place, American citizens have claims against the Caracas government, and our Chief Magistrate would naturally prefer that some third party should undertake the task of propounding principles in the application of which American claimants would be interested.

To the extent to which such interests exist our own government is virtually invited to play the part of judge in its own case. There is, indeed, no doubt that this objection would be gladly waived by Venezuela, and that President Castro, who has already clothed the United States minister at Caracas with full powers to act as arbitrator, would exhibit at least as much confidence in that minister's superior, the President of the American Commonwealth. It is, then, perfectly evident that Mr. Roosevelt's assumption of the rôle of arbitrator would be satisfactory to all the parties to the controversy, and we suppose that, sooner than witness a prolonged war between the European claimants and Venezuela, and face the awkward complications that may grow out of such a contest, his fellow-countrymen would prefer to see their Chief Magistrate take upon himself the unwelcome duties of an arbitrator.

It should be borne in mind, however, that even if the proposal to make Mr. Roosevelt arbitrator is accepted, delicate and perhaps protracted negotiations would have to take place before all the details of the case to be submitted are agreed upon by the parties to the controversy. Mr. Balfour said in the House of Commons, just before the adjournment of Parliament, that England had not entered upon a mere debt-collecting expedition, but desired to secure reparation for wrongs suffered by British subjects in their persons as well as property at the hands of Venezuelan governments, and to obtain reasonable safeguards, if possible, against the repetition of such offences.

The German Foreign Office has made a similar declaration, and demands an apology for the indignities to which the family of its diplomatic representative was

subjected when the news that Venezuelan war-vessels had been seized and sunk at La Guayra reached Caracas, and provoked a riot in that capital. On his part, President Roosevelt will, no doubt, require as a condition precedent to his performance of the part of arbitrator, an agreement that, as soon as the case to be submitted to him has been made up, if not earlier, the so-called war blockade of Venezuelan seaports shall cease, and European war-ships shall be withdrawn from Venezuelan waters. We take for granted that all these things will be done in good faith, and with all possible celerity, though a certain amount of time may be needed for the arrangement of the form of procedure. This preliminary business will be complicated, and to a certain extent delayed, by the fact that France, Italy, and Holland have a right to ask that the claims of their subjects, as well as those of British and German subjects, shall fall within the scope of one and the same arbitration.

Assuming that all preliminary and incidental arrangements are promptly made, that detailed inquiries into the validity and amount of all claims submitted have been conducted by qualified persons appointed by Mr. Roosevelt, and that the President, enlightened by their researches, has rendered his decision, we must still regard this solution of the Venezuelan imbroglio as only tentative and provisional. For, suppose that Venezuela should fail to conform to the terms of the award on the plea of her inability to do so. It should be borne in mind that the pecuniary resources of the Caracas government are very scanty. If to-day she were called upon to pay interest on the cost of the railways built with German and British capital, she could with perfect honesty reply *non possumus*. But, it may be asked, why should not a receiver of her customs duties be appointed in the interests of those foreign creditors whose claims are adjudged valid by the arbitrator? The answer is that, in the first place, the Caracas government depends upon those customs duties to defray the cost of internal administration; and, in the second place, as things are now, even the whole of those duties would represent but a meagre revenue. In 1889 the value of the republic's imports was but $61,000,000, and the imports are now said to be less than half what they were in the year named. To provide interest and a sinking-fund for the purpose of restoring all the money invested by British and German subjects in Venezuela would require the surrender of all the customs dues to a receiver for an almost indefinite period.

If that receiver were a foreigner, it is obvious that Venezuela would be practically reduced to the ignominious position of Egypt. If, on the other hand, the receiver were an American citizen appointed by Mr. Roosevelt, Venezuela would find herself in a position analogous to that occupied by Cuba during our military occupation of that island. There would be this difference, however, that the task of the receiver would stretch over a far longer term.

Nobody can blame Mr. Roosevelt for shrinking, as he doubtless does, from the assumption of the rôle of arbitrator, foreseeing, as he must, that he may be called upon to assure the execution of the judgment that he renders. It is possible, however, and certainly desirable, that some firm of American bankers, if assured of the continued good offices of our State Department, might undertake the payment of Venezuela's debts, when these have been judicially defined, on condition that an agent of their own shall be installed as receiver of a considerable proportion of the Venezuelan customs.

Good Resolutions

It was about this time of year that people, who were young fifty years ago, used to buy blank books, of different sorts and sizes, or sometimes merely quires of ruled paper, which they sewed together, and began, by the advice of their elders, to keep diaries. The habit so initiated was supposed to make for character through the daily introspection required; for the diarists had to take stock, day by day, of their opinions and principles, and their conformity to certain rules of conduct, as well as to set down the events of the last twenty-four hours. Their ideal was by no means realized in the young diarist whose continuous record ran through the week that ended it, "Got up; washed; fooled round the rest of the day." They were expected to commune with themselves, and to give themselves the advantage of their reflections on their behavior. Above all, they were expected, in opening their diaries, to form good resolutions for the ensuing year, and to ask themselves pretty constantly afterwards whether they had kept them.

They may or may not have kept the resolutions longer than they kept the diaries. The habit of keeping a diary, with the self-consciousness that it promoted, may or may not have been very wholesome. But we incline to think that the habit of forming good resolutions with the beginning of the year was not such a bad one, even when the resolutions were broken, as they usually were. It is very well to be brought to shame for moral failure, and this is what broken resolutions were always doing for the victim. To be sure, they could overwork his conscience, and deprave him in his despair of ever being able to do right. But they were supposed to be a secret between him and his Maker, and a transgressor can somehow nearly always arrange matters with his Maker. It is his fellow-creature, his fellow-sinner whom he finds difficult; but his fellow-creature, his fellow-sinner, was not in his confidence. To keep him out of it for the time being was, perhaps, the reason why the early diarists wrote their diaries in cipher. Mr. Pepys conspicuously did so, with the consequence that when some centuries later, his confessions were deciphered, nobody wished to punish him for his shortcomings; which were indeed greatly enjoyed for their quaintness. They may have always seemed quaint to his Maker, who knew as well how to account for Samuel Pepys then as we do now, and since he had invented him, was amused as well as pained by him. But we cannot be sure of this, while we can be sure that we can only be better by trying to be so; and though we cannot urge our readers to keep diaries, even in cipher, we think we can fitly urge them to form good resolutions, at this season, when the good resolutions of the past year have mostly gone to pieces. There is nothing morbid, or conscious, or unwholesome anywise in resolving to do nothing that is not perfectly right, and true and noble during the year before us. We shall ourselves, editorially speaking, not form any such purpose, for we do not feel the need of it; but we fear that there is hardly a reader of ours whom something of the kind would not advantage. We may do our readers injustice; and we will not push the quest too far; but we should really like to know whether there is one of them can truthfully say that he has derived all the benefit he might from the exemplary tone and temper of this publication during the past year. Has he read every line of it as he ought? Every paragraph of the "Comment?" Every one of the "headed editorials?" All the fiction? All the poetry? All the advertisements? Having done all this, has he had a care to speak of us to his neighbor, to the stranger within his gates, to the fellow at the club whom he has suspected of not reading us?

It can be answered us (not very candidly, we own) that this is a very narrow and selfish view of the matter, and we could grant that it was if we had meant to offer it as the sole view. But we had not and we do not. We offer it in illustration, merely, of the sort of sin of omission which forms the guilt of the resolution-breaker. He does not so much resolve that he will do such and such good things during the new year. If he did, the affair would be much simpler, and he could more easily keep himself up to the work. But he resolves that he will not do so and so, and unless we very much mistake him he keeps on doing the things he promised not to do. That is where he falls down, and that is where he finds it most difficult to pick himself up.

It should be understood that good resolutions are usually, if not invariably, against bad habits, none of which we will specify, lest our readers accuse us of being personal, and having one or other of them in mind. It is in the nature of good resolutions to require the penitent to be constantly on his guard; and while one may readily remember to do a fine thing or a noble thing, when the chance offers, or the duty thrusts itself upon one (in that offensive way of duties), one is always forgetting not to do the shabby, or low, or disgusting or wicked thing, that one vowed one's self to forbear; and it is there that one hits gravel, as the old moralists say. We note the facts not with the expectation that the reader will be instantly and fully able to profit by them, but partly for the psychological pleasure that their recognition gives, and partly in the hope of suggesting, dimly, remotely, a way out of the vicious circle in which the reason "eddies round and round." It is apparent at this glad hour of the infant year, that we ought to form good resolutions and not put it off till the Fourth of July, or next Christmas. Yet it is just as apparent that if we resolve not to do this or that, we shall pretty surely do it, because we forget not to. On the other hand, it is again just as apparent that if we resolve to do this or that good thing, we shall now and then do it, because the opportunity offers or insists. The good resolution ought therefore to be positive, and not negative, in its terms. This seems to us the solution, and we commend it to our readers. For ourselves, as we have already hinted, we do not feel the need of so sharp a spur.

The Secretary to the People, George B. Cortelyou

See page 3

The constitutional provision for the succession in case of the incapacity or death of the President of the United States, every school-boy knows. But there is an official not named in the Constitution who in the evolution of the organs of government, has come into a place and a function of such prominence that he virtually succeeds in temporary emergencies. He might very properly be called the "Acting President," for when the Chief Executive is for any reason kept from his duties, this official, who is both afferent and efferent nerves to the administrative head, goes on receiving and directing as if the nervous centre were itself consciously active.

By title this person, who stands nearest to the President, in his daily official life (though he is not known to the Constitution), is the "Secretary to the President," but the term "Secretary" must be given, in its present association at any rate, very ex-

tensive and dignified significance. All the members of the cabinet are "Secretaries to the President"; they have simply taken over certain administrative duties which by the Constitution are lodged with the Chief Executive. He is still responsible for their acts; they are responsible to him. But even with this division of labor and multiplying of advice, the President has not eyes, ears, tongues, or hands enough to attend to his growing duties; so a general secretaryship has been added. Its occupant is without a portfolio, but by virtue of his office he enters all departments, knows all secrets (or so I suppose), and is accessory to all Executive acts. He is seldom far distant physically from his Chief, either at home or in his travels, and he must often be the President's sole companion in his expeditions for information and in the roads of thinking by which he comes at conclusions.

I am, of course, generalizing the office from the personality and the imagined relationship of the present secretary to the Presidents with whom he has been associated; and, naturally, the office is what the temperament and capacity of both President and secretary make it. In the early days of the republic, when the obligations of the Executive were less imperious of his time and energy, there was no official secretary; and when in the course of the country's growth assistance became necessary, it was provided at the President's own expense. When the public first assumed this expense, the secretary's service was clerical, or military, and later in some considerable degree social; but in President Cleveland's first administration it was enlarged to a more direct participation in the serious political affairs of the Chief Executive. The office magnified by the executive abilities and the political sagacity of Colonel Daniel Lamont, which President Cleveland recognized by appointing him later to a cabinet position, has kept its larger import; and under Mr. Cortelyou, who has had training in both the clerical and social duties, has come to an even greater scope. This is due partly to the increasing business which falls to the Executive office and partly to the qualifications of the man who holds the secretaryship.

It is an interesting coincidence that the office which received increased dignity and influence under President Cleveland is now filled by a man whom he called to the White House. Mr. Cleveland has himself referred to Mr. Cortelyou as a good example of the results of the merit system. From a very subordinate position in the civil service he has been promoted, merely upon the recommendation of his own efficiency, to places of higher and greater responsibility. There has been no political influence. Mr. Cleveland summoned him from the service of a department reluctant to part with him, and two Presidents of the other party have kept him and further advanced him. Now he holds the highest and most important clerical position in the country. The correspondence of a nation passes across his desk to and from its Chief.

But, as has been already suggested, his duties are not merely and passively clerical. He partakes, in his personality and office, of all the active functions of the Executive. In President McKinley's administration he seemed as one lobe of his brain, so devoted was he to all the objects of the President's devotion, so accurately did he know and express the President's feeling and purpose. When the President was stricken, he seemed to occupy in his own person the place which his Chief had shared with him. It was unquestionably his own brave, unselfish, thoughtful spirit that, above all others, directed affairs in the days between the wounding and the death of the President. Constitutionally, there was no inter-regnum, but if the actual conditions could have record Mr. Cortelyou's name might well appear between those of President McKinley and President Roosevelt.

At any rate, it was through his personality that the power passed and through his service the two administrations have had a very vital bond. That he has remained at the same post under President Roosevelt is the best tribute to his efficiency. One, not knowing, might infer that his ready adaptation to the thought and ways of a President of such widely differing temperament indicated a weakness, but those who have seen much of this man who is so quick to hear and so slow to speak are obliged to find some other explanation, and one that is creditable to him.

His devotion to the President and his interests is a part of his subconsciousness. I was told by a member of the party at Pittsfield, on the day of the accident, that the secretary, in dazed condition, would not have himself cared for, but asked only concerning the President. And yet with all this devotion and with all his untiring official labors, he is developing himself in other ways. When he entered the government service he was not only an expert stenographer; he had studied music thoroughly; he had been a principal of secondary schools; he was somewhat acquainted with medicine, and had written for newspapers and magazines. Since then he has made time to take a course in law, and is qualified for its practice. He is thus a man of accomplishments and attainments quite apart from his immediate field of occupation, and fitted for independent service.

It is rumored that if the new Department of Commerce is established he will be appointed its first Secretary. No one can question his qualifications for organizing and directing the work of such an administrative department; but it would seem almost a misfortune to specialize the labors of one who is of such great value to the country in all its interests, through his generalized devoted, personal service. His title might very well now be "Secretary to the People," and those who know with what full desert he holds it, cannot wish him a better.

Woman's Privileges

WHOEVER says an unexpected thing at a public dinner, and says it well, is entitled to the gratitude of the company. No matter if the unexpected thing runs counter to some of the convictions of those present; the license that is issued to an after-dinner speaker carries the right to relieve the mind, otherwise no one worth hearing would take such a license out.

The remarks of Miss Josephine Dodge Daskam at the "Pilgrim Mothers' Dinner" last week, in New York, had this surpassing merit of being unexpected. The dinner was given on the anniversary of the landing of the Pilgrim mothers, by members of the New York Legislative League. Most of them are pronounced woman-suffragists, solicitous for all the rights that women can obtain by legislation or constitutional amendment. Miss Daskam's theme was "The American Girl of the Future." She was not very strenuous about rights. Reminding her listeners that the recent multiplication of women's rights had not perceptibly loosened the hold of "our brother" on the advantages he had always possessed, nor increased the strength of women, she suggested that the girl of the future may have to choose between her present privileges and her rights. In which case, said she, "I should advise a young girl who asked me what to choose, to hang on to her privileges and let her rights go." When we read that in the paper the next day we all smiled, and said it was a joke on the "Mothers." Miss Daskam went on: "If you cannot in this generation get your vote you can always get your voter. I don't think the young girl has changed very much. She has no more mind than she used to have, though she may use her mind a little differently. There are two things which woman must always have had to be, since the creation of the world, to be successful: she must be good, and she must be charming. If she is not good, the world cannot progress; if she is good, and nothing else, she will be as dull as anything the world ever made; but if she can be good and charming her heritage and posterity can ask absolutely nothing better."

Miss Daskam spoke for the majority. Most of the rights—the legal rights—that have been won for American women in the last fifty years were due and overdue, were well worth winning, and are well worth keeping, but they have not put her in a position where she can afford not to be charming. A large share of success in this world goes by favor. There are women who make their way and win their dues by sheer ability and persistence, but the commoner experience is that the women who get what they want win it more by grace than by main strength. A lot of valuable qualities go to the making of a charming woman—intelligence, the quick sympathy which is at the bottom of what we call "tact," kindness, unselfishness, sweetness. Charm has not much to do with physical beauty, except as that itself is a reflection of the inner spirit, for charm is mainly spiritual. Nobody should, scarcely any one does, disdain it as an attribute of weakness, for, rightly understood, it stands out as a form of strength.

After all that has been done for American women by legislators and educators, and college builders and reformers, it still remains true that the most valuable possession a normal woman can acquire is a suitable and satisfactory man. Nothing else is quite so serviceable in promoting the fulfilment of her destiny and her content while it is in the process of fulfilment. Nothing else if she is normal—and there are very few women who are not considerably normal—quite takes a man's place with her. One of her most valuable privileges is that of selecting her man, of picking and choosing and taking her time about it, and possibly even of changing her mind after she had begun to think she knew it. It is observed that women who are good, and have the luck to be charming also, have great advantages in carrying this important process of selection to a successful issue. More men are available for such girls to choose from, and once the choice is made the resulting contentment is more apt to endure and to wax, instead of diminishing. The most that legislatures can do for married women is to protect them from bad husbands. Choosing good ones is a matter of personal enterprise which laws can do little to promote. But of course a woman who has few rights and is in complete possession of a satisfactory and competent husband is better off than if she had more rights and no satisfactory means of realizing her destiny. If the American girl ever has to choose between her rights and her privileges—including the privilege of being charming, and this invaluable privilege of selecting a man that suits her—she will undoubtedly do well, as Miss Daskam advises, to hold on to her privileges and let her rights go. But she will hardly have to make such a choice. She will retain her privileges, anyway, and all the rights she can make up her mind to want, besides.

A Great English Sport

By Sydney Brooks

LONDON, *December 15, 1902.*

WHAT, at this time of the year, is the great social pre-occupation of England? I would suggest the question as a test of all Americans' knowledge of this country. Is it politics? Chamberlain's visit to South Africa? the Education bill? the trouble in Somaliland? the little brush with the Waziris? the approaching Durbar at Delhi? No; none of these things. These are but the accidental happenings of the moment. The staple interest of England from the first day of November to the last of March is fox-hunting. One gets some idea of how big an interest it is from the mere fact that in this little country, which is only a shade larger than the State of New York, there are one hundred and sixty-five packs of hounds hunting regularly two or three times a week for nearly five months on end. That means practically that wherever you pitch your tent in England, you are within easy hacking distance of a meet, often of several meets. At Melton Mowbray, for instance, a little village that is the hunting centre of "the Shires," you will find the chance of a run with the five most famous packs in England, brought literally every week-day to your very door. Geographically, "the Shires" are understood to mean Leicestershire, Rutlandshire, and Northamptonshire, but in practice "hunting in the Shires" implies that you have been following one or the other of five packs—the Belvoir, Cottesmore, Quorn, Mr. Fernie's hounds, or the Pytchley. These are the oldest, the most fashionable, the best appointed, the most lavishly maintained hunts in the kingdom, and the country they hunt over is supposed by all Englishmen, by a few Americans, and a good many Continentals to show some of the finest sport in the world. Nowhere else do you get such a combination of stout straight-running foxes, high scent, difficult variegated jumps, such thrilling forty-minute ourses, so many expert huntsmen. The late Empress of Austria, herself a dashing and experienced huntswoman, gave the palm to a day with the Quorn or Belvoir over all other forms of sport to be met with in Europe, adding thereto the remark that she did not know how good or how bad riding could be until she had visited the Shires. I imagine Mr. Foxhall Keene, who knows more of hunting in England than any other American, would confirm this judgment in both particulars. One needs a stout nerve, a superb mount, and a long purse to live with these hounds. If Englishmen spent as much in proportion on education as they do on sport, this country would stand a good chance of becoming the most intelligent in the world. An average price for a hunter trained in the Shires is anywhere from $1000 to $1500. The Earl of Lonsdale is rarely without a $10,000 mount in his stud, and when one remembers that the ordinary life of a horse in the hunting-field is five years, that an accident may kill him any day—a Welsh nobleman has already this season "staked" a couple of horses, worth $1250 and $1500, within a week of their purchase—and that a man who means to do the Shires properly needs two or three cast-iron nags and at least eight or ten hunters in his stud, one may form some notion of the lengths to which English extravagance will run.

I have no exact statistics of the number of people who habitually follow the hounds right through the season, but a rough guess may be hazarded. Taking the country all in all, the small packs of twenty couples, as well as those of fifty and seventy, and putting the average attendance at each meet at 100 and the number of meets at 400 a week, one gets the respectable total of 40,000 men and women in the saddle every week. The hunting season lasts twenty weeks. A complete return of all who follow the hounds from November 1 to March 31 would therefore show a total of 800,000—not, of course, 800,000 different individuals, because the same person will hunt four or five days a week from start to finish. And this takes no account of the multitudes who follow in traps, on foot, or on bicycles or motors. A meet is always regarded in the neighborhood as an informal holiday. I remember as a boy that whenever hounds were to throw off within striking distance of the school I was at, the headmaster would solemnly announce the fact after morning prayers, books would be thrown aside, football jerseys and knickers donned, and we would run our five or six miles to the meet and join in the hunt, to our own intense delight, but to the maledictory dismay of the M. F. H. and his whippers-in. For every man and woman actually riding to hounds there are usually five or six doing what they can to keep up with the fun on foot or wheels. One must also remember the numbers of those immediately dependent on the sport for their living—the grooms, stable and kennel boys, earth stoppers, and so on. Altogether, if one said that from first to last fox-hunting actively interested two million people each season, it would be very difficult to prove the statement an exaggeration.

Wherever you go, evidence of the popularity of the sport is palpable. The daily papers give their column a day to hunting news. The railroad companies issue special tickets and run special trains for huntingmen, so that it is possible to breakfast in London and be at a Leicestershire covert-side in time for the first draw. There are villages and whole districts in the Shires that live on the sport, as Stratford-on-Avon lives on Shakespeare. At the hunting centres, places like Melton Mowbray, Market Harboro', and Grantham, nothing is said or done or thought that has not some immediate reference to the great pastime. Young and old, men and women, are alike engrossed in it. The first ambition of a nobleman's or county magnate's son is to follow the hounds on a pony; his next, to be in at the death; his last, to be M. F. H., as his father was before him. A meet on the grounds of an old country mansion is perhaps the pleasantest of the many pleasant sights that England has to show. The aristocracy and the great territorial families still largely control the sport, spending in some cases tens of thousands of dollars a year to keep it going. All are on an equality by the covert-side, landlord and tenant, the small farmer and the peer. And this season sport has been and promises to continue exceptionally good. The end of the war has restored thousands of officers to their beloved Shires; foxes are plentiful, fields large and more of the right sort than they have been for some years, oats and horse-flesh are both up in price, and the farmer, without whose good-will and co-operation hunting would have to cease, is less than usually discontented.

Nevertheless, in spite of all the wealth and enthusiasm behind it, in spite, too, of its essential manliness, the future in the long-run would seem to be against fox-hunting. The sport, in the opinion of many good judges, has already, and without knowing it, passed its meridian. Free trade, railways, and the pheasant are slowly but surely squeezing it out of existence. Even within the last fifty years its conditions have been revolutionized. Half a century ago a hunt was an affair of friends. It had a territorial basis; its members all came pretty much from the same neighborhood, and, either as landlords or tenants, were intimately connected with the soil. Every one knew every one else. The farmers were prosperous, and hunted themselves; the fields were manageable and mainly of the country gentleman type; barbed-wire was rarer even than a railroad track, and the game preserver had not yet arisen to prefer the pheasant to the fox. Moreover, the old semi-feudal respect for the squirearchy still held its own, and was judiciously fomented by the almost universal custom of the M. F. H.'s of buying their forage, their hacks, and at times even their hunters in the locality. But to-day you find, first of all, that the large well-to-do farmer has practically disappeared, and that his place is taken by the small two-hundred-acre man, whose finances will not allow him to hunt. That means that the farmers as a class no longer have the same personal interest and participation in the sport. Secondly, you find the railroad everywhere; and the railroad has had an immense effect on hunting, first, by largely adding to the number of those who follow the hounds, and, again, by reducing the area in which hunting is practicable. A cultivated, but not overgrown, country is the ideal one for fox-hunting. The railroads, however, not only head off the fox, but bring the suburban builder and speculator with them. New districts are opened up, houses are built, and the fox-hunter finds another stretch of country spoilt for his pastime.

Moreover, the railroads bring an entirely new class of men into the hunting-field, townsmen for the most part who know little of hunting and less of agriculture, who do not reside in the district they hunt, and are simply out for a day's sport. These are the men who are setting the farmers' backs up and who are doubly irritating to the M. F. H. Ninety per cent. of them are free-lances; they pay no subscriptions, and make no donations to the funds of the hunt they patronize, yet there is no way in which they can be prevented from joining in the run. And being ignorant of agriculture and having themselves no stake in the land and no fear of social ostracism—for the neighborhood only sees them on hunting days—they are careless of what damage they inflict. One hears in consequence of a growing antagonism towards the sport, of foxes poisoned and trapped, of fields needlessly fenced with barbed-wire, at times even of prosecutions for trespass. At the same time, the number of those who turn out for a run grows yearly greater—in the Shires a meet of seven hundred is no uncommon thing—and the damage they cause increases in proportion, while true sport diminishes in the same ratio. To maintain a pack, becomes, in consequence, a most expensive business. The farmers, even when they are willing to have their land ridden over or their coverts drawn, make the M. F. H. pay handsomely if indirectly for the privilege. They systematically exaggerate the damage to their crops and fences, and in the matter of the poultry which they allege to have been killed by foxes, they practice what is almost a form of blackmail. The hunt treasurer, as a result, is continually putting his hands into his pockets, not grudgingly, but still with the feeling that he is being "done." The "compensation fund" of any one of the packs in the Shires would average, I suppose, about $6000 a season, $4000 of which would go to the poultry account. The "wire fund," to meet the expense of taking down the barbed-wire fences at the beginning of each season, and of putting them up at the end, is another considerable item.

The Book of Months

By E. F. Benson

JANUARY

THICK yellow fog, and in consequence electric light to dress by and breakfast by, was the opening day of the year. Never, to any one who looks at this fact in the right spirit, did a year dawn more characteristically. The denseness, the utter inscrutability of the face of that which should be, was never better typified. We blindly groped on the threshold of the future; feeling here for a bell-handle, here for a knocker, while the door still stood shut. Then, about midday, sudden commotions shook the vapors; dim silhouettes of house roofs, promised lands, perhaps, or profiled wrecks, stood suddenly out against swirling orange whirlpools of mist, and from my window, which commanded a double view up and down Oxford Street, I looked out over the crawling traffic, with an interest as if in the unfolding of some dramatic plot, on the battle of the skies. From sick dead yellow the color changed to gray, and for a few moments the street seemed lit by a dawn of April; then across the pearly tints came a sunbeam, lighting them with sudden opalescence. Then the smokebeam from the house opposite, which had been ascending slowly, like a tired man climbing stairs, was plucked away by a breeze, and in two minutes the whole street was a street of primrose-colored sunshine.

All that week I was work-bound in London, a place where, as every one knows, there are forty-eight hours in every twenty-four. The reason for this is obvious—it is impossible to sit idle in a chair in London; it is impossible (almost) to read a book, and it is (happily) quite impossible to write one. Thus, then, the hours are multiplied. The sound and spectacle of life induce a sort of intoxication of the mind: ten yards of Piccadilly is a volume, and the Circus an improper epic. Hence the impossibility of reading—the books are in the flowing tides that jostle from house wall to house wall, and they are vastly more entertaining than anything that publishers have ever had the good fortune to bring out. Now people who are incapable of reading print, of which the enormous mass is very sorry stuff, are held to be uneducated, but it seems to me that people who cannot read, or, at any rate, conjecture at, this splendid human print, are much more ignorant. For it is here in these places, alive with the original words and phrases out of which all books are made, that there lies the key to all books that are worth reading at all. At any rate, here lies the material; it is here, and nowhere else, that the *chef* does his marketing. There are, however, several rules to be observed if you would read the original. The first is that you must attend with all your might; the book, so to speak, shuts automatically if you cease to attend. The second is that you must at a moment's notice be ready to pity and to praise. The third, and perhaps the most important of all, is that you must never be shocked. For the whole attitude of the observer is covered by pity or praise. The great author does not want his moral condemnation, and in addition to this there is nothing so blinding to oneself as being shocked. It is like looking through a telescope at one point only, and that probably wrongly focussed, for it is focussed by one's own individual code, which is almost certainly not correct. It is Human Life you are looking at. If that is not good enough for you, go and look at something else. There are plenty of dull things in the world, but remember always that if you find other people dull, it is only a sign that a dull person is present. But if you are to read the book Living, come humble and alert. Try to catch the point of every phrase, for of this you may be sure, that there is a point. You will find there, thank God, many pages that will make you laugh—laugh, that is, properly, with sheer childish, unreflecting amusement; you will find there things that will make you think, and you will certainly find the things that will make you want to weep. And if we knew a little, instead of knowing nothing, we should probably—no, certainly—fall on our knees and thank God for those also.

One of each of these occurred to me today. The first was when I was coming out of the club with a friend on our way to dinner. An obsequious porter held the club door open, an obsequious page-boy stood by our glittering hansom, with a hand on the wheel. My friend had an opulent appearance, and wore a fur coat. On the pavement were standing two exceedingly small and ragged boys, and one of them, whose hair drooped over his eyes like a Skye terrier, seeing this resplendent exit, put his thumbs in the place where the armholes of his waistcoat would have been had the merry little devil had one, and with his nose in the air, said very loud to the other, "Whar are we doining to-night, Bill?"

The second made one laugh at first, but think afterwards, and it was thus: At the corner of Dover Street there lay a heap of mud and street sweepings, and as we drew up just opposite, blocked by an opposing tide of carriages in Piccadilly, a small, very dapper little gentleman in dress-clothes stepped into this muck-heap, with the result that one of his dress-pumps was drawn off his unfortunate foot with a "cloop," and stuck there. On to it there swooped a vulture of the highway, a lad of about twenty, who picked it out and made off down Dover Street with it. Now what good was one shoe to him? Would he not have done better to have wiped it carefully on his coat, which really could not have deteriorated farther, and chanced a tip from the dapper little gentleman; or was the instinct of stealing so strong that he never stopped to think? One would have supposed that a tip was a practical certainty.

The third was merely a matter for tears: I walked back from dinner, and my way lay up Piccadilly again. At a populous corner stood a very stout elderly woman dressed in violent and ridiculous colors. Her hair was golden, her eyebrows broad, thick, and vilely drawn, her cheeks so burned with rouge that one blushed. She addressed every passer-by in endearing terms. None regarded her. That was quite right: but the pity of her standing there on this squally night, with her horrid mission, and her total ill-success! Yes, it is difficult to thank God for that.

After five days I got deliverance from this entrancing slavery, and, like a cork from a bottle, flew to Grindelwald. The journey I remember as a dreadful dream, for I had a cold so bad that all sense of taste, smell, and most of hearing and feeling had passed from me, and I seemed to myself to be a rough deal-board being sent by train, and turned out into a drizzling night at what appeared to be mere cow-sheds, simply for the purpose of declaring that I had no spirit or lace about me. Spirit! The Queen of Sheba when she had seen Solomon in all his glory had more. As to lace, that diaphanous material seriously occupied my waiting dreams as we mounted the Jura. Was there anything in my face that suggested lace, I wondered, or did lace frilling peep out from my trousers? Anyhow, why lace? I was willing, almost anxious, to declare five hundred cigarettes, but nobody suggested such a thing. Then—

The new heaven and the new earth—an earth covered with powdery snow, thatched here and there by pines and reaching beyond all power of thought, by glacier and snow-field, and rocks too steep for the settling of the snow into the pinnacles of the Eiger and the Wetterhorn. From ridge to ridge the eye followed, lost in an amazement of the wonder of the earth and the greatness of its design. Austere and silent rose the virgin snows, and more silent, growing from words to exclamation, and from exclamation to silence itself, one's wonder. There, out of the void and formless pulp which was once the world, they were set, barren, fruitless, useless, and that is the wonder of them and their glory. Centuries have been as but seconds in the life of an idle man in the forming of them, for centuries that have been to them but the winking of an eye they have raised their immemorial crests, and the centuries shall be as the sea sand before they crumble. O ye mountains and hills, praise ye the Lord! Every day you praise Him.

Now this Book of Months is almost certainly worth nothing, anyhow, and I take this opportunity to inform critics so, in case (as is not likely) they have the slightest doubt about it. But if they and I are wrong, it will be because we have both overlooked the possible value of a true document,—true, that is, as far as I personally am able to make it true. Therefore I will state at once that for the next four weeks the childish pursuit of making correct turns and edges on the ice occupied me much more, except on a few occasions, than all the mountains, all the heavenly blue of the sky, or the divine radiance of the marching sun. Instead of attending to these big things, I got up, day after day, full of anxious thoughts, and had I been assured that these anxieties would never trouble me again on condition that I never again looked at the Eiger, or the scarlet finger of the Finster-Aarhorn that caught the sunset long after the sun had set to us, I would quite certainly have closed with the bargain. Those who do not know what a clean outside-back-counter means can have no voice in this affair, since they are not acquainted with the subject matter of it. But those who do will, I believe, extend to me their pitying sympathy. For no known reason, I desired to make these and other turns, which, when made, are of no conceivable use to anybody; and full of anxious thoughts, which violent collisions with the elusive material on which I performed fully justified, I proceeded to devote the hours of light to these utterly indefensible pursuits. I wished to execute a movement in which the skate left a certain mark on the ice, and no other (I am alluding, of course, to involuntary change of edge), and to make this and other marks on the ice (continuous loops, bracket eight, and a few more, for the sake of the curious) I signed a bond, so to speak, for three weeks of my short mortal life. All morning, that is to say, I struggled with these evanescent scratchings, ate a hurried lunch, and struggled again till it was dark. Really, it is very odd: and I hope to do the same next winter. I am perfectly aware that I could have spent my time much better, or, at any rate, tried to; I knew that at the time. But I did not care then. And I do not care now.

There were sane intervals, however. For instance, one Saturday evening it began to snow. Now I see nothing conceivably wrong in skating on Sunday, and am unable to comprehend the position of those who do. But it is certainly wrong to skate on Sunday when it will spoil the ice on Monday, and on this particular Sunday I went to church in the morning, and afterwards took a sandwich lunch from the hotel, and tying

it securely to a toboggan, sat myself insecurely on the toboggan, and went alone (that was an essential part of the plan) down past the church and through the village, through fields of white snow that spouted as the toboggan met them, even as the spray spouts round the bows of a liner. In nothing does a man (unless he be M. Santos-Dumont) come nearer to the ecstasy of flight,—some low skimming flight that follows the contours of the ground as swallows when storm is imminent. So went I down an ever-steepening mile, finishing at the end just by the side of the bridge that crosses the stream from the glacier. The frost had been severe for the last week, and this was nearly covered over with lids of ice that grew out from backwaters and extended almost from bank to bank. Wherever a stone stood in mid-current, there below it had the ice first gathered, lengthening itself spearwise down stream till the cold feeler reached another stone. Then, already half established, it had broadened and broadened till a third anchorage met it. But in certain swift places the water still ran unchecked, its flow, of course, greatly diminished with the lesser melting of the glacier in winter, but still busy, busy, seeking the sea with steadfast purpose. Round the bank and in the bed itself of the stream grew an immense company of alders covered completely with the inimitable confectionery of frost, a forest of spiked branches.

Then mounting again, I passed up a long gentle slope by a few outlying chalets, and having come out of the shadow of the Eiger, sat down to lunch. The air was utterly windless, the frost so keen that not a flake of snow clung to my clothes, yet through the glory of that pellucid air the sun struck so hot that a coat was altogether a superfluity. Eastwards the Wetterhorn rose in glacier and snow-field, and its superb and patient beauty, seeming like a noble woman waiting for the man she loves, struck me with a pang of delight. Thereafter, still climbing, I entered the pine woods below the Scheidegg, where the sun drew out a thousand resinous smells, as if odorous summer instead of midwinter held sway.

Alone! I had intended to be alone, but never was a man in more delectable company. Trees, glimpses of the gorgeous dome above them, drifts of driven snow, were my companions, while, if one grew overbold, there was the Eiger to hazard a respectable remark to, and the sun itself to be worshipped. On no other day, indeed, that I can remember have I felt so strong a sympathy with Parsees. High it swung, benignant, and all for the fir-trees and me. Then rising higher, I came to the edge of the wood and the beginning of the snow-fields again, and resting for a moment, did an exceedingly childish thing. Underneath a piece of spreading root of the last tree of that heavenly wood I hid a stick of chocolate, a Bryant & May's match-box containing an English sixpence, two nickel coins of ten centimes, a short piece of pencil, and four matches. These I dedicate to the wayfarer, should he need a light. Also I should ask him to write his name with the pencil and put it in the match-box, and, if he feels as foolish as I, add some small object of no value. Next year I will go there again and make some further striking addition to the *cache*. The tree is a large one on the left of the path, and quite notably the last in the wood. My initials are rudely carved in the piece of root directly above the *cache*.

Now where shall we look for the source of this instructive piece of foolishness? This is not a merely egotistic query, for I am perfectly certain that many sober and mature citizens like myself will feel sympathy with, though they may not practise, such *caches* as I made on the slope of the Scheidegg. Is it that we still preserve, even in this well-civilized and *restauranted* century, some cell in our brain which even now obeys the prudent instincts of some remote cave-dwelling ancestor, and do we now in play imitate his serious precautions? Or—and I like to think this better—have we still, in spite of our sober maturity, some remnants of a heritage more priceless than cave-dwelling ancestors, namely, the lingering joys of our own childhood?

Here I feel that I may be treading on alien ground—the *cache* habit I know is not rare, but I have not at present met any one who "talks French," of which the manner is as follows: Every one, I suppose, has moments of sheer physical enjoyment. I need mention two only: the one getting into bed with legs curled up, ere yet the freezing sheets can be encountered; the other, when very cold, getting into a hot bath—a bath, that is to say, so hot that it is on the border between bliss and anguish, when, in fact, to move is to scream. On those occasions—for loneliness is essential—I "talk French." That is to say, streams of gibberish flow in a hushed voice from my lips, in the form of dialogue, and any one present would hear remarkable things of this nature:

(With deep anxiety.) "Lesti icibon?"

(Reassuringly.) "Mimi molat isto pacher."

(Reassured.) "Kaparando quilli. Amatinat sholst."

I blush to reproduce more. But I long to know if anybody else "talks French." I want to talk it with somebody and compare vocabularies.

A long colloquy was held that afternoon sitting in the sun, after the *cache* was made, and then towards sunset I started to go back through the darkling wood, with dim but welcome thoughts of bears and brigands lying in wait on each side the path. One corner, I remember, I particularly feared, for low-growing bushes bordering the path might conceal almost anything. That I had good reason to fear it I soon found out, though I had feared it for wrong reasons, for my toboggan threw me with reckless gayety into the middle of them. In fact, for the first half-mile the track was abominable; bare stones and tree roots alternated with passages of breathless rapidity; never have I experienced a quicker succession of violences. But as the wood grew less dense the texture of the going became more uniform, and for the last mile I hissed downward with ever-increasing speed and smoothness, through the pallor of the snow-bright dusk. Large stars beamed luminous overhead, and from scattered cottages sprang the twinkling lights, showing that all were home from the frozen fields and safe within walls. Then, wonder of wonders, the full moon rose over the top of the Wetterhorn with a light as clear as running water and as soft as sleep, making complete with its perfection this perfect day.

The other interlude from this rage of tracing useless marks on the ice was a funeral. The funeral was that of Slam's kitten, though the kitten was not really Slam's at all. But to go back to the beginning of things, it is necessary that you should know who Slam was. Her real name was Evelyn Helen Anastasia, and goodness knows what; but what matters more is that she was a child six years and one month old, freckle-faced, snub-nosed, devoted to animals and the outside edge, and by far the most popular person in the hotel. It was the outside edge originally that had brought us together, for she had told me that I didn't do it properly, and very kindly showing me how, she had fallen heavily on the ice. As I picked her up, she said:

"You see what I mean, don't you? Let me show you again!"

Under her tuition I improved, and, what was more important, our friendship ripened. I am proud to think that I was the *only* person who ever knew about the kitten, which had followed Slam—I am sure I don't wonder—with pitiful mewings down from the Happy Valley, an ownerless beast that would have touched hearts more hard than Slam's. She kept it in a cupboard in her room and fed it with cake. This I learned on the second day of the kitten's imprisonment. That evening it died. I will pass over Slam's lamentations, and the wealth of falsehood by which I convinced her that a diet of cake in an airless cupboard was the only thing that could have saved it. Then, as it was dead, it had to be buried, still without the cognizance of Slam's nurse, whom I feared.

"I don't want a lot of people," said Slam. "It would be much nicer if we buried her quietly. So when nurse is at dinner I will bring her down in my hat."

Meantime I had procured a card-board box, and from Slam's hat the kitten passed into the coffin. The coffin was put on our toboggan, for Slam and I were going to lunch out, and the catafalque left the hotel.

Slam put her hand into mine—a compliment that only children can pay—and we debated about the cemetery. I personally inclined to the river-bed at the bottom of the valley, but Slam would have none of it.

"Up above," she said, "it is cleaner," and though it was all pretty clean, I assented. "Then we can eat our lunch, and toboggan down," she added. This was common-sense; to walk up after the funeral would be depressing; we might recover our brightness of spirit if we kept the tobogganing till afterwards. On the way up—through the village, that is, and towards the glacier—the talk turned on serious subjects. Did I believe that animals would have a resurrection? Why did God make them if they were just to die and be finished? Again, if they were to have a resurrection, was it not proper to bury them properly? Thus we arrived at the cemetery. Four pine-trees stood there, with snow drifted high between them; the benediction of the sun hallowed the place; never had any one a more virgin tomb. We scooped out the snow down to soil level, and dropped the box into the excavation. Then with pious hands we covered it up, and on the top of the cairn planted sprigs taken from the pines.

"And now I will say my prayers."

She knelt down in the snow, and even with the fear of her nurse before my eyes, I could say nothing to dissuade her, but knelt by her and uncovered my head. And then Slam said the Lord's Prayer, and asked that she might be a good girl always, and prayed that God might bless her father and mother and nurse and me.

Do you know what it is to be remembered in the prayer of a child? "And the kitten," she added. And I said, "Amen."

So there the kitten lies, between the sky and the beautiful snow-clad earth. Pines whisper about it, and the Wetterhorn and Eiger look on its resting-place. And Slam said her prayers there.

What follows? As far as I am concerned, this: I believe that the "whole creation groaneth and travaileth in pain together," and that there will be, one day, a great healing and comforting. And when, on that day, mysteriously, unintelligibly, that little body, which meantime has fed the grasses and the Alpine flowers of the place, comes to itself and is alive again, a happy little kitten will stand between those four pine-trees, lost no longer. And Slam and I will recognize it. And the kitten—who knows?—will recognize us, and Slam will say again, in the phrase that is so often on her lips,

"Oh, it is nice!"

To be Continued.

Correspondence

GERMANY AND THE UNITED STATES

December 15, 1902.

To the Editor of Harper's Weekly:

SIR,—Some time ago there came under my observation an article—said to be from the pen of a well-known military authority—in which the possibility of a war between Germany and the United States was demonstrated.

In the editorial section of HARPER'S WEEKLY of September 27, 1902, reference is made to the unexpected progress towards the completion of the German naval programme formulated in 1898 and amended two years later. According to Lieutenant Louis M. Moulton, who was deputed by the Navy Department to study the subject, the German naval programme may be completed in 1908, if not a year or more earlier.

The editorial says that within six years Germany will have at her disposal, in home waters for a sudden aggressive operation, about ninety modern war-ships—a larger naval force than could be quickly gathered by France or Great Britain, whose navies, in consequence of their extensive colonies, are scattered over all the parts of the globe. The opinion was expressed that, *a fortiori*, the German Empire could direct against any point on the Atlantic coast of North or South America a fleet much superior to that of the United States, with our existing resources. And the portentous query followed, "What would become of our Monroe doctrine?"

Mr. de Bloch, in his work on modern warfare, to which a reference is made, states that in the war of 1870–1, between France and Germany, the command of the sea was useless to France. I perfectly agree with him. The coast of the North Sea is not an inviting place for an attacking navy; and the Germany of those days had hardly any navy worth mentioning. But let us presume that the Germany of 1870 had been in possession of her navy of to-day. What would have been the result for France?

I knew the first ships of Germany in the days of the war of Schleswig-Holstein. I recollect the sale at auction by Fischer of the so-called German fleet. I knew the gunboats *Nixe* and *Salamander* of those days. What was Germany then?

A conglomerate of principalities, with Prussia as the leading star and Austria as a dead-weight upon the German Bund. British, French, and Austrian influence and corruption did their best to keep the different parts from uniting. A German flag was hardly known on the seas in those days.

The flags of the Hansa States floated from the tops of many fine sailing-vessels — but they were the flags of the Hansa States alone. I remember the unkind remarks we made upon the "three houses" in the flag of Hamburg. To-day the ships belonging to Hamburg are the finest in the world; every seaman stares with wonder and deep respect at those ocean greyhounds.

Everything in Germany has changed since the year of 1871—since Napoleon III. played the rôle of the delivering prince in the fairy-tale of "Dornröschen" in the enchanted castle. But there was the difference that it was not the Princess Dornröschen he delivered.

His emprise won but a thorny rose for him, his dynasty, and France. It brought back to Germany Alsatia and Lorraine; it cemented the union of the German race; and it resulted in the German Empire. With the Empire came progress. And with all the reins of government in the hands of a powerful, self-relying, intelligent ruler, the fine qualities, the very genius, of the German nation, that had been lying dormant for so many years, broke forth and made more rapid strides than would have been taken by a race in any other country. Like a matured plant which awaited only the beneficial rays of sunshine to open its splendid, gorgeous flowers, Germany has developed its immense capacity of intelligence, its knowledge of science, its industry, and its self-reliance.

That is what makes the foreign observer uneasy, meditative, and often suspicious. The progress was, and is, too sudden.

We Americans are surely a progressive people; but we mature and develop little by little. Only during the last decade have we marched at a rapid pace. No doubt, with our natural resources and exceptional facilities, we will always be abreast of the most progressive nations in war and peace. I remember well, in 1854, when I, who had seen the finest capitals of Europe, was first at Washington with my captain, what an astonishing, bewildering, incomprehensible concern it was. To-day I consider Washington the best-appointed and handsomest capital of the world. Such is American progress.

In Germany it was existent for centuries, but dormant. It is, therefore, natural that Germany, now awake and progressive in industry and commerce and well prepared for any controversy on land, must be heedful that she have a strong and efficient navy. In many respects she has advantages over France, England, and other sea powers. All the costly experimenting done in the naval departments of other nations at such enormous expense has been saved to her. She can use the costly experiments of others for her own benefit.

Mr. de Bloch holds to the opinion that a strong navy would be superfluous to Germany in the event of a war between the Triple Alliance and the French-Russian League.

In my opinion, there is very little danger from that side. France would not dare venture on attack single-handed; and there is no reason to believe that Russia would join in such undertaking. History has proved that Russia has been Germany's best, her only true, friend in the terrible struggles that endured from the last century into the beginning of this; and Russia has proved friendly up to this very day. Russia has nothing to gain, and can rest satisfied to have in Germany a trusty, peaceful neighbor on her extensive boundary, while all her energies are concentrated in the endeavor to gain a strong footing on the Pacific and to extend her influence to Asia. Russia knows well that the march to those regions is over Constantinople. The France of to-day is not the France of 1870. On friendly terms again with Italy, she wants more extensive possessions in Africa. She must have and will have them, as Italy should have Tripolis in the spread of her domain. It is but natural that the coast of Africa bordering the Mediterranean Sea should belong to those two countries. Since the time of the first Napoleon, Great Britain has dominated the Mediterranean with her powerful fleet; she has there her strongholds Malta and Gibraltar; and she has taken, without asking leave, Egypt.

There is no reason to suppose that the Triple Alliance and the Franco-Russian League will clash.

No German fleet will ever come to the shores of the great republic of North America with intent other than friendly, and to cement the feelings of mutual respect and amity between two nations that are bound together by many ties.

I am, sir,

E. H. P.

THE CANTEEN QUESTION

HARTWICK SEMINARY, OTSEGO CO., N. Y.,
December 19, 1902.

To the Editor of Harper's Weekly:

SIR,—(1) I have read your paper for a number of years, and am at a loss to understand how you can advocate the return of the canteen. (2) Considered from a business stand-point, almost without exception the large firms not only do not provide a place for their employees to get intoxicating drinks, but, on the contrary, other things being equal, they drop the drinking man from the pay-roll. Why should we, the people, do what good business policy opposes? Considered from a practical stand-point, the average individual will buy more candy, if he sees it every day, than if he does not so; if a soldier has it under his nose constantly, he will use more liquor than if there is no liquor at the canteen; or if the reverse is true, his commander is incompetent, and ought to be removed. It is manifest that the man who does not like or use either candy or whiskey will not be injured by the failure to have liquor in the barracks. (3) Considered from a moral stand-point, we as a nation cannot be *particeps criminis* in such a business and expect to escape the consequences. The products of the traffic in liquor are visible at every drinking-place of our country. Beer-bloated, dull-faced, broken-down men, old before their day, are the regular return of every drinking-place. Of two evils, take neither. The taking of grog is an evil, whether taken in a canteen or a low-down saloon. (4) We cannot trust our safety in war or peace to drinking men. There is no certainty as to what idea may get into the head of a drinking man.

Very truly yours,

J. G. TRAVER.

[(1) The WEEKLY advocates the reinstatement of the canteen solely on the ground that there is less drunkenness with the canteen than without. (2) There is little likeness between the relation of the government to the soldiers and that of an ordinary employer to his employees; yet such a concern as the Colorado Fuel and Iron Company, employing miners and other workmen in isolated places, has found it expedient in some cases as a temperance measure to start clubs, where its men can buy drinks. (3) The government now derives a very large revenue from the liquor business. (4) If we cannot trust our safety to drinking men we are in a bad way. There are few teetotallers among the men who rule the country. We doubt if there is one in the President's cabinet or on the bench of the Supreme Court.—EDITOR.]

"THE QUALITY"

To the Editor of Harper's Weekly:

SIR,—The ground for the personal attack upon me by the *Saturday Review*, mentioned by your correspondent last week, appears to lie in a difference of opinion between certain masters of English literature and that paper, concerning the proper employment of the word, "quality." Personally I prefer to accept the verdict of the masters.

If it were true that a flagrant misuse of the English language stamps my work as "Kitchen" literature, how could any discussion or review of any book of mine have a place in a gentleman's periodical?

For the doubtful honor of a review in their paper I am proportionally their debtor; the attack upon myself I can only deplore in the name of that common decency which a gentleman instinctively attributes even to those with whom he differs in opinion.

I am, sir, yours,

ROBERT W. CHAMBERS.

Woodrow Wilson's History of the American People

PRESIDENT WILSON has written a literary masterpiece, an artistic and enchanting story of the American people. It is marked by the qualities which have made the author one of the most attractive, as well as one of the most satisfying of our writers on American history and on government. It is, indeed, not too much to say, now that Mr. John Fiske is no more, that President Wilson stands easily first as a broad and picturesque painter of our historical, political, and social life.

In the five sumptuous and richly illustrated volumes published by Harper & Brothers, and entitled, *A History of the American People*, President Wilson has made for popular reading a complete account of the beginnings of civilization on this continent, the rise and progress of our liberty and our self-government, following the history from the earliest day to the election of 1900. It is the only complete account contained in a single work. Its scholarship is accurate. The judgment which has selected the large personalities, and the large events for illustration of the theme is sound and unerring. The literary style is charming. The work is for the pleasure of all, scholar as well as general reader. It holds one with its intense interest and its literary seductiveness. Moreover, it is a marvel of compression. It is, of course, impossible to describe epochs in epigrams, but Doctor Wilson comes very near doing so when in summing up the characteristics of the early seventeenth century when the English began to swarm hither, he writes:

"It was to be an age of profound constitutional change, deeply significant for all the English world; and the colonies in America, notwithstanding their separate life and the breadth of the sea, were to feel all the deep stir of the fateful business. The revolution wrought at home might in crossing to them suffer a certain sea-change, but it would not lose its use or its strong flavor of principle."

"Its strong flavor of principle" is a phrase noteworthy of the men who brought the petition of rights, and the *habeas corpus* act out of the Stuart tyranny, and worthy to describe the heart and soul of the revolution for individual liberty, which ended only with the granting of our independence and the establishment of a responsible government in England.

In another chapter, that on "The War for Independence," Doctor Wilson gives in a few strong, illuminating, and brilliant touches the philosophy of the growth of the reverence of Washington's countrymen for the leader whom Congress had placed at the head of the army, and of the development of Washington's respect for the character of his countrymen.

"They had chosen better than they knew," he writes, speaking of the selection of Washington for the command, and his assumption of it at Cambridge. Then he continues:

"It was no small matter to have so noticeable a man of honor and breeding at the head of an army whose enemies deemed it a mere peasant mob and rowdy assemblage of rebels. Washington himself, with his notions of authority, his pride of breeding, his schooling in conduct and privilege, was far from pleased till he began to see below the surface, with the disorderly army he found of uncouth, intractable plough-boys and farmers, one esteeming himself as good as another, with free and easy manners, and a singular, half-indifferent insolence against authority or discipline."

In half a page he sets before the reader the contemptuous expectation of Europe that our confederation would fall to pieces; in a quarter of a page he deftly shows the timidity with which the Constitutional Convention began its task.

One of the features of the work which makes it of especial value to the general reader who is desirous of knowing the history of his country without the labor of reading a score or more of volumes is the clearness with which is described the popular movements against George III., both here and in England, and that the same immemorial principles of civil liberty were stirring men on both sides of the ocean.

Those who desire both to read a comprehensive view of the history of the American people, and who wish to experience the delight which admirable literary form can lend to such reading, will find all they are looking for in President Wilson's *History of the American People*. The spirit of the author is that of joy in his subject and in the achievements of the country. There can be no better illustration of these than in the closing words of the fifth volume, the history ending with the second election of Mr. McKinley.

"Her voice," Doctor Wilson writes, speaking of the part played by the nation in the war in China—"her voice told for peace, conciliation, justice, and yet for a firm indication of sovereign rights, at every turn of the difficult business; her troops were among the first to withdraw to the Philippines when their presence became unnecessary; the world noted a calm poise of judgment, a steady confidence as if of conscious power in the utterances of the American Secretary of State; the new functions of America in the East were plain enough for all to see. . . Sections began to draw together with a new understanding of one another. Parties were turning to the new days to come and to the common efforts of peace."

An Unrecognized Genius

WE have lately heard, by way of the Boston Symphony Orchestra and the Kneisel Quartet, musical evidence of a sort to confirm us in our belief that that most misunderstood and maligned of geniuses, Franz Liszt, is the true parent and fountain-head of modern music—we mean, of course, the music of to-day: of contemporary Russia and France and Germany. For our part, we cannot listen to so nobly revealing a performance of Liszt's "Tasso" as the Boston Symphony Orchestra gave us at its last concert, or to the "Mazeppa," or the "Dante," or the "Faust Symphony," without being strengthened in an unalterable conviction that had Liszt not lived and produced his tremendous tone-poems, Wagner, and Tschaikowsky, and Borodine, and César Franck, and Richard Strauss would have been other than they were and are. Where does modern music get its peculiar chromatic poignancy, its feeling for dramatic characterization, its subtle fluidity of form—where but from Liszt, the Liszt of the symphonic poems, whom Wagner could acclaim, in a burst of pardonable hyperbole, as "the greatest musician of all times"? Such a composer as Brahms is, we concede at once, beyond the reach of such a relation; but then Brahms was not in the least involved in the on-sweeping current of musical modernity—he was merely a belated classicist,—withal a full-blooded one. It has been observed how rich in quotations "Hamlet" is. In the same sense it may be noted how full of Wagnerisms—of "Tristan"—Liszt's "Tasso" is: "Tristan" having been completed in 1859, "Tasso" in 1854. And as Wagner drew inspiration from the welling fountain of Liszt's genius, so also did tone-poets of lesser stature, from Tschaikowsky to Richard Strauss. How remarkably Liszt-like is—for an immediate example—that violin sonata of Richard Strauss performed here recently by Mr. Kneisel and Mr. Lamond! And let it be noted as a curious fact that this sonata is an early one, composed before Strauss had come so completely under the sway of Liszt's magnetic influence as he now is; yet it is incontrovertible that Strauss would have conceived the music very differently had Franz Liszt never lived. In its idiom, in its thought, in its emotion, it is only half Strauss; and the other half is largely Liszt.

The Law of Mustachios

"WHEN the Emperor sneezes, the people require handkerchiefs."

This axiom may seem irrelevant to the Venezuelan situation: it requires earnest reflection to connect the Imperial mailed fist with the subjective handkerchief.

Another interesting law has recently been discovered: that no nation which curls up its mustachios can become a world power.

That the tonsorial curling-tongs should play so material a rôle in the destiny of peoples is nothing new; a female barber curled up Samson.

Moreover, that this law concerning crimped mustachios exists, is proven by history: frizzled France fell before shampooless Mexico; curled and pomaded Austria tumbled before the rough-bearded Teuton; the waxed and needle-pointed whiskers of the Third Empire drooped and fell out at Sedan; and gallant Don Whiskerandos gave one final flourish to the twisted adornments of his upper lip ere the furnace-blast of Santiago de Cuba shrivelled the last hair to the follicle.

"When the Sultan itches, all Asia scratches. When the Emperor of—" But why, *why* continue? Alas! that to-day the Fatherland should be but a bristling thicket of up-curled, fan-spread mustachios! *Aut scissors aut nullus!*

Startled patriots like the *Staats-Zeitung* may argue that it is not yet too late; that the damage is not yet irreparable; that any style of whiskers may be changed at the nearest barbers for the modest consideration of twenty pfennigs; that, in the awful and lurid light which the discovery of the Law of Mustachios has shed upon the downfall of nations, the frizzled Fatherland may yet be saved through the humble office of a pair of scissors.

No!

Danger lies not in the *coup de fer;* Dominion abhors not the whisker, *per se;* Destiny hovers not in the pomatum pot. But remorseless Truth, with inflexible fixidity, brands forever the nation capable of tonsorial toadyism; and Justice snaps the padlock on its padded cell.

Shade of Barbarossa! Weirds of the shaggy hordes that hurled back Rome! Ghosts of the un-shorn, quaffing forever in Valhalla! Only a Belasco can record the tragedy of your despair; only a Frohman stage it; only a Grau can contribute contraltos for the lament; only a Sousa conduct the obsequies!

Finance

WITH apprehension over serious money stringency before the end of the year allayed by the formation of the $50,000,000 money pool, and the clearing up of the ominous Venezuela clouds by the consent of the powers to submit the matters at issue to arbitration, there was a rebound in the securities-

markets which was altogether natural. Sentiment improved decidedly. Pessimism gave place to hopefulness. The recoveries in prices were rapid and in many cases substantial. Money became easier, and it seemed to be assumed by nearly everybody in Wall Street that the liquidation of highly speculative accounts had been so thorough that, with the return of currency from the interior to this centre and the probable increase in the exports of agricultural products, a January rise was certain to come. This led to a very fair volume of buying orders. On the rise that followed, those who had bought at the low prices reached during the slump promptly converted their "paper profits" into hard cash, and the rally was checked. At no time was there any foolhardy attempt to "discount" the "reinvestment demand" that, according to tradition, Wall Street looks for, after the New-Year, or the much-heralded January bull movement. It was as well, for the condition of the money-market, even if it did not have the menace of the semi-panicky days of a fortnight ago, by no means justified rash operations for the rise. They are wise pools that have profited by the lesson of the December slump in prices. Whatever they may do later, their disastrous experiences are too recent to have been forgotten. After the rally, and the profit-taking, the market became dull and, in the Street phrase, inclined to sag.

That prices recently fell in some instances below the level of actual value, may be admitted, though it cannot be denied, on the other hand, that there are stocks which even at the present figures may be regarded as unduly high. The market, on the whole, is in a far stronger position than in many months. Considering the fact that the retrograde movement in trade and business generally does not seem to have set in, at any rate, not in real earnest, it is altogether reasonable to believe that the general prosperity will continue for at least another year. It is not easy to see how railroad earnings are going to decrease, certainly, not the gross earnings. The net earnings present adverse possibilities owing to the increased cost of operation, by reason of advances in wages, materials, etc., but railroad managers are counting on offsetting such items by means of advances in freight rates, which should enable net profits to keep up proportionately. Our foreign trade should presently improve, by increasing our agricultural exports at the same time that, according to current indications, imports should fall off. Our bankers have been paying off our indebtedness to Europe, and the reduction in the volume of such obligations has been considerable during the past two months. With the return of currency to New York there should be easier money, but it is not certain whether there will be enough of it to permit of active speculation in stocks if Europe demands to be paid. It simply means that we have yet to see whether the foreigners are to be paid in gold or in corn. With the collapse of the illogical and disturbing bull speculation in corn, which immediately lowered the price of the cereal, increasing exports must be expected. Cotton exports are already increasing.

It will be seen that, taking it all in all, the prospect is hopeful rather than the reverse. There are still syndicates with huge blocks of securities yet unsold, and very little demand for their goods. But there is also a very rich public, not speculating to-day, but always a great potential stock gambler. At the moment, it would seem as if after a period of hesitancy and the usual "backing and filling" of a market governed largely by the operations of professional traders, the movement of prices would be upward rather than down. The speculative community believes that conservatism is the best policy until after the turn of the year.

Important Announcement

WITH the current January Number the NORTH AMERICAN REVIEW, for the first time in its history, begins the serial publication of a great work of fiction,

THE AMBASSADORS

By Henry James

This work will run through the year, and the REVIEW will be enlarged to provide for its publication without encroaching upon the pages now filled by its authoritative articles upon public affairs and current literature. It is printed rather as literature than as a story, although it is a work of absorbing interest.

The second of a series of three articles by MARK TWAIN on *Christian Science* also appears in this Number.

THE NORTH AMERICAN REVIEW
FRANKLIN SQUARE, NEW YORK

TWO BOOKS EVERY ONE IS READING

The Adventures of M. d'Haricot

BY J. STORER CLOUSTON

A book of rollicking fun—a kind of new "Innocents Abroad," with a Frenchman trying to be an Englishman as its gentle hero. M. d'Haricot's readiness for adventure and his susceptibility to feminine charms involve him in many entertaining situations. His wit is nimble and his self-possession never fails him in the most embarrassing crisis. It is the funniest book published in years. A new departure in humor. Funny cuts by Levering.

Ornamented Cloth, $1.50

The Wooing of Wistaria

BY ONOTO WATANNA

Author of "A Japanese Nightingale"

A love story of Japan, told with all the poetic charm and feeling that made "A Japanese Nightingale" one of the most popular novels of recent fiction. It is most artistically made, with frontispiece portrait of author in tint, etc.

The Reflections of Ambrosine

By ELINOR GLYN

Author of "The Visits of Elizabeth"

A new love story, embodying all the wit, humor, and go of "The Visits of Elizabeth" and something more besides. It is a brilliant social satire, and a genuinely good love story, with a heroine who at once comes to the front of the story and remains there until the last page is reached.

THE NEW YORK PUBLIC LIBRARY—ASTOR, TILDEN, AND LENOX FOUNDATIONS

Few people in the country have yet fully realized the size and beauty of the new Public Library now in course of construction in the plot of land between Fortieth and Forty-second streets and Fifth Avenue, where the old Reservoir used to stand. The building alone will cost between four and five million dollars, and will contain all the valuable collections of the Astor and Lenox libraries and the bequests left by Samuel J. Tilden. It is probable that the building will be opened and ready for use in 1905-6

The New Niagara

See page 11

THE development of electric power at Niagara Falls is already an old story, quite familiar to every intelligent American. But it is hardly realized how quickly the earlier work of the last decade is being carried to a magnitude that begins to promise rich realization of the hope that in the great cataract might be found an illimitable supply of cheap power for every industry that chooses to locate within ear-shot of the booming gorge. The splendid enterprise developed by such well-known leaders as E. D. Adams, D. O. Mills, J. P. Morgan, W. B. Rankine, John Jacob Astor, E. A. Wickes, and L. B. Stillwell, on liberal lines, is growing at this moment faster than ever under the sovereign compulsion of a demand for the current derived from the energy of the waterfall, whose beauty as a spectacle may sometime be of less importance to us than its ability to drive our machinery, light our lamps, and keep us warm. As far back as the first half of 1901 the power-plant of the Niagara Falls Power Company, above the upper rapids, was delivering current equal to a consumption of 800 tons of coal a day, and all the plants in the vicinity now are trying hard to double that output. Yet Niagara is still far from developing steadily 100,000 horse-power electrically, and all the

(Continued from page 31.)

present plans in contemplation keep within range of 500,000 horse-power; but the mighty torrent, even at its great leap, is good for far more than ten times that; and on its way down the cañon of the Niagara River it could repeat the performance without the tired feeling that distresses the average Yankee every time he exerts himself slightly.

The utilization of Niagara below the Falls is in reality something to be discouraged, from the æsthetic stand-point, as it leads to the placing of buildings and plant at some of the most picturesque spots in the gorge. The utilization above the Falls, a mile or two back, offends no one's eye, and cannot be detected save by the white foaming tide that shoots out from the portal of the long tunnel just under the first bridge. On both sides of the chasm this scientific development is going on, and unless the reports of the gaugers are astray, it will be very long before any one will note any lessening of the green sheet of water that curves over the lip of the Horseshoe, because of the diversion of a portion of the falling tidal wave. Upon the American side, the first power-house contains 50,000 horse-power of water-wheels and electrical generators that they drive, all busy now and overloaded. Across the intake canal, upon which that handsome power-house stands, a *vis-à-vis* has lately gone up, and six new electrical generating units will be in operation there soon after the New-Year. The second plant is also good for 50,000 horse-power, and the tunnel to carry off the waste water of the pair was successfully tested lately as to its ability to get rid of the volume thus represented by a stream from which a hundred thousand horse-power had been extracted by the thumb-screw methods of modern electro-mechanical ingenuity. All this current is in brisk demand. It is being availed of freely in Buffalo, and places thirty and forty miles away are glad to secure some of it, for the Power Company is selling current at Niagara at twenty dollars a year for twenty-four-hour power, supplied every day in the year, which is not half what the best-known economy by steam can do. In New York city there is many a man whose steam-power is costing him from sixty to a hundred dollars a year per horse-power, even for ten-hour power, so that it would not be surprising if some folks moved to the Falls, as others have done from Pittsburg, the very home of cheap fuel. The alternative is to bring Niagara to the door of the manufacturers needing power; and that process is also working its way.

Over on the Canadian shore, in the vicinity of Victoria Park and the Dufferin Islands, a kindred development has begun, and there the same general principles and methods have again been adopted—an intake canal, power-houses on each side of it, a wheel-pit with water-wheels at the bottom attached to the generating dynamos at the top, and a waste-water canal emptying somewhere near the level of the river in the gorge. The machinery to be placed in the sub-cellar of the wheel-pit and on the floor at the surface will give the equivalent of 50,000 horse-power; but there is room for a total output capacity of 100,000 horse-power, which Canada will try to grow up to in the way of consumption. A very interesting feature of the plant in the Dominion is that the first three dynamos to go into it will be the biggest and best that the world knows. Those on the American side are equal to five or six thousand horse-power each. Those on the Canadian side will each be able to deliver 10,000 horse-power. The earlier machines, moreover, are polyphase of low voltage—needing step-up "transformers" to raise their 2200 volts to the 11,000 or 22,000 required in the transmission to Buffalo. The big latest types are to generate current at a potential right off of 12,000 volts, so that the transformers will virtually be unnecessary, except for extreme long-distance work. It is some satisfaction to know, however, that these colossi are to be built in New York State, and that while we still look quite naturally to Switzerland for pointers on water-wheel work, American engineers are responsible for design, plan, and construction of the whole

Type of Modern Gasoline Motor-Truck

THE substitution of mechanical traction for horse-drawn vehicles is being made gradually by many of the most prominent firms in New York. Electricity has been found to fulfil the requirements more completely than other forms of motive power on account of its noiselessness and simplicity of application. In several cases, however, the gasoline motor has been found useful to department stores which make large out-of-town deliveries. For these conditions, the need of a quick and easily procurable means of recharging forbids the use of the electric battery, for the present, at least. By rough calculation, one of these motor-trucks will do the work of four horses and two wagons in the same period of time. During the heavy snowstorms of the winter the motors have been able to plough through deep drifts without difficulty, the only disadvantage being a slight tendency to side-slip.

plant. When they graduate from Niagara they move down to New York city, to deal with gigantic lighting and transportation problems that playing with its ceaseless "rush hours" has rendered comparatively easy of solution.

Meanwhile, on the Canadian shore, above the Falls, other plans and projects are afoot, such as that of the Ontario Power Company, which, unhappily, proposes to duplicate the American work in the gorge by setting its plant down at the river's brink, so as to secure the full drop of the water from the edge of the cliff. Still another scheme, well backed and likely to be pushed, is that which aims to develop part of Niagara's power with the object of carrying it to Toronto, some seventy-odd miles away, far beyond the Queenstown Heights, and hugging the eastern horizon across the Ontario Lake. But seventy miles are nothing nowadays to the ambitious electrical engineer, who, as these pages have told, is already dealing with three times that span out in California, sending the thrilling energy of the Sierra floods across hill and dale to the Golden Gate itself. And what has been done on the Pacific slope is just as easy of accomplishment and far surer of reward with Niagara as a source, here in the East, whether for the pushing city of Toronto or for all the wires and wheels of the Empire State.

Kitchen Culture

["Only nine replies were received to an advertisement for a cook, while a simultaneous request for a music-teacher produced 389 applicants."—Morning Paper.]

BELINDA, it was fine of you
To stoop to culinary toil,
But lettuces, I think, can do
With less of vinegar than oil:
And yet, although you spoil a salad,
How sweetly you can sing a ballad!

Not e'en a lunatic would sing
A pæan o'er your buttered toast;
Your "hand for pastry" is a thing
Of which you have no right to boast:
But my artistic soul with glee notes
Your splendid touch upon the key-notes.

You have a somewhat ghastly knack
Of overdoing ribs of beef:
The way you serve up bacon black
Is, mildly speaking, past belief.
But while I wonder still I do know
How capably you render Gounod.

Potatoes are a form of food
That you can never rightly cook,
E'en when in contemplative mood
You've studied Mrs. Beeton's book:
They look and taste like tallow candle,
Yet how you can interpret Handel!

You do not grasp the ins and outs
Of serving the most simple sweet:
Your sausages and Brussels sprouts
Are quite impossible to eat;
You can't cook even a tomato—
But how sublime is your vibrato!

You must have answered, it appears
To me, the wrong advertisement,
And out of two distinct careers
'Twas for the wrong one that you went.
Your cookery is far from sano;
Go in for teaching the piano.

MOSTYN T. PIGOTT.

Begin 1903 By Saving

A Diamond

20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20% OR 3% OR 20%

We deliver any Diamond, Watch or other article in our million dollar stock upon a small payment and let you pay the balance in small amounts monthly just as you would put a little of your earnings in a Savings Bank. We are assured by the highest European authorities that Diamonds will increase in value at least 20% annually. Savings banks pay 3%. You also have the pleasure and prestige of wearing the Diamond while paying for it, and when paid for you have the most valuable commodity in the world, which can be exchanged for full cash value in any civilized country. Your local jeweler, if he is posted in diamond values, will tell you that a 20% increase during the next year is a certainty.

YOUR CREDIT: It is just as easy and confidential to open an account with us as it is with a savings bank. All we require to know is: **Are your intentions good, and are you disposed to do as you agree to do?** Your cash resources are unimportant, honesty is all that we require.

HOW IT IS DONE: You send for our beautifully illustrated catalogue which shows thousands of Diamond rings, brooches, lockets, studs, earrings, cuff buttons, Watches, etc., together with the price and full description of each. Select any article that you would like to see and we will send it to you for your examination. If you like it, and are convinced that it is the best value you ever saw for the money, pay one-fifth of the price and keep it—sending us the balance in 8 equal monthly payments.

NOTE THIS: We give a Guarantee Certificate of quality and value with every Diamond; make liberal exchanges at any time, allowing full price paid for the Diamond in exchange for other goods or a larger stone. We pay all Express Charges, and if you send the first payment (one-fifth) with your request, we cheerfully refund your money in case you decide not to buy. Your interests are safeguarded at every point in dealing with us. We are the largest house in the world in our line of business and one of the oldest—established in 1858. We refer to any bank in America, for instance: Ask your local banker how we stand in the business world. He will refer to his Dun or Bradstreet book of commercial ratings, and tell you that we stand at the top in credit, promptness and responsibility, and that our representations may be accepted without question.

OUR PRICES: Notwithstanding the fact that our prices are from 10 to 20 per cent. lower than the cash prices of local jewelers, we make a discount of 8 per cent. on cash sales. We make the most startling refund proposition on cash sales that you ever heard of; we also show, how you can wear a fifty dollar Diamond for ten cents a week—if interested, write for it.

Write today for our 1903 Catalogue, which shows more fine genuine goods than any catalogue published—worth its weight in gold to any intending purchaser.

A Second Yosemite

FROM time to time during the past dozen years, more frequently within the past year or two, there have appeared in print enthusiastic assertions that the Kings River Cañon, in California, is more wonderful, more beautiful, and more various other things than the Yosemite Valley. We confess that, with the tenacity with which most of us cling to our belief in the excellence of the things whereof we know, rather than of those things whereof some other fellow knows, we have largely discounted the rating of Kings River Cañon. It seemed to us that the enthusiasm of the few who have penetrated its wilds was fired somewhat by the prideful consciousness that they were few, that they had done a big thing to get into the cañon, and that there was no harm in boasting that they had been rewarded with more than their trouble for their pains. But just now we are assailed by a doubt of Yosemite's superiority in all those charms and wonders which have given it its great fame. The late Professor Joseph Le Conte, for many years of the faculty of the University of California, explored the Kings River Cañon when he made the last of his beloved mountain camping tours, and in his article, "My trip to Kings River Cañon," which we find in a recent publication of the Sierra Club, he made precisely the comparisons between the cañon and the valley we have long hoped to find.

The cañon is in Fresno County, in what for many years has been only vaguely known as the "Kings River Country," and is reached by a ten hours' railroad journey from San Francisco to Sanger, a little town in the San Joaquin Valley; a day's stage-ride to Millwood, well up in the foot-hills; then a two to four days' saddle-ride—as one wishes to hurry or loiter over the rapidly ascending trail; then a foot scramble down 3500 feet to the floor of the cañon.

Professor Le Conte, who for thirty years was familiar with the Yosemite, quite naturally made a comparison in describing his first view of the cañon. "After the storm," he writes, "we walked to the verge of the cañon and took our first view—a sunset view—both of the cañon itself and of the surrounding peaks, the goal of our desires. Barring the wonderful falls, the view will compare well with that of Yosemite from Inspiration Point." His permanent camp was in a thick grove of pines, on the very banks of the river, at the foot of Grand Sentinel Peak, an almost vertical precipice rising 3500 feet above the river. "There is nothing in Yosemite finer," he writes. "The river, swift everywhere, became, just below our camp, a roaring, foaming cascade, which by day charmed us with its ever-changing form and by night lulled us into deeper and sweeter sleep."

Later he pushed on up the main cañon to the forks, then up Bubbs Creek, and still onward and upward to the crest at Kearsage Pass, 12,000 feet above sea-level. It was in visiting this portion of the cañon that the veteran mountain-climber felt and expressed the enthusiasm which, we observe, marks all who write on the subject. "On the whole way up Bubbs Creek to Kearsage Pass the trail becomes steeper and rougher, cascades and falls more frequent and more beautiful, and the scenery grander and more impressive, until finally, as we approached the summit, I could not refrain from screaming with delight. The mountain splendor reached its climax at Bullfrog Lake. . . . At this beautiful place—the most beautiful I have seen in the Sierra—we camped nearly a week. The lake, 11,000 feet above sea-level, stands in an amphitheatre completely surrounded by the highest peaks of this the most Alpine portion of the Sierra. On the east, the sharp, jagged, castellated, pinnacled, splintered peaks of Kearsage; then, going round southward, the symmetric,

UNIVERSITY OF CALIFORNIA

conical, towering form of University Peak, 14,000 feet high; then Stanford Peak, equally lofty, and Mount Keith, still loftier, 14,200 feet; then the fine outlines of the Videttes; then, southwestward, the grand, massive form of Mount Brewer, with its great cirque filled with snow, from which emerges a fine glacier. On the northwest, Charlotte Peak, with Charlotte Lake at its foot, and all the fine peaks of the Sierra in panoramic view from its summit."

We must pause, in considering this expert's description of these mountain wonders and beauties, to record a protest against some of the nomenclature of the region. The climax of mountain splendor reached at —Bullfrog Lake! Horror! Beautiful, grand, impressive scenery on the way up—Bubbs Creek! Horror upon horror! A State with a wealth of musical geographical names; with its San Juan River, its Las Alamos Creek, San Bernardino Mountains, San Rafael Village, its San Buenventura, Del Norte, Sonoma — to be shamed by Bubbs Creek and Bullfrog Lake! We call upon the Sierra Club to take the law into its own hands. Rename that creek "Le Conte," the lake "Muir." Not Bubbs. Not Bullfrog. Oh!

It is interesting and instructive that Professor Le Conte, after many specific descriptions of the cañon's features, makes a general comparison between them and those of Yosemite. "Doubtless," he writes, "for aggregation of striking features within a limited area, and especially for the splendor of its many waterfalls, Yosemite stands unrivalled, not only in California, but in the world. But there is a peculiar, though gentle, charm, also, in the foaming rapids so characteristic of Kings River and its branches. If Yosemite is far superior in its falls, and also in its extensive meadows and the variety of its foliage, Kings River is far superior in its surrounding mountain scenery. Kings River Cañon branches and re-branches, becoming deeper and wider and grander until it deploys and loses itself among the highest peaks and grandest scenery of the Sierra."

A characteristic difference, which also explains why the cañon's "wildness" is frequently dwelt upon, is noted by the writer: the fall of the Merced River in the Yosemite is only about eight feet in as many miles, while in the same distance the Kings River falls about five hundred feet.

The sportsman, as well as the lover of nature in its beautiful and majestic aspect, is rewarded by the climb into the cañon. "Although we spent little time fishing," says the writer of this first comprehensive story of the cañon, "we had all the trout we wanted. Nor was big game wanting. Without turning at all out of our way we saw both deer and bear."

Professor Le Conte was a wide and observant traveller, an experienced mountain student, a geologist of note; his report is to be accepted without discount. California is to be congratulated on the possession of a second Yosemite.

If the poor and humble toil that we have food, must not the high and glorious toil for him in return, that he may have light, have guidance, freedom, immortality?

HARPER'S MAGAZINE

For 1903

These will Write in 1903

Swinburne
Mark Twain
Mary Johnston
W. D. Howells
Edith Wharton
Maurice Hewlett
Mary E. Wilkins
Booth Tarkington
Robert W. Chambers
Amelie Rives
Margaret Deland
Henry Van Dyke
Thomas A. Janvier
Woodrow Wilson
George E. Woodberry
Hamilton Mabie
Lew. Wallace
Theodore Watts-Dunton
Alice Meynell
Alice Brown
Alfred Ollivant
Brander Matthews
Chester Bailey Fernald
Josephine Dodge Daskam
E. S. Martin
I. Zangwill
Sarah Orne Jewett
Octave Thanet

IN this page are outlined some reasons for believing that HARPER'S MAGAZINE (which attracted a larger number of readers in 1902 than ever before in its fifty years of progress) will appeal to an even wider audience in 1903.

The promise for increased excellence is a certain one, though only a part of the good may be definitely foretold. In the matter of serial stories and continued series of articles, HARPER'S MAGAZINE will be different.

It will not print more than one serial story at a time.

It will not print articles of a "news" nature.

It will not print consecutive series of short stories.

It will not print connected series of articles on any except possibly historical subjects. Thus every number will come as a surprise. This was true of last year, when the most important, the most readable, the most authoritative articles were those which appeared without preliminary announcement. A few of the things which can now be announced are:

THE PICTURES OF

EDWIN A. ABBEY, R. A.

Mr. Abbey has for ten years been engaged upon the colossal work of illustrating Shakespeare's Tragedies for HARPER'S MAGAZINE. Many of his pictures will be paintings in color, others in pen and ink, handled with that delicacy and finesse which characterize all of Mr. Abbey's work. All of Mr. Abbey's illustrative work will appear in HARPER'S MAGAZINE. The text accompanying Mr. Abbey's pictures will be by the most notable living scholars and critics.

ALGERNON CHARLES SWINBURNE

No living writer on literary subjects commands the attention of the world more completely than Mr. Swinburne. During the coming year he will contribute to HARPER'S MAGAZINE a number of brilliant literary articles. Other notable writers who will write on literary subjects are Theodore Watts-Dunton, Arthur Symons, Joseph Knight, W. J. Rolfe, etc.

A NEW ROMANCE BY

MARY JOHNSTON

AUTHOR OF "TO HAVE AND TO HOLD"

Miss Johnston's new story is entitled "Sir Mortimer." It is a psychological study deeper than her previous work, and is of a more delicate literary texture; it maintains a higher artistic level and displays a new and maturer genius. Miss Johnston ranks anew from this work. "Sir Mortimer" is a romantic love story of the Elizabethan period. The romance will be illustrated by F. C. Yohn, and will run through the summer months.

MARK TWAIN

The famous author of "Huckleberry Finn" and "Tom Sawyer" will write only for HARPER'S during 1903. Mr. Clemens will contribute frequent short stories—possibly a novelette.

WILLIAM DEAN HOWELLS

Mr. Howells also will write only for HARPER'S during 1903. He will continue to conduct the "Easy Chair," and will contribute short stories, essays, and poems.

The MAGAZINE for 1903 will have articles by the greatest authorities on science, exploration and travel.

SHORT STORIES

HARPER'S MAGAZINE will print in each number more short stories than any other illustrated magazine. In this branch of fiction the MAGAZINE has always been famous. It has published the best work of noted and new writers alike, and has been perhaps the strongest factor in developing short-story writing to its present perfection. Not less than seven short stories of varied types and wide range of interest will appear in each number of the MAGAZINE for 1903. The list of authors who will contribute stories includes the names of every notable story writer in this country and England.

A few of the Artists for 1903

Edwin A. Abbey, R. A.
Howard Pyle
F. C. Yohn
Elizabeth Shippen Green

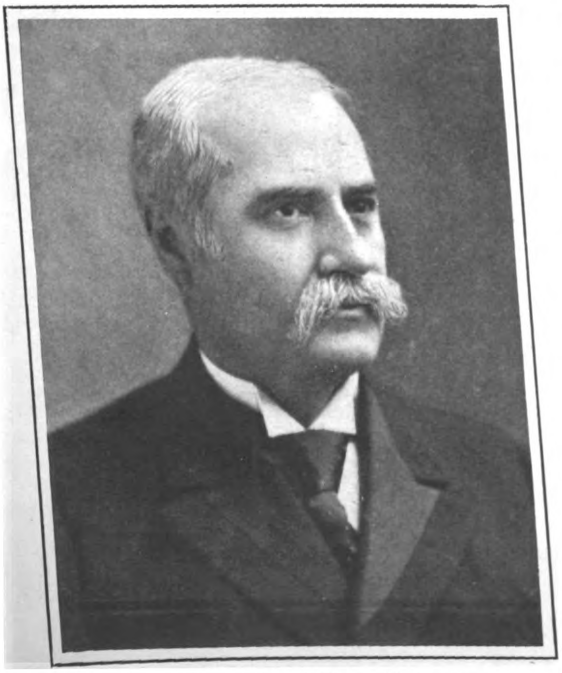
The Outlook for Tariff Legislation

THE anomalous state in which proposed tariff legislation finds itself in the closing days of the Fifty-seventh Congress is that but one of the tariff bills under consideration (that providing for the reduction of the Philippine tariff) has originated in the House, where all revenue measures have their constitutional initiation, and that not even one of these is in the hands of the Senate Committee to which revenue bills in that body are normally referred. Such legislation has come in "by some other door," cloaked in the language of treaties, and asking the consideration accorded to "foreign relations." The result is that Senator Cullom's committee has the Cuban, Newfoundland, French, and all other reciprocal tariff treaties in its hands, while Senator Lodge's committee on the Philippines has in its keeping the remaining bill. The Finance Committee is out of tariff work. This is the present situation. No other tariff legislation has put its head above the horizon.

As to the outlook, it is possible to speak with almost as great definiteness. First, the proposed reciprocity with Newfoundland will not be approved. The interests of twenty or thirty thousand fishermen off the coast of Maine and Massachusetts protest against it, though some of the great packers of the United States are for it. Also, Senators Frye and Lodge are members of this committee. Second, the French treaty and the whole tribe of "Kasson treaties" have no chance of confirmation. Senator Aldrich, chairman of the Finance Committee, is not disposed to let reciprocity rob his committee of its revenue control and legislative prerogative, and there are, moreover, devious interests opposed to the measures themselves. With these treaties out of the way, there are but two propositions left: the one embodied in the Cuban reciprocity treaty; the other providing for the reduction of the duties on imports from the Philippines to twenty-five per cent. of the Dingley rates (the present rates being seventy-five per cent.).



Senator Shelby M. Cullom, of Illinois

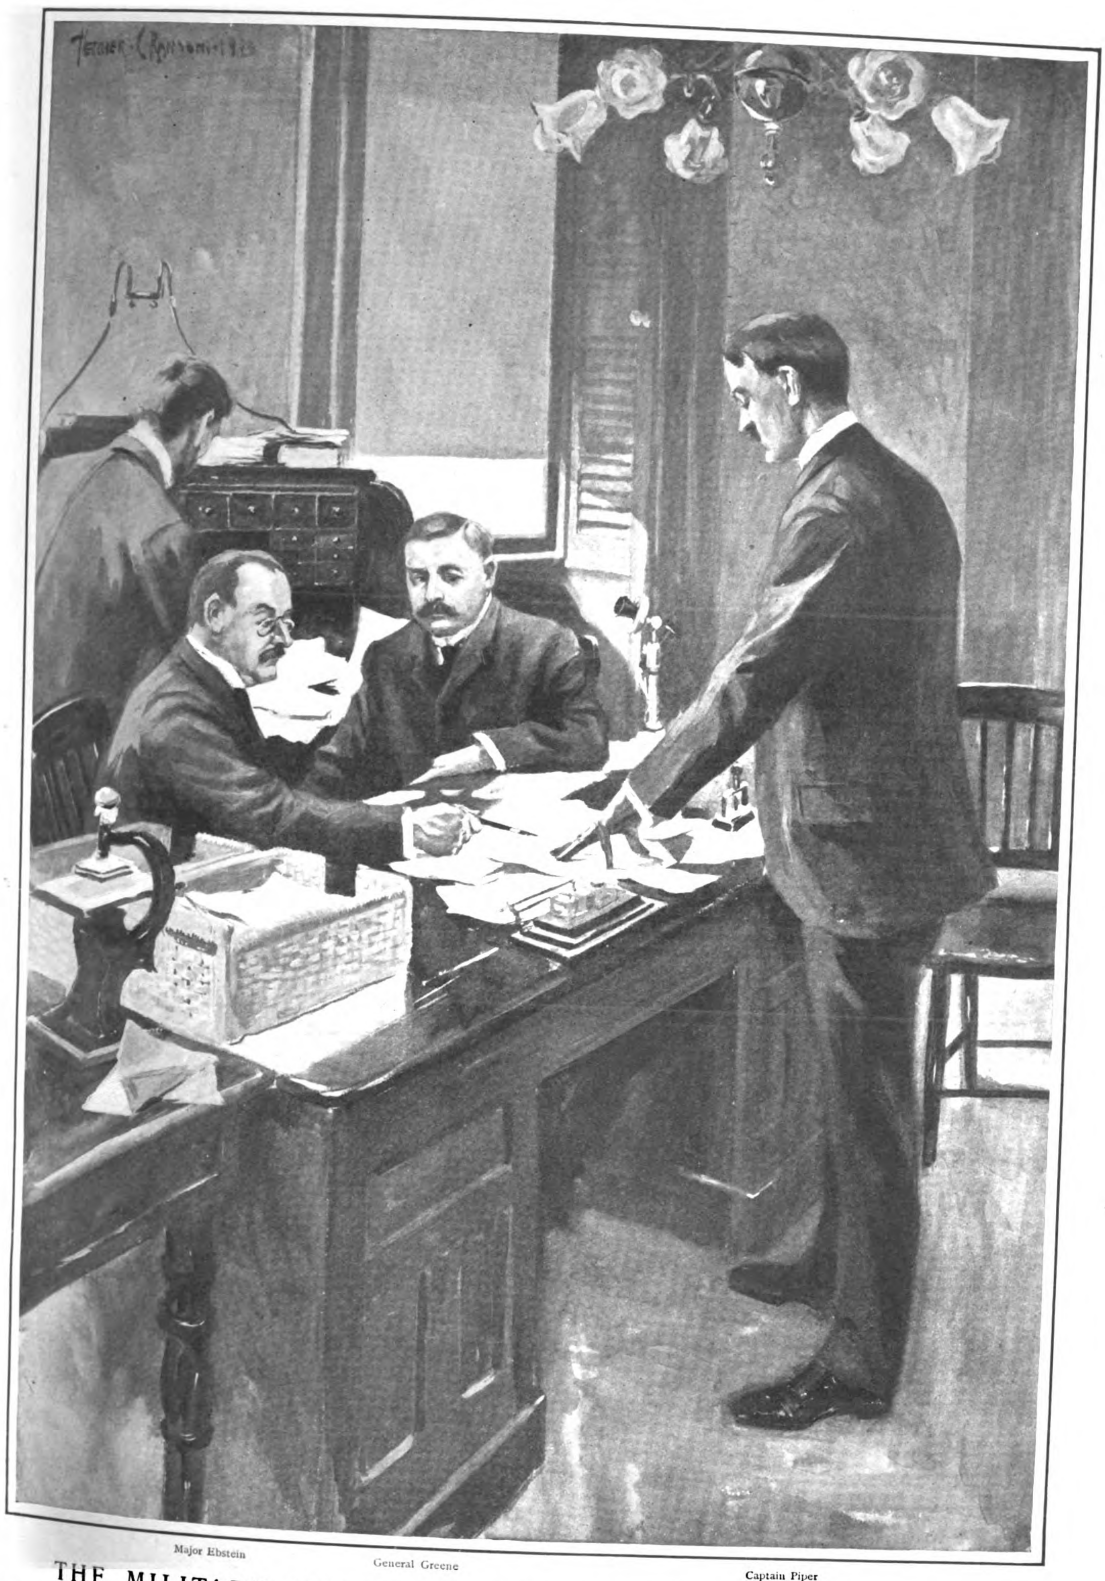
Chairman of Committee on Foreign Relations. The Cuban Reciprocity bill has been referred to this committee

The Cuban treaty which was submitted to the Senate just before its recess has now good promise of confirmation, if it can be brought to a vote. This good prospect has perhaps some relation to the hope on the part of its enemies of being able to hold it up in the House; for it is anticipated that the President, in event of the Senate's confirmation, will ask for legislation by the House in harmony with the treaty's provisions before giving it effect. Meanwhile, the beet-sugar interests, soon to hold a convention, are to deliberate as to whether they can allow the proposed reduction, and meanwhile, also, the people of the country grow impatient of the Senate's tardiness in meeting the obligations under which Cuba's rightful expectations have put it.

The Philippine bill has, it would seem, a precarious journey ahead of it, with fairly good prospects of reaching its destination. Here again the sugar interests threaten to prevent in the Senate as great a decrease as the House has voted. The fifty per cent. reduction seems to be conceded. The struggle will be over the remaining twenty-five per cent., and the issue cannot now be predicted.

This is the meagre result that may be expected in tariff legislation this session. Even the President's slight recommendations appear to be unheeded.

Senator Nelson W. Aldrich, of Rhode Island



Chairman of Finance Committee. It is held that the Cuban and Philippine bills, on account of their revenue features, should be referred to this committee

Senator Henry Cabot Lodge, of Massachusetts

Chairman of Committee on the Philippines, that has the bill for the reduction of the Philippine tariff in charge

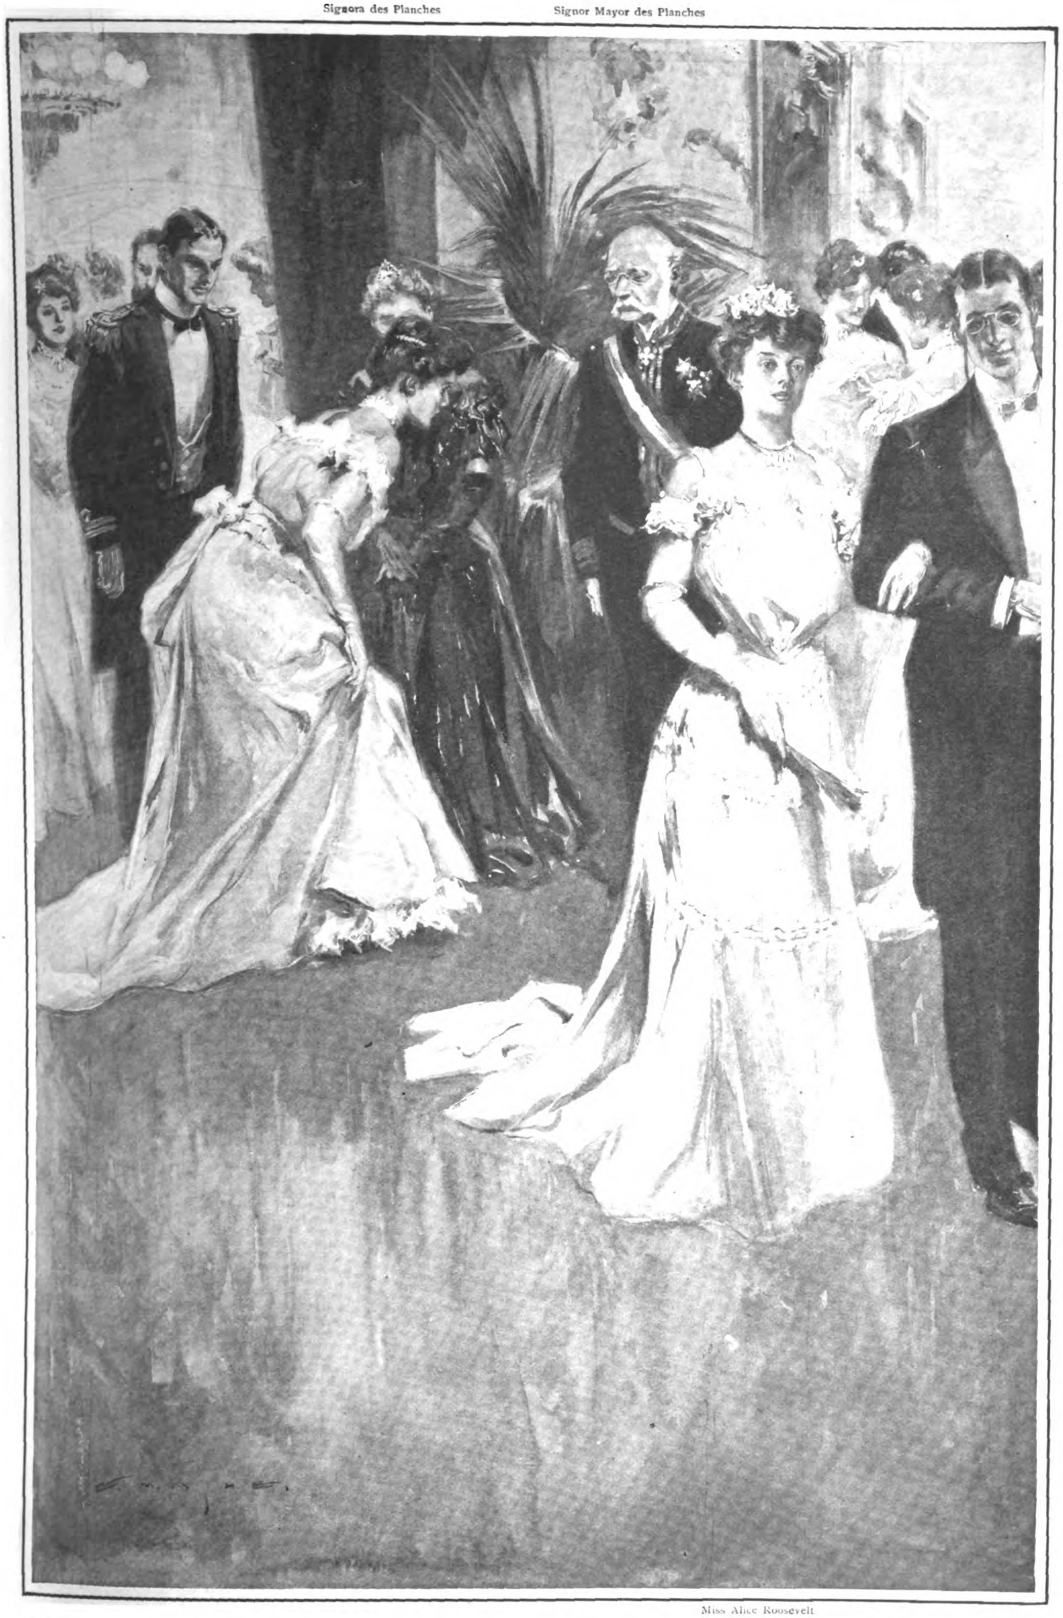
The Academy Exhibition

"The Sacred Hecatomb."—By Amanda Brewster Sewell
Thomas B. Clark Prize

THE exhibition of the National Academy, now being held in the galleries of the Fine Arts building in Fifty-seventh Street, has one interest that attaches in equal degree to no other of New York's annual picture shows. It sums up the achievements of the younger painters better than any other, for the Academy is true to its tradition of teaching and encouraging. To this end most of its prizes are awarded. The three Hallgarten prizes offered to painters under thirty-five years of age are given this year, in order of merit, to H. M. Walcott, William Fair Kline, and Miss Belle Haven. Of these, Mr. Kline is a member of the Academy. The Inness gold medal for the best landscape, never awarded twice to the same painter, goes to Leonard Ochtman, A.N.A., the previous winners being, in 1900, Bruce Crane, and, in 1901, Walter Clark. To Amanda Brewster Sewell is awarded the Thomas B. Clark prize for the best figure composition. It is gratifying news that Mr. Clark has assured this prize for all time by the gift of six thousand dollars to the Academy. Mrs. Sewell's picture, "The Sacred Hecatomb," shows a procession of Greek youths and maidens leading cattle to the sacrifice with music and the dance. These joyous figures, moving in a leafy glade into which the sunlight filters, are charming in color and rhythmic movement, and as a piece of admirably conceived and executed decorative painting it stands alone in the collection. The only painting worthy of comparison with it is Louis Loeb's "The Joyous Life," a group of classic female figures dancing across a sloping field in the glow of late afternoon while Pan pipes beneath a tree.



Mr. Walcott's "At the Party," which received the first Hallgarten prize, shows groups of happy children seated on a lawn, and is brilliant with color and animation. In showing the advance in the productions of the younger painters the exhibition is one of the most successful ever held.

"At the Party."—By H. M. Walcott

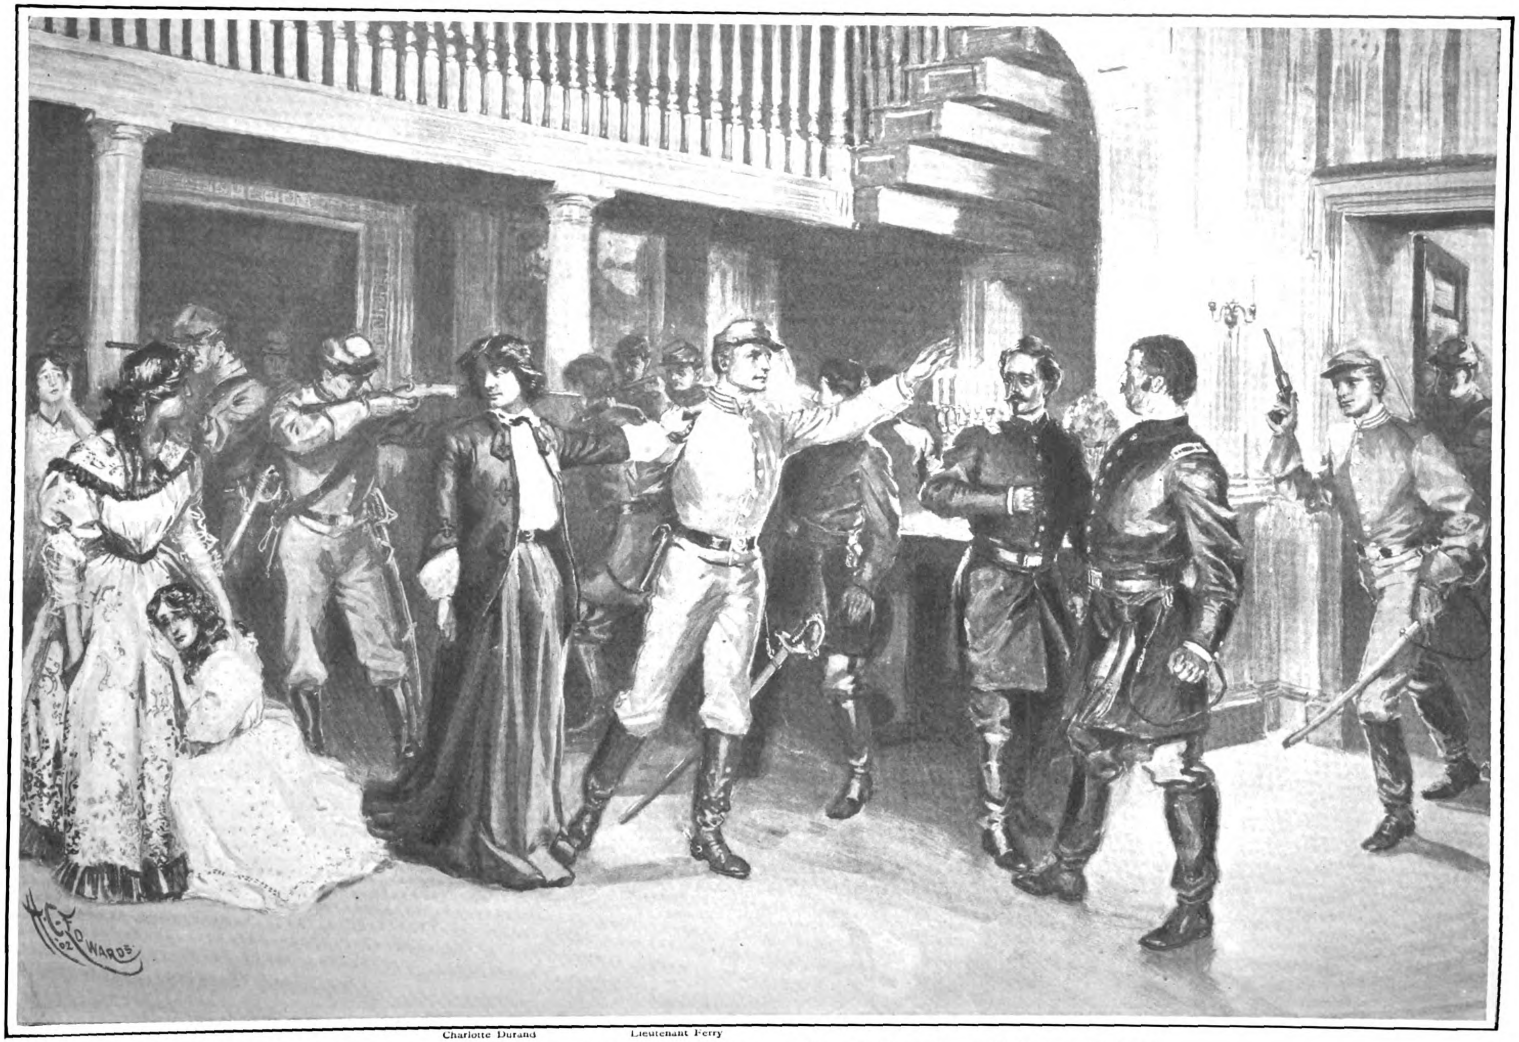
Recent Light on the Röntgen Rays

EVER since the extraordinary discovery by Professor Röntgen, seven years ago, the identity of the remarkable rays that bear his name has been a matter of scientific debate, of persistent experiment, and unabated wonder. Their character, penetrating unchanged the most opaque substances and bringing the invisible to ready view, was certainly sensational enough to provoke unlimited discussion, but until recently it has borne little fruit. When rays can pass squarely through the human body and record the shadows of its inner structure upon a photographic plate, it is evident enough that in some way or other energy has been transmitted through that body in amount sufficient to produce the photographic image, and the fundamental question has been the mechanism of the transmission. Now, energy can be carried in two well-known ways — by the passage of material particles from one point to the other, as in the stream from the nozzle of a sand-blast, or by the simple transmission of impulses in the medium between the two points, of which the most familiar instance is in the radiation of heat and light by waves in the ether. And it is often rather difficult to tell which process is in action, so that when the Röntgen rays came up for investigation their nature was a puzzle. They did not behave like ordinary light or any other known form of radiant energy, for not only did they freely penetrate substances which by good rights should have been opaque, but they utterly refused to be reflected by a mirror, bent in passing through a prism or lens, or twisted around a corner by diffraction. On the other hand, their properties were equally irreconcilable with those of any known form of streaming particles, so that hypothesis had a fair field for uncontrolled liberty.



The Automobile in Surgery

New York surgeons, hampered in the use of the X-rays in private houses, where there is no electric power, have recently devised the scheme of obtaining their power from the storage batteries of their automobiles. The wires are carried direct from the automobile in the street to the patient's room

Within a few months, however, M. Bloudlot has performed some beautiful experiments that may be regarded as crucial in discriminating between the two main suppositions just noted. By a very ingenious and refined method he has shown that the Röntgen rays are propagated with the same velocity as light. For good dynamical reason this leads to the conclusion that they are not streams of matter, but ether impulses akin to light. This being definitely shown, their differences from light admit of a fairly simple explanation following a suggestion made by Sir George Stokes. According to this view, the Röntgen rays are volleys of independent impulses in the ether, — mere fragmentary bits of light waves, never settling down into steady wave motion. When a ray of any kind strikes a body it tends to stir the molecules into vibration, and thereby to slow down the entering wave. But this takes time, albeit a very short time, so that while an ordinary light ray almost immediately settles into steadiness, the enormously sharp and brief impulses of the Röntgen ray, too short to fit the vibration time of the molecules, have come and gone, without losing much energy. Hence all bodies are transparent to such rays, at least to such degree that the impulses either get through or get far enough within the surface to escape reflection from it. And the same almost infinite suddenness of the impulse forbids the existence of diffraction, unless in very insignificant degree. The wonder is that even the sensitive molecules of the photographic plate or the fluorescent screen are stirred into action, and they probably would not be save for the relatively large energy of such terrifically sharp impulses. Wave length, in the ordinary sense of the word, they have not, any more than a pistol-shot has a musical pitch, but if they could be examined in detail, there is reason to expect that one would find the impulses of very varied length, but all so brief as to correspond in time of action with waves shorter than any known to us in the form of light. Professor J. J. Thomson has shown mathematically that just such swift disjointed impulses must be generated under the conditions which are found to determine the generation of Röntgen rays, so that theory and experiment seem at last to unite on a reasonable explanation that accounts for the very singular facts.

Excavating Prehistoric Animals of North America

THE explorations of the Department of Vertebrate Paleontology of the American Museum under Professor Henry Fairfield Osborn, for the season of 1902, were among the most successful known.

One expedition went into the region north of Miles City, Montana, seeking for the remains of horned dinosaurs (terrible lizards), under the direction chiefly of Barnum Brown, associated with Professor R. S. Lull, of Amherst College, and Mr. Brooks, a recent graduate of Amherst. They discovered a skull which lacked the upper portions of the horns only, and which had an especially complete frill. Other discoveries were portions of the skeleton of the same species and of other horned dinosaurs, the remains of a carnivorous dinosaur of gigantic size, three crocodile skeletons, and portions of the skeletons of several beaked lizards (*Rhynchocephalians.*)

Another expedition in Montana, under the leadership of Dr. W. D. Matthew, was in quest of mammals chiefly of the Miocene period. Discoveries were made of the beds containing the remains of some of the smaller animals of the period when the Titanotheres flourished, especially small carnivores and rodents and some primitive species of horse, among them *Mesohippus westoni.* The small fauna of the Lower Oligocene had already been made known partly through the researches of Earl Douglas, but these collections greatly add to his results. The party found the lower jaws and extensive portions of the legs and skeleton of a large rhinoceros, probably belonging to the species *R. malacorhinus* Cope, a long-limbed animal which has been known hitherto from its skull and from a single foot-bone only. This find enables Professor Osborn to give almost the complete characters of this long-limbed and long-skulled type, which stands in marked contrast to the more abundant short-limbed and short-skulled rhinoceros of the same period, named *Teleoceras.*

An expedition, under the leadership of Walter Granger, associated with Peter Kaison, returned to the vicinity of the famous Bone Cabin dinosaur quarry of central Wyoming for the fourth year of excavation. The early part of the season was devoted to a new dinosaur quarry discovered by W. H. Reed, and systematically explored by the museum for the first time in 1901. This quarry proved to be very rich, especially in remains of the giant herbivorous dinosaur named *Camarasaurus supremus* by Cope and *Brontosaurus* by Marsh. After work was finished at this point, the Bone Cabin quarry was systematically explored, and yielded a rich harvest of fifty-two boxes, mostly fine specimens, and several of them new to the museum collection.

Method of Work in Raising and Boxing frail Bones and Skeletons

Section of a gigantic extinct Dinosaur encased in Plaster, and ready for Shipment to New York

Professor Osborn's Party unearthing Bones at Bone Cabin Quarry, Wyoming

The search for fossil horses was continued under the direction of J. W. Gidley, especially in the southern portion of South Dakota. A brilliant discovery was made of the remains of a small herd of fossil three-toed horses belonging apparently to the genus *Hipparion*, and parts of numerous fore and hind limbs in a perfect state of preservation, and one skull and an associated skeleton so complete that it may be mounted. This discovery more than added another much-desired stage to the collection presented to the museum through the generosity of William C. Whitney, who donated $15,000 to acquire a collection of fossil horses.

After months of most difficult and skilful work, chiefly under the direction of Adam Hermann, three specimens of rare interest have been made ready for exhibition at the museum. One of these is the complete skeleton of a small new dinosaur which is to be named "The Bird Catcher," owing to its apparent capacity for great speed and the long and slender grasping structure of the hands. A second specimen is the great bear-headed fish *Portheus molossus*, secured by Charles H. Sternberg in Kansas. This magnificent specimen, sixteen feet in length, has been mounted on a very large panel, and it may be fairly claimed that it is the most striking specimen of a fossil fish in any museum in the world. The other exhibit is the superb pair of tusks and skull of the mammoth, the great *Elephas imperator*, secured from Texas. The tusks are thirteen feet six inches in length and twenty-two inches in circumference. The entire upper portion of the skull has been restored in white plaster. The specimen has been mounted with a view to showing the actual height of the skull in an animal of this size.

The fossil horses, so called, comprise the skeletons of the ancestors of the modern horse, which, when completed, will form a unique collection at the American Museum. The work of the American Museum under the direction of Professor Osborn and his associates is of the highest scientific importance.

Results of the recently returned Expedition sent out by the American Museum of Natural History under Professor Henry Fairfield Osborn

COMMENT

At the hour when we write, it is taken to be granted that the conclusion of an agreement preliminary to the submission of the Venezuela controversy to The Hague tribunal will encounter no serious obstacle nor prolonged delay. There seems to be no doubt that President Castro is willing to assent to any demand which it is within his power to grant. There is a limit to his present pecuniary resources, however. This limit ought to be considered by Great Britain and Germany when fixing the sums of money which they will require to be paid as conditions precedent to the reference of the principal matters in dispute to arbitrators. We hope that there is foundation for the report that Great Britain has offered to reduce her immediate claim from $340,000 to $40,000, and that Germany, while lowering her own exaction from $340,000 to $300,000, has signified a disposition to accept a guarantee, instead of insisting upon instantaneous payment in cash. Environed as Castro is by rebels, it is scarcely reasonable to ask that he shall strip himself of the sinews of war. Another question of international interest which will have to be settled in the preliminary agreement relates to the continuance of the blockade pending arbitration. It is obvious that a cessation of the blockade would remove sources of provocation and friction, and for that reason it will be earnestly recommended by our government. It is not easy to see why Germany should show itself recalcitrant to such a judicious suggestion, especially as the British nation is making no secret of its eagerness to wash its hands of the Venezuela business.

Up to the present, the only country which has distinctly gained in international credit and honor from the Venezuelan imbroglio is the United States. Through a very fortunate chain of circumstances we have been able to stand as the friend of each of the three parties to the quarrel, while greatly strengthening our own position on the Monroe doctrine, and at the same time almost miraculously avoiding, so far as can be foreseen, the dangers of future complications and financial responsibilities, which both Germany and England were extremely willing to see saddled on our shoulders. At the first outbreak of the trouble, Minister Bowen came forward as the trusted friend of both Germany and England, chosen by them to represent and guard their national interests in Venezuela, and this extremely friendly attitude has been preserved throughout. Not less friendly in form, while far more effectively so in substance, have been our relations towards Venezuela and President Castro. It cannot be doubted that to our good offices and vigorous intervention was largely due the acceptance of the principle of arbitration by all the interested parties; nor can it be doubted that this acceptance has shielded President Castro and his country from grave dangers and almost certain invasion. Having in view the renewed activity of the insurgents under General Matos, it is easy to see to what straits President Castro would have been brought by the occupation of Caracas by the allies; it would have meant for him almost certain political annihilation. It may be noted, in passing, that there is considerable reason for believing that the renewed activity of the Matos party, and indeed the whole course of the revolutionary movement of which he is the head, is not wholly unconnected with the movements of the allies, nor wholly independent of foreign inspiration and support. The expedient of setting up a pretender favorable to our claims and designs is a very old one in the history of nations. While President Castro has acted with vigor and dignity through the present crisis, we cannot be blind to the fact that his position is in the last degree precarious, while General Matos and the revolutionists hold a large part of the country. A really decisive and complete victory for either party would be the best thing that could happen for the welfare of Venezuela.

While we have profited at every turn of the Venezuelan difficulty, gaining but lustre and power from the troubles of others, it cannot be denied that Germany has suffered severely in international credit and esteem. Many nations were conscious of a feeling of irritation at the behavior of Germany in China, from the first "mailed fist" oration to the days of the advance on Peking and the slaughter of hundreds of helpless Chinamen. There was a bumptiousness, a surly unmannerliness, about the whole proceeding which was as displeasing to the world at large as it was discordant from the better traditions of German urbanity and culture. It was distressing to see the land of Kant and Goethe descend to mere bullying. But when the same truculent methods were introduced into the political disputes of the New World, into the territory of the Monroe doctrine and republican government, then the revelation of Germany's temper was painful and repellent. The serious element in the matter is that the present rebuff to the Teutonic genius is likely to cause very serious irritation, and even a mood of exasperation, in the dominant section of German political life—a mood of exasperation which is likely to work itself out in ways that may justly inspire apprehension. Our present success in Venezuela may merely open the door for a much more serious effort in the not distant future. The happiest outcome to the whole matter would be for Germany to realize that international bullying does not pay, either in cash or credit, and, recognizing this, to revert to methods more in harmony with the nobler side of the Teutonic genius. If Germany emerges from the fray with ruffled plumes, England has certainly lost very heavily in prestige and reputation for statesmanship and wisdom. Strictly regarded, the reported protests of her naval officers against further co-operation with Germany are a grave breach of discipline, a very bad sign, an indication of serious disharmony between the brains and the hands of the British nation. But this disharmony and the indecision and vacillation of the Balfour government are only too evident.

We think that the Secretary of the Navy should be satisfied with the outcome of the naval manœuvres in the Caribbean and adjoining waters. It is true that the so-called White

Squadron, representing the enemy, succeeded in evading the war-ships which were acting on the defensive under Rear-Admiral Higginson, and in capturing the harbor of Mayaguez, Porto Rico. There was nothing remarkable in Rear-Admiral Higginson's failure to keep in touch with the White Squadron, and thus to foil the assailant's plans. In the last search problem proposed to divisions of the British fleet the opposed squadrons passed within five miles of each other, yet neither knew of the opponent's proximity. In that case, as in the Mayaguez affair, the lack of timely information was due to a deficiency of scouts. Not only scouts, but battle-ships, were wanting on the part of Rear-Admiral Higginson. Of the latter he had but four, which he felt constrained to keep together, whereas, if he could have had five, his force might have been divided, one division being stationed at each end of Porto Rico. In that event he would have had a fair chance of capturing the White Squadron. Then again, Rear-Admiral Higginson would have been in a better condition for defence if his vessels had been equipped with a wireless-telegraphy apparatus, such as many European war-ships are now provided with. It is a considerable gain to have learned what we need. Aside from its usefulness from this point of view, the search problem which engaged the attention of the fleet under Admiral Dewey gave our naval officers an increased knowledge of the waters of the West Indies, and accustomed them to navigate at night without lights and to keep their vessels at proper distances from one another while cruising in the darkness. We add that the presence of Admiral Dewey's great fleet in the Caribbean had probably some moral effect on the commanders of the Anglo-German squadrons engaged in the demonstration against Venezuela. It kept them on their good behavior, and strictly within the limits prescribed by a shrewd and cautious diplomacy. It is, for instance, probable enough that but for the proximity of Dewey's fleet one of the German war-ships would have seized the coveted island of Margarita, which would make an admirable naval station, and would give a precious strategic advantage to a power desirous of controlling the northern terminus of the Panama Canal. The fact that Admiral Dewey's fleet was known to be superior to all the foreign war-ships in the Caribbean rendered any exhibition of force on our part at La Guayra or Puerto Cabello superfluous. It is the strongest of the arguments advanced by Mr. Roosevelt for a big navy that if we had such a weapon in reserve, we probably should never be called upon to use it in a defensive war, for proximity to our naval stations would give us a superiority to any assailant except Great Britain.

It looks as if the desired result would be attained by the note concerning the treatment of Jews in Roumania which was addressed, less than five months ago, by Secretary Hay, not only to the Bucharest government, but also to all of the great powers that signed the Treaty of Berlin. The note, it will be remembered, provoked a good deal of captious comment in Vienna and some other Continental capitals, and it was asserted that the United States were bound by the negative or self-denying side of the Monroe doctrine not to interfere in the internal affairs of European states. As a matter of fact, our government has never deemed itself disqualified by the Monroe doctrine for protesting in the name of humanity against iniquitous and cruel deeds, and it has never abdicated the right to demand redress for damage suffered by itself or its citizens at the hands of a European power. It was pointed out by Secretary Hay, in the despatch to which we have referred, that the relief of the Roumanian Jews from grievous disabilities and shameless oppression—a relief promised by an article in the Berlin Treaty—was required not only by the dictates of humanity, but in order to relieve the United States from an inflow of indigent and undesirable immigrants. That, under the circumstances, our government, though not a signatory of that compact, had a right to request the fulfilment of it was ultimately recognized by Great Britain and Germany, which powers, accordingly, endorsed our note. Thus supported, our remonstrance could not be unheeded at Bucharest, and we observe with satisfaction that on December 27 the Roumanian Senate, at the request of the Minister of Public Instruction, agreed that Jews residing in Roumania might be naturalized, and thus acquire the rights of citizens, which hitherto have been withheld from them.

American diplomacy of the next hundred years has in the achievements of the last a good foundation upon which to build. England's foreign policy would seem to have its lines predetermined by the necessity of assimilating what it has already appropriated of the earth's peoples with their varied civilizations. France is likely to find sufficient room for all colonial ambitions it may cherish in northeast Africa and southeastern Asia. Russia's outside interests will be absorbed by the necessities of its Asiatic possessions. The predilections of the policies of Germany and Italy alone look toward South America. With this estimate of interests, we may know with what anxieties Lansdowne, von Bülow, Delcassé, and Prinetti take thought for the morrow. The Venezuelan incident is informing not only in recording the attitude of Europe toward the United States to-day, but also in revealing the lines along which foreign policies are likely to travel.

A writer in the *Nineteenth Century* thinks that he has detected a weak spot in the American republic, because the native American and British elements in our population are increasing much less rapidly than is the non-native or non-British element. For the sake of argument, we will accept the definition that the native American is a citizen all of whose grandparents were born either in the United States or in the United Kingdom. Now it is probably true that the native American thus defined is increasing very slowly, if at all. There seems to be no doubt that his birth-rate is tending to decline. As long ago as 1851 Dr. Jesse Pickering, in a report made to the city government of Boston, pointed out that there was no natural increase in the strictly American population. Dr. Allen, another municipal official of the same period, demonstrated that fully one-half of the natives of Massachusetts were already foreign. According to the census of 1900 the population of Massachusetts was 2,805,346, of which no fewer than 1,743,710 were either foreign-born or of foreign parentage. So far as New England is concerned, the foreign birth-rate from 1850 onward has gained on the American birth-rate, until now it is four to one. It may be said that the smallness of the native element in the population of New England is due to the fact that this element has opened up the West. This was true during the first half of the nineteenth century, but it has not been true since. If the West had been settled by New England, the statistics of the West would be more favorable to the native American element. This is scarcely the case, however. The population of Illinois is 4,821,550; of these, 966,747 are foreign-born, and 1,498,473 of foreign parentage. Undoubtedly the native element is stronger in the Southern States, but this seems to be due to the productiveness not of the American, but of the negro.

From the facts here set forth and others by which they are corroborated, the writer in the *Nineteenth Century* draws the deduction that the native American is doomed to extinction, and that the time is not distant when his ideas will cease to dominate the United States. His ideas are embodied, however, in the American dialect of the English language and in American institutions. There is no reason to doubt that these great assimilating influences will prove as irresistible in the future as they have in the past. The fact that our Federal and State laws are printed in English, instead of being presented in a bilingual medium like those of the Dominion of Canada, would of itself suffice to assure a quick approach to homogeneity and to the domination of the political, intellectual, and moral type contributed by the native American element. The preponderance of New England ideas is not to be measured by the numerical proportions of the New England stock. The love of the Union which inspired Webster's reply to Hayne was much more widely and deeply felt in the Northern States in 1860 than it had been thirty years before when that speech was delivered; yet during those three decades the numerical importance of the native American element in that section had relatively fallen off. To-day, when comparatively few Americans can trace back their lineage to colonial times, there is far more interest taken in the pre-Revolutionary history of the British colonies than there was fifty years ago.

Very grave and menacing news comes to us from China, bearing on its face an imprint of truth by no means universal in the cables from Shanghai. It is reported from Shensi that

General Tung Fu-Siang is mobilizing ten thousand well-armed and well-drilled troops in Kan-su, with the purpose of seizing the walled city of Sian-fu, and using it as a base in a new war of extermination against the foreign devils. It is said, with great probability, that Prince Tuan is aiding and abetting this new movement, and we are told, though without much evidence being offered in confirmation, that the Dowager Empress and Yung Lu are aiding the new movement with funds and moral support. The gravity of this news arises from the character and ability of General Tung Fu-Siang, whose reputation and record are pretty well known, and whose execution was ineffectually demanded by the powers after the Peking outbreak two years ago. Tung Fu-Siang is by no means one of the ordinary type of Chinese generals; he is not a listless Oriental, full of forms and ceremonies, and still holding in his heart of hearts that the bow is more excellent than the rifle, the gong more effective than the Gatling-gun. He is, on the contrary, a warlike and stubborn Mussulman, one of the type of cut-throat saints that the religion of the Prophet has produced in such abundance; a man in many qualities of character and fortune very like Abdur Rhaman Khan, the late Afghan Amir. Tung Fu-Siang is a mountaineer, one of the tribesmen of the western hills; and he certainly has energy and ambition enough to organize a formidable campaign, and military skill and daring enough to give fair hopes of success. His reappearance in Chinese politics might have been foreseen. Now that it is announced, we cannot escape the foreboding that the misfortunes and sorrows of China are likely to enter a new and acute phase, under the pressure of this violent and gifted warrior, who is so bent on closing the door of his country to the genius of the West.

Secretary Chamberlain has very adroitly escaped from the Venezuelan muddle by his South-African expedition, and he may congratulate himself that Premier Balfour is left to face this crisis, as well as the opposition to the Education bill, alone. Yet, while public opinion will thus unconsciously dissociate Mr. Chamberlain from the Venezuelan imbroglio, and lay the whole blame of failure and national discomfiture and discredit on Mr. Balfour's and Lord Lansdowne's shoulders, there cannot be the smallest doubt that Mr. Chamberlain is equally responsible with them for the attack on Venezuela, and, indeed, the whole conduct of the affair bears the hallmark of the Colonial Secretary's mind and method. It is no secret that the man of Birmingham is a warm admirer of Kaiser Wilhelm's genius, as witness his triumphant but blundering assertion of an understanding or even an alliance with Germany, so caustically disavowed by Count von Bülow, at the outbreak of the South-African war. We all remember Mr. Chamberlain's singularly infelicitous remark, directed at Russia's policy in the Far East, that when you sup with the Devil you should use a long spoon. This luminous remark crystallized into the much-lauded but wholly ineffectual Anglo-German alliance in the East, whose sole purpose was to checkmate the designs of Russia—a purpose that altogether failed. The Kaiser and Mr. Chamberlain are singularly alike in their methods, their entire absence of scruple, their frequent changes of base, their willingness to resort to bullying, and their deep, inherent materialism, combined with frequent allusions to their personal influence with the God of Battles. So that we may be quite certain that in England's Venezuelan policy, with its blundering indecision and opportunism, Mr. Chamberlain fully shares the responsibility of the English Premier and Foreign Secretary. Let us hope Mr. Chamberlain's visit to South Africa, and the wise and beautiful policy he marked out for himself and his country in the great Natal oration, may be marked by more wisdom, more sound sense of the rights of others, more humanity,—and more real honesty—qualities that his past acts have not always possessed.

Speaking of trusts, President Wilson of Princeton said the other day, "I believe in the utmost freedom of combination in a free country." Speaking of football, Dr. Wilson takes a different view. Sauce for the goose is not sauce for the gosling. He criticises mass plays, and in football would have freedom of combination somewhat restricted. "I think," he writes to a Western correspondent, "that just at the present time the game is clearly in the way to be discredited because the rules have been slowly altered in the direction of making all the success of the game depend upon mere weight and mass and strength." Fighters of the trusts will say it is just so in business, but in football at least the cure is neither impracticable nor hazardous. Dr. Wilson goes on to say that these changes have made the game not only less interesting to the spectators, but more dangerous to the players, and in proportion as sheer strength has been made the basis of the play the players have been tempted to do very brutal things. "Indeed," he adds, and it is a serious comment, "I am afraid that in some instances they were instructed to do brutal things so as to put their opponents out of the game. I look upon all this as merely a phase, though a very demoralizing phase, in the development of the game." We will all agree with him. To encourage brutality in football is to encourage cheating. Dr. Wilson said the other day that character was a by-product, and came as an indirect result of work done with some other purpose. The character developed as a by-product of football will not be what it should be if the rules make it expedient to instruct players to play unfairly. Besides, if success at football is all to depend on mere strength and mass and weight, it would be cheaper to have the game played by steam—a method that would also avoid all vexatious eligibility questions. Rather than do that, amend the rules. It can be done, an expert says, by a rule suggested three years ago: "There shall be seven men in the line when the ball is put in play." That looks simple, and might work until the ingenuity of the players and coaches devised new schemes to frustrate it.

Few things are of greater practical importance to this country at present than the character and reliability of the Colombian government, and, therefore, of Colombia's Chief Executive. We are about to enter into a treaty with that country, or at least we are making very strenuous endeavors to conclude a treaty, which will have immense influence on our future well-being, on the balance of power in the Caribbean Sea, the prosperity of the Central and South American republics, and, finally, the control of the Pacific Ocean,—the ocean of the future, as the Atlantic is the ocean of the past. It is, therefore, of the utmost moment to us that Colombia should have a President with real and large authority and power, a man who can bind his country to an engagement in such fashion that the engagement will be inviolably kept. Without wishing to be censorious, we may say that the present official head of Colombia does not altogether fill the high ideal we have indicated; his authority, only just recognized by a large element in his country, and that chiefly owing to the armed intervention of the United States and the pervasive diplomacy of that great Celt, Rear-Admiral Casey, is still by no means firmly riveted and assured; and he has hitherto done practically nothing towards building up his country on the solid basis of material production and development. We are, therefore, interested to learn of the candidature for the Presidency of General Aristides Fernandez, the present Minister of War, who has shown vigor and ability in pushing the campaign against the insurgent generals, Uribe-Uribe and Herrera, and whose boast a year ago that he would restore peace within twelve months has been justified by the event. Even more reassuring was his practical wisdom in healing the wounds of the rebellion, holding open the doors of reconciliation, declaring a general amnesty, and using the resources of the state to re-establish the former rebels as useful citizens. He has also restored mail and telegraphic communications throughout the country, and, in general, has shown signs of possessing that mingling of warlike and peaceful qualities that make the greatness of Porfirio Diaz. It would be easy to make a canal treaty with such a President.

By opening its pages to a serial story, the *North American Review*, in the first number of the new year, makes an interesting departure from its traditions and custom. The number of pages in the *Review* have been increased for this purpose, so that the general character and policy of the periodical may not be interfered with. The story selected for the experiment is a work by Mr. Henry James, entitled "The Ambassadors." There is no doubt that lovers of fine fiction will be delighted to make the acquaintance in this way of a new book by one of the greatest, if not the greatest, of American novelists. As an introduction to the serial, Mr. W. D. Howells has written a hearty and subtile appreciation of Henry James. "The enmity to Mr. James's fiction among his readers is mostly

feminine," says Mr. Howells, "because the men who do not like him are not his readers. The men who do like him and are his readers are of a more feminine fineness, probably, in their perceptions and intuitions, than those other men who do not read him, though of quite as unquestionable a manliness, I hope."

An attempt has been made by Colonel George Earl Church, in the journal of the Royal Geographical Society in London, to show that the Panama Canal will not pay. He begins by asserting that the projected waterway could not hope to gain any of the commerce now passing between Europe, on the one hand, and Asia and Africa on the other. The figures seem conclusive on this point. The distance from the English seaport Plymouth to Yokohama in Japan is 1725 miles less by Suez than by Panama. Even by the way of the Cape of Good Hope, Plymouth is nearer to Shanghai by 745 miles than it would be by a Panama canal. As regards the trade between Europe and Australia, there is a slight difference in favor of Panama on some of the routes, but this, according to Colonel Church, would be more than counterbalanced by the canal tolls. With reference to the west coast of South America, we are reminded that the most valuable part of its freight traffic comes from the nitrate deposits of Chile. It is, in the first place, uncertain how long the nitrate traffic will last, owing to the doubt concerning the depth of the deposits; and, even as things are now, it is questionable whether the nitrate trade, more than three-fourths of which goes on sailing-vessels, would take the Panama route, owing to the fact that an extensive region of calms adjoins the western terminus. The value of the trade of our own Pacific slope is not disputed by Colonel Church, but he believes that the greater part of it will continue to be conveyed across the continent by rail. There is no doubt that our transcontinental railways have superseded the Cape Horn route, which used to employ a huge fleet of clipper-ships, and they have practically absorbed the trade which used to cross the isthmus by the Panama Railroad. In 1869 the traffic between New York and San Francisco *viâ* the Panama Railway was valued at $70,000,000, but ten years later it had shrunk to less than $5,000,000. The Mississippi River cannot compete with the railways running from north to south, but seems destined to degenerate into a draining-ditch. We concur with Colonel Church in thinking that the Panama Canal is unlikely to meet, in the matter of receipts from tolls, the over-sanguine estimates put forward by the Lesseps Canal Commission when the waterway was begun. It may be that even the more cautious computations of our own Canal Commission are also too optimistic. Even if it could be proved, however, that the commercial value of the canal will be inconsiderable, and that only a very small dividend, if any, can be paid upon its cost, it would still be the duty of our government to undertake the work for political and strategic reasons. The matter was settled once for all when the *Oregon*, which was in the Pacific, but which was needed in the Caribbean at a grave conjuncture, had to go round the Horn. The fate of our greatest Atlantic seaport may be one day determined by the ability of our Pacific squadron to traverse an isthmian canal.

The proofs of the extent to which American manufacturers are invading the globe continue to accumulate. It is not, indeed, particularly surprising that we should now be sending locomotives to Guatemala and Brazil, agricultural implements to Argentina and harvesting-machines to France, electrical apparatus to Japan, a shoe-manufacturing plant to Mexico, and mining-machinery to Johannesburg. We may well open our eyes, however, when we learn that engineers from Central Asia are expected soon to reach this country for the purpose of placing contracts with American firms for cotton-seed-oil mills. Strange to say, too, the German government is purchasing from the Philadelphia Pneumatic Tube Company pneumatic tubes for the Imperial Navy-yard at Kiel; American capitalists have started a factory in Glasgow, Scotland, for the manufacture of golf-balls; large engines for British blast-furnaces are about to be shipped by a foundry and machine company in Philadelphia; and King Edward VII. has requested a Pittsburg firm to provide the charging station for his automobiles at Sandringham with the electrical portion of the apparatus. It is well known that the finer qualities of women's shoes, which used to be made exclusively in France, are now manufactured so much more skilfully in the United States that they have driven the French products out of the fashionable shops in Paris itself. For cheap watches we used to have to go to Switzerland, but now watches can be made nowhere so cheaply as in the United States. There is scarcely any product of human industry, from a battle-ship to a gimlet-screw, as to which the American inventor does not outstrip his competitors. It is true that our war-ships cost more to build and more to run, owing to the higher wages claimed by American labor. On the other hand, there is reason to believe that the ships are better.

It is scarcely credible that a majority of the Senate will consent to admit New Mexico and Arizona to Statehood when the facts relating to the actual and comparative population of those Territories shall have been recognized and discussed. It is the duty of Senators not only to mark the disproportionate political power which a small body of voters would acquire through the entrance of either of those Territories into the Union, but also to consider the inexpediency of adding to the unreasonable weight already possessed in the Senate by the five Far Western States which may be described as rotten boroughs. Senator Quay and his Democratic coadjutors propose to give two United States Senators to New Mexico, although the population of that Territory is only 195,000, or very much less than that of the city of Buffalo; and also two United States Senators to Arizona, which has but 122,000 inhabitants, or very much fewer than the city of Rochester. That is to say, the small bodies of electors in these two mining communities of the Far West would be able, through their representatives in the Senate, to neutralize the voice of New York and Pennsylvania, which, taken together, constitute, in respect of wealth and population, one of the great powers of the earth. Such injustice to those massive commonwealths would be emphasized by the fact that they have already been subjected to grievous injuries of the kind.

The five States Idaho, Montana, Nevada, Utah, and Wyoming have between them, according to the last census, only 814,000 inhabitants, yet they counterbalance in the Senate New York, Pennsylvania, Illinois, Ohio, and Missouri. The addition of Arizona and New Mexico would raise the aggregate population of the seven small Far Western States to 1,131,000, or less than the number of inhabitants in the Borough of Brooklyn. Yet in the United States Senate the power of those seven insignificant communities would counterbalance that of New York, Pennsylvania, Illinois, Ohio, Missouri, Massachusetts, and Texas, which, in respect of combined wealth and population, may be compared with France or with Austria-Hungary. How long do the advocates of the admission of rotten boroughs into the Union imagine that the seven great States that we have named will submit to a preposterous subordination of their influence in the more important branch of the Federal legislature, the branch which unites executive with legislative functions? It is no argument for the admission of Arizona and New Mexico to Statehood that the framers of our Federal Constitution recognized that Delaware and Rhode Island would counterbalance New York and Pennsylvania in the Senate. There were in 1787 political reasons of a momentous and vital kind for persuading the smaller States to accept the Union framed at Philadelphia. Their acceptance was conditioned on the concession of complete equality in at least one branch of the Federal Legislature. There are no political reasons for making such a concession to New Mexico and Arizona; on the contrary, there is a strong political reason against it, to wit, the well-grounded apprehension that the mighty commonwealths that we have named would become profoundly dissatisfied with their representation in the Senate. It is true that the platform constructed by the last Republican national convention contained a plank favoring the admission of the two Territories named to the Union. The promise should never have been made, and the Republican party will deserve better of the country by breaking it than by keeping it.

Justice Gaynor, of the Supreme Court of New York, writes in the current number of the *North American Review* an article on the lawlessness of the police of New York which will make many good people, both officials and private citizens open their eyes and stare,—an article which every lawyer

in the country will want to have in a convenient place among his statutes and reports. It appears that police officers "have no right or power to arrest without a warrant which every citizen has not; that an officer is given no more right by law to arrest without a warrant than that given by law to every citizen, excepting in one not very substantial particular in the case of felonies." But the contrary practice has so long been the rule, says the writer, that the residents of the city of New York "have forgotten their rights as freemen under Anglo-Saxon law." So far, indeed, has this practice gone that the New York police "may without a warrant raid, arrest, and lock up overnight several hundred people, from all parts of the United States, found in a public room or hall, against whom there is no pretence of any criminal charge whatever," or drag voters away from the polls, or suppress free speech by breaking up meetings and driving the speakers out with clubs. The eminent justice indignantly protests against this violation of private rights—a state of things, he says, which would not be tolerated in England. "Crimes and vices are evils to the community, but it behooves a free people never to forget that they have more to fear from the growth of the one vice of arbitrary power in government than from all other vices and crimes combined." The article is sure to provoke the liveliest discussion, out of which, let us hope, some substantial improvement will come in a situation which is, to put it mildly, highly unsatisfactory and uncomfortable.

The latest reports from our naval authorities in Samoa do not contain optimistic views of the immediate and permanent acceptance by the natives of conditions imposed by "civilization." When the first American governor, who was also commandant of the naval station, landed at Tutuila he found a social problem of tenacious and vexatious dimensions. He was a man of spirit, originality, and vigor, and he went to work in a campaign of reform which is outlined in his historic, and now posthumous, documents in the form of so-called "general orders" and "circulars." He took a sturdy drive at everything in the shape of economic and social abnormality, and carried his remedial measures perilously near to the domain of autocracy. He never quite went over the line in what he required of the inhabitants, but it was feared even then that he might not succeed in bringing the natives to an amiable compliance with the traditions of our superior order. There was some prospect of success vouchsafed in the excitement of the reformatory moment, but now it appears the Samoans have not relinquished all that they were asked to abandon of their old—and, to us, irreconcilable—customs. For instance, it seems they cling to the ceremonial of the "malaga," which finds its expression in the habit of one community, to the extent sometimes of an entire village, descending upon a neighboring community and being entertained for weeks or even months at a time. It is a sort of warfare without the intent of antagonism, no less devastating to individual possessions and village resources because it has a friendly aspect. There can be, and generally is, a return of the overwhelming compliment, and this custom was impoverishing the involuntary hosts. The reluctance shown in giving up the practice is discouraging to the American officials, who find also similar indisposition on the part of the Samoans to abolish the marriage "Faa-Samoa," a type of alliance which allows the wedded to separate after a union of any period, without disgrace to either, and without recourse to law. Still another custom which was "abolished" by us and which is again in vogue is the practice of a husband who is childless taking a second wife, without rejection of, and without protest from, the original. These circumstances are related in somewhat discouraging vein in the annual report of the naval commandant, who says, with a note of hope in it:

> It would be useless for the commandant to arbitrarily order such practices to cease. He could not enforce the order. The climate makes it an easy matter to bring up children as they rear them; food is abundant. Time, and I am afraid a very long time, will be required to get the natives to see that they are wrong in such matters. In the mean time efforts are being made to help them, and an improvement in some ways is evident.

A Berlin despatch, dated December 29, recorded that the Lutheran clergy of Saxony had issued an order striking the name of the Crown-Princess from public prayers. It may be as well, for the public prayers seem not to have been especially profitable to the Princess; but such of the Lutheran clergy of Saxony as have either piety or humor must feel in their hearts that if ever the Crown-Princess needed praying for, it is now. She has quit the court and capital of Saxony, abandoning her royal parents-in-law, her equity in her husband, and, sad to say, her children, and run away to Geneva with a man to whom she is not yet married. That is a bad predicament for any woman to be in, and the Princess does not pretend that her case is enviable, but she seems to think it is better than it was. The immediate cause of her elopement was that she fell in love with M. Giron, a professor. The remoter cause was that life at Dresden was very unpalatable to her. She disliked her husband, apparently with ample reason, and royalty under the conditions she experienced seemed to her altogether unprofitable. The fact that one of her brothers, the Archduke Leopold Ferdinand, accompanied her to Geneva, and has since applied to be relieved of his title and the obligations of his rank, makes her course seem less crazy, and favors the presumption that the life she left was pretty bad, whatever may be said of the life she has in prospect. Court life in Europe in these days does not seem attractive as compared with private life under advantageous circumstances. It abounds in hazards, futilities, and restrictions. Its privileges are not very satisfying; its drawbacks are substantial, and except in a few cases its opportunities are very limited. It suits people who like it, but to be born royal and not to like the job is to be in a pretty desperate position.

The decision in the Taff Vale case, in England, is of great importance, not only to trades-unions, but to employers of labor, and to communities affected, or likely to be affected, by strikes and lockouts. The union in this case undertook to intimidate the non-union employees of the Taff Vale Railway Company who worked for the road contrary to strike orders. The union sent circulars to the men in which they were informed that such action made them "blacklegs," a word equivalent to the word "scabs" applied to non-union workers in this country. It was held that the use of this word in a union circular was terrorizing. The judge who presided at the trial gave the jury his own opinion of the evidence, announcing that it must not be taken as authoritative, but the jury agreed with him. They found that the three defendants, officers of the union, conspired together to molest and injure the plaintiffs; that they unlawfully persuaded men to break their contracts; and that they authorized and assisted in carrying out the strike by unlawful means. The most interesting feature of this decision is that the officers of a voluntary society were held responsible for the consequences of the illegal acts committed under the society's orders. A like interpretation of the law by the State of Pennsylvania would make Mr. John Mitchell and the other officers of the United Mine Workers responsible for the acts of violence committed by the strikers against non-union men. The English union was not incorporated, and it is because unions both in this country and in England have desired to avoid responsibility to the law that they have objected to incorporation. But now an English court has held an unincorporated union liable for interfering with the rights of non-union men, and has declared that the injured employers, as well as the persecuted non-union men, may recover damages. Perhaps, in view of this, the unions will seek the advantages of incorporation, and secure the right to sue collectively now that their officers may be mulcted in damages. At any rate, the law which holds to their responsibility the officers of combinations having the welfare and comforts of the community at their mercy will be justified in the eyes of reasonable men.

So much of the story of William Smith as came from Pottstown, Pennsylvania, on December 29, and was published in the newspapers, is disquieting. It represented him as dying at the Pottstown Hospital. He had been a deputy-sheriff during the coal strike. "Ostracized, and unable to find work, though he had travelled the length of the coal region," he had been assaulted and beaten by four men in a saloon at Cumbola, and left with a fractured skull. In his ante-mortem statement he named his assailants, and warrants were issued for them. He had applied, he said, to scores of places for employment, and got work, but was always discharged when it was found out that he had been a deputy. It is a bad story if true, and we shall want to read the next chapter of it. Will

the assailants be caught and tried and punished? To serve as deputy-sheriff is to assume an honorable public duty. If the mere fact of such service blacklists a man in the coal region, matters are still in a bad way there. If union labor condemns deputy-sheriffs as it condemns members of the National Guard, it becomes a perplexing question what means of enforcing law and preserving order in times of tumult union labor will countenance..

It is an important public duty to remember the men who worked in the coal region during the coal strike. That we are getting hard coal now is partly due to the engineers and others who kept the mines from being flooded. *McClure's Magazine* prints in its January number a report of the experience and present condition of some of these men and other non-union miners. It prints only a few stories out of a great number collected,—stories of assault, murder, the persecution of women, and the destruction of dwellings. It also publishes in the same issue some chapters in the history of the Standard Oil Company, and a narrative of the recent extraordinary experiences of Minneapolis, whose city government was administered for a time by criminals. The editor, as an afterthought, suggests that these three pieces which happened to push themselves into the same number may be profitably studied for the light they throw on American disregard for law. They are all impressive stories, and treat of matters of a sort that it behooves the thoughtful voter to know about. The tale of what happened to Minneapolis because her decent men were too busy making money to look after the city government is almost incredible. We have read in the papers that there was an upset in Minneapolis, and that her Mayor ran away, but the full measure of her appalling disgrace has not been generally appreciated. There is almost as bad a story to tell of St. Louis, and of course the city of Philadelphia and the State of Pennsylvania will yield instructive tales of political infamy at all times and in any desired quantity.

Hand in hand with the menace some day — in the near future—of having no engineers for the navy is the companion calamity of having no ordnance officers for the army. In testimony given this session before the House Military Committee, General William Crozier, the army chief of ordnance, reported a serious state of affairs in his corps. There were fifteen vacancies in the corps since February 1, 1901, and only three have been filled. Few first lieutenants of the line, who are alone eligible, want to become ordnance officers for a period of four years, on the expiration of which they must go back to their regiments. Their temporary transfer means no increase in pay, and, besides, they must pass a rigid examination in technical subjects. The result is that line lieutenants find it worth while to stay with their troops, or try for a place in other staff corps where they act and are paid as captains during the four-year detail. It is General Crozier's idea that the examination be continued as a condition to detail; that second lieutenants be made eligible to transfer; and that the junior ordnance officers have but one in each four years of service with the troops. This would open the field to officers who would be benefited financially by the detail, who would come in by competitive examination, and who would be able to acquire a useful knowledge of their profession in the comparatively uninterrupted form of duty in the corps. General Crozier is anxious to retain the alternative line and staff principle in his department, as tending to enlarge the officer's scope of information and opportunity of observation, and he plainly indicates his opposition to anything which would admit to the corps men who cannot meet the professional requirements. He does not believe in a remedy which is worse than the malady, and he admits, with candor and concern, the necessity of therapeutic measures of relief.

Charges of cruelty against United States army officers serving in the Philippines have recently been revived. Not only is Major Glynn a second time the victim, but new names are introduced. These revivals and new investigations are really of no use. The country knows the main facts, for it has been admitted and defended. The administration naturally endeavored at first to prevent the country from knowing of the horrors that have been found to be necessary for the subjugation of the Filipinos; but the secret would out, and now the country knows practically all that there is to know,—at least that part of the country which cares to be informed, whether it have any feeling about the matter or not. It cannot be said that the army has confessed; it is nearer the truth to say that it admits and justifies. It is nearly, if not quite, the unanimous opinion of the army that the water-cure, at least, has been necessary in order to carry out the orders to compel peace in the islands. It is well that the country knows this; it was a mistake on the part of those in authority to endeavor to suppress it. The country is entitled to know the whole cost of the war with Spain, the whole cost of our new possessions, pecuniary and moral. If this knowledge is only to be useful as a guide in the future, it is well worth the having; but what is to be known has been revealed, and the effort to keep the game of investigation going is mere teasing, calculated to annoy the investigated, but also to do much harm to the investigators and their cause.

Some of the neighbors begin to talk about the approach of the three-hundredth anniversary of the discovery of the Hudson River, and to wonder by what sort of high jinks it will be celebrated. It is six years off yet. Hendrik Hudson came in 1609, and rather late in the season. A world's fair is spoken of as a suitable effort to mark a date so notable, but another American world's fair is hardly likely to be planned until St. Louis has finished with hers. Ten years is not too long a time to come between fairs of the first magnitude in this country. Moreover, the Hudson celebration would doubtless come to New York, and New York is ill-off for fair-grounds, and will probably prefer something less laborious and protracted, and, if possible, more amusing. Six years will do a good deal to make New York commodious and comfortable, provided its population does not outrun its struggles to take care of it. The Holland Society has undertaken to make suggestions about the Hudson celebration, and its plans will doubtless be influenced by its forecast of the state of development that the town will have reached in the year in which the plans are to be carried out. Possibly the Erie Canal will be reconstructed and enlarged before 1909, and the Hudson joined by an adequate waterway to the Great Lakes. That would best mark the anniversary. Give us the enlarged canal as the chief monument, and we will take out the rest of the celebration in fireworks and river pageants.

To be President of Yale University is to occupy a great place. To fill such a place is a very considerable feat. When President Dwight announced in 1898 that he intended to resign and notified the Yale authorities to select his successor, there was no distinguished Yale graduate of suitable age whom they did not consider. All previous presidents of Yale had been ministers; all had been men of notable scholarship. There was a feeling that in this generation Yale needed a man of affairs—of business—rather than either a theologian or a scholar. The electors broke with the ministerial tradition. They chose Arthur Twining Hadley. He is not a clergyman, though he has come to be a preacher, but he is a scholar, and the son of a scholar, and a son of Yale, born in the blue, reared in the same, a native of New Haven, and long a Yale instructor. From his father, the famous Professor Hadley, he got brains first, and all the languages and learning a clever lad could imbibe in an atmosphere of erudition. He graduated at Yale in 1876, studied for a time in Berlin, and came back to Yale in 1879 to teach. In 1885 he was appointed Commissioner of Statistics in Connecticut. In 1886 he became Professor of Political Economy at Yale. In 1899 he was promoted to the presidency of the university. He can talk Latin off-hand, as he demonstrated at Yale's decennial celebration; but his mind, trained by classical methods, has turned to the practical concerns of the present. He is an authority on economics, the author of a book on railroad transportation, and is, or was, president of the American Economic Association. He is equipped with the learning of the ancients, but he is a modern, and constantly concerned with the newest modern questions. No college knows what kind of a president she has got until she has tried him. Yale has had a chance to try Dr. Hadley, and is sure that she has found just the man she wanted. The country thinks so too. Dr. Hadley was born April 23, 1856, and is forty-six years old.

The Solution of the Venezuela Problem

THE precise terms upon which the controversy between Venezuela and various European nations is to be submitted for arbitration to The Hague tribunal are not yet settled, but, no doubt, they will be speedily arranged at a conference of diplomatists representing the parties interested. Meanwhile we have before us a fact of far-reaching influence on our international relations, the fact, namely, that an agreement to substitute arbitration for war has been reached at the instance of the United States. Let us mark some of the consequences of the precedent thus established. Two of these, at least, are obvious, viz., that the Monroe doctrine has received material extension and general recognition, and, secondly, that an immense stimulus has been given to the beneficent movement for the pacific adjustment of disputes by the international court of arbitration founded at The Hague.

Why do we say that the Monroe doctrine has received material extension? Because, as lately as the first week in last December, when Mr. Roosevelt's second annual message was submitted to Congress, our Federal Executive, interpreting the Monroe doctrine, conceded to European powers the right to enforce by violence their claims against Latin-American republics, provided the claimant refrained from a permanent occupation of American territory. Waiving questions in which a nation's honor is involved, and confining ourselves to pecuniary debts, we must regard it as at least disputable whether the maxim *caveat emptor* should not be deemed applicable to European creditors of Latin-American republics, inasmuch as those creditors are well aware of the risks attending their speculation when they invest money in those countries, and are careful to insure themselves against such risk by exacting exorbitant rates of interest. That a good deal may be said for this view of the matter from an ethical point of view seems to have been conceded by Premier Balfour and Chancellor von Bülow, for both have publicly asserted that the Anglo-German demonstration against Venezuela was not intended solely or mainly to collect ordinary debts, but primarily to obtain redress for high-handed injuries inflicted upon the persons and property of British and German subjects. While professing, however, to have been actuated primarily by a resolve to uphold their national honor, there is no doubt that the authors of the Anglo-German demonstration would, but for the interposition of the United States, have sanctioned a continuance of hostile operations, until they should have extorted a provision acceptable to them for the payment of all ordinary debts alleged to be due in Venezuela to subjects of Great Britain and the German Empire. That is to say, under the construction of the Monroe doctrine which prevailed up to yesterday, these European powers would have arrogated the right to determine for themselves the validity and amounts of their respective claims, or, in other words, to act as plaintiffs, judges, and sheriffs in their own case. The unreasonableness of such an attitude would be patent if only private persons were concerned. This is not the only objection to the exposition of the Monroe doctrine put forth in December last. What was meant by the word "permanent," and who was to be clothed with the right of defining it? Would not an occupation of strategic points on the Venezuelan mainland, or merely of Venezuelan custom-houses for a term of twenty-five years, constitute a dangerous approach to permanence? The military occupation of Egypt by England has not yet lasted twenty years, yet it is universally looked upon as permanent. If Great Britain and Germany had insisted upon retaining La Guayra and Puerto Cabello until the receipts from customs at those points had provided interest and a sinking-fund for all the debts alleged to be due British and German subjects, and also for the cost of the naval demonstration and for subsequent collection expenses, it is improbable that Venezuela would have recovered those seaports within the present generation, if at all. For all practical purposes Great Britain and Germany would have owned those two ports, and would thus have acquired invaluable coigns of vantage with reference to the Panama Canal. What, moreover, they were permitted by us to do this year in Venezuela they would have been authorized by precedent to do next year on the Atlantic or Pacific coast of Colombia and Central America, or in Brazil, or in Argentina. In a word, our Executive, by acquiescing in the collection of debts by war, and by sanctioning any occupation of American territory, although ostensibly transient, would have opened the door wide to the gradual subordination of Latin-American republics to European powers.

Our government has still to deal with the question how the judgment of The Hague tribunal, when rendered, is to be enforced, but meanwhile it is manifest that the Monroe doctrine received an immense development from the moment that Great Britain and Germany, instead of persisting in the enforcement of their claims by war, consented, at Mr. Roosevelt's request, to submit them to arbitration. No longer will our Executive consider itself bound by the unfortunate Corinto precedent. No longer is a President of the United States, when defining the scope of the Monroe doctrine, likely to announce that European nations are at liberty to treat a weak American power as they would never dare to treat a strong one, to assume the validity of debts unrecognized as valid by any international tribunal, and to subject a debtor-state to any amount of devastation and spoliation, so long as they shall refrain from "permanent" occupation of its territory. All that is now obsolete, and, in the light of present events, seems as discreditable as it is antiquated. What those events mean is this, that, hereafter, when a European nation asserts that pecuniary debts, or even debts of honor, are due to it, or to its subjects, on the part of a Latin-American republic, the validity and extent of those debts must be determined by an international tribunal. The establishment of such a principle is of inestimable moment, not only to South America, but to the world at large, for the minds of statesmen will be thus habituated to the substitution of peaceful instrumentalities for war, and to the acceptance of the supremacy of law in international as well as municipal affairs. The Hague tribunal, which, but for the agreement of the United States and Mexico to invoke its services, had remained entirely neglected and inert, now enters upon a splendid career of activity and usefulness, thanks to the self-denying and far-sighted course pursued by our Federal government with reference to the Venezuela imbroglio. Unquestionably the offer to accept Mr. Roosevelt as arbitrator conveyed a flattering compliment, and a self-reliant man who wishes to fix the attention of mankind may well have been tempted to assume the function, but, aside from the practical objections to Mr. Roosevelt's performance of the rôle, objections which we need not now repeat, he would have missed a precious opportunity of investing The Hague tribunal with a jurisdiction and an authority which it has hitherto lacked, and of thus setting in motion machinery of incomparable value for the furtherance of universal peace.

We add that, by their original proposal to make Mr. Roosevelt arbitrator, and by their subsequent acquiescence in the preference expressed by him for The Hague tribunal, the allied European powers have recognized the moral obligation of respecting the Monroe doctrine, and have acknowledged the hegemony of the United States in the New World.

The President and Public Sentiment

No matter who may be the President, he wonderfully influences the public emotions. On a subject which affords any opportunity for the display of passion or sentiment, the President is usually able to carry the country with him. It was said at the time that the country swept Mr. McKinley into the war with Spain; it is now known that Mr. McKinley led the way, and held the country back until he had bought enough powder. Mr. Harrison stirred up an intense sentiment against Chile in 1891, and Mr. Cleveland set the country wild with his Venezuelan message in 1895. In fact, the American people like their President to appeal to them, like to think that when he calls upon them to be up and doing he is about to add to the glory of the country, or to put his foot upon evil men or evil institutions, or in some way to vindicate his office and their power. So it is pleasant, at least for the moment, to be a dramatic President, but eventually the dramatic President is not likely to be so well thought of as the useful plodder.

In view of the potency of the President's words, a cautious man will be especially cautious in his speech. Mr. Roosevelt makes many speeches, and his conversations, or their purport, are often quoted. Thus far he has been somewhat exuberant in his utterances, and, in more instances than one, reflection has followed speech. Moreover, he is inclined to think aloud. Perfectly honest and frank, and possessed of a marvellously quick mind, he often announces a conclusion which he subsequently changes. He has thus obtained with some a reputation for vacillation. He is also apt in making general statements which, read with the context of speeches made by others with whom he seems to be in agreement, excite alarm. Mr. Roosevelt evidently has not learned the country, and, on the other hand, it is quite clear that the country has not learned him. He does not realize that he is stirring up the people to unwholesome excitement, while the people have not yet learned that, when it comes to action, Mr. Roosevelt rarely offends the conservative men who control his party.

The allied enemies of Venezuela had no sooner launched their thunderbolts at their small debtor than this country began to wonder when Dewey and his fleet were to be ordered to La Guayra. In the face of the actual conditions, however, the President became steady. He had said so much, however, about the iron in his blood, and had cried so loud in praise of war; it was known that he entertained such keen suspicions of Germany's intentions in the West Indies and in South America; it was so universally admitted that he insisted that the country should possess a fleet as large and powerful as that of the German Emperor,—that the feeling of war was in the air. The blood of youth began to run hot, and sober business interests began to tremble. But the President did not want war. Because of the reputation which he has

won by his warrior speeches, he is sensitively anxious to disappoint the carpers who predicted a bloody administration. If the country had understood the strong desire for peace which animates him, it might not have become excited, the newspapers would not have stimulated the excitement, Congressmen would not have endeavored to meet him half-way on the road which they falsely assumed that he was travelling. If his speech about war had been more temperate, if he had permitted the iron in his blood to rust a trifle, we should have felt that he had been working all the time to steer the dispute into The Hague tribunal, or some equally peaceful haven. Moreover, the country would have been in a more observant mood, which would have enabled it to watch the very able steering process with pride and pleasure.

In other matters, of far more intimate interest to the welfare of the country, Mr. Roosevelt's words have far exceeded all the possibilities of performance. It may not be that his speeches concerning trusts and their regulation have been really intemperate; but they are so regarded by sensitive business interests. He is easily excited by his own speech, but the listening country does not take account of this excitement. What the President says is to be believed. When he talked about trust evils, therefore, and, following Mr. Bryan, recommended a constitutional amendment, it was firmly believed that he meant the same kind of war that has been threatened by the usual trust-killer. He meant nothing of the kind, he afterwards explained, but financial centres are easily alarmed and slow to recover; and the President is still dreaded because he has excited fear by his words.

It is just to the President, however, to judge him by his actions, rather than by his speeches and conversations. In reality, he is a conservative man, and in the presence of the leaders of his party he is often yielding. Many years ago he said that he would "die for free trade," but when he became a figure in politics his name disappeared from the lists of members of free-trade organizations, here and in England. At the beginning of last year's session of Congress he announced more than once that he was ready to fight his own party in behalf of reciprocity for Cuba, because the question was a moral one and the honor of the nation was involved. He used this expression in his message, but we know that in conversation he also expressed the determination more than once to fight his party, if necessary. But when the time for fighting came Mr. Roosevelt was governed by the advice of the Republican leaders, and yielded his view to theirs. In the White House, as in the Senate, the question is no longer moral; it is purely commercial. It has also been naturally supposed that he would push at once for tariff revision, at least for a law authorizing a tariff commission; but he has been dissuaded from that.

As to the war on trusts, the business world should guide itself by facts, and not by the language of oratory. It is unfortunate that the President should have made such war as he has, for it has caused much disturbance. At the slightest sign of political hostility business is terrorized, and at this time it is peculiarly sensitive. At the beginning of January the banks of New York began to pay out money for dividends and interest which will call eventually for a disbursement of $140,000,000. Just at this time the House of Representatives, hurrying once more to prove that it shares the excitement which the President has raised throughout the land, proposes to put $500,000 extra money into the hands of the Attorney-General, with which to fight trusts. There is no doubt that the President is a little more like his words on this subject than he is on others, but, with time, he will yield to the advice of the older heads, of the leaders who manage the party, and who control conventions. He is under conservative influences, and he often seems even timid in their presence. It is greatly to be regretted, however, that his speech sometimes runs beyond his final intent, for his words have a wonderful influence. They arouse passions that should be kept in check, and create alarms which are disastrous to prosperity. There is no doubt that his anti-trust speeches have awakened hostility which he will not share when the time for action arrives. It is terrible to let loose a spirit which cannot again be bottled, and this sort of magic Mr. Roosevelt is in the habit of practising. In view of its effect on the public sentiments and passions, it is probably his most dangerous fault.

The Monstrous Tax on Art

THERE is hardly any law in the statute-book so inherently vulgar and so inspired by the evil spirit of sordidness as that which imposes a tariff tax on art. The other day the new entrance hall to the Metropolitan Museum of Art was opened. It is the last word of the great architect, Richard M. Hunt, who did so much to decorate the city in which he passed his active life. The idea was his, and after his death it was carried out reverently by his son and by Mr. Post. If ever there was a living evidence of the worth of cosmopolitanism in art, it was Mr. Hunt, who added to the freshness and vigor of his stalwart Americanism the inspiration caught from the glorious days of the sixteenth century, when Louis XII. and Francis I. filled Touraine with the noble châteaux to which those who love great architecture still make pilgrimages. New York owes to Mr. Hunt its finest specimens of domestic architecture. He had no rival here in his day, for the great Richardson did not work here, but in Boston, in Chicago, in Pittsburg, and in Washington. What all these cities possess of the art of the two masters is, in turn, due to their training at the Beaux Arts in Paris. Mr. Richardson built his own ideas upon the Norman cathedrals and castles, and Mr. Hunt brought back with him a recollection of the beautiful homes of kings that, built as castles for defence, were disappearing before palaces constructed for domesticity,—those charming palaces whose eyebrows have been so picturesquely described by Henry James in *A Little Tour through France*. Later, another Beaux Arts man, Mr. Charles McKim, gave to Boston a modernized and democratized St. Genevieve: still another, Mr. Flagg, built the new Corcoran Art Gallery in Washington; another still, Mr. Hastings, is embellishing New York with the Public Library. We might go on, for Beaux Arts architects are almost swarming in our country, and to-day the domestic architecture of no other country in the world equals that of our own.

The twin arts of architecture and sculpture, the former especially, are flourishing here because they find patrons. Some day the patrons will recognize the excellence of our painters. On some other day, the officials who order public statuary will become intelligent enough to leave to experts the task of selecting the sculptor and of passing on the finished work. Perhaps by that time the national law-makers will have learned that art does not flourish in hidden places, nor under restraint, nor in ignorance of what talent and genius are accomplishing throughout the world.

To the architects we have mentioned we might add the name of one American who is the greatest sculptor of his time, and of at least two painters whose commanding positions are recognized wherever the language of art is spoken. All whom we have named, or might name, who have achieved great distinction, who have reflected honor on their country, and whose work has beautified some of the waste places of our populous cities, have made the treasures of the world their own. There is not one whose achievements have been notable, who has not sought his inspiration at the fountain of the ancient masters, and who has not often refreshed his spirit by communion with his fellow-workers throughout the world. Art is not confined by national boundaries, and those who endeavor to breed it in narrow confines bring forth, at the best, an abortion. To the American artist, the cultivation of the past is as essential as the free spirit, the democratic reverence for humanity, and the eager quest for new forms of expression, which are part of his native heritage.

The genesis of our tax on art is not difficult to trace. It is the direct result of the failure to differentiate between the achievements of the artist and the output of the manufacturer. In the rage for protecting home industries the artist has been brought within the paternal oversight of the government. In order that the United States might make up its own cotton into its own calicoes, it was deemed necessary to shut out the calicoes of Manchester by a protective tariff; therefore, in the reasoning of the political mind, it was also thought to be a reasonable proposition that if art was to become a paying trade in the United States, the practice of buying foreign works should be discouraged by a tariff tax. Most artists in this country have always been opposed to this tax; some, however, have favored it, but when these have been pressed for a reason, they have answered that the tax prevented many ignorant Americans from buying foreign forgeries of the old masters. The excuse which sets Congress up as a schoolmaster in the arts is almost as monstrous as the tax. The tax denies to all American artists who are not able to go abroad for study the full knowledge which is their right and which would be their inspiration. It prevents the formation of great private collections which would eventually go to the Metropolitan Museum of Art. It therefore limits the opportunities for the education of the public taste. Such a barbarian law can hardly be found in any other country of the civilized world. Americans with great fortunes, a keen appreciation of the beauties of the treasures of the world, and a worthy desire to benefit their country, and to provide it with what it lacks by very reason of its youth, have purchased and stored in foreign countries valuable paintings, statuary, and other forms of art, and there they remain, priceless but useless, because Congress insists upon its tax on art, its burden on enlightenment, its Chinese wall against civilization. If its tax benefits any one, it is to the advantage of the pockets of the poor in spirit, who, abroad or at home, would never contribute in the slightest degree to the glory of their country. The men who, as architects, sculptors, and painters, have established an American art have succeeded because they have violated the spirit of our narrow law, because they have gone abroad after what was denied them at home, and have thus demonstrated how great a deprivation to the country is the law which denies to it free access to the treasures without the knowledge of which a national art would be absolutely impossible.

The Latest Royal Scandal

THE escapade of the Crown-Princess of Saxony is, so far as it is personal to her, of the moral measure of the flight of any other lady who fancies life with her husband impossible, and takes refuge from it with her paramour. Her behavior is no worse, as it certainly is no better, than another such woman's, but it has a peculiar interest for the whole world just now because of the false position in which she was placed. By superstition and tradition she was set over a people whose sovereignty her husband was to inherit as if it were a piece of real estate or personal property. By the make-believe of pretty well all Europe, and quite all Asia, Africa, and Oceanica, she was superhuman, and sacredly immune from censure. She had become so, as any woman might have become, by marrying the Crown-Prince; but she had contributory claims to the worship of the Saxon people, because she was the daughter of a long line of worthless princes, and the niece of an Emperor who was endeared to his subjects by descending from a family divinely appointed to rule over them so far back in the past that the memory of man ran not to the contrary. She was confirmed in her right to be above and apart from other human beings by virtue of the principle prevalent in Europe, Asia, Africa, and Oceanica, that the head of a nation ought to be born, and not chosen, and when he has once taken that trouble he hallows everything belonging to him. It is only the first step that costs, in his case, as in others, and having come into the world the rest is simple for him. He finds a nation ready and eager to bow down to him, to own him lord, to make him God. If it is a free nation, that is a parliamented nation, it reserves certain rights politically, but socially its allegiance is as idolatrous as any non-free nation's, and the position of the monarch and the monarch's family is as entirely false as if he held the power of life and death over every one of his subjects, as he does in several countries of Europe, and in all the countries of Asia and Africa, and such countries of Oceanica as have not failed of the original inspiration. Compared with the lie of being a Crown-Princess the lie of living in secret adultery with the tutor of her children, was not half so monstrous in the case of the wretched woman who has fled from it to the shame, such as it is, of living in open adultery with him. As a woman, faithless to her husband, she was incalculably less corrupting than she was as a princess faithful to the tradition of royalty. Whatever mischief will come of her evil as an adultress will have its worst poison from her evil as a princess, and her sin will have power upon the common imagination through the glamour of her royalty.

These are some of the little facts that our simple republic will do well to keep in mind while standing before royalty as a world power. Let it not forget that something of their regal splendor is the shimmer of their personal putresence, and that whatever airs of majesty they put on, every king and every kaiser of them is in a false position, a position far falser than that of the poor creature who has wrenched herself away from it, and taken her shame upon herself. It is of course not the shame of the common sinner. The spell of her origin and station follows her to Geneva from Dresden, and surrounds her with the halo of royalty still. But what she could do to undo that spell she has done, poor soul, and if royalty were not invulnerable, humanity might be grateful to her for having dealt it a deadly wound.

But royalty, if it could be hurt, would have perished of itself long ago, and that it has survived as an institution all that princess and princesses could do against it is one of the proofs of its divinity that really strike one dumb. That a thing so essentially bad can continue to be, and that its victims should vaunt it as finer and better than the thing which it is not, confounds the reason, so that it is no wonder some Americans are beginning to be shaken in their sense of the self-evident truths proclaimed in the Declaration. Some Americans scarcely appear to know that the only two powers now provided with magistracies of unimpeachable respectability are their own Republic and Swiss and French Republics. These stand amidst the environing absurdity and iniquity and depravity of the royalties as lights of hope for the peoples still stumbling in the dark ever since kings were given them for their sins. Even those poor Latin-American republics are, with all their shortcomings, logically so much in advance of the monarchies, that we may not see them molested in their little insolvencies without a pang of compassion. They may have despots, but they have not princes, and they change their tyrants with a swift vicissitude which promises something for their future. While we deplore their shortcomings, we must not forget that here and there one of them picks itself up, like Mexico, and Chile, and Argentina, and goes steadily forward on the road that at least leads somewhere. At the worst, their morality is in no danger of being lowered by the misbehavior of any lady of their presidential families. They are not socially misgoverned, as monarchies must always be, with the court forming the topmost round of society, and filtering corruption down.

In the meantime, the escapade of the Crown-Princess of Saxony, scandalous as it is, is useful in dishonoring the superstition of royalty, which, of course, it cannot destroy. In spite of the example of these States, and of the Swiss Cantons, and the indivisible French Republic, the monarchical countries of Europe, Asia, Africa, and Oceanica will continue monarchical. But they will not continue monarchical with quite the former effulgence. They are all rendered a little ridiculous by that elopement from the palace at Dresden to a hotel at Geneva; they are brought into contempt, and their tradition is mocked by a woman in whom it was theoretically consecrated. She is no worse than the man she abandoned, and her infamy imparts itself not so much to her sex, which is good or bad quite independently of her conduct, but to her royalty, and to all the royalties, inextricably involved in her shame by the confession of human frailty in regions so far above humanity. This is to the gain of humanity, and it will help people to hold up their heads like men, not perhaps immediately in the monarchies, but in the republics, where there is always danger of their fancying that royalty is what it honestly believes itself, and not the conspiracy against reason which it really is.

It makes me mad to see what men shall do
And we in our graves! This world's no blot for us,
Nor blank; it means intensely, and means good:
To find its meaning is my meat and drink.
—*Browning.*

The moving Finger writes; and, having writ,
Moves on: nor all your Piety nor Wit
Shall lure it back to cancel half a Line,
Nor all your Tears wash out a Word of it.
Fitzgerald's Rubáiyát of Omar Khayyám.

Correspondence

REVISING THE CONSTITUTION.

To the Editor of Harper's Weekly:

SIR,—Would it not have been a good idea if the Framers of 1787 had inserted a provision that during the first year of every new century a Constitutional Committee should sit and determine whether or not the Constitution should be revised in accordance with present needs? We are a vastly different race from our four million revolutionary ancestors, and we have a new set of problems every twenty-five years. The greatest men cannot be prophets unless they go into the wilderness and fast, and for that the great men of 1787 had no time. But could not we remedy the defect? Is it too late to agree upon such a Board, composed, it may be, of chosen members of the Supreme Court, the Senate, the House, a citizen, otherwise distinguished, of each State, and perhaps the President himself? Its decisions of course would have to be final, for the Legislatures would bicker until the dawn of another century. That our eighty millions in population—who will not be long reaching a more formidable figure still—with their millions of foreigners and negroes, their increasingly complex national character, their genius for unexpected developments, their country's enlarging bulge on the map—to mention but the first on the list of differences from the conditions of the nation's birth—will, in the course of a very few years, compel an overhauled Constitution, is as sure as that the old order of Presidents came to an end with McKinley. Why then should not the matter be taken into consideration before the strain is beyond endurance? If any one will have the patience to sit down and read the Constitution, and then reflect upon the infinite number of new forces and factors which are making history at present, he will not find Mr. Roosevelt's recent suggestion—on the Trusts—either as impulsive or radical as our trembling patriots have imagined.

As for the States—those intolerable nuisances in the history of the United States—cannot any one see that they are doomed?—that the forces at work have already undermined and rotted their barriers? The whole tide of the country is toward centralization, and its gathering volume is as independent of the railroads, the reformers, ambitious statesmen, as it is beyond the damming up of all the alarmists in the country.

And is there any one left so benighted as to be more proud of being a New-Yorker, a Californian, a Virginian, than of being an American? I am, sir, etc.,

GERTRUDE ATHERTON.

LIKE A FARM WITHOUT FENCES.

To the Editor of Harper's Weekly:

SIR,—"We shall continue to urge upon Congress, with all insistence the necessity of building and maintaining a navy equal at least in size and strength to that of the German Empire."

This paragraph from HARPER'S WEEKLY of December 20, should be copied by every newspaper in the country, for it voices the desire of every true American. The attitude of Senators Hale and Platt should be severely condemned. Let editors keep the subject before their readers, and public opinion will be so in favor of a navy adequate to our needs, that Congress will be compelled to provide for such. A country without a navy is like a farm without fences, or a house without walls, inviting depredation by outsiders. I am, sir,

F. Y. P.

Lord Curzon: The Man and his Work

In spite of Mr. Rudyard Kipling, India remains for most Englishmen little more than a brilliant abstraction. Few of them take the trouble to form any clear idea of the work that is being done in their name between the Himalayas and Cape Comorin. Fewer, still, inquire into the principles and actual workings of the British Raj, or are acquainted with even the alphabet of the thousand and one fascinating problems that confront the rulers of that most fascinating country. The subject is altogether too vast for the average busy citizen, who contents himself with a vague pride of ownership, and does not aspire to any intimate knowledge of the daily routine. The House of Commons is never so empty and lethargic as when Indian subjects are on the carpet, and its indifference is but the reflection of the popular attitude. Perhaps, on the whole, it is just as well that this should be so, and that India should not be a matter on which every Englishman felt bound to have an opinion, or take rank as a standing political dish alongside of Ireland and the London water-supply. At the same time it robs England of a good deal of justifiable pride. Six months ago, for instance, the Englishmen were few and far between who could give a clear account, or, for the matter of that, any account at all of the work Lord Curzon has accomplished in India. And but for an accident that ignorance would have remained undisturbed until the end of Lord Curzon's Viceroyalty. The accident, of course, was the Grand Durbar that was held at Delhi on January 1. The crowning of King Edward as Emperor of India has touched the English imagination. Neither the King nor the Prince of Wales was there, but the Duke of Connaught was commissioned to represent his Majesty; hundreds of English noblemen, statesmen, retired Anglo-Indian officials, and journalists assisted at the ceremony; members of every royal house in India were present; Lord Kitchener held his first review as Commander-in-Chief; and a whole fortnight was given up to *fêtes* and pageants, balls and receptions, polo tournaments, and an immense exhibition of native Indian art. This great event has thrown a search-light of inquiring eagerness on Lord Curzon's Viceroyalty. Publishers and magazine editors have seized on it to bring out books and to print articles such as no Viceroy has ever yet had the fortune to inspire; and England suddenly realizes that Lord Milner and Lord Cromer are not her only proconsuls of the first rank, but that in Lord Curzon, too, she possesses a statesman of brilliant and distinctive achievement.

Five years ago Englishmen rather laughed at Curzon. He knew too much, was too eloquent, too cocksure, and altogether too young. Oxford and the Oxford manner hung heavy upon him. An old Balliol tag had dubbed him "a very superior person," and the name stuck. The hero or the victim of it was at no pains to live down his reputation. Mr. Curzon at all times, and on all occasions, was decidedly "superior." The House of Commons takes as little to this foible as to genius, and the sport of "taking Curzon down a peg" became the chief delight of more than one member,—of Mr. Labouchere in particular. But the Hon. George Nathaniel Curzon, son of Lord Scarsdale, ex-Etonian, Fellow of All Souls, Oxford, and winner of the Arnold prize with a portentous volume on Diocletian, ex-President of the Oxford Union, the indefatigable traveller; the man who knew Central Asia, Persia, Afghanistan, the Pamirs, Siam, Indo-China, and Japan as intimately as most men know their bedroom; the man who had discovered Corea, and soared in a basket up to and into the monastery of Mount Athos; who numbered among his treasures personal gifts from the Amir of Afghanistan, the Abbot of Meteora, Li Hung-Chang, the Mikado, and statesmen and diplomatists beyond number; who wrote of all he saw and recollected and imagined and suspected with inexhaustible dogmatism; who read Blue-Books while other men read novels, and burrowed in statistics while his frivolous contemporaries shot pheasants; who could overwhelm you on any matter of foreign politics with pailfuls of local color and atlases of outlandish names, among which he moved with almost insolent familiarity; and who, finally, had learned the business of statesmanship at Lord Salisbury's knee—it took, as you may conceive, and as Mr. Curzon quickly let it be known, a good deal to "down" such a paragon. Even while it laughed, the House could not help admiring; for not even Mr. Curzon's kindly contempt for his fellow-mortals, and particularly his fellow-members, could hide the fact that he was a man of unusual parts and an industrious acquisitiveness that never wearied. The matter was all right; it was only the manner that jarred at times. He was twelve years in the House, and rose to be Under-Secretary for Foreign Affairs, which, as his chief sat in the Lords, meant that on Mr. Curzon fell the task of answering all questions and representing the government in all debates on matters of foreign policy in the popular assembly. People were just beginning to pierce through his little consequential airs to the man behind them,—in a word, to understand him,—when, in the fall of 1898, just before his fortieth birthday, he was appointed Viceroy of India.

The appointment was almost as great a surprise as was Disraeli's choice of Lord Lytton, twenty-two years earlier, for the same post. Nor was surprise the only emotion of the moment. There was doubt and even alarm mixed up with it. However brilliant and painstaking, Lord Curzon up till then had held no administrative office. Moreover, he was young,—not only actually young, but young in his dealings with men. Furthermore, he had come out strongly against Russia in his books, had visited India often enough to get a tourist's misleading knowledge of it, had a patronizing way about him that the Indian bureaucracy was expected to kick at, and was a zealous supporter of the aggressive and ruinous "Forward Policy." On all counts people were apprehensive, but on only one have their fears been justified. A cautious, progressive, imaginative, altogether admirable Viceroy in all other ways, Lord Curzon has not proved an easy man to work with or under. Officialdom frankly and undisguisedly dislikes him. Neither with the army nor with the civil service nor in Simla society is he popular. But then what sort of a Viceroy is it that society and officialdom prefer? They like, for one thing, a "manageable" Viceroy, without personality or initiative, one who will contentedly remain a gold-gilt dummy and figure-head, hide himself in Simla eight months out of the twelve, and hibernate in Calcutta the remaining four, and not attempt to learn anything of the people except at third or fourth hand. If to this gift for self-effacement he adds the attraction of a long lineage, charming manners, and a good figure on horseback, then he comes pretty near the social and bureaucratic ideal of what a Viceroy should be. And this, more or less, is the standard to which the average Viceroy, like Lord Dufferin or Lord Lansdowne or Lord Elgin, conforms.

Lord Curzon had no intention of becoming a Viceroy of this stamp. He landed in Bombay, said an unfriendly critic, "with the eye of a bishop and the side whiskers of an under-gardener." He landed with a good deal more than that—with a knowledge of India and its problems, laboriously acquired and unsuspectedly accurate; with an enthusiasm for his work, and an intense earnestness in doing it; above all, with the resolve to be Viceroy in fact as well as in name. The bureaucratic bones were soon set a-rattling. The young Viceroy, instead of subscribing to a policy, came to formulate one; instead of meekly following, made it clear from the start that he meant to be master. The astonishment of officialdom found vent in nicknames. "Young Man in a Hurry" was the first; "Imperial George" followed soon after; "George the Fifth" stuck the longest. No doubt Mrs. Hawksbee and her official friends have had a good deal to complain of. Curzon carries the Parliamentary rapier in his hand a little too often, and wields it more aptly than a starched and stiff-necked bureaucracy has any liking for. Also the social duties of his post bore him. His manners are brusque and haughty, and he has none of the small graces or the social instinct that belonged to Lord Dufferin. Nor has he the softening, lubricating quality of humor. He takes himself and his work with a seriousness that would kill a lesser man, and leaves the social side of his position to Lady Curzon, who carries it through with an American grace and brilliancy. All this, with his merciless insistence on efficiency, has made him as salutary and unpopular a nuisance in the Indian bureaucracy as Lord Kitchener is in the army.

Not all of Lord Curzon's reforms are original to himself, nor does he pretend that they are. The great and characteristic merit of his Viceroyalty is that what his predecessors for thirty years merely talked of doing he has actually done. On all the matters he has taken in hand he has stamped the impress of his energy and common-sense, leaving for whoever may succeed him some definite foundation to build on, with a detailed plan of the superstructure to be erected, and not merely voluminous reports and sketchy outlines. He does not discuss projects; he puts them through. The projects may not be wholly novel; the fact remains that it was he who rescued them from the oceans of ink in which they were sinking, and finally set them on their feet. A mere list of what he has accomplished would perhaps mean little to those who are not students of Indian subjects, but the list may as well be given if only to show the variety of his interests. Lord Curzon, then, has created and organized a new frontier province for dealing with the tribes of the northwest; he has shaved down the "Forward Policy" to an inexpensive and efficient system of border police; he has effected a stable rate of exchange in the currency system; he has appointed a commission to lay down a cohesive scheme of irrigation that will decide for the next fifty years the operations of government; he has zealously furthered meanwhile the building of canals and railroads; he has rescued the civil service from the tyranny of the pen by abolishing a large number of reports, and encouraging each member of it to govern in the old patriarchal style; he has confirmed the Punjab peasant in the possession of his land by forbidding him to offer it as security to the money-lender; he has almost halved the cost of telegraphic communication between India and England; he has fostered native industries and native arts, and shown the passion of a scholar and archæologist for the preservation of historical remains; before his five years are out he will have revolutionized the educational system of the country.

England and American Imperialism

By Sydney Brooks

LONDON, *December 28, 1903.*

A SENTENCE in President Roosevelt's latest message has started a curious discussion in London. That is the sentence in which Mr. Roosevelt spoke of American policy in the Philippines. "Not only," he said, "does each Filipino enjoy such rights to life, liberty, and the pursuit of happiness as he has never before known during the recorded history of the islands, but the people, taken as a whole, now enjoy a measure of self-government greater than that granted to any other Orientals by any foreign power, and greater than that enjoyed by any other Orientals under their own governments, save the Japanese alone." The gist of this sentence was cabled over when the message was read to Congress, but for the full text we have had to await the arrival of the American papers. They came a week ago, and at once fanned into fresh life the discussion to which Mr. Roosevelt's bold pronouncement had given rise. The discussion threatens to cover not only American policy in the Philippines, but the whole business of American Imperialism, and the general aptitude of Americans for the government of subject aliens. That is a matter on which the English, as old hands at the game, feel entitled to give their opinions freely. From the first moment of America's venture in *Weltpolitik* it has keenly interested them, and what I here offer as a *précis* of English views on the subject has been gathered from many sources—from newspaper debates like the one now raging, from magazine articles, from interviews with the very few prominent Englishmen who really know America, and especially from talks with men like Sir Hugh Low and Mr. Hugh Clifford, who have met and solved problems such as now confront Americans in the Philippines, and are able to bring American policy to the touchstone of a practical experience.

Let me say at once that Englishmen have no sort of doubt but that in the long-run American rule in the Philippines will be all that Americans desire. Their confidence in the final capacity of any section of the race for that sort of work is not to be shaken. At the same time, to be quite candid, there is a shade of anxiety mingling with their faith. After reading and studying the reports of the various Philippine commissions, Englishmen are not yet wholly convinced that Americans are altogether on the right tack, or that their prevision of what lies ahead of them in the archipelago is in all respects complete. It will perhaps surprise Americans to hear that the gravest doubts of all have been those caused by Mr. Roosevelt's own speeches. To that I will return presently. The more general aspects of the matter must first be touched on. It is safe to say, and it can be said of no other country, that in England American Imperialism is watched with the utmost sympathy. No political danger whatever to British interests is apprehended from it. The average Englishman, who is pro-American to the core, believes, indeed, in his vague way, that at some time or other England and the United States will be found working side by side and co-operating in the prosecution of a common foreign policy. He has a strong, firm belief that as Americans advance along the road of Imperialism, and begin to appreciate the nature of the bowlders in their path, they will come to a better understanding of just what it is that England has done for the world, and of the obstacles she has overcome in doing it. Englishmen, in short, regard American Imperialism as the happiest step yet taken toward mutual comprehension and sympathy between the two countries.

As to its effect on the United States, Englishmen, of course, utterly reject Mr. Bryan's fantastic notion that it will work any change in the spirit of American institutions, or that Americans will be one whit less democratic in the future than they were when not one American in ten thousand knew within an ocean or two precisely where the Philippines lay. On the other hand, they were greatly amused a few years ago by the buoyant claims of the American Imperialists that the possession of the Philippines and Porto Rico and the rest would in some way react favorably on the tone of domestic politics, and thrill New York and Philadelphia with a sudden zeal for purity and efficiency. The idea of Mr. Croker turned reformer by studying the happiness of the Tagals under honest American rule struck them as delightful, but unlikely of fulfilment. They prophesied that when the novelty had worn off, the average American would trouble himself as much or as little about the Tagals as Englishmen do about the Hindus; that all things would go on pretty much as usual, and that the notion of reforming Tammany Hall *viâ* Luzon would be quickly dropped. Whether that prophecy has yet been verified only those on the spot can say; but if English experience goes for anything, it will be verified sooner or later. The time, that is, will come when the average New-Yorker will be content with a hazy idea that the Porto-Ricans are happy or unhappy, satisfied or the reverse, prosperous or not prosperous; but of the system on which they are being ruled, of the local problems that are being faced, of the local questions that interest them, he will be a whole encyclopædia of ignorance or of cloudy misinformation. Such, at any rate, is the condition of Englishmen in regard to their Empire.

Englishmen, as every one knows, find not a little difficulty in distinguishing between British practices and the universal laws of nature. When, therefore, they criticise American methods, it is always on the implied assumption that the right model in this business of empire-building is the British model. That point of view is with them instinctive and fundamental, and must always be allowed for. When this is grasped, some of their forebodings in regard to the American experiment in the Philippines will be easily understood. It is, for instance, almost an axiom over here that to rule successfully, a body of civil servants, chosen partly by competition and partly by appointment, divorced from politics, irremovable except for proven offences, well paid and well pensioned, is a prime essential. To Englishmen, therefore, it is a matter of surprise, almost of consternation, that though the American Empire is now four years old, no such service has been organized or apparently even thought of. They insist that the appointment of men like Governor Taft and Governor-General Wood is nothing like so important a matter as the character and capacity of their subordinates,—that, in short, it is the rank and file, and not the chiefs, of a service that make or mar its efficiency. Long before now they expected to see the best men from Harvard, Yale, and other universities crossing the Pacific in successive batches to learn the business of government at the feet of their superiors. No such sight has yet greeted them, and the absence of it puzzles and dismays them. A man who has made a brilliant name for himself as a ruler of Malayan peoples—Mr. Hugh Clifford, C.M.G., ex-Governor of Borneo, and at present the British Resident in charge of one of the Federated Malay States,—said to me: "The fact is, America is so rich, so under-populated, so full of boundless opportunities, that I cannot see how a young American can be expected to accept lifelong banishment in an uncongenial climate, much hardship, low pay, frequent separation from his wife and children, and but slender chance of fame or distinction, for the simple honor of serving his country and ordering the destinies of a rude people. Yet without men of the best type, men of refinement, address, extreme sympathy, tact, and firmness—in a word, men who are gentlemen in both the right and the conventional sense—you cannot hope to govern Malays as they should be governed."

But above everything else Englishmen suspect American sentimentality and American "hustle." A rising English politician, who has recently been admitted into Mr. Balfour's cabinet, and whose name, were I permitted to give it, would be recognized as that of a sound authority on foreign and imperial politics, held forth at length on this topic. "Americans," he said, "are incorrigible sentimentalists. They have even more than their fair share of that abominably defective altruism which is the badge of all our tribe; and you will find that the spirit which gave votes to the darkies after the civil war will prove their greatest handicap in dealing sensibly with the Filipinos. Americans have a great theory that everything can be cured by legislation. Look at their 'Prohibition' States, their curfew laws, and anti-cigarette bills. The passion for making laws is bred in their very bones, and all their remedies are heroic. Moreover, they are tremendous believers in the 'American idea,' and think that every one—white, black, brown, or yellow—can be civilized by having it brought home to him, that it suits all people alike, and can be prescribed indiscriminately. They have grown up and thrived on certain notions and certain institutions, and nothing will ever persuade them that other nations would not prosper equally well on the same regimen. The consequence is they will repeat in the Philippines the very mistakes we have made in India. They will go and dump upon the islanders all the laws and institutions they have at home—elective assemblies, a free press, trial by jury, the right of public meeting and debate, and Heaven only knows what else; not in the least because these things are wanted in the Philippines, but because Americans are used to them in the United States. To maintain a firm but kindly despotism, which is what the Filipinos need, is just as impossible for them as for us; and at bottom you will find they will try to govern the archipelago as though it were a larger Wisconsin."

This, or something like it, is a view one constantly hears expressed in England. People here seem to think that Americans are in far too great a hurry to explode "democracy" and "Jeffersonian doctrines" upon the tropics. "There are two things," says a writer who is entitled to be heard on the subject, "that you cannot do. You cannot 'hustle' the East, and you cannot Westernize it. Have Americans realized this?" Some of Mr. Roosevelt's speeches incline Englishmen to believe that Americans have not realized it. For instance, last May he said: "We believe that we can rapidly teach the people of the Philippine Islands not only how to enjoy, but how to make good use of, their freedom; with their growing knowledge their growth in self-government shall keep steady pace. When they have thus shown their capacity for real freedom by their power of self-government, then, and not till then, will it be possible to decide whether they are to exist independently of us or to be knit to us by ties of common friendship and interest."

The Book of Months

By E. F. Benson

FEBRUARY

It is a very false estimate we should get of the world if we only look at other people from our own stand-point. It is useless, for instance, to imagine oneself in the position of a newsboy from whom I usually buy an evening paper at the corner just outside. He is frightfully ragged; why his coat, for instance, holds together at all is beyond my comprehension, and his boots are in a sore similar state of disintegration. Certainly if it was my lot to stand at that corner earning a penny only out of every twelve papers I sold, and for the sake of earning my bread at all being compelled to stand there for hours in frost, rain, or fog, I should quite certainly be most unhappy. Yet nothing is falser than to imagine that he is unhappy. He has, on the contrary, a "frolic welcome" for everybody that comes along, and evidently circumstances which would depress what we may call the comfortable classes have no effect whatever on his spirits. On the other hand, there are things which happen to you and me every day, which we bear without undue complaints, that would be almost insufferable to him. He would certainly revolt at a bath in the morning; and though he would very likely be pleased at the breakfast that followed it, I feel by no means certain that he would not sooner sit on a coal-sack and chaff the nearest policeman, as he does, with his mouth bulging with large crusts. Again, I doubt whether "the bloke," which is the name by which he is known in the neighborhood of his stand, could live through the sort of things we live through. He would consider it so unbearably dull to have to sit in a room for hour after hour, while London and the streets roared outside, and read a book—or—worse, write one. For supposing we endow him for a moment with that sort of veneer of the mind which we call culture, literary taste, artistic taste, or what not, a thing which he does not probably possess at present, even then should we set him down at "Romeo and Juliet" let us say, what will be his verdict? Why, that he can see the thing itself every evening, and perhaps has acted it too, poor little devil, and why should he spend his time in reading a pale moonlight translation when the original jostles him? At this point, of course, the *literati* will hold up hands of horror. Do I mean to say, they will ask, that the immortal tragedy I have referred to is to be brought into comparison, even for a jest, with the idylls of the street corner, with the walking out of a man with a maid, a marriage in the registry office,—or perhaps the omission of that ceremony? Yes, if they will but think, I mean all that. For why, if we consider this question more closely, does the tragedy of "Romeo and Juliet" strike us, and rightly, as a masterpiece, and why does the sordid account of "murder and suicide" in the daily press strike us as a page to be turned over with a "poor thing" shudder if we are people of discernment, but if we are only refined, to be passed over in utter unconsciousness? It is because Shakespeare showed us the terror and the tragedy of one, and we have not the genius to see the terror and the tragedy of the other. Had not Shakespeare been a man of human insight he could never have written his work, but if we were, we should find in life what he found. That he gave it in the form of drama to the world is another matter; that was because Nature—or I prefer to say God—gave a man of this humanity the power of speech, this sense of drama. Hundreds, I soberly believe, feel as keenly as Shakespeare felt, but are, so to speak, born dumb. Hundreds could write as Shakespeare wrote, could they but feel. It is the conjunction of the two, rare as the transit of Venus, that makes the supreme artist.

To return to "the bloke." All morning we have given him a translation instead of the original, and, the morning over, we give him lunch. He will eat largely, because for all the years he has known it has been his custom to eat all there was to eat, for fear that there would soon be nothing to eat when he wanted to eat. He will drink in immoderation for the same reason, and grow somnolent. But he is plucked from his slumber to call on some one who bores him, to be polite when he doesn't want to be polite, and he will return to "dress" in a collar that hurts him, and eat a dinner which he does not want. That evening he will be sick, and three days later have a bilious attack.

But look from this gloomy picture to the reality. "The bloke" as I saw him this evening had a huge crust stuffed into one cheek, in the corner of his mouth was a cigarette. There was news about a test-match in Australia, and papers were going like hot cakes. His pockets were not to be trusted, and that mouth of his had eight coppers on one side, and the crust not yet masticated on the other. But did "the bloke" think about verdigris-poisoning and other inanities? Not a bit. If there was a moment to spare, the pennies were ejected and stowed in a pocket somewhere at the back of his trousers. If there was no moment to spare, he merely cursed, and prayed for a sixpence which got rid of five wet pennies. All the time he was shouting "Remarkable collapse," chaffing the policeman at the corner, shouting hoarse profanities to the drivers of passing 'buses, and ogling miles of girls of his acquaintance. Now consider, oh, my cultured friend, where would you or I have been in such a crisis, which you must remember was a feast and a high day to "the bloke." We should have retired behind a boarding to eat our crust, and sat still—God help us—for several minutes in order to digest it. Then we should have lost the cream of the sale. Then coyly re-entering Oxford Street, we should have murmured, quaveringly, "A bad score on the Colonial side"; we should have put our pennies in the untrustworthy pocket, whence they would have slithered coldly down our legs onto the pavement. Grasping the inadequacy of this, we should have held them in our other hand, and impeded the swift passage of the papers. We should have cast apprehensive glances at the policeman for fear he should tell us to move on—he tells "the bloke" to move on, and "the bloke" says "Garn"; we should have frowned at 'bus drivers who nearly ran over us, and made a feint of taking their numbers. We should have had a quantity of depressing reflections about the young women in London, so bold and bad-mannered, and as an upshot we should have sold with infinite depression one-fifth of what "the bloke" sells with a gusto indescribable. And what is perhaps worst of all, we should have prayed that evening, if we were not too sleepy, for all the starving homeless creatures of the street. "The bloke" does not pray—he told me so, I, God forgive me, casting apprehensive glances at the policeman—but if he did, he would say with Browning,

"God's in the heaven; all's right with the world.

Exit "the bloke."

P. S.—No, not exit just then. Yesterday only, I was coming round the corner from Davies Street, and caught sight of "the bloke" dancing excitedly in midstreet with his sheaf of papers, shouting the verdict of the Tunbridge murder. Next moment he had been knocked down by an omnibus, and the wheels had gone over him. With many others I ran out into the roadway, and it so happened I was there first, and I picked "the bloke" up and carried him to the pavement. His head bent inwards from my elbow to my chest, and two wet pennies fell into the crack of my arm from his mouth. His sheaf of papers had fallen from him, and still lay in the road. Before we reached the pavement he looked up and saw me.

"I'm damned dirty, sir," he said; "take care of your noo coat. That bloody 'bus—Gaw'd—I'll talk to Jim—running over me like that."

There was an ambulance near at hand, and I delivered up "the bloke." Some one had picked up his papers from the roadway and put them by the side of the thin little body, and the pennies which he had dropped out of his mouth I put there too.

Next day I went to the hospital where he had been taken. But "the bloke" will not stand at his corner any more.

Sad? Heaven help us all if we are going to be sad, because we are (quite assuredly) going to die; the sooner we die and get it over, the better. Anticipating sadness is an absolute drug in the market, and is it not better to be glad because at the present moment we happen to be alive, and not sad because at some future moment we are going to die? How long would the world go on if we all sat and sighed because we were going to die?

Yes, decidedly spring has come, and it amazes me to look back on what I wrote only a week ago and find myself so obsessed by that moment of languor which announced it, and forgetting, as indeed I did, what should so shortly follow. Yet if that obsession of languor had not been so complete, I suppose this obsession of spring would not thus riot in me as it does, and it is with infinite misgivings that I attempt to put into words any of that babbling thrill, that ecstasy in the sensation of mere living, which is felt, I believe, in every growing thing down to the humblest blade of grass which is trodden under foot even as the varnish of spring-time is on it, at that divinest of all moments in the year, when in man and brute and as yet leafless tree, the sap once more stirs.

This year it came upon me in spate: that great flood of renewed vitality which follows round the earth from continent to continent as the spring returns, suddenly lifted me off my feet, dictating what I did as imperatively as an electric current dictates the involuntary twitching of the muscles it passes through. And on this wise:

I had been out of town for two days last week, staying in Sussex at a house on the high downs near Ashdown Forest. As I drove from the station I was aware that some huge and subtle change was in the air, but put it down only to the contrast of country breezes with the density of London. The briskness of winter was altogether gone, but in its place was the smell of earth and growing things, very fragrant and curiously strong, for rain, which brings out all scent in the air, be it good or bad, had fallen heavily that afternoon, bringing out, as I have said, the smell of growth, and leaving behind it, just as a water-cart does in streets, the smell of dust laid, or, rather, the smell which the air has when there is no longer any dust in it. Also the vividness of color surprised me, and in the yet leafless trees there was a certain vigorous look which I had missed all winter, a crispness of outline, a look of tension as in an instantaneous photograph of a man about to leap. A thrush babbled suddenly in a bush by the road-side, and, fool that I was, I did not know what was happening. I thought it

was only a thrush singing. But had I known, it was spring.

That night after dinner, instead of sitting down to bridge or some gray pursuit classified by the title of game, eight sober and mature people did the silliest things. We played blindman's-bluff; we cock-fought on the hearth rug; we fell heavily to the ground in attempting to take out pins with our teeth, pins placed in inaccessible positions as the legs of chairs; nobody cared what anybody else was doing. Every one talked simultaneously and laughed causelessly.

Eventually we dispersed to our rooms flushed and hot.

My window had been shut, and a blind drawn down: here were the first things to be remedied. Up went the screaming blind, up went the window, and the huge exultant night poured in. That was better, but still bad, and I tore off my clothes, leaving them on the floor, and, as my mother bore me, and as I shall go back to the great mother of all, leaned out into the night, full of the excitement which at last I understood. It was night, night, the time when even a stockbroker (who had made £290 on the Stock Exchange) reverts in some degree to the beast from which he has been evolved, when, unless one is fuddled with wine, or stupefied with food, or addled and rotten with sensual thought, one occasionally wins back to the old primeval, prowling, excited joy of being alive, to the bliss which childhood knows at nightfall, robbed of its terrors.

There it was, waiting for me, and I, as far as might be, ready for it, unburdened with an overloaded stomach, free from all desire, carnal, mental, or spiritual, but caught and burning in the flame of mere life. Huge and soft the night beckoned; great gray shapes of bushes rose on the lawn outside; above them rose the still gaunt shapes of trees, but humming, like a gas-jet, with the pressure from within. Rain clouds obscured the sky, the cold infinite stars were shut out, and only by the fact that it was not very dark did I know that the moon was somewhere risen, though invisible. That was as I would have it; for the time I was just a Live Thing, conscious of life.

I wanted no distant stars to remind me how small I was, or how immense was heaven; for the time I desired only the kind warm earth, no moon to evoke, as she always does, the need of companionship. I was alone on the earth, which, like me, was bursting with the promise of spring. Mating-time was not yet, not yet was the time of fresh leaves or any outward fruit of vitality. The vitality was within; everything had drawn a long breath, and the long breath hung suspended for the moment. Soon in a shower of starlike blossoms, in a mist of green hung round the trees, in the complete song of birds, in achievement or effort on my part, the tension would break. It was the physical moment when completion is assured, and the pause comes, delicious because all, all has been leading up to this, and one is content, if it is possible to be content, because fruition is sure. Exquisite pangs have gone before, the pangs of anticipation. Exquisite pangs of completion will follow, but nothing can ever approach the completeness of the assured moment.

Night, and its veiled darkness, a soft rain falling and hissing among the shrubs, the sleeping house, unless, indeed, there might be other watchers like myself unclothed beside an open window, utter loneliness and the thrill of life. But it was not enough to stand there; I had to mix with the night, I had to do my utmost to take it, the hissing shrubs, the falling rain, the whole growing quickening earth, nearer to me. It was not enough to look at it. So for convention's sake I pulled on trousers again, buttoned a coat over me, and, hatless and barefooted, opened my window further —a ground-floor window—and stepped out into the night.

What I wanted I did not know; it was certain, at any rate, I did not want anybody else to be there. Yes, I know, I wanted only to be part of the growing sap-stirred world. No thought of either spiritual or carnal passion did I feel; no gratitude to God, who made this ecstatic machine called me, entered into my mind, nor thought of love or lust or desire. The gray curtain of cloud was the blanket under which, like a child, I buried my head. I was too far gone, you will understand, to "talk French." Simply I was possessed by the joy of life, that life which moved my muscles, and now and then, tense and slack in turn as I walked, that held a long breath in my lungs and blew it out again, that made the soft rain drip from the clouds, that made the earth drink it in instinctively, that made the shrubs whisper to it falling, and give out the odor of dampness and growth. Step by step, as I went over the lawn, with my feet already dripping and my hair growing matted with the benediction of the falling rain, this passion grew and grew. Before I knew it, from walking I had passed to running; before I knew it my coat was lying somewhere on the grass, and the rain fell thick and cool on my back and shoulders.

Dim shapes of shrubs flew by me, then in front, then sprang out of the dark the lines of a wooden fence, bounding the lawn. This was taken in the stride almost, and the longer, coarser fibre of the meadow-grass wrapped itself round my feet. Then a sandpan — a bunker guarding the eighteenth green of the golf-links, showed yellow in front—and next moment a flag waved to my right. Thereafter coarser grass again, and a hundred yards beyond the stream-bed where I have delved patiently with a niblick. Beyond, another fence, and in the field — out of bounds — large dark shapes of cows lying down. One underneath the shadow of a tree I stumbled against, leaving a snort and a stir behind, and I remember laughing at that. Then in due time a certain failure of wind, and a halt underneath a young beech-tree with smooth rounded stem. Next moment the trunk was between my knees, the trunk also between my arms strongly wound round it, my cheek against the bark, and panting, I clung to it. It too was alive, and strong and hard, and with that, turning my head, I remember biting the bark, till strips of it came off and my lips bled. Then a bed of old brown bracken, and with my fingers I dug in the earth till I felt the buds of springing stems an inch below the ground.

There I lay, a minute it may have been, or ten years, and the climax I must suppose was reached. There was no more possible to me. The riddle was unsolved, and for the moment I knew it to be insoluble, not because it was a silly riddle, but because it was no riddle at all, but the mystery of all mysteries—Life. As far as I personally could, I had done my best to answer it, not by thought, which is futile, but by being of the earth, by making myself one with growing things at the moment of springtime, and this not, I do assure you, consciously, but because I had to. The current that ran through everything else ran through me also. I was a savage, an animal, what you will.

The greatest moment was over. Again I was conscious of one slack arm hanging by my side, the other braced at my elbow to support my weight as I sat up. I knew that my feet were wet, that my hair had to be brushed from my eyes, that raindrops fell from my eyebrows onto my face, that a torn, distracted, mud-covered blackness represented dress-trousers, that my coat was lying somewhere on the lawn, and that my bed-room window was an invitation to robbers. So I rose and walked back, slowly, and designedly slowly, in order to enjoy what I had not known I had enjoyed before, but had simply taken. The cool rain was exquisite to the skin, so too the cool grass to the feet. The night above and around was huge and silent and ennobling. Then the moral consciousness, I must suppose, awoke. I was filled with edifying thoughts. They would be dull if recorded; they were dull even then, for the memory of the savage moments was still hot as a dream.

Well—what then? There is no "what then." That wild running through the dark is flesh and blood of me. Perhaps you have no taste for cannibalism. That is a very comfortable defect.

The next twenty-four hours were, it is true, full of spring, but to me, licking the chops of my dinner, they were jejune. My coat I picked up on the lawn; I entered through my window—no robber could have come in that sacred hour—gazed on the wreck of dress-trousers, and went to bed—to sleep instantly and dreamlessly, awaking to a great bold sunlight that streamed in through the window when my valet drew up the blinds. With him I held a shamefaced colloquy as he gathered together my dress-clothes.

"I'm afraid they're rather muddy," said I, stifling my face beneath the sheet.

"Yessir."

"Do they happen to be torn?"

A short pause.

"Yessir; torn in five places."

"Well, see what can be done. Have I any more?"

"No, sir. Cold or hot bath, sir?"

Bath! That was a sitting in a tin pan and lifting teaspoonfuls of water onto one's spine. Acrobatic performances to get wet altogether. Towel. Huddling on of clothes.

"Oh, cold. Bring it in half an hour."

In half an hour I half dozed, half thought of the performance of the night. I carefully considered the question as to whether I had gone mad, and decided—rightly, I believe—that I had not, though other people would say so. Then after breakfast we went to play golf. Yes, I was right, the anticipation, unfulfilled, certainly was over; already small buds were red on the lime and yellow on the elm. Spring had come, and we all talked about its delights. But none knew of mine.

Eventually the eighteenth hole was reached, after a game that I should normally consider exciting, since my adversary and I were all square at the seventeenth hole. But this morning it struck me as colorless. Here, however, his second shot—full with the cleek —was short, and he went into the sandpan guarding the green, across which I had jumped in my outward journey and walked through on my return. I stopped on the edge of the barrier, for I had warned him he could not be up, having myself taken a full shot, landing just over it. Upon which the accursed man took his niblick, and, amid a shower of sand, lay nearly dead.

"Curious," says he.

Meantime, I had been examining the bunker, and saw there the trace of a bare foot.

"There's something much more curious than any shot of yours, close by you," said I. "Look, do you see the trace of a naked foot close by you on the sand?"

He looked.

"By God!" he said. "Let me putt first."

He missed it. So I had two for the hole and won.

To be Continued.

Correspondence

CHANGES IN THE MAP OF NORTH AMERICA.

December 22, 1902.

To the Editor of Harper's Weekly:

SIR,—Just as surely as we will have, in a time not too far removed, a new political-geographical map in Europe, so the political map of North America is apt to be altered—not by force of arms, but through commercial considerations, the need of self-preservation, and common interests.

Looking at the map of North America and following the mainland, we find, south of the United States, bounded by the Rio Grande del Norte, the republic of Mexico; then the so-called republics of Central America; and then the republic of Venezuela, bounded by the Orinoco River. Still farther south in North America, before we come to the equator, the line dividing North and South America, we find the Guianas, subdivided into three different political parts—British, Dutch, and French Guiana. Going south from Florida, we find, stretching into the southern part of the North Atlantic Ocean, a chain of islands which spread nearly to the mouth of the Orinoco. Nearest to our Florida coast we have a cluster of islands known as the Bahamas; then come Cuba, the pearl of the Antilles, and Jamaica; further southeast are Porto Rico and Haiti, known as the Greater Antilles; and, beyond, a long necklace of islands encircling the so-called Caribbean Sea, and known under the name of Lesser Antilles, or Windward Islands, ending with Trinidad Island, which lies before the mouth of the great Orinoco River.

All these islands, with the exception of Porto Rico and Cuba, belong to European powers. England, France, Denmark, and Holland still hoist their flags over colonies there.

In the last century, those island possessions were rich pearls in the crowns of European powers. Their coffees, sugar, cocoa, indigo, tobacco, spices, dyewoods, and rum were of great value, and were much sought after. Fleets of sailing-vessels came to and went from the possessions, loaded down with products. Rich plantation-owners could afford to live in Europe in luxury, while their slave-drivers used the lash to keep filled the coffers of their seigneurs.

With the abolition of slavery much has changed. It is no longer profitable to hold estates in the islands without taking personal care of them. Since Brazil, Venezuela, and other countries of the Spanish Main produce an abundance of coffee and other products, and are very well supplied with steamship communication, few of the islands can compete with foreign markets. Since beet sugar has come into the market, the island sugars may be dispensed with; and since chemistry has demonstrated that sugar can be produced without cane or beet-root, the island conditions are worse. From coal tar the finest dyestuffs are distilled; and so indigo and dyewoods, in their turn, have a hard struggle for existence.

To England, France, Denmark, and Holland the Caribbean possessions for which so much blood was drawn in the last centuries—these crown pearls which in former times enriched so many governors and officials—are to-day, if they speak the truth, an unwholesome drug; costly yet valueless encumbrances to national exchequers. None of them is self-supporting, and all need the financial help of their home governments.

The national debts of the European powers holding territorial possessions in the North Atlantic Ocean do not decrease. They augment. A general European war will add enormously to national obligations. Most of the islands are now beyond the beaten track of commerce, and they will be more pitifully lost as soon as the isthmian canal shall have been built. It is but natural that European powers, in their own financial interest, as well as in the interests of subjects living in the islands, should find it, for the promotion of a general welfare, to ask the United States to buy them, and to give those islanders a chance to better their financial and commercial conditions. It will be, too, an act of love and humanity for the European powers to do so. Nobody will come forward with strategical objections, which held good in the days of the old three-deckers, but have no weight in the era of steamships.

The day of including the islands of the North Atlantic in the political-geographical map of the United States may not be far off. I should not be surprised if, in a short time, Denmark should take the decisive step in this direction. Go where you will, through the islands, and hear the public opinion. It is the wish and hope of the people; it is their only final commercial salvation; it is their only road to tolerable prosperity.

Let us return to the mainland of North America. South from Rio Grande del Norte extends the republic of Mexico, called by one of our ablest statesmen, the Hon. John W. Foster, the "New Mexico," in his highly instructive and fascinating article published in the *National Geographic Magazine*, January, 1902, where he gave to the world a description of what Mexico was in former days and what it is to-day under the government of President Porfirio Diaz. Mr. Foster was formerly Secretary of State. He is no mean authority. He has known Mexico since 1873, and nobody is better qualified to speak upon that neighboring republic. He is full of praise, and admires the great progress which that country has made and is daily making. Should Mexico continue to advance in her civilization and commercial development, I think the day will come when mutual interest will bring her into a closer political-geographical union with her great Northern neighbor.

Farther south from Mexico we have the small Central-American republics. The iron horse dominates at last in Mexico, and with its steel rails there have come civilization, freedom of thought, enlightenment, and commercial progress. The railway will penetrate into these small countries as well, and it will bring to them what it has brought to Mexico.

The Quixotic dream of a Central America Republic, with Colombia and Venezuela under one flag, is an impossibility. How is it possible to clasp these people together if they cannot keep peace in their own states? The Central republics will learn that it is cheaper, better, and safer to live under a strong and respected government which stands for all the word means.

Farther south, we come to the republic of Colombia. There is no doubt, when the railway passes through the Cordilleras on its way to the equator, bringing new blood, that new ideas and civilization and commercial intercourse will be felt and will teach the people their own interest. The building of the canal will also have a wonderful civilizing influence upon Colombia, as well as upon the adjoining republic of Venezuela. Thousands of foreigners will come and spread over these immensely rich countries, and will bring industry and progress to sadly neglected lands.

The wail that, with the advent of the Anglo-Saxon race, hated foreigners will destroy the Catholic religion, is but the cant of selfish politicians. Where American progress and civilization take root there is freedom of thought and freedom of religion. The millions of Catholics in the United States are the best proof of it. To-day the poor Catholic priest in the republics lying south of Mexico is not in an enviable position. There is hardly enough left to enable him to keep soul and body together. Surely the Catholic Church could breathe afresh if a strong government should take hold of these countries. The only nation which can do it, and should do it, is the United States.

Colombia and Venezuela are to-day but large slaughter-houses where fratricidal bloodshed reeks to heaven. They have become a sad spectacle to the civilized world. But their day will dawn. Common-sense and the instinct of self-preservation will teach them what is their best, their true, interest. In the century of trusts and commercial combinations they cannot escape the coils of the great anaconda of trade. These countries need not be taken by force; they will, of necessity, submit to a peaceful combination, which I will not explain in this article.

When the Panama canal is constructed, the commercial interests of the European powers will be more and more thrown to the immense field upon the Pacific coast. British, French, and Dutch Guianas, which are not even yet paying colonies, will be even farther removed from the commercial spheres of their mother-countries. The connection between them and the mother-countries has not taken deep root. Nor are they the copestones of national prides. When that general war for which the Germans prepare their powerful navy—when the remolding of the political map of Europe commences—England and France, as well as Holland, will need money—a great deal of it. France, as in the days of Napoleon I., may sell to us her out-of-the-way colony for money. Holland and Great Britain also might need cash, or some diplomatic favors might make them think it worth while to give us their part of Guiana.

That it will come is sure; time will prove it. Then we can begin our civilizing work from the south as well as the north.

I am, sir,

E. H. PULMACHER.

United States Consul at Maracaibo.

"THE YOUNG MARRIED OFFICER."

NEW YORK, *December 14, 1902.*

To the Editor of Harper's Weekly:

SIR,—In your editorial of December 13, page 1396, about the "young married officer who had been ordered to the Philippines," you remark, "In days past an officer who was a major at forty-five was lucky." He certainly was, and it is doubtful if the records will show a case in which *any* officer who entered the service as a second lieutenant (the lowest grade) had been advanced by regular promotion to a majority at the age you give. The man who "in days past . . . was a major at forty-five" became so by what is *called* "selection." The increase in the army consequent upon the Spanish war brought promotion to lots of old captains, many of whom had served as company officers for more than thirty years; and these gentlemen regarded themselves as extremely lucky in getting the advancement, as, but for this increase, they would have gone on the retired list at sixty-four years of age without any promotion.

It is difficult to imagine why any officer, young or old, married or single, should seek to avoid going wherever he may be ordered to go. Such a person must have a strange notion of the obligation imposed by the oath he took when he accepted his commission. Can such a man be of the "sons of men who had iron in their blood"? L.

Finance

THE year closed with greater activity and strength in the securities-markets than the most optimistic observers of the financial situation would have believed possible early in December. The recovery from the low level reached during the late "slump" was very rapid indeed, in view of the fact that many of the uncertainties which helped to cause the decline remained uncleared. To be sure, even at the higher figures of the "rally" which is under way at this writing stock prices are still considerably lower than they were during the ill-advised bull campaign of last fall. But it was not the latter fact which was responsible for the present upward movement; it was rather the realization on the part of the professional speculators that the technical condition of the stock-market rendered a rise in quoted values an easier task than a fall. Their efforts were therefore bent in the upward direction, the pools and speculative cliques helping.

During the week of the Christmas holidays the market, though not very active, was much less dull than on the previous week, and the undeniable improvement in sentiment was reflected in advancing prices. There came a brief period of hesitancy, and the upward tendency was checked. The rank and file of the minor professionals deemed the rally over-rapid and, as was natural in a market of so markedly professional a character, believed a moderate reaction not only logical, but "healthy." Their attempts to bring about a lower range of values succeeded in disclosing a remarkable scarcity of offerings. Call money at 15 per cent., disquieting reports of a general strike on the Union Pacific and Southern Pacific systems, higher sterling rates, all were powerless to keep prices down, and under the lead of some rather obviously manipulated specialties, the entire market resumed its upward course. Sentiment, depressed when prices were low, was cheerful when prices had risen. But it must be admitted that the public at large did not evince more disposition to buy stocks than it did in August or September when the bull fever raged in the Chicago camp. At the same time, if there was no "real" buying, neither was there real selling, and it was evident that when stocks passed from weak hands into strong, they were not likely to "come out" on the market on a six or eight point rise.

There was really no especial development to which the rise could be attributed, other than the belief on the part of certain large operators for the rise that bull manipulation was justified. To be sure, while there are many uncertainties to be removed before the public can see its way clear to buy, there is nothing to show that it is wise or prudent to sell. The high rates for money were regarded as transient, as no doubt they were. In December, 1901, money touched a still higher level. This week, moreover, the speculative community remembered that the famous $50,000,000 money pool was still in existence, ready to help should a crisis be reached. At the same time it was and is not altogether clear that the return of currency to this centre will take place as soon after January 1 as the more optimistic appeared to believe. And granted more and easier money, there remains the obvious opportunity for Europe to send in her bill to American borrowers of foreign capital, so that the question of increasing exports of agricultural products comes to the front as offering the solution of a vexatious problem. This problem is neither more nor less than, Is there to be enough money with which to carry on active speculation in stocks?

Much has been said of the absence of the usual New-Year's "reinvestment" demand. The January 1 disbursements are probably the largest in the history of this country, and since it is undeniable that the country at large is highly prosperous, it is strange that there should be so very little investment-buying. It is a matter of much significance that several of the latest bond underwritings have proven failures, so far as concerned the profits of the underwriters. In years gone by, prominent banking-houses "brought out" bond issues for various railroads, and found their wares quickly absorbed by the public, which apparently was satisfied, from the identity and good repute of the bankers, that the bonds were safe or desirable investments. To-day, this does not happen. Either the public scrutinizes more closely the securities offered, reads more carefully the terms of the mortgage, studies more intelligently the earnings of the issuing company,—in short, takes more pains to inform itself regarding the value of the security offered for sale; or else the public is overloaded and surfeited with new securities, owing to the enormous flotations of the past three or four years. In either case, it is clear that the future attitude of the public is not altogether easy to determine by the syndicates and pools, who, in engineering advances in stock prices, have no other object than to shift the load from their shoulders to the public's. The question of actual values is also to be studied—that is, the present and the probable future course of earnings and the extent to which net profits will be affected by increased cost of operation.

While all these considerations may deter the ultra-conservative from plunging into stock speculation at the moment, there is hopefulness in the air. Strong interests appear confident that before the tide turns a bull campaign can be successfully carried on. The ability of the American people to outgamble any other nation cannot be questioned. And the great powers of the world of finance are familiar with the psychology of their countrymen no less than with commercial, industrial, and financial conditions in the United States.

The Next Speaker of the House of Representatives

THE Hon. Joseph G. Cannon, who will in all human probability be elected Speaker of the House of the Fifty-eighth Congress, has the distinction of having served longer in the lower legislative chamber than any of his thirty-four predecessors. The Eighteenth Congressional District of Illinois first sent him to represent it at the national capital in the year that General Grant defeated Horace Greeley for the Presidency, and he has done so continuously ever since, with the one exception of the Fifty-second session, '90 to '92, when he was made to stay at home by a Democrat named Busey.

His election to the next highest office under the government will be the realization of a long-cherished ambition with Mr. Cannon, and an honor which has been won through exceptional services. He was born at Newgarden, near Guilford Courthouse, in 1836. He went to Indiana early with his parents, where he received only a common-school education. At fourteen he hired out as clerk in a country store, and five years later began the study of law. Deciding that there was not much honor for a prophet in his own country, he concluded to go to Douglas County, Illinois, to begin his practice. That first year in his profession, 1858, was pretty hard pulling for the future Speaker of the House, and there is no denying that he would have come to actual want if a friend had not stood for his board bill. It was not in the young lawyer's make-up, however, to allow difficulties to daunt him. By hard work and untiring perseverance each succeeding year saw his influence broaden and his practice enlarge. With his inborn aggressiveness he was soon identified with his party's politics, and in 1861 he was elected State's Attorney, a position he held until 1868. His experience as counsel in cases of every conceivable kind, during those fourteen years before he became a member of Congress in 1872, undoubtedly fitted him for the useful place he has filled there.

The Hon. Joseph G. Cannon

Who will in all probability be the Speaker of the Fifty-eighth Congress

Mr. Cannon would not have been, perhaps, the President's first choice for Speaker of the House. As was shown in a recent number of the WEEKLY, their policies do not entirely harmonize, yet Mr. Cannon can safely be trusted with the best interests of his party. He is one of the oldest and ablest veterans in public life—indeed, he will be the oldest man who has ever occupied the Speaker's chair. Through all of his long career his bitterest enemies have never been able to connect his name in the remotest way with any scandal. He is a rough-and-tumble fighter; in debate he is not choice in the use of his adjectives, but he has a keen intellect, unimpeachable honesty, and a character of sterling worth. He is well known as one of the most conservative members of the House. As chairman of the Appropriations Committee he has had control of the supply bills, and with so jealous care has he watched the proposed expenditures that he has fallen heir to the late Mr. Holman's sobriquet, "The watch-dog of the Treasury."

New York's Great Transportation Problem

See double-page illustration

THE hardest transportation problem to solve in the world undoubtedly exists on Manhattan Island, New York City. Plans are under way to spend about $200,000,000 within the next five years, so that those who do business in Manhattan may get to their work in the morning and to their homes at night in comfort and with reasonable speed. This enormous sum is to be expended upon tunnels, bridges, and upon improvements in surface and elevated railroads.

Vast as are the undertakings to solve this problem, the outlook is that the expenditure of all this money is to be only a beginning, and at the end of a few years the congestion in travel will be as acute as it is now, and that more millions by the hundred will have to be spent. No one can predict when the time will come that the streets of Manhattan will not be "all torn up" to solve its problem of the transportation of human freight.

The fact is, that no one could even guess that the greatest "boom town" in the world, such as New York is to-day, would

require such a tremendous expenditure of money to simply carry the people who have to travel up and down and across its narrow streets. No one was prepared for this wonderful increase in travel. Transportation officials, city authorities, and the people generally have just begun to realize what the growth of New York means, and a clamor for immediate relief in travelling facilities has arisen that will not be stilled. The railroad officials are just as anxious as the city authorities and the masses to improve the transportation problem, for it means more money in dividends.

There never was a better illustration of the truth that an increase in traffic facilities in a growing country or city makes increased traffic, than is displayed in New York City. Look at these figures: In 1880 the number of persons transported on street cars and elevated railroads in Manhattan was 60,831,757. Ten years later it had grown to 190,024,848. In 1901 this sum had grown to 550,610,435. The figures for 1902 are not in yet, but will probably approximate 700,000,000. Was there ever such a stupendous growth of travel seen before in all the world?

Here are some more facts that illustrate this increase in travel in New York's streets: On Dewey Day in 1899 the elevated railroads carried 836,000 passengers. Such traffic was unheard of. No one thought it would be reached again, perhaps in a decade. Yet on Monday before Christmas, 1902, these same railroads carried 931,000 passengers. At one junction on the lines of this company no less than eighty-one trains an hour pass in the busiest times. It is impossible to stop more than forty trains an hour at stations when locomotives are used. When electricity is used, the limit of stops at stations is sixty trains an hour.

The electrical trains can carry one more car than the steam trains. By April 1 next all the trains will be electrical, but that this will afford only partial relief is shown by the fact that about 700,000 passengers of the 1,800,000 carried every day on the various lines in Manhattan use the elevated railroad, and the cars are crowded to a capacity of 140 persons, when there are seats in each for only 48. The elevated railroad uses about 3500 cars, and the six-car trains mean an addition of 500 or more cars, but that will only "loosen up" the number of passengers slightly. On the surface lines the managers assert that it is a physical impossibility to run many more cars than at present. They hope to be able to divert some of the traffic to side streets, but the crowded conditions will continue.

All this simply indicates the extent of the great problem involved. New-Yorkers, however, are impatient people. They not only want relief, but they want it right-away, to-morrow morning, if you please. Most of them cannot understand, or do not take the trouble to understand, that to make permanent railroad betterments takes a long time. You can no more improve transit facilities on a large scale in a week or two than you can build a battle-ship in the same time. Tell this to those who have to scramble, jostle, push, and almost fight day after day to get a mere foothold on the way to business and back, and they will tell you that the railroad managers might have foreseen all this great rush in travel, and that it was parsimony and the feeling that "a great big D" should always be applied to the public, that inspired their attitude of seeming indifference to the needs of the people. That might be true, if the managers and owners of the railroad properties were so lacking in ordinary perception as not to see that if their travelling facilities were adequate to the demand they would be making more money than they are now.

This transportation problem has always confronted New York. Time and again it has seemed to have been solved, but the last stage is always worse than the first. It is the topography of the place that has caused the difficulty. Manhattan is long and narrow. It cannot grow east or west. Its increasing population must find homes to the north or across the river in Brooklyn, New Jersey, or Staten Island. Thirty years ago the town got along fairly well

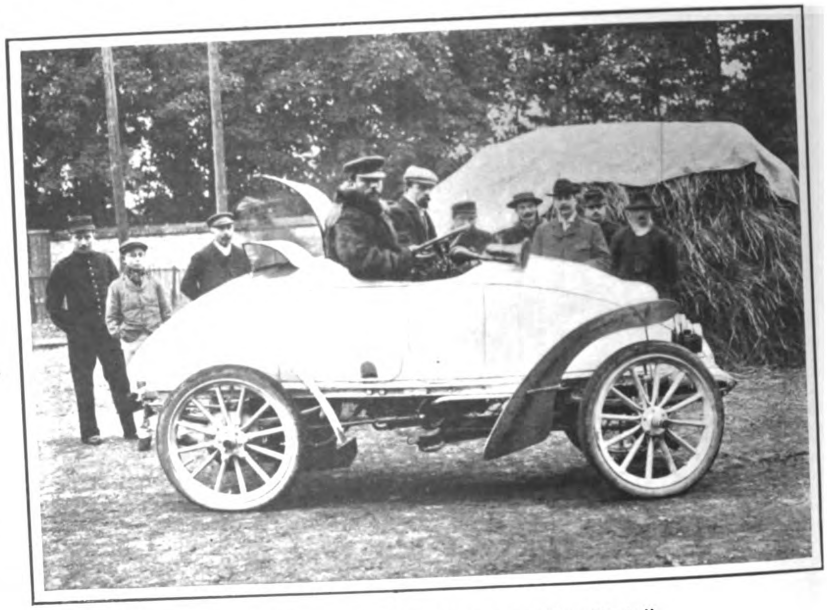
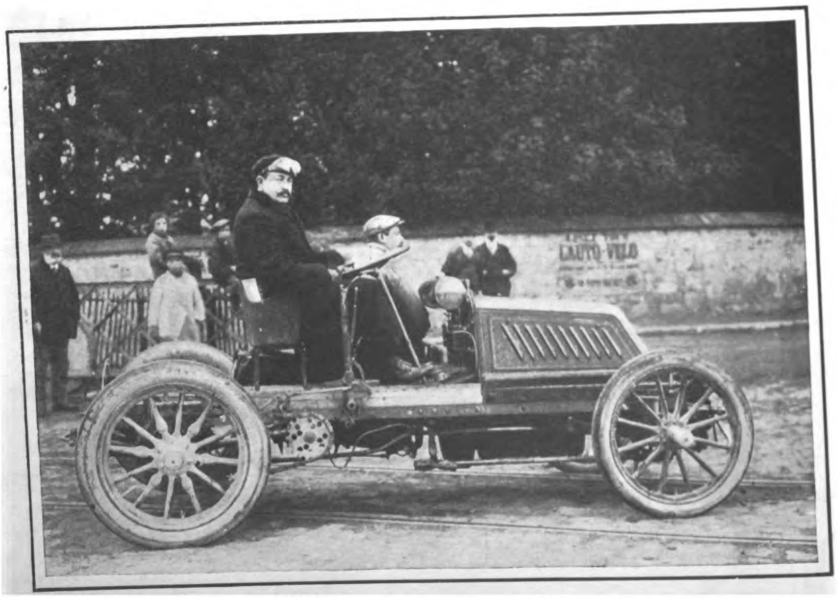
Types of Entries for the Gordon-Bennett Race



OF all countries which have entered competitors in the international race for the Gordon-Bennett trophy, France has the odds decidedly in her favor. Her machines are the result of a long experience in successful motor-car building, and the attention which is paid to the smallest details has developed cars which stand the test of the most arduous conditions of races and rough-country touring, while as to tires, it is extremely doubtful whether those of other than French make can stand the tremendous strain of a long-distance race. Besides all this, the French drivers are incontestably equal, if not superior, to those of other nations, chiefly on account of their great experience in racing. Still another point in their favor may be the course, the selection of which has to be made before the 1st of February; and as, on account of the strict police regulations, it cannot be held in England, and as the Irish roads seem unsuitable, the choice will doubtless favor France, and the Paris-Bordeaux road will be used. The French drivers will probably be Fournier, René de Knyff, and Charron, the first on a Mors motor, the other two on Panhards. Fournier came in first in the Paris-Berlin, as well as the Paris-Bordeaux race, so the course will be very familiar to him; de Knyff and Charron have also had much racing experience.

It seems unfortunate that a Serpollet machine is not to be entered in the race, as the latest model is said to be capable of developing a speed of more than ninety miles an hour. This model is in the form of an inverted canoe, and, like all the racers of this make, has the fine lines which are associated with types of racing-yachts.



The French method of securing drivers for the race is the opposite of the English: the Automobile Club of France chooses the cars which are to compete, then consults with the manufacturers of these cars as to the preferable men to manage them. In England, S. F. Edge, as the present holder of the Bennett cup, and Charles Jarrott were selected; both these men will drive Napiers. The third driver and car are to be found by means of the contest held at Welbeck, at which eight or ten machines are expected to start.

The American entries are in a more indefinite state. Alexander Winton is at present the only driver actually selected, and the car which he is building for the contest is carefully shrouded in a veil of impenetrable mystery; it should prove to be an important antagonist even against such well-tried veterans as the Panhard and Mors racers. At all events, it will be an interesting experiment, for it is remarkable that, after several years of popularity for the automobile, no American machine has yet been made which at all approaches the perfection of mechanism exhibited by the French and German cars; yet if such a car is to be built in this country, it will undoubtedly be Alexander Winton who will be responsible for it.

Germany, or rather Prussia, will be well represented by three of the well-known Mercedes machines, and without much hesitation it may be said that one of them will "lift" the cup, provided only that the driver be of sufficient skill and experience. It will doubtless be a hard struggle, as France has been quite disgruntled at having had an Englishman win last time, and will make every effort to keep an American or German from victory on this occasion. It is not probable that the English "Napier" will win this race, as it did last year.

M. Serpollet in his famous Racer "The Whale"

M. Fournier in his 70-horse-power Mors Racing-motor

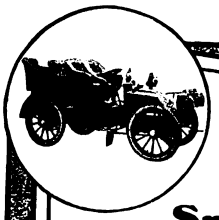
(Continued from page 73.)

with street cars and a mere suggestion of an elevated railroad. There was talk of a tunnel under Broadway and under the rivers, but with the exception of partly building the Hudson River tunnel nothing was done about it. It is only now that engineering has made tunnelling for city transportation feasible.

Soon the elevated railroads were improved and consolidated, and it seemed as if New York ought to get along in a satisfied condition for some time. The horse-cars grew larger and better rails came, and then it looked as if there might be peace for a time. After a while the stages were eliminated from Broadway, and street cars appeared there. All went smoothly for a little time after that. Then came the era of cable railroads and still bigger cars and better rails. These lasted only a few years.



The underground-trolley caused the cables to be thrust aside long before they had become antiquated, and at a heavy loss to the companies. Cars began to follow one another on the streets so closely that there was scarcely room for wagon traffic, to say nothing of pedestrians, to cross the highways. New streets for wagon traffic were opened, but that made little difference. The trolleys from Brooklyn were allowed to cross the Bridge, and the railroad facilities for the Bridge cars were more than doubled. All this simply brought more traffic.

One of the sights of New York is to witness the seething mob on a stormy night at the Manhattan end of the Brooklyn Bridge trying to get home. The same condition obtains on all the elevated and surface lines. Wrath and denunciation are in the air. The newspapers of the town fill their columns, setting forth not only the misery and lack of decency of the situation, but the so-called incompetence of the railroad managers, until it becomes an old story. A certain grade of preachers thunder about it in their pulpits, and a din is raised about the cars of the railroad men until they throw up their hands and, although they know the futility of it all, they cry out: "Come and tell us how to run our railroads and we'll try to do it."

Lately the women, in organized effort, have taken up the cry against the crowded condition of the cars, and the State Railroad Commissioners have come down to investigate. Little improvements, some of them highly desirable, have followed, but there can be no permanent help until cars, built to carry fifty persons, cease to carry 140 on the average. That condition can only come when there are more cars and more trains. But the railroad men say the limit in the number of trains on the elevated is nearly reached, and on the surface lines has already been reached. The introduction of the third-rail system on the elevated will make it possible to run six-car trains on all lines by April 1 next, and to run under shorter headway, but that will help only a little.

Meantime, New York will fume and fret. The Subway will open for traffic in a few months. A new bridge to Brooklyn will be ready for traffic, but the indications are that the relief will be only temporary. The Subway Company has made this plain by its purchase of the elevated railroad lines and the guarantee of seven-per-cent. dividends to its stockholders as against four per cent. now. Every time there has been an improvement in transit facilities in New York by any company, rival companies have been benefited instead of being hurt, and that will probably continue to be the case. Instead of one or two tunnels, running the length of Manhattan Island, in twenty-five years there will probably have to be half a dozen, for New York, by that time, will be the largest city in the world, and when it reaches that distinction there'll be no catching it for decades to come.

What has caused all this marvellous increase in travel in the city? It isn't hard to discover. The great prosperity of the United States has centred largely in New York City. The most direct reason, however, has been the erection of the so-called sky-scraper buildings. Manhattan Island can grow only in one direction, and that is up in the air. These enormous buildings have gone up by the hundreds. Some of

them house thousands engaged in vast business transactions. The real effect of this has been to narrow the streets upon which the buildings are situated. In a mad swirl the people sweep through these highways night and morning. The buildings are getting taller and the streets more crowded, and there seems to be no limit in sight. The steel-skeleton-framed buildings have crowded New York's cars beyond endurance.

Again New York is taking on its permanent aspect. From the Battery to Canal Street is the financial district. That region must always be crowded. Where the money is the crowd always will be thickest. From Canal Street to Twenty-third is the dry-goods district and always will be. There is a great amount of room for it to expand east and west, but not north. From Twenty-third Street to Fifty-ninth is the retail, hotel, great railroad terminal and theatre district. It is bound to remain so. From Fifty-ninth Street up to the end of Manhattan Island there is the extensive apartment-house district. And all these districts are bound to grow in one direction—up in the air. The cars are bound to be crowded in carrying the people to these districts, and the end will come when there is no more room for sky-scrapers, and the streets have no more room for transit facilities.

But what is being done at present to improve the conditions? In the first place, there is the great Subway involving the expenditure of $35,000,000. It is to be a great tunnel running to the upper end of the island, where it will send out two branches, one to the east and one to the far north. From the Battery end of the Subway a tunnel is to run to the heart of Brooklyn. This, with the lowering of the tracks on Atlantic Avenue in Brooklyn, means an expenditure of $20,000,000 more. Then, the Pennsylvania Railroad is to tunnel across the Hudson and East rivers, and is to bridge Hell Gate, giving direct connection with New England from the South. All this is to cost $50,000,000. Then the New York Central is to spend $30,000,000 in improving its terminal facilities from Forty-second Street north.

In addition, the old tunnel, two-thirds finished, under the Hudson River is being finished so as to bring trolley-cars from New Jersey and the terminals of the Erie and Lackawanna railroads direct to Manhattan. This will cost at least $10,000,000. Three enormous new bridges from Brooklyn to New York are being constructed. The Williamsburgh Bridge will probably be opened within a year. One between the present Brooklyn Bridge and the Williamsburgh Bridge has been started, and the stone-work on the one across Blackwell's Island is far advanced. These bridges will cost from $45,000,000 to $50,000,000. All this foots up to nearly $200,000,000.

Then there is the constant improvement of the trolley systems, involving many millions more. It will probably be five years before all the improvements now under way will be finished. No one who understands the traffic problem of New York doubts that all this increased facility for traffic will bring more traffic in return, and that soon again the crowded-condition problem will have to be worked out over again. It will simply mean more tunnels until Manhattan Island gets so crowded that it cannot grow up any higher.

Meantime, it will be some comfort to know that partial relief will come within a year, and that in five years it may be possible for the majority of the tired workers going home at night to get a chance to sit down. But in a few years after that who can tell what the conditions will be?

I say: Fear not! Life still
Leaves human effort scope.
But, since life teems with ill,
Nurse no extravagant hope:
Because thou must not dream, thou need'st
not then despair.

—*Matthew Arnold.*

Presence of Mind

THE writers and speakers who "improved" the accident which befell the President in the autumn did not generally observe that it showed very plainly the difference between the intellectual and the social virtues. This suggestion was subtly conveyed by the Westminster *Gazette*, in the following instructive, if tardy, comment: "But what should command the most unqualified admiration was surely the conduct of the motorman, who, having run down the Presidential carriage, injured the President, and killed two of his companions, proceeded to round on the President for obstructing the line with his coach. Here, if you like, was presence of mind."

If any one is tempted to dismiss this as a mere specimen of journalistic sarcasm, let him grope towards the truth as he reflects upon the story of a certain Oxford don who, early in the last century, was known as Presence-of-Mind Smith. Going down to Nuneham with a friend in his undergraduate days, he returned alone. "Where is T——?" he was asked. "Well, we had an accident," was the reply; "the boat leaked, and while we were baling it T—— fell over into the river. He caught hold of the skiff and pulled it down to the water's edge. Neither of us could swim; and if I had not, with great presence of mind, hit him on the head with the boat-hook both would have been drowned." Never, perhaps, was an honorable prefix so easily earned. In civil life, at least, it is seldom possible to gain a lasting reputation by one thoughtful and courageous act.

The duty of presence of mind has so often been emphasized that it has come to be regarded as part of the ethical code. It will, therefore, be with a certain shock that some of our readers will recognize this quality to be compatible, as at Pittsfield, with absence of manners and, as at Oxford, with absence of morals. But there is no acceptable definition of the term which will exclude its attribution to both the motorman and the undergraduate. Each of them came up to the dictionary standard of "coolness, alertness, and readiness of resource in a situation of sudden danger, embarrassment, or difficulty." The motorman, it is true, would have exhibited this virtue in a more desirable form if he had checked his car before it ran down the Presidential party; but, the mischief once done, there was no possible escape from personal embarrassment equal to an outspoken claim of right of way.

A weaker man would have allowed his thinking to be marred by intrusive considerations of regret and sympathy. The motorman had his wits about him, and was satisfied with their company. So, too, Presence-of-Mind Smith, instead of suffering himself to be distracted by various emotions, analyzed the situation with as unbiassed a reason as if he had been solving a problem in Euclid, attained his Q. E. F. without mental disturbance, and reached calmly for the boat-hook.

But while it has thus been shown that the gift of presence of mind does not exalt the character, far be it from us to suggest that it exerts a debasing influence. In situations where no concentration of mental resources was necessary, the motorman would probably have shown himself as rude, and the undergraduate as selfish. The fact is that, like any sort of smartness, it neither promotes nor hinders the spiritual graces, but is simply distinct from them and independent of them. We need none of us, therefore, be deterred by these two discouraging examples from aspiring to perfection in the quality which they illustrate but do not adorn. Once in a century it may knock a drowning man on the head, but those who profit by it are manifold more numerous than its victims.

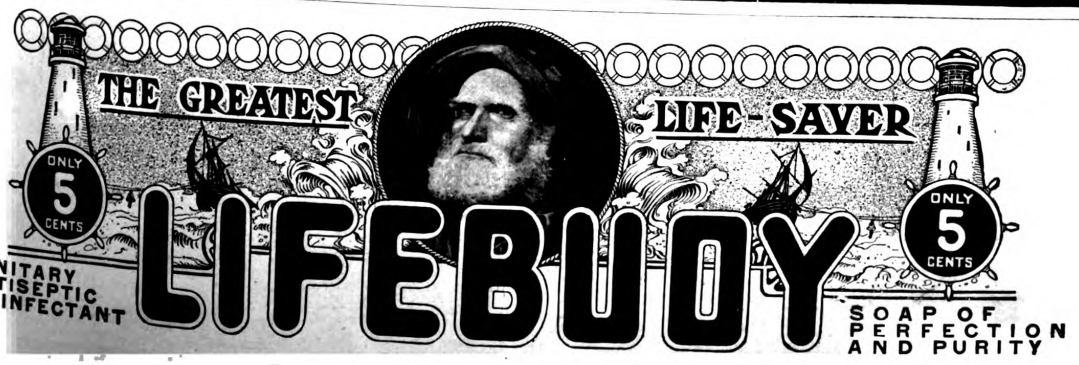
The Standard Authority on the History of the American People

Harper's Encyclopaedia of United States History

IN TEN VOLUMES

This set of books may be purchased upon easy payments



A descriptive booklet giving terms and prices will be sent upon application

THE ENCYCLOPÆDIA gives an accurate history of every important event from 458 A. D. to 1902. It contains more than 300 Original Documents never before published in one work; more than 3000 Illustrations; 5000 Pages, with 4000 Biographical Sketches, and Special Articles by every American historian of authority who was alive in 1901–2. It embraces every phase of American history, every subject in any way—even remotely—connected with the life and development of our country from the earliest times to 1902. Every American historian of note alive to-day has assisted either as editor or contributor. There are special articles on every important subject in American history written by the highest authorities and by specialists. In the list of rare and original documents, and in maps, plans, battle diagrams, etc., etc., the Encyclopædia occupies a field entirely its own. It is the only work of the kind in existence.

Based upon the plan of B. J. LOSSING, LL.D., with an Introduction by WOODROW WILSON, Ph.D., Litt.D., LL.D., President of Princeton University.

INTERESTING FICTION

The Intrusions of Peggy

By ANTHONY HOPE

Author of "The Prisoner of Zenda," "The Dolly Dialogues," etc,

A charmingly entertaining story of London life of the present day, full of wit and cleverness. A rich and attractive young widow, Trix Trevalla, goes to London to make her social way in the world. Into all her adventures, matrimonial or financial, Trix's friend, Peggy Ryle—a breezy and ingenuous young woman—intrudes, much to the reader's amusement. It is, indeed, a highly clever comedy, brilliantly written and of unflagging interest.

Illustrated by William Hurd Lawrence

$1.50

The Reflections of Ambrosine

By ELINOR GLYN

Author of "The Visits of Elizabeth"

If Elinor Glyn charmed novel readers by her first work, she has certainly added to her popularity with this newly published story. The keenness of observation, the audacity, of "The Visits of Elizabeth" are here, but, in addition to this, she has given us a strong love story and a novel of real dramatic power.

$1.50

The Maid-at-Arms

By ROBERT W. CHAMBERS

Author of "Cardigan"

Mr. Chambers has long since won a most enviable position among contemporary novelists. The great popular success of "Cardigan" makes this present novel of unusual interest to all readers of fiction. A stirring novel of American life in days just after the Revolution. It is a story with a fascinating love interest, and is alive with exciting incident and adventure. Some of the characters of "Cardigan" reappear in this new novel.

Illustrated by Howard Chandler Christy

The Outlook for Navy Legislation

THE necessity of a navy as large as that of the navy projected by the German Emperor is settled. It does not follow, however, that the determination of such a necessity signifies immediate action by Congress for the purpose of meeting it. Congress has enormous confidence in the safety of delay. At the same time, it is easier to secure legislation for the increase of the navy than for any other general purpose, because it may be provided for in the general appropriation bill, which is bound to have a hearing.

Senator Eugene Hale
Of Maine

Admiral H. C. Taylor

W. L. Moody
Secretary of the Navy

The army cannot be increased in size in the army appropriation bill, because, under existing conditions, enlargement of the army is not a simple proceeding; it involves changes in the character of organization, and the settlement of differences between the different arms of the service, besides other things. With the navy it is merely a question of appropriating for the construction of more ships, making provision for obtaining more officers, and authorizing the enlistment of more men. No dispute has to be settled except as to the policy of more ships and men, something about which there ought to be no dispute whatever.

The German Emperor has rendered the country excellent service in giving us an object-lesson as to what may happen to us and to our Monroe doctrine if we do not provide for the defence of our position. The lesson seems to have sunk into the mind of the country and to have awakened the popular branch of Congress to a comprehension of what will be expected of it. There is every reason why we should make the effort to prove that when we warn Europe away from that part of America which it does not already possess, we are sincerely in earnest. There is only one way to do this, and that is by laying plans for the construction of as great a fleet as the German Emperor expects will make his empire the second largest naval power in the world.

The present outlook at Washington is that the necessity will be met by Congress, and that a much larger appropriation will be made for new ships than was anticipated when Secretary Moody wrote his strong report. Events have worked for the President and the Secretary, and have proved that their recommendations were based on a thorough knowledge of the situation and on a wise appreciation of their own duties, and of the duty which the country owes to itself.

Representative G. E. Foss
Of Illinois

It is expected, with reason, that the House committee will authorize two new battle-ships and two new large cruisers. The Naval Committee of the House of Representatives appears to be ready to follow the administration, and the House will follow the committee, and will support any generous aid which may be proposed, in the way of preparing for the defence of the doctrine to which we are fully and inescapably committed. We have nine first-class battle-ships completed and five authorized, or fourteen in all. We have one second-class battle-ship. We have two armored cruisers built and six authorized. These may be classed as our first line of fighting-ships. All the others are auxiliary, for scouting duty or for coast defence. In the end, therefore, when all the ships now in process of constructing are completed, we shall have twenty-three first-class war-ships, three of which at least are rapidly growing obsolete. Against our fourteen battle-ships, nine only in commission, the German Emperor has ten in commission and seven building. Besides his seventeen first-class battle-ships, he has four second-class battle-ships, reconstructed in 1895, and will soon have three armored cruisers.

Against our twenty-three, therefore, he will possess twenty-four; but by 1914 he will have thirty-eight battle-ships and fourteen large cruisers. In order to meet him, at the end of twelve years, this country will be obliged to build at the rate of two battle-ships each year. As for cruisers, we need only three more than those already authorized to bring our force up to the standard. We have also to bear in mind that the German Emperor contemplates the remodelling, or modernizing, of seventeen old battle-ships, and these, when the design is carried out, will give him fifty-five battle-ships.

The true policy of the country demands that the work of increasing our navy should be done, and the House seems ready to respond, moved thereto by recent proof of the necessity of a larger number of ships, and, consequently, of a greatly increased complement of men.

Senator Hale, the Senate's authority on naval affairs, alone apparently stands in the way. He holds that a large navy is a temptation to war. Without disputing the contention that this may be true of a needless large navy, it may be said that it has been proved that our own navy is insufficient, and no matter what temptation to aggression may be involved in a sufficient navy, a sufficient navy is absolutely necessary.

It is probable that Senator Hale's objection may be overcome, but meanwhile he is the only formidable obstacle in the way of the increase of our sea power.

A CHARGE OF THE MOORS ON FEZ

The rebellion against the Sultan of Morocco, now apparently smothered for the time, came to a climax when Bubamara, the Pretender, stormed the city of Fez. During these fights the ferocious followers of Bubamara drove the Sultan's force before them into the city

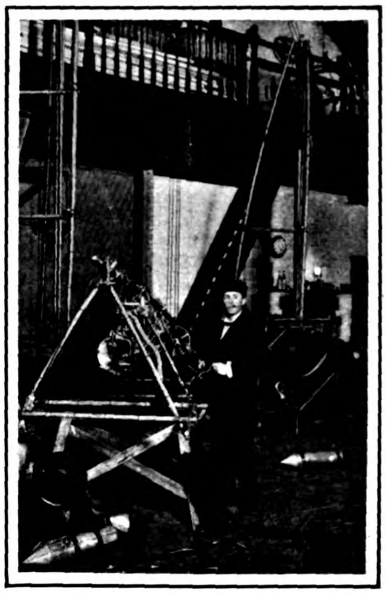
Progress Through the Sky

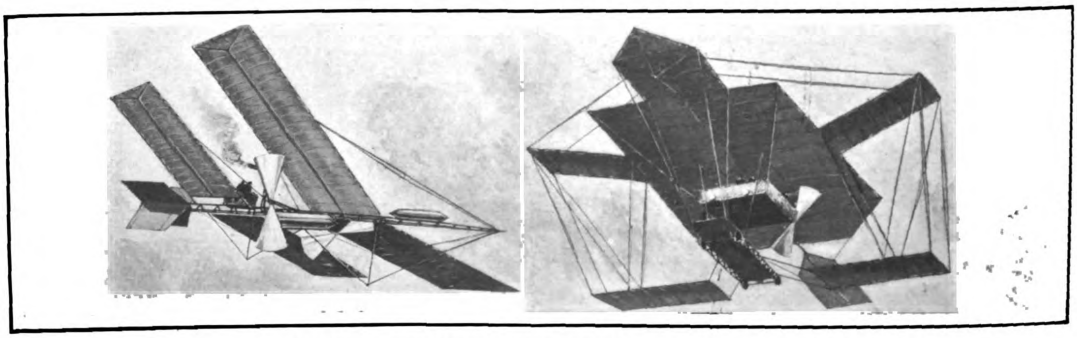


Types of Present-day Flying-machines
Showing the models as perfected by Santos-Dumont, Spencer, and others

THE interest in so-called "flying-machines," which became general when Santos-Dumont nearly two years ago sailed around the Eiffel Tower from St.-Cloud, five miles away, was increased a few days ago when it was announced that Alexander Graham Bell, known as the inventor of the telephone, had hit upon what he considered to be the correct theory, or what approaches the correct theory, upon which to build them. The basis of Professor Bell's experiments, he announced, was the tethered kite. It was the extension of what is known as the aeroplane system.

The Santos-Dumont air-ships have not been regarded by scientific men as strictly flying-machines. The reason is that they use gas to make them lighter than the air. They are really dirigible balloons, and they represent no new principle, but rather a perfection of details in the management of balloon navigation in the air. The flying-machine seems to have passed that stage. As long ago as 1885 two French army officers on a perfectly still day made a journey of nearly ten miles at Mentone. Santos-Dumont's machine sails in a moderate breeze. The gas raises it, and a small propeller pushes it on. The up or down direction is obtained through a sliding adjustment of weights.

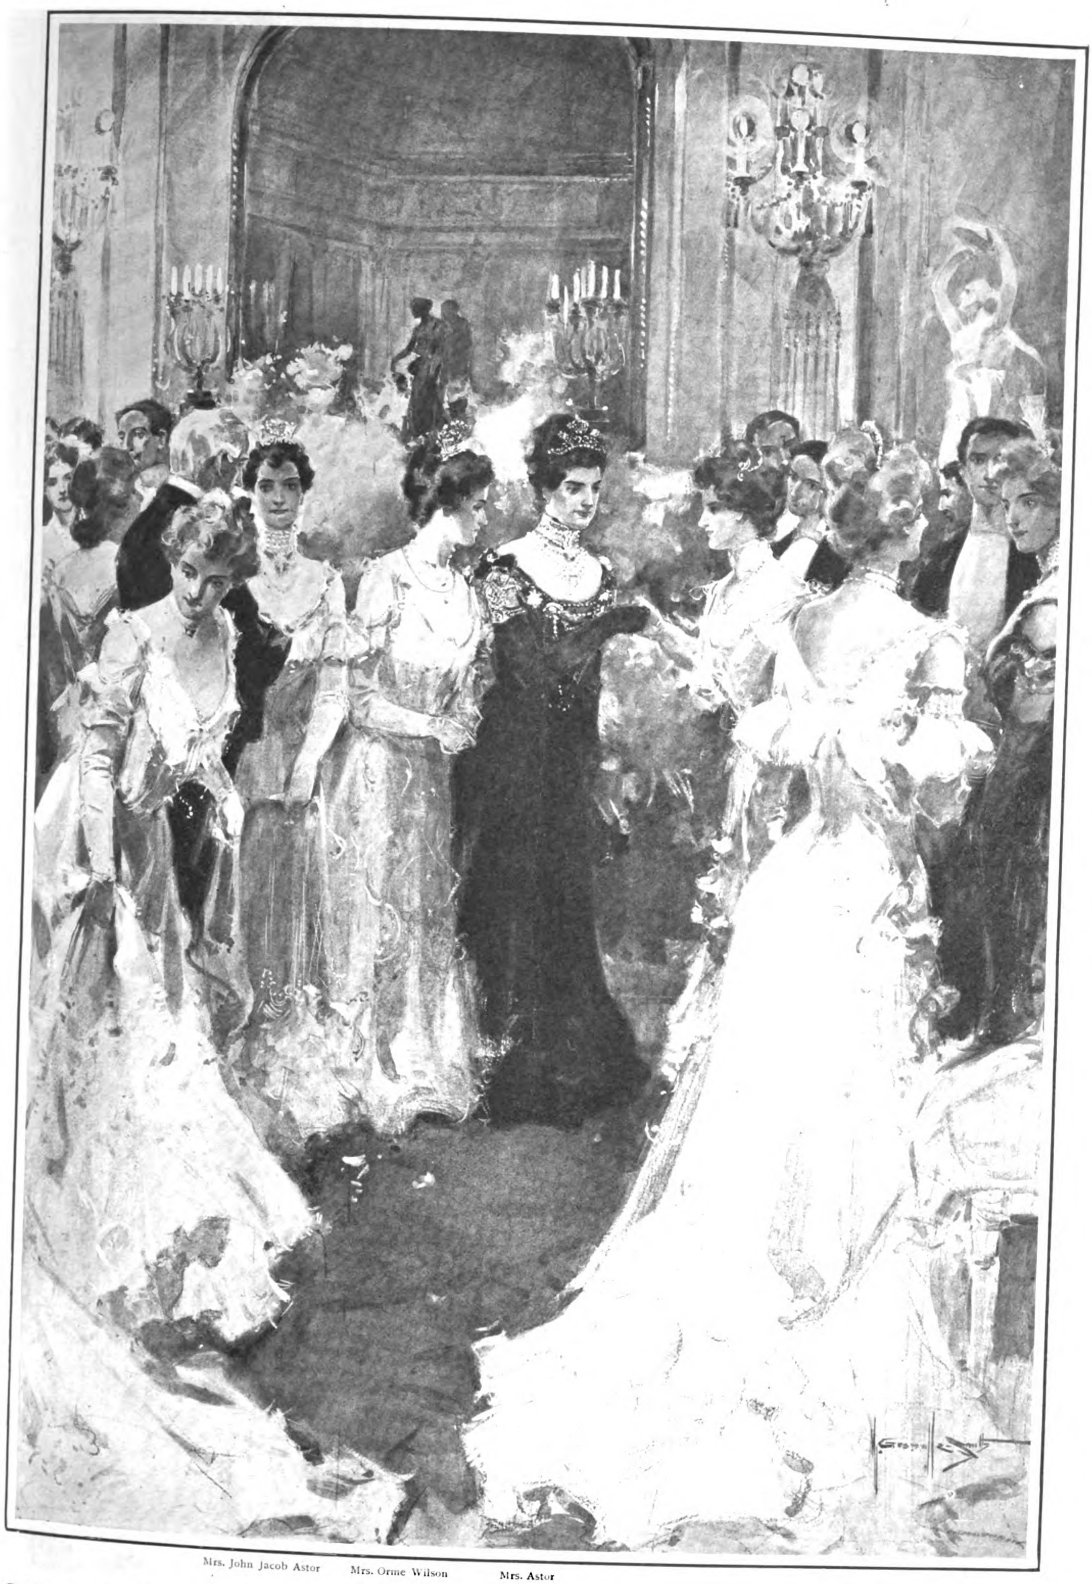
What is needed is a machine that is heavier than air, and that will fly by means of an engine which it carries. Any machine raised by gas, it is declared, never can be satisfactory. The man regarded generally as foremost in trying to solve aerial navigation is Professor Samuel P. Langley, secretary of the Smithsonian Institution. In 1896 he built an aeroplane that flew half a mile upward over the Potomac River. He had no means of condensing the steam in his little engine, and when the power gave out it slowly settled to the ground, showing its practical safety. It was 1000 times heavier than the atmosphere. It had a speed of twenty miles an hour.



Mr. Spencer at Work on his new Flying-machine
Mr. Spencer recently made the tour of London in his car, starting from the Crystal Palace

Professor Bell at that time pronounced it the most satisfactory of all the attempts to fly in the air. Professor Langley took the common turkey-buzzard as a model for his experiments. That bird is much heavier than the air, and it soars and sails and turns with scarcely a motion of its wings when once it gets going.

Professor Bell's new experiments, which he made for several months last year at his summer home on Cape Breton Island, were based on the kite theory. He held that a kite is simply a flying-machine tethered to the ground.



His theory was that "a properly constructed flying-machine should be capable of being flown as a kite, if anchored to the ground: and that, conversely, a properly constructed kite should be capable of use as a flying-machine if provided with suitable means of propulsion."

Professor Bell has as yet built no such machine. His theory means that when his machine appears, if it does appear, it will be a kite with a machine on it that will be able to raise it and to keep it poised in the air. The problem of making it go forward or back or to turn has already been solved by Professor Langley and by the large numbers of those who have propelled balloons successfully through the air. All this would seem to signify that the balloon stage of flying-machines has been, or soon will be, passed, and that its place will be filled by aeroplane machines.

Types of the new Aeroplane Machines designed by Langley and Maxim
According to the best scientific opinion, the future progress in machine-flying will be made along these lines

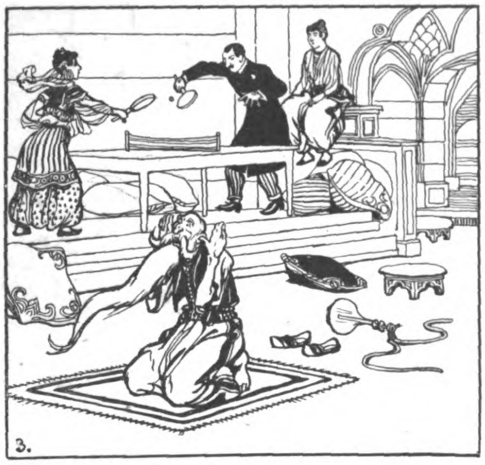
THE REVAMPING OF THE KORAN

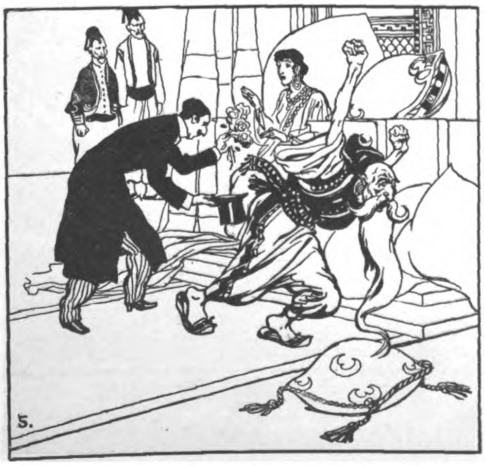
(A NEW BINDING IN MOROCCO)

BEING EXCERPTS FROM THE FORTHCOMING BOOK BY THE GRAND VIZIER



PICTURED BY ALBERT LEVERING

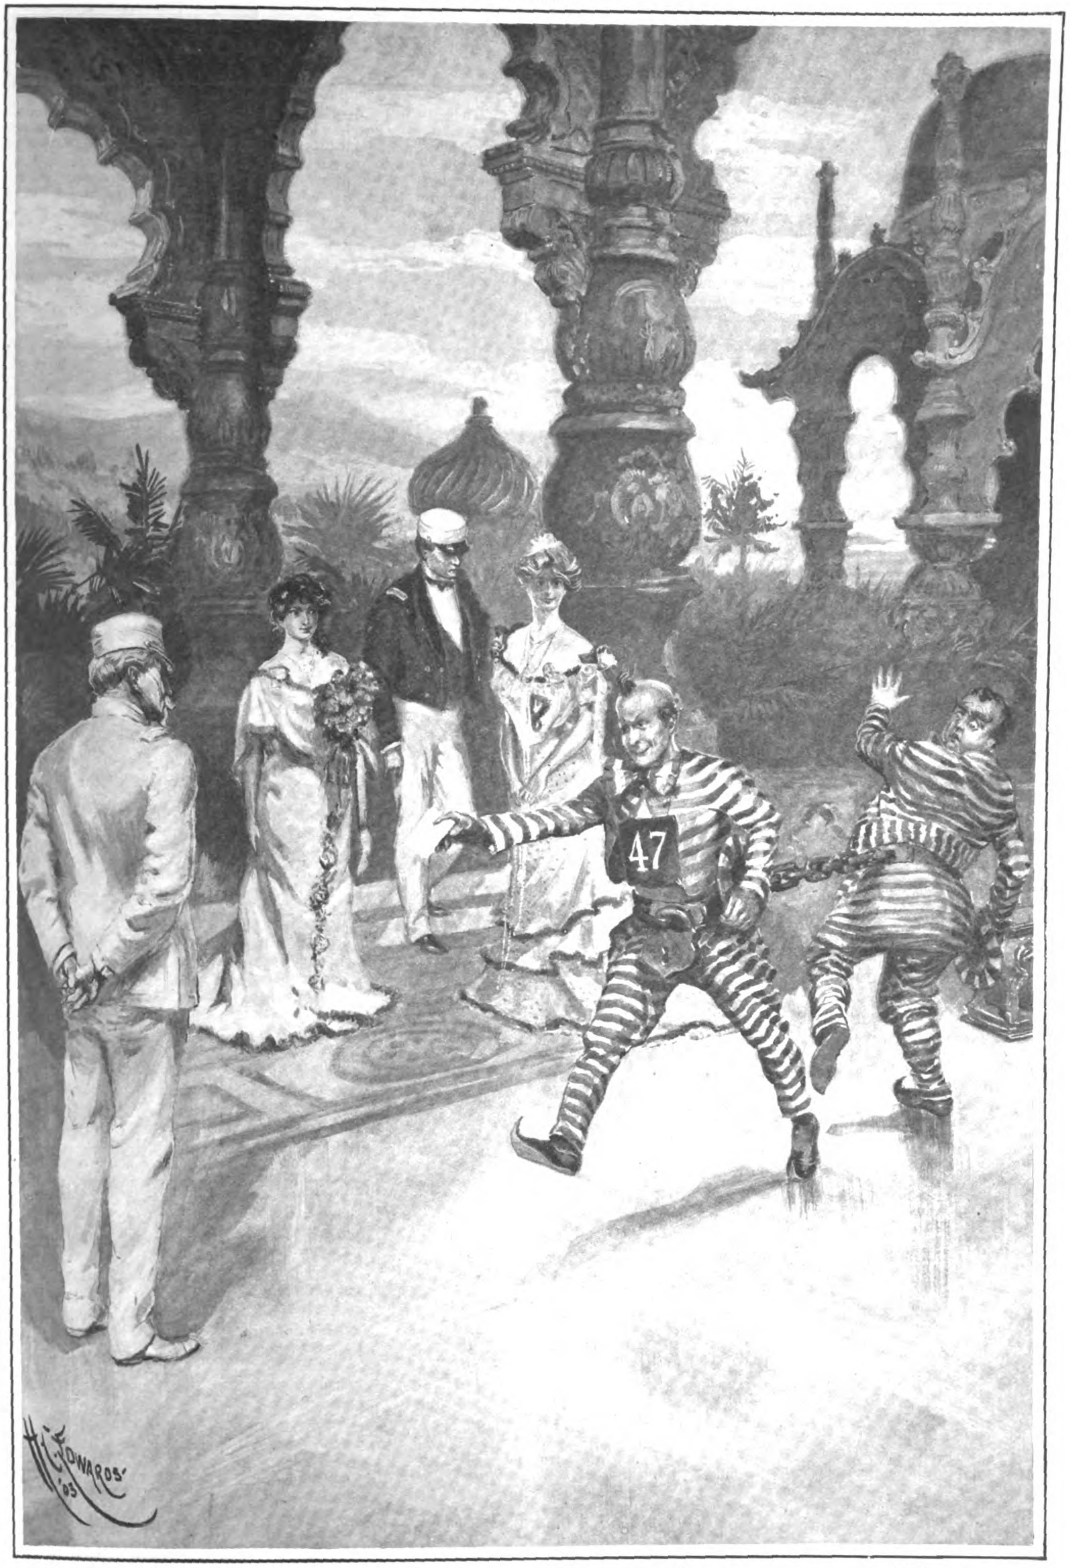
O Muley Hassan, that our Sultan is truly thy brother, now I doubt not! Observe him now in the checkered pants of the unbeliever!



And even see, O son of the true prophet, he snapshooteth all things—against the commandment of graven images.

O Ageeb! Ben Ali! In the mosque of our fore-fathers! Ping-Pong!

Do my lordy orbs see aright? Are those the accursed wheels of progress?



Lost! Lost! At last, by the beard of Akbar, doeth he tribute to but one wife!

If this be a dream, let me slumber. For thou art the true son, and the other the pretender.

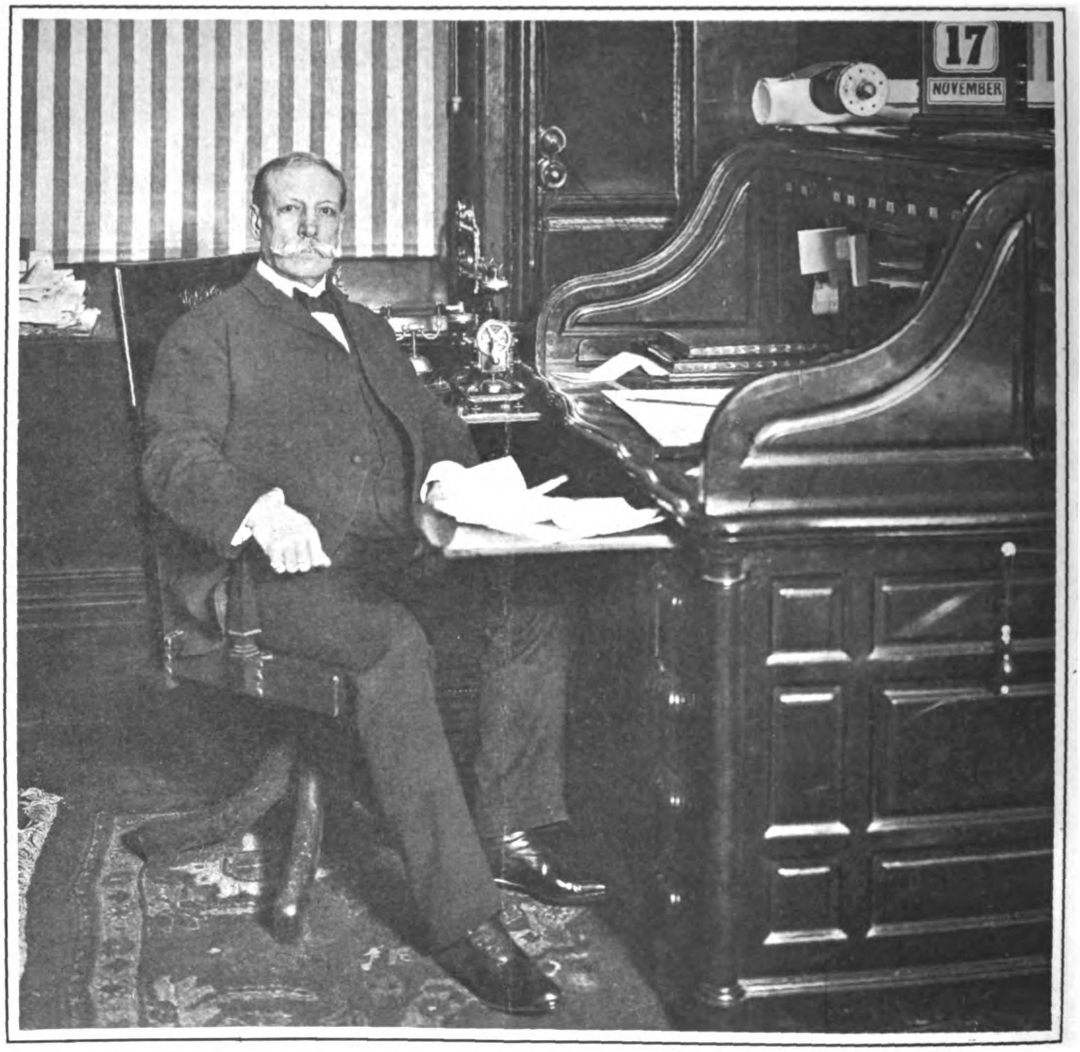
An American Invader of London



UP to two years and a half ago the so-called American invasion of London was largely social in character. English lion-hunters had made much of our eminent men and our attractive women. There was nothing too good, to use a forceful expression, for our statesmen, our men of finance, our painters, our authors; and as for the American girl—well, she seemed to sweep everything before her. Americans were so bright, the English said. Great Britain had discovered us anew.

Then came the business invasion. We sold millions of dollars' worth of steel in the English markets in competition with their own manufacturers. We worked a mighty change in the money-market of London, buying back our own securities, and even going so far as to float an English loan in the New York market. Then another important factor appeared in London's business life. We undertook to improve the transit facilities of the town, which for years had been in a most crude and inadequate condition, by building underground electric railroads for them.

The leader and pioneer in this great enterprise was Charles Tyson Yerkes, formerly of Philadelphia and Chicago, but later of New York, a typical American in those business qualities which the English had come to admire. He is now engaged in building four underground railroads for London, with a combined trackage of fifty miles, and is also equipping with electricity the well-known Metropolitan District Railway, known popularly as the London Underground, with a trackage of forty-eight miles. This involves a capital of more than $125,000,000.

All this has not only required the elements of courage and persistency usually displayed in carrying on large railroad operations at home, but has stirred up a strife characteristic of similar enterprises in this country. Mr. Yerkes and his associates have not only had to overcome English conservatism in the matter of improvements, but have had to fight another American company striving for the same ends. The contest is not yet ended, but will be fought out this winter in Parliament. The Yerkes company is known as the Underground Electric Railways Company. It has this advantage in the controversy in the development of underground railways of London, that it is already engaged in the work. The rival company is fighting for its existence before Parliament.

Mr. Yerkes first got control, for about $500,000, of an English franchise for the Charing Cross, Euston, and Hampstead Underground Railway, a franchise that had gone begging, because the English scarcely knew what to do with it. Then he had to convince the English shareholders that his electric system was better than the Hungarian system toward which they were predisposed. A board of arbitration settled it, and the English sense of fair play yielded to Mr. Yerkes. After that he got franchises for three other systems—franchises that cost nothing, because the English thought it would be a benefit to London, and were glad to give it to him. These franchises were for the Baker Street and Waterloo, Brompton and Piccadilly, and the Great Northern and Strand railways. Then he and his friends got control of the London Underground system. They formed them into one company, and arranged to make them parts of one great system.

A Painter of Famous People

MR. RICHARD HALL, whose exhibition of twenty portraits at the Knoedler Galleries is just now the most interesting small-picture show in New York, has been aptly termed a painter of famous men and women. Mr. Hall is a good draughtsman. His range is wide.

Of the women's portraits there is none without distinction. An air of good breeding surrounds them all, from the full-length portrait of the Duchesse d'Uzes, in coronet sables and cloth-of-gold brocade, to the heads of young women known in New York society. The portrait of Mrs. Oliver Harriman, Jr., reproduced in this issue of the WEEKLY, is typical of the collection.

A full-length portrait of Mrs. R. S. Guggenheim is among the latest of the paintings shown, and is one of the most successful. The graceful pose, with one hand extended along the back of a chair on the arm of which a little girl is seated with her head against her mother's breast; the study in texture of the lace dress; the background of tapestry in dull greens are all satisfying and all contributory to the charm of the well-poised head and gentle intellectual face.

Mr. Hall is nothing if not cosmopolitan. Born at Bjorneborg, in Finland, of a Russian mother and an English father, he spent his first years in London and his youth in Stockholm, where, as a student in the Beaux Arts, he won the Prix de Paris, which gave him three years of study under the best auspices. An early salon picture, "La Classe Manuelle," showing an interior with a group of Breton peasant girls knitting, was purchased by the government for the museum of Rheims, and was the beginning of the popularity which he has won to an unusual degree. In 1901 he filled a Paris gallery with portraits that have given him great vogue among persons able to command his work.

COMMENT

AT the hour when we write, the arrangements for the submission of the Venezuela dispute to The Hague tribunal have not been completed, although there seems to be no doubt that the controversy will be ultimately disposed of in this way. Some delay has been caused by President Castro's reply to our proposal that the international court at The Hague shall be substituted for the President of the United States in the rôle of arbitrator, a proposal to which the European powers concerned have assented. It turns out that, in his reply, President Castro suggested that, if Mr. Roosevelt should be unwilling to act, Venezuela would prefer to entrust some South-American state with the arbitrating function. As all the Latin-American states are indebted more or less heavily to the subjects of European powers, and may find themselves at any time in the position now occupied by Venezuela, they are obviously disqualified for rendering a disinterested judgment in the case. Moreover, in almost all of the Latin-American states—Mexico is an exception—the so-called Calvo doctrine is generally accepted. We need not say that the Calvo doctrine goes much farther than the Monroe doctrine has ever yet been carried by any of its expounders. Señor Calvo pointed out that the alleged right of European powers to enforce by arms the payment of debts claimed to be due to their subjects was exercised against weak states, but not against strong ones. He recalled the fact that when Pennsylvania, and subsequently Mississippi, repudiated bonds which had become the property of British subjects, Great Britain never dreamed of compelling the payment of those bonds by military and naval measures aimed at the United States. Their subjects were relegated to such remedies as should be attainable through the United States courts.

Now why, asks Señor Calvo, should not the same rule of conduct be applied to the Latin-American republics? Foreign creditors have invested money in those commonwealths with their eyes wide open to the risks incurred, and they have insured themselves against such risks by high rates of interest. Why should they not be bound by the maxim *caveat emptor*, and, for the recovery of alleged debts, be limited to such remedies as they can obtain from the courts of the country in which their debtors reside? There is manifestly something to be said in the forum of ethics for the Calvo doctrine, which simply asserts that European powers have no more moral right to coerce a weak South-American commonwealth than they have to attempt a coercion of the United States. A European publicist would answer that England did have a moral right to attempt the coercion of the United States when Pennsylvania and Mississippi defaulted on their bonds, but that she deemed the exercise of the right inexpedient. Russia has a moral right to compel Turkey to pay the arrears of the indemnity imposed upon the latter power by the Berlin Treaty; Russia, however, deems it inexpedient to exercise the right. The situation, then, is this, that while the principle embodied in the Calvo doctrine is regarded as just by almost all South-American states, it has never been recognized by any European power. It was therefore not to be expected that either Great Britain, Germany, or Italy would consent to refer their claims against Venezuela to the arbitration of a South-American republic which is itself indebted to European creditors, and which, by its adoption of the Calvo doctrine, would be disposed to hold that the three powers named should have sought remedies in the Venezuelan courts. Under the circumstances, we opine that President Castro's proposal was put forward not with any hope that it would be accepted, but in order to "save his face" in the eyes of his fellow-countrymen. We have no doubt that, having made this purely perfunctory move, he will acquiesce in our suggestion that the claims of the allied powers shall be referred to The Hague tribunal. We believe, also, that an agreement concerning certain preliminary points will be promptly reached. Germany has withdrawn her demand for an apology, which would simply have humiliated Castro, and it looks as if American bankers would furnish the relatively small sums of money an immediate payment of which in cash is required.

General Matos and the revolutionary leaders are profiting immensely by the Venezuela blockade; indeed, a situation is rapidly developing there which the allies do not seem in the smallest degree to have foreseen, and which is likely to upset all their plans and calculations. What will it profit England and Germany to have incurred the expenses and evils of war with Venezuela, to have aroused hostility at home and abroad, to have awakened grave apprehensions in the United States—in a word, to have disturbed the whole balance of international life—if at last they are to find the Venezuelan government, in the person of President Castro, slipping like water through their fingers? What will it profit to have brought Venezuela to bay, and driven a hard bargain with the vanquished, if the vanquished is likely to go out of existence before the bargain can be carried out? Germany's move had a certain superficial smartness about it, but, viewed in the cold light of fact, it seems rather futile. What is the use of a mortgage on Venezuela's resources if Venezuela has no resources? What is the use of binding a government when that government is certain to melt out of existence? President Castro's position, between the rebels and the deep sea, is rapidly becoming impossible. The armistice between the government and revolutionist armies has been well and wisely used by the latter, and they have already gained three important victories over President Castro's forces. The defeat of General Modesta by the insurgent commander General Antonio Fernandes, at Guatire, was a particularly crushing blow; and the position of General Acosta, whose small band of troops represents the government's last card, is more than

hazardous. Further, to add to the misfortune of these definite defeats, we must remember that President Castro's troops have for a long time been without pay, and are now even without rations; and, finally, we are assured that they are almost without ammunition,—a state of things which the blockade renders hopeless and irremediable. All this might and should have been foreseen by the allies; they should have foreseen that their victory over Castro would certainly defeat itself. Are we, then, left to the conclusion that if they had any luminous and reasoned purpose at all, that purpose was to bring General Matos into power, hoping to make favorable terms with him, or, perhaps, having made a bargain with him beforehand?

The moment seems opportune for writing a kind of obituary notice for Cipriano Castro; his extinction as a political force, and perhaps as a personality, seems only a question of days. Looked at in the large, there is as much or as little tragedy in his rise and fall as in the soaring ambition and ruin of Macbeth. Castro is, indeed, tied to the stake, and must stand the course. For him, Birnam wood has come to Dunsinane, and life may well look to him an idiot's tale, full of sound and fury, signifying nothing. It is exactly the same story of great personal courage, a certain gift for large affairs, and a wholly unscrupulous and essentially immoral nature—a nature, that is, which quite fails to realize the rights and lives of others, and, therefore, incessantly violates those rights and sacrifices those lives. From a purely military point of view there was something to admire in the way he conducted his great attack on General Andrade three years ago. In this he shone far more brightly than Macbeth, though Macbeth was as good a soldier and as full of personal valor. At the head of nearly fifteen thousand troops, Castro swept down on Andrade at Caracas, having previously captured the city of Valencia, a strategic success of the first importance. Castro had a scouting party of three hundred Colombian cowboys in his army, playing much the same part that the Cossack irregulars play for the Russian forces. He had also, it is said, three hundred Amazons—in the Grecian, not the South-American, sense of the word—and he met Andrade in person, at the head of his army. Andrade's defeat was final and overwhelming, and no alternative was left to instant flight. Sailing away to Barbados, Andrade left a stinging message behind him, like a Parthian arrow: "I return you the navy; you may need it yourself before long." That was the navy so ignominiously sunk by Germany, just as she had previously sunk Haiti's *Crête-à-Pierrot*. In spite of this fine and martial beginning, Castro made no worthy use of his three years of power. He built nothing, constructed nothing, created nothing but international quarrels, enriched no one but himself and his ballet-dancers. And now the wheel has turned, and ruin stares him in the face.

Has Venezuela anything better to hope, should the revolution, moving quicker than the allies, put a sudden end to Castro, and lift General Matos to power? This is something which, so far, we cannot tell. The gifts of the successful soldier, especially those needed in the half-guerrilla warfare that makes up so much of Latin America's fighting, are so widely different from those of the sound and successful administrator, and so rarely united with them in the same person. President Porfirio Diaz of Mexico is the one conspicuous example in Spanish America, and the type is so rare that we have to go to Napoleon and Julius Cæsar for conspicuous instances. The successful soldier must dominate others, subordinating their genius to his own; the successful builder of states must, on the contrary, renounce the desire to dominate, and devote himself to drawing out the powers and divining the genius of others, who must, each in his own department, be trusted with individual and independent building. All we know of General Matos promises well; and we may at least hope that he has something of the two-sided genius that the nascent Latin-American states so cryingly need. He at least is a man of great individual power and influence; one whose own fortune, the largest in Venezuela, was, before the war, estimated at six million dollars. Of this he has spent a third, perhaps a half, in organizing the campaign against Castro, who is, in his eyes, a mere adventurer and usurper, using power to the country's unmeasured detriment, and for sordid and corrupt personal ends. Though General Matos is now prominent as a soldier, he really gained renown and power in the victories of civil life, not only as a cabinet minister, but even more as a great merchant prince and man of affairs. He is said, like St. George of Cappadocia, England's patron saint, to have grown wealthy by army contracts; he was the head of a large commission-house in Caracas, with branches in the United States and Europe, and has thus gained the sense of international credit and international responsibility. He had also large interests in the two chief Venezuelan banks, and owned great coffee and cocoa plantations. All these great interests he has endangered in his campaign against Castro, in which his avowed motives were pure, honorable, and patriotic. General Matos at least deserves success.

To obtain an adequate idea of the impelling motives of Germany in the Venezuelan affair, it is profitable to study the official German diplomatic reports. It is, for instance, found that on August 17, 1900, the then German minister resident at Caracas, Dr. Schmidt-Leda, expressed himself to the Foreign Office in Berlin as follows:

> Force is the only thing that will bring Venezuela to terms. . . . To seize and hold for a sufficient time to obtain desired results one or more of the principal harbors, and to make, under our administration, custom receipts pay delinquencies, would be eminently feasible (in hohem Grade durchführbar).

This report was endorsed and fully supported by the German consuls in Ciudad Bolivar (L. Brockmann), in La Guayra (Albert Lentz), in Maracaibo (F. E. von Jess), in San Cristobal (Paul Gerstäcker), and in Valencia (Theodor Gosewisch). As late as October 2 last, Herr von Pilgrim-Baltazzi, the German chargé d'affaires at Caracas, reported to his government:

> President Castro will not be open to conviction except by forcible measures. . . . A joint action with Great Britain would, of course, in a certain sense and to a certain extent, be preferable to isolated action. . . . But equivalents and compensations would have to be insisted upon most rigidly, despite the probable protests of United States Minister Bowen and his government at Washington. . . . The blockade, to insure effect, must be of sufficient duration. Whatever ports or inland towns the German government, or the allied British, or both jointly, would have to hold, must be held long enough to make a deep and lasting impression on the Venezuelan government and public opinion alike.

Evidently the programme as outlined by the German representative in Caracas at that time was somewhat modified later on, owing to British influences. It would be a task repaying the trouble to search the official German diplomatic records coming from the other South and Central American countries. There might very likely be similar surprises in store, showing the real animus of the Berlin government in its dealings with these countries.

By official promulgation the German new tariff has now become law, although the date of taking effect is not yet fixed. Its inception was chiefly due to peculiar internal conditions. The bill as framed by the imperial government answered in a measure the enormous demands for higher protection made by the Agrarian party in Germany, and in a smaller degree similar demands put forth by German industry, stampeded by the panic which seized upon them on the dangerous invasion of American manufactures in their home market. The bill has been greatly altered in the Reichstag, the Agrarian majority increasing duties, especially those on American products, until on many American articles they may fairly be termed prohibitive. The duty on maize, for example, has been raised from sixteen to fifty marks (four to twelve dollars) per ton, meaning an extra impost of about $13,000,000 per annum on this one item of American import. And other articles in proportion; American bicycles, shoes, tools, sewing-machines, etc., would be virtually barred hereafter. American cereals, meats, lard, bacon, petroleum, though the German consumer and German industry cannot get along without them, will now be much higher in the empire, due to excessive duties. All this is a suicidal policy, to which Count von Bülow, if he were a real statesman, ought never to have acceded, for, with the necessaries of life heightened in price, and with the rawstuffs for German industry rendered dearer, competition with this country will simply become harder. But the Agrarians in Germany have their hour of triumph, and the Kaiser, his chancellor, and the al-

lied sovereigns as represented in the Bundesrath have submitted to Agrarian domination for reasons of internal political expediency. There is, however, a new general election approaching, and five months hence the electors may declare their disapproval of imperial methods which sacrifice prime needs of the masses for the sake of retaining the political allegiance of the influential land-holding aristocracy. The manner in which this amended tariff bill was passed proved the temporary or permanent collapse of German parliamentarism. The constitutional rights of the Liberal minority were overridden roughshod, and a bill comprising 946 paragraphs was passed as a whole and without any debate whatever—an unprecedented thing in the parliamentary history of any nation. The new tariff law, however, while largely due to exceptional internal conditions, cannot fail to produce far-reaching alterations in the foreign relations of the young empire. The signs in that respect are portentous.

Our commercial relations with Germany have been growingly important and profitable. All the more reason why we cannot afford to remain idle and indifferent spectators in the case of a tariff law whose effects will gravely disturb these conditions. In 1886 this country sent but $25,500,000 worth of goods to Germany. In 1900 we sent an even $250,000,000 worth to the empire, or seventeen per cent. of our total exports, while we bought but nine per cent. of Germany's exports. Within fourteen years the volume of our exports to Germany had increased tenfold — a far larger ratio of increase than was scored by us with any other important country. And in the column of these American commodities sent to Germany industrial products of every kind have taken a more and more conspicuous place. Under the old tariff conditions we could confidently count on holding and even increasing this supremacy in exports. The new law was avowedly framed with especial reference to trade conditions with the United States. It hits us far harder than any other single customer of Germany. Now the German government, in reply to remonstrances from this side, makes answer that a new commercial treaty between the two countries would remove these objections, wholly or in part. At present the old commercial treaty of 1828, concluded between the United States and Prussia, is still in force. Negotiations for a new treaty, more in accord with actual conditions, have been going on, at both Washington and Berlin, for about five years, but in a desultory and rather feeble way. Germany was the party most anxious to conclude a new treaty, and this for obvious reasons. For the old treaty is, under prevailing conditions, more favorable to American than to German trade. The new German tariff, virtually—though not formally—discriminating seriously against this country, furnishes the German government with an apparently formidable weapon wherewith to force our hand and urge us into a new commercial treaty. But the weapon is only in appearance formidable. For Germany cannot do without those American products which form the staples of our exports to her shores, viz., cotton, meat, preserves, cereals, petroleum, copper, which altogether form about seventy per cent. of what Germany buys of us. At least she cannot exclude them without inflicting serious injury to herself. But the German exports to this country, of which the principal ones are beet sugar, textiles, chemicals, chinaware, toys, could be spared without great harm. Certainly, none of her exports are indispensables in the sense in which American exports to Germany are. Hence, too, the chief weakness in Germany's tariff attitude toward us. And a tariff war would have to be fought out by Germany on precisely the same footing of inequality. It would be fraught with immeasurably greater injury to her than to us. Nevertheless, it remains true that the new German tariff will greatly disturb our commercial relations with Germany.

Events seem likely to offer President Roosevelt a second opportunity of promoting the peace of the world. With the exception of the United States, all of the powers interested in the indemnity to be paid by China for the Boxer outrages have refused to accept the payment of the second instalment of the indemnity in silver, and have notified the Peking government that a failure to pay in gold will have grave consequences. Now the indemnity imposed was notoriously exorbitant, and, since the signing of the protocol by which it was fixed, it would if payable in gold be swollen by nearly twenty per cent., owing to the continued fall in the value of silver. Our State Department did what it could to curtail the indemnity in the first instance, and has now consented to accept the second instalment in silver, being unwilling to play the part of a harsh and inexorable creditor toward a weak and impoverished country. It seems to be a suitable question for submission to the Hague tribunal, whether, at the time when the protocol was signed, it was not understood by all the parties that, while the indemnity should be nominally payable in gold, yet, as China has no gold, the Haikwan tael should be accepted as of the value which it possessed at that date. The value of the Haikwan tael, as we have said, is now lower by nearly a fifth than it was then. It seems unreasonable to insist that China shall bear the whole burden of the recent and unexpected depreciation in the value of the white metal. We incline to think that, if Mr. Roosevelt should propose a reference of the matter to the Hague tribunal, the proposal would be accepted by those signatory powers which really desired to avert a further dismemberment of China's territory, to wit, Great Britain and Japan. If the assent of the two powers named could be procured, the other signatories would have to follow suit, for they would perceive that China could no longer be treated in a high-handed way. An invitation to arbitrate presented under such circumstances would be equivalent to a command. Unmistakable would be the presence of an iron hand behind the velvet glove, for the combined naval forces of Russia, France, and Germany would be powerless to cope in the Far East with those of Great Britain, Japan, and the United States. If the present Anglo-Japanese alliance had existed eight years ago, Japan could never have been coerced by Russia, France, and Germany into a retrocession of the Liau-tung peninsula.

The second instalment ($496,092) of the Chinese indemnity fund has been paid to our government. The first instalment, paid July 1, 1902, was nearly all used in settlement of missionary claims for damages done by the Boxers. The State Department paid twenty-five per cent. of each large claim. A Washington correspondent of the New York *Times* is authority for the report that the State Department's commission which deals with these claims considers that many of them are excessive, and has cut them down. In one case a claim of $250,000 for mission property destroyed was cut down to $100,000, on the strength of reliable affidavits that that was a liberal estimate of the property's value. Claims of missionaries for personal losses seem to have been liberally allowed, but the Department is said to consider that the commission's estimate of the value of lives taken by the Boxers is too low. The commission seems to have assumed that a murdered missionary, fifty years old, would be capable of ten years' work at $400 a year, and should be valued at $4000, which is very much less than an American railroad would have to pay for killing him. The report of the proceedings of the commission, which has the settlement of all these claims in hand, is likely to make interesting reading.

An article in the December *Atlantic*, by Mr. Francis H. Nichols, dealt with what seems to be unusual intelligence with certain defects in the methods used by American and British missionaries to Christianize the Chinese. Mr. Nichols holds that the rigidity of the great system of ethics which Confucius devised for China is the chief cause of Chinese unprogressiveness. Confucius tried to provide for everything. Mr. Nichols finds his chart more nearly perfect than any that modern altruist has ever devised, but it has limited the very civilization which it has preserved. Chinese civilization, in Mr. Nichols's opinion, "cannot and will not go forward until it recognizes a soul, until it has ideals that are not earth made, until it seeks a country that is not like Shensi, eternal on earth, but "eternal in the heavens." Accordingly, Mr. Nichols considers that China needs Christianity far more than she needs anything else. She is not getting it nearly fast enough to suit him, and he puts the blame for this defect upon the methods of the missionaries, and their attitude towards everything Chinese.

Of the missionaries as individuals he speaks most handsomely, scoffing at the charges that they looted, denying that they are inferior men who live in luxury. They are brave, honorable and devoted, he says. Their faults are all of the

head, not of the heart. Their mistake, as he sees it, is that they have made the Chinese hate Christianity, and with good reason. They regard the Chinese as heathen through and through. They abominate all Chinese sentiments and customs, whether necessarily incompatible with Christian beliefs or not. They teach their converts to despise their own country, so that a Christianized Chinaman is necessarily denationalized. The Chinese are not illiberal in religious matters. They do not oppose a religion because it is foreign. Mohammedans and Buddhists live peaceably among them, and worship and make converts without molestation. They hate the Christians because the Christians make themselves hateful. The missionary expects to be hated and doesn't mind it. He considers it part of his day's work. Mr. Nichols thinks he is too comprehensive in his hostilities and condemnations, too inconsiderate, too little appreciative of the strength and wisdom of the civilization that confronts him. Criticisms very like these were made some years ago by Mr. E. H. House, as the result of extended observation of missionary methods in Japan, but Mr. Nichols is a more friendly critic than Mr. House was. The American Board could not ask for conviction more positive than his that China, which needs so much, needs Christianity more than anything else. Americans, who are on the whole her best friends among the nations, cannot but hope that it may be more wisely and successfully commended to her acceptance in the future than in the past.

The Panama Canal treaty is passing through the stage which Adam Smith used to call "the haggling of the market." There seems to be no formidable obstacle in the way of the early conclusion of the treaty, but the question of price, and while Colombia is asking a pretty high figure, the administration recognizes the fact that Colombia has a pretty good article to sell, and is willing to trade on a basis of "reasonable liberality." Colombia says her lowest price is an annuity of $650,000, equivalent to several billions of Colombian money at the present rate of exchange. She makes up this somewhat formidable total in the following way: The canal, she says, will put the Panama Railroad out of business, and the Panama Railroad brings in $240,000 a year. Then there are the harbor dues at the two terminal ports of Colon and Panama, and these must be relinquished to the United States, if we build the canal, and collect all tolls, lightship dues, and so forth. Now the harbor dues of Panama and Colon amount, says Sister Colombia, to $400,000 a year, and apparently $10,000 more is thrown in for luck. To this plea the administration has returned a soft answer, qualified by a secret determination to look up the accounts of those harbor dues and of that trans-isthmian railroad, to see if they were really in such a condition of blooming prosperity, and to ascertain how far Sister Colombia is stretching it. We may reasonably infer that the Colombians are tumbling over themselves with eagerness to get their hands on any such sum, which, in their present financial straits, represents the wealth of Aladdin's cave; but they recognize that they will only have one chance to trade in isthmian canals, and they are determined to make the most of it. But time presses, and they cannot linger much longer. The President wishes the canal question to be decided during the present session, and is not disposed to give Colombia more than two or three weeks more leeway. Failing a decision, he is authorized to turn to Nicaragua,—which fair land will then be in a position to hold out for even higher terms, knowing that her only competitor has already been dished.

That distinguished Englishman, Mr. Sidney Lee, has just been at some pains to explain to what degree his Most Gracious Majesty, King Edward VII., is a nonentity in affairs of state. His ostensible object is to divert from his Majesty some of the odium of England's alliance "with Goth and with Hun," as Mr. Kipling expresses it in his picturesquely inaccurate way,—seeing that the Goths are Swedes, the Huns, Hungarians, and the Germans neither one nor the other. But for cussing purposes that is all the same. Mr. Sidney Lee tells us that his Majesty's well-known love for Nephew Willy had nothing to do with the appearance of the English and German allied fleets off the coasts of Venezuela; that that love is merely a beautiful idyllic fact, but cuts no ice in practical politics. His reason is a poor one. He says Uncle Edward did not interfere, because Uncle Edward would not be allowed to interfere; because the divinity that doth hedge a prime minister is a far more formidable thing than the divinity that doth hedge a king. He tells us that it would be Mr. Balfour's business to snub Uncle Edward if Uncle Edward got gay with the ministerial prerogative; Uncle Edward would promptly be asked to go 'way back and sit down. Of course we do not attribute these flowers of rhetorical beauty to Mr. Lee. They are our own. His style is altogether different. The way he phrases it is this: "In accordance with admitted custom, the minister invariably treats the criticisms of the sovereign as unauthoritative suggestions, and is entitled to ignore them altogether, without in any way prejudicing his relations with the sovereign, who is debarred from offering formal advice on any political question." The sovereign, when he expresses his views even informally, must put them in a tentative, interrogative form, "which barely raises them above the level of an irresponsible suggestion." We wonder, after reading this, what Uncle Edward has done to Mr. Sidney Lee. We hope his Majesty will take warning, and not do it again, for Mr. Lee will surely confiscate the crown and crystal ball at the second offence, and at the third execute his Majesty on Tower Hill. Our private opinion is that Mr. Lee is stretching it. We ourselves always value Uncle Edward's criticisms.

Premier Balfour's holidays were somewhat marred, and the ministerial nervous system was somewhat jarred, by the announcement of yet another Liberal victory. This time the winner is Mr. Charles Rose, and the seat is Newmarket, which generally suggests winners with more legs than the present one. Mr. Rose will be remembered in this country as the successor of Lord Dunraven, and the predecessor of Sir Tommy Lipton, as challenger for the *America's* cup. He backed out of the contest of 1896, however, alleging as his reason that his action was taken as a criticism of the ill-starred nobleman who had lost his temper so badly in the preceding year. Mr. Rose is, in other regions, an all-round sport, and has for eleven years been a member of the Jockey Club, so that his representing Newmarket in Parliament is obviously appropriate. All of which will bring small balm to the feelings of Premier Balfour, or Secretary Chamberlain, who is now waving his palm branch over Pretoria, and secretly berating the Lord Commissioner.

The situation in Morocco is growing painfully like that in Venezuela, and a change of dynasty there is imminent, unless it has already taken place. We advise the pretender and the Sultan—who by this time may have changed hats—to kiss and make friends at the earliest opportunity, as the battleships of the great powers are pointing their prows towards Morocco in a way which has only one meaning and one outcome to turbulent minor powers. There is no Monroe doctrine in Africa, and the Grand Turk, who is nominal suzerain, has troubles of his own, and is in no position to interfere. Mulai Abdul Aziz, the young Sultan, who by this time may be writing his name Abdul Azwaz, seems quite a nice boy, with a Georgian mamma, and a taste for bicycles, autos, kodaks, and health foods, just like any other proper-minded and alert young person. But he seems to be a poor hand with machine-guns and insurrection-suppressing machinery generally, and if we ever made a bet we should back the pretender.

It now looks as if no opposition to the Cuba reciprocity treaty would be offered by Senators from the beet-sugar States. If the treaty fails to receive the necessary two-thirds vote—which seems improbable—it will be because extreme protectionists are unwilling to sanction any change in the Dingley tariff. Mr. Underwood, a Democratic Representative from Alabama, is an advocate of reciprocity with Cuba, but thinks that the President should have continued as he began, and tried to secure it, not by treaty, but by legislation. He asserts that, because the proposed treaty will reduce customs duties, and, therefore, affect revenue, the assent of the House of Representatives is required, for the reason that, under the Federal Constitution, all revenue bills must originate in that Chamber. He admits that, by the McKinley law and the Dingley law, the House of Representatives conceded to the treaty-making power the right to reduce customs duties, but he points out that the McKinley law was repealed years ago, and that the Dingley law limited the number of years during which this power could be exercised and that those

years have now expired. Mr. Underwood's mistake lies in his assumption that the power of the Executive, supported by two-thirds of the Senate, to make commercial treaties modifying duties, and therefore affecting revenues, is derived exclusively from the reciprocity clauses of the McKinley and Dingley acts, which, as he says, are no longer operative. Whether the power to make treaties which is vested by the Constitution in the Executive and two-thirds of the Senate includes the power to make commercial treaties is a question that was raised more than a hundred years ago, in Washington's second administration, when the Jay treaty with Great Britain was submitted to the Upper House of the Federal Legislature. The Senate then answered, and has since repeatedly answered, the question in the affirmative, and the correctness of its position has been repeatedly confirmed by the United States Supreme Court. The constitutionality, therefore, of such a reciprocity treaty as the President has signed with Cuba must be regarded as *res adjudicata.*

The intention of Senator Hoar's anti-trust bill is drastic and oppressive, but it really means nothing more than the President's message meant. If it were enacted into law, and could be enforced, it would practically put an end to inter-State commerce by corporations. It is, in purpose at least, a vicious measure, and it would be so in reality if it were enforceable, as it probably is not. It begins by making the Attorney-General the absolute master of inter-State and foreign commerce, including in its field of jurisdiction manufacturing corporations as well as inter-State railroads. This feature of the measure is an attempt to put into effect the suggestion of Attorney-General Knox's Pittsburg speech, and is clearly open to constitutional objection and to moral criticism. So far as the publicity provided for is concerned, it is an extension to the general public of the knowledge to which shareholders now have a right. Besides this, the Attorney-General is to be given the power to compel any company carrying on inter-State commerce to exhibit at any time its contracts and transactions for twelve months past, wherein it has carried articles for less than the ordinary rates or sold articles for less than the market price. No one objects, so far as we are aware, to the compulsion of quasi-public corporations, like railroads, to render services to all on the same terms; but if producers and manufacturers are to be held to market prices, trade will languish and will be restricted infinitely more than it has ever been by combinations. Sales for the purpose of killing competition are to be misdemeanors, and corporations violating, within the States of their creation, acts prohibited by this new bill, are to be forbidden from engaging in inter-State or foreign commerce. The officers and directors of such corporations are to be liable to fine and imprisonment for the part taken by them in authorizing the illegal acts of their several corporations. The main objection to the bill is that it provides for the unconstitutional invasion of the States by the Federal government. It is also a bill in restraint of trade by government. Furthermore, if enacted, it would be another unenforceable law on the statute-books. It is a bill to destroy a natural industrial and commercial development. If it were passed and enforced it would ruin every corporation engaged in inter-State and foreign trade, and would transform our present prosperity into ruin and bitter misery.

It was a difficult problem which was presented to President Roosevelt by the resignation of Mrs. Cox, a respectable colored woman, who for some six years has performed the duties of postmistress at Indianola, Mississippi, to the satisfaction of the Post-office Department. We call the problem a difficult one because the citizens of Indianola have as much right to enjoy postal facilities without interruption as have the citizens of any other town in the United States. On the other hand, under the Federal Constitution, as amended, Mrs. Cox has as much right as any other citizen to hold a Federal office, provided she does the official work honestly and efficiently. It is admitted that no complaints of malfeasance or incompetence have ever been made against her; it is also admitted that she has been driven to resign by threats and intimidation. Mr. Roosevelt has decided not to accept Mrs. Cox's resignation, and he apparently intends to go on paying her a salary, although she will have no work to do, since he has ordered that the post-office at Indianola shall be closed until a better feeling among the townspeople shall prevail. Was there no other way of dealing with the matter? Might not the United States marshal of the district in which Indianola is situated have been instructed to protect Mrs. Cox in the discharge of her official functions? Was not the intimidation to which she was subjected an interference with the United States mails? If Mrs. Cox refused such protection, would not our Federal Executive have exhausted his duty in the premises? Then, again, by suppressing the post-office at Indianola, is not Mr. Roosevelt punishing innocent as well as guilty persons? Is it likely that any of the colored residents in that town took part in the intimidation of Mrs. Cox? Is it even likely that all of the white residents, male and female, were engaged in the discreditable business? Both these questions must be answered in the negative. It appears, then, that Mr. Roosevelt, by an order which has been too hastily applauded in certain quarters, has withheld postal facilities, to which they are legally entitled, from a considerable number of persons who are guiltless of any wrong. We apprehend that, on reflection, he will recall the order.

Owing to the strike in the anthracite-coal region and the consequent impossibility of accumulating the normal stock in advance during the last summer and autumn, the present supply of the combustible falls very much short of the demand. Under the circumstances, the retail dealers in many Eastern cities have felt themselves justified in discriminating in favor of their regular customers. That is to say, in the case of applicants who have not been regular customers, the dealers either refuse to sell any coal at all or exact higher prices. The victims of such discrimination consider themselves wronged, and some of them are going to find out whether the law provides no remedy. Certain residents of Washington have determined to raise the question in the courts. If the retail coal-dealer were a common carrier or an innkeeper, there would be no doubt about his duty at common law to serve all customers indiscriminately. But he is not a common carrier, because all the coal he carries is his own. He is not an innkeeper, because he does not offer food or shelter to man or beast. He is simply the vender of a kind of fuel for which in former days, when the common law of England was evolved, there was no demand, and which only in recent times has come to be looked upon as necessary in parts of several countries. It is not absolutely necessary anywhere, since there are several substitutes for it. Apparently, at common law, a vender of coal has as much right to sell to whom he pleases, and at what prices he chooses to designate, as has a vender of bread or cloth. Nobody doubts that the retail price of coal could be fixed in a given State by statute, as the price of food and clothing has been fixed at divers times in England. We shall await with lively curiosity the attempt to be made in the District of Columbia to compel all retail dealers to sell coal to all applicants at the same price. Suppose a dealer should see fit to go out of business sooner than submit to the dictation of courts in the two particulars named? Could he be constrained by a mandamus to continue his business? We apprehend that the coal-consumers at Washington will get no relief from the courts.

A Western newspaper summing up the year 1902 reaches the conclusion that in politics there are more problems than there has been achievement. This may do to go with the list of fifty unanswered but pressing questions in the domain of politics and social economics propounded by the Unitarian journal, the *Christian Register*, of Boston, with the declaration that it could easily ask fifty more. When one regards the subject intently he is apt to be staggered by the apparently endless supply of problems, and no less with the paucity of solutions. Occasionally it happens that a problem looks as if it were answered, when a nearer view discloses that what at first sight seemed an answer was only the proposal of a dozen new problems. Our fathers solved the problem of dependence upon Great Britain by setting up for themselves, but the problems they set agoing by that operation continue to this day, and they dance in perplexing mazes as far along the vista of the future as it is given to us to see. Watt solved the problem of transforming steam into power, and consider what he bequeathed to the world—railways with smash-ups and consolidations and differential tariffs and the inter-State Commerce Commission; factories with strikes and lockouts; and trusts and the protective tariff, and Congressmen who wish they could

tinker it, but who don't dare to. Gutenberg solved the problem of printing, and we have the problem of more new novels in a day than we can read in a year, not to speak of newspapers with six-o'clock editions issued at 11 A.M. New York solved the problem of Tammany—or thought it solved the problem—by resorting to fusion; and now it has the problems of both Tammany and Fusion. There is no such thing as getting ahead of the problems. The best we can do is to adopt the wise attitude of that philosopher who says that if it were not for the problems life would not be worth living.

It isn't the man who sells rum who makes trouble, but the man who drinks it. Provided the rumseller sells the right kind of rum to the right kind of people, his business need not excite much complaint. It is with the man who drinks—drinks to his own detriment and the public inconvenience—that the public has a bone to pick. Heretofore, laws for the diminution of drunkenness have been concerned chiefly with the sellers of liquor. American liquor laws either prohibit or restrict rum-selling. Few of them aim at preventing or diminishing drunkenness by punishing the drunkard and depriving him of liquor. Few of them discriminate between qualified drinkers, and drinkers who are not qualified. The new British licensing act which went into operation on January 1 aims to make just that discrimination. Drunkenness heretofore has been comparatively pleasant for the drunkard, and very disagreeable for sober people. This new licensing act is designed to make drunkenness disagreeable to the drunkard. Heretofore it has been the glad and lawful privilege of a British subject to get drunk at any time and anywhere. The police could not touch him unless he was also disorderly. The new act regards drunkenness as itself a form of disorder, and provides that any one found drunk in a public place may be arrested, prosecuted, and punished. Three convictions within twelve months entitle the offender to be rated as an habitual drunkard. The prescribed treatment is to send him to prison for a month, photograph him while there, and to send a copy of his photograph to all the licensed liquor-sellers in his district, with a notice not to give or sell him any liquor for three years. That is called blacklisting the drunkard. If a publican is caught serving liquor to a blacklisted man, it may cost him ten pounds for the first offence and twenty pounds for the next. That tends to make the rumsellers careful whom they sell liquor to.

The new law has other important provisions. It provides that any one found drunk while in charge of a child shall be liable to a fine of two pounds or a month's imprisonment. It constitutes habitual drunkenness due cause for legal separation of husband from wife or wife from husband. Separations have already been granted under its provisions. It seems a drastic and effectual law, and the news despatches say that it has made a decided stir in London. If it can be enforced and its enforcement gives good results, it may become the pattern for new liquor legislation in this country. What is known of drunkenness in Great Britain suggests that its enforcement will be an enormous labor, but it is worth a vast deal of trouble to make drunkenness a dangerous pastime for the drunkard, and to make the sale of liquor to drunkards unprofitable to saloon-keepers. The post-exchange canteen system in our army, which was probably the least objectionable system for the sale of intoxicants ever employed in this country, embodied on a small scale the restrictions which this British law hopes to introduce on a large scale. It provided for the sale of beer in limited quantities to sober men only.

The understanding about army chaplains in our service has always been that if they earned a special reward, nothing should be done to impair their claim to collect the whole of it in the world to come. All army chaplains are and have been heretofore of the same rank, and neither faithful service nor any disclosure of heroism, devotion, or proficiency could win them the invitation to go up higher. There is now a bill before Congress to institute one higher grade, with rank corresponding to the rank of major, to which twelve or fifteen chaplains (one-fourth of the whole number) may be promoted. It seems a bill that ought to be passed. Clergymen in civil life win promotion, and get it. There is no good reason why army chaplains should be without the hope of a like reward. Many of them have admirable records. A reasonable promotion when earned by efficient service is not only their due, but would help to keep in the service good and valuable men who are needed there, and to whom superior inducements are offered to resign and take positions in civil life.

Arguing that Latin is not yet played out, but still affords an unrivalled mental training, Mr. Andrew Lang cites America and Austria to testify on his side. The Americans, he says, are a practical people, devoid of a traditional prepossession in favor of the Roman language and literature, yet he finds that Latin is being more and more studied in the American secondary schools. In 1890 about 100,000 American school-boys were studying it. In 1900 more than 300,000 of them—one-half the whole number of scholars in our secondary schools—"are learning Latin in continuous courses of four or five years." He borrows these figures from an address of Professor Ramsay of Glasgow before the Scottish Classical Association. They mean, says Mr. Ramsay, "that the middle classes in America are finding out that the most fruitful, useful instrument for training the mind for ordinary commercial life is to be found in the Latin language." The testimony from Austria, also borrowed by Mr. Lang from Mr. Ramsay, is that of Dr. Bauer, the head of the chemical department of the Technical High School of Vienna, who maintained that his best students of chemistry come not from the "practical" but from the classical schools. Possibly the cleverer boys are sent to the classical schools, but certainly the boys from the classical schools (Gymnasien) can beat the other (Realschulen) boys hands down at chemistry, cricket, or anything. So it was in Germany, where the superior merit of the classical schools is so well appreciated that they get three-fourths of the pupils. Out of 152,000 scholars in the secondary schools of Prussia in 1899, 112,700 took the classical courses. To learn Latin, says Mr. Lang, is to learn concentration of the mind. It is hard work, and progress in it can be tested almost as certainly and definitely as in mathematics.

The statistics of crime as set forth in a report made to Congress by Dr. Arthur MacDonald indicate that for thirty years past crime has been increasing in the world. In spite of the progress of education and the labors of philanthropy, mental and nervous diseases, suicide, insanity, juvenile crime, and pauperism are at present increasing faster than the population. This increase, due apparently to concentration of population and increased strain on the mental apparatus of mankind, does not necessarily imply that the world is growing worse, but merely that it is changing. An increase of crime may be an incident of a development that in the long-run will be salutary. Dr. MacDonald's report accompanies a bill to provide a laboratory for the study of the criminal, pauper, and defective classes, in the hope of discovering the microbe of crime and eliminating it. If Congress won't establish such a bureau, the Carnegie institution might consider it. Colonel Henry Watterson can probably be induced to give his valuable support to the bill for the proposed laboratory if it will specifically include the smart set among the defective classes to be studied.

Representative Fitzgerald of New York has introduced into Congress a bill making it illegal for any person engaged in trade to use, for advertising purposes, the name or picture of any living person without having first obtained the victim's consent in writing. The aim of the bill is righteous. It seems astonishing that there should be need of such a law, but there is. If the constitutional power of Congress to regulate commerce warrants such a law, let us have it. Living persons should certainly have the privilege of deciding whether their names and likenesses shall be used for advertising purposes or not. The law might even go farther and afford some protection to the recently dead.

If it is true, as a London despatch reports, that the Marconi Wireless Telegraph Company has concluded contracts for a daily service of news telegrams to a British steamer sailing between New York and Liverpool, then are the possibilities of rest on this earth prejudiced in an important detail. Heretofore it has been possible for persons who had worried or worked themselves to the verge of nervous prostration to go aboard a steamer in New York and be quit of all knowledge of current events for nearly a week. One of the chief blessings

of steamer life has been held to be that it was unvexed by newspapers. Stocks could go up or down, fire could consume or death invade, banks break, kings take sick, maidens elope, but the steamer passenger has been safe from all news of it until he got ashore. For a week he had enforced peace so far as the world ashore was concerned. But daily news despatches aboard a big steamer mean a daily newspaper, and a daily newspaper on one big steamer means daily newspapers on all big steamers, and that involves a serious impairment of the repose of steamer life. It seems a pity, but if the Marconi Company can carry out its contract there is no help for it. Where newspapers are obtainable people have to have them. They will be even more in demand aboard ship than ashore.

There are signs of an existing propensity to constrain the partial withdrawal of the word "sick" from the American language in favor of the word "ill." Newspapers in their head-lines and elsewhere speak nowadays of "a very ill man." It used to be "a very sick man." Why the change? "An ill wind" is a satisfactory use of language, but "an ill man" grates on the ear, and sounds like an attempt to improve on a usage that had no perceptible defect. They say this new whim is a euphemism imported from England. A correspondent of a Boston paper discusses and disapproves it, protesting not only against the use of the unwarrantable adverb "illy," but against "the growing use of the word 'ill' in place of the homely word 'sick.'" This Boston protestant, quoting Webster, finds that Shakespeare with hardly an exception uses "ill" to mean mental, moral, or impersonal disorders. "Ill at ease," "ill-advised," "ill-bred," "ill fares," are all fit and familiar uses of a good and industrious little word that has plenty of legitimate work of its own to do, without being constrained to figure as a feeble substitute for "sick."

A dozen years ago Mr. Howells wrote, "There seems to be some solvent in New York life that reduces all men to a common level." The author of *A Hazard of New Fortunes* must have been vividly impressed by a social tendency, rather than an existing condition, for when he noted the operation of the solvent "that touches everybody with its potent magic," its process, as we recall, was not yet complete. It is now. But even a dozen years ago there were observable characters in New York. Now, not one; the identification of the different, as the chemists say, is now complete; each social plane is a plane, indeed, where no pleasing, or absurd, or fantastic differentiation exists to relieve the smug, dreary level. The tendency was manifest, as Mr. Howells pointed out for us, twelve or fifteen years ago, but there were then a number of well-known characters in several planes of society, who added to the gayety of Manhattan life, or at least to the interest of the looker-on. One made us merry by solemn assurance that there were exactly so many—no more, no less—men and women whose names could (or was it "should"?) be found on an approved invitation list. Another undertook with notable success to determine for us all what was proper and appropriate each hour of the day for man to wear, and was delightfully *naïve* in conferring that boon. A third taught the rising generation, by precept and example, vegetarianism and gentle manners. A fourth bade us to be bold, and hold and practise with him the truth that happiness depended on a nice judgment in the preparation of terrapin. A fifth—rest his soul!—proved that neither the art nor the charm of Munchausen had departed. And there were others.

But they are gone, all; some from this life, some merely resolved to that common level that the Marches—was it Basil, or Isabel?—gently deplored. The kindly shade of Madison Square, the Bowery, the corridors of the fashionable hotel, the bow-window of the clubs, the Patriarchs' Ball, no place that knew them knows them, nor any successor, now. Why? Would we withhold approbation, even attention, from any man so bold as to arise from the "common level" and display an eccentricity of manner, dress, speech, view, taste, judgment, pastime; or who should invite his soul otherwise than the common level invites its soul; or who should comport himself with less—or even more!—conventionality than the common level? It is sad.

Medical legislation has recently made great progress, not only so far as it pertains to questions of public health, properly, but also as it concerns the control of those studying medicine and entering upon the practice of medicine. With the establishment of medical State boards, a great step in advance has been made. It is only natural that in the course of time acts to regulate the medical practice became more stringent, and that this tendency will continue. Lately a movement has been revived which is well apt to further the cause of higher medical education, perhaps more than any other measure which has yet been undertaken, namely, the movement toward inter-State reciprocity for the license to practise medicine. This will lead in the course of time to uniform medical legislation. National legislation in the matter is out of the question at present. The necessity for such a movement can be understood when we consider that at present a physician who is allowed to practise in one State is not admitted to practice in another unless he has passed a new examination. In many instances this discrimination is eminently just, on account of the fact that the newcomer does not reach the medical standard of the State of his new choice. On the other hand, some medically weak States do not allow licentiates of medically strong States to practise within their jurisdiction without a new examination, because the medically stronger States discriminate against them. The very simple question which every citizen can ask himself, "Why are physicians to whom our State gives the license to treat me, my wife, and my children not allowed to practise in the neighboring State?" should convince anybody of the importance of the movement which tries to establish sound conditions. In a homogeneous country the same medical laws should prevail everywhere, and the same high standard of medical education should exist in every political division.

Lucky Nantucket!—but, as to that, Nantucket always was lucky! Read this business announcement:

CHARLES HENRY WEBB,
Dealer in
Soft and Bituminous Verses
and
Hard and Humorous Coal.
Nantucket. Swain's Wharf.

The literature of the enterprise also includes a bill-head carrying the information that the Amateur Coal Company, with an office at the head of Swain's Wharf, is prepared to furnish coal for "cash or approved verses." Of this company Charles Henry Webb is President and Literary Adviser, and Frederick Coffin Ayers is Secretary and Shoveller, while trade in anthracite and anacreontics is reputed as flourishing. Reduced to plain facts, the case is that Mr. Webb, finding Nantucket on the verge of a coal famine, with no prospect of relief, interceded—whether in prose or in verse is not recorded—with a person of influence in the trade, and to such good purpose that the islanders are far from being reduced to the necessity of picking up driftwood on the South Side. Now all the rest of the New England coast is searching for poets who have pulls with the coal potentates, while the Nantucketers are more than ever in the frame of mind of Good Skipper Obed, celebrated in verse by Mr. Webb himself as one "whose heaven 'Sconset was, and Sheol but a shoal."

In the good old days when Presidents were elected by New York, New Jersey, Connecticut, and Indiana, the Western member of the group, for reasons of political geography, received much more than its fair share of recognition, and big men of the Hendricks type logically grew up to fill the big places awaiting them. Of these the latest and greatest was Mr. Harrison. Since his day the remainder of the country has taken a hand in making Presidents, and Indiana has been less conspicuous. She is now, however, producing an exceptionally fine new crop of smart fellows like Tarkington and Ade in literature, and Beveridge, whose portrait we print herewith, in politics. It is a fine thing to represent a great State in the Federal Senate at thirty-seven, but Mr. Beveridge has done that, and, better yet, has done it well. He is a zealous statesman, originative, forceful, and, in a way, picturesque. That the wide mark he has already made will be broadened materially as he gets older and learns more is a foregone conclusion. He is now forty.

The President's Happy Escape

It is commonly said that Mr. Roosevelt was born under a lucky star, and the saying is as true as any other superstition. It nearly always seems true of the adventurous and daring, who take enormous chances, and whose escapes from disaster are apparently miraculous. In fact, however, these escapes are almost invariably in accordance with the law which governs chance, or are due as much to capacity and character as to sheer good fortune. Every man who tempts fate and lives to tempt her again must be considered fortunate, especially if he escapes the apparently logical consequences of his conduct; but before we can properly attribute the escape to luck we should endeavor to ascertain the extent to which he is indebted to his own thoughtfulness or to his own character.

Those who suppose that the President acts without intention are mistaken in him. It is true that he may not reflect deeply, or think his problems out to their most remote conclusions or in all their bearings. His mind is quick, and his speech is quite as quick as his thought. In a word, he is impulsive. He sometimes announces a thought which he is obliged to revise and recall. Notable illustrations of this idiosyncrasy were afforded by the declarations of his purpose to retire General Miles. He spoke only after he supposed that he had reached his final conclusion, but he was in error, and withdrew from his purpose after the lamentable party and personal consequences of such an act had been pointed out to him. Quick as he is, and prone as he is to overlook some of the consequences of his words and deeds, he invariably has a purpose which is intelligent and which is frequently characterized by acuteness. Sometimes he displays wonderful cleverness in presenting two alternatives for choice, one being that which he desires to be selected, while to take the other would be a mistake on the part of the person with whom he is dealing.

The outcome of the Venezuela difficulty has materially decreased, probably ended, the chance of war between this country and Germany over the Monroe doctrine: it has improved the position which the doctrine holds in international law; it has taught the German Emperor that he cannot break up the friendship between England and the United States, and that he cannot hope to extend his colonizing schemes to this hemisphere. Another consequence of the affair has been to make the Hague tribunal seem real, "to save its life," as a European diplomat is reported to have said. All this is a great accomplishment, but no one who knows the attendant circumstances has failed to see that the President barely escaped a capital blunder, and that, instead of this great success, he might have brought upon us a war in which the odds would have been against us, or he might have discredited himself and the nation in becoming a judge in a controversy to which he was a possible party.

The President and his administration, in the first place, had not kept their suspicions of Germany to themselves. They doubted Germany's good intentions towards this country and towards England, and the country knew that Washington believed that the Emperor had his eye on South America and on the Caribbean Sea. It was therefore possessed of the notion that Dewey's fleet had not happened there for nothing, and war was expected by a few and dreaded by many. Suspicion creates delicate situations which a democracy does not deal with skilfully. Congress began to betray symptoms of noisy insolence, and the President found himself in a dilemma. He did not want war. He has said more than once that a war would be especially unfortunate for him and for his administration, because it would tend to convince the country of the justice of the chief criticism made by his enemies—that is, that he could not refrain from war. Congress began to talk in a way which could not please the German Emperor, and the President was obliged to silence it. He did silence it effectively. The absoluteness and the providential character of this silence may seem a bit of good luck, but, in fact, it was brought about by tact and frankness. The President was able to convince the law-makers that he could be trusted to enforce the Monroe doctrine, and that he was in the way of procuring better terms for all America, including the United States and Venezuela, by peaceful methods. If, however, he had not previously betrayed so general a fondness for war, and if, especially, he had not permitted the escape of the knowledge of his suspicions of Germany, there would probably have been no thought of war.

His great escape, however, was from the position of arbitrator. If he had accepted the shrewd request of the Emperor, a mistake might have been committed which would have given Germany an advantage over us, and might have more closely cemented the strange alliance between the Emperor and his uncle of England. It was quite in the cards, that both the allies would have acquired a grievance from the President's finding, while now neither can complain of anything that the United States government has done. It was the President's impulse to accept the invitation, and to be guilty of the impropriety of sitting as judge in the case. He was saved from this by the sound advice of Mr. Hay, and by the frankness with which he dealt with the allies. The ordinary man, seeking to escape from the position in which the President found himself, would have been looked upon as consciously coy when he had said that he would take the arbitration himself, but that he preferred the Hague tribunal. The ordinary man, in order to be believed implicitly, would have been forced to say emphatically that he would not be judge, and that resort must be had to the established tribunal.

Just as the President was obliged to silence Congress, and to undo the consequences of his own teachings and of his own suspicions of Germany, so he was forced to withdraw his evident readiness to be arbitrator without seeming to have been driven off, and without changing the cordial and friendly tone with which, from the first, he had dealt with all the countries involved in the dispute. Here again his absolute frankness and obvious sincerity came to his assistance. He had been led to see that to act as arbitrator would be improper, and the existence of the Hague tribunal had been called to his attention. After all, the end that he had in mind was the settlement of the controversy by arbitration, suggested by the United States and agreed to by all the powers. Such a conclusion would necessarily form a precedent which thereafter might be appealed to as constituting a recognition, by England and Germany, of the validity of the contention that the Monroe doctrine is part of international law. He had impulsively betrayed his willingness to act as arbitrator; he soon saw that this would not do; with great acuteness he then saw that nothing which he could possibly do would inure more to his reputation than his procurement of the reference of the quarrel to the Hague tribunal. Such a reference would be hailed with delight by the peace-loving world; would be one more deed by this country for the promotion of international arbitration, and would reconcile every one to the declaration of the United States that it will save South-American states from attacks by European powers. Having reached his conclusion, he had no difficulty in persuading the powers involved of his sincerity. England, of course, was ready to do whatever he asked; but even if its government had held off, Mr. Balfour and the German Emperor could not have afforded to turn their backs on the Hague tribunal which they had helped to create, and which was so greatly fostered by Lord Pauncefote. They saw that to insist upon the President's acceptance of the arbitration, on his presentation of this alternative, would have been a blunder. There could have been no misunderstanding of their motives for such a choice, and thus they would have been put at a disadvantage. In his ingenuous, open, and manly way he accomplished what diplomatic methods could not have brought about. Out of apparent indiscretions he had snatched a victory, and had shown once more that frank dealing is as masterful in international as it is in personal affairs, and that, with a fair case, it will always accomplish more than trained diplomacy proceeding according to its traditions.

The Hoar Anti-Trust Bill

Whether or not the anti-trust measure introduced by Senator Hoar represents the aspirations of the administration, it is a matter of moment to mark precisely what Senator Hoar proposes to do.

The Hoar bill provides that no corporation in the United States shall engage in commerce with foreign nations or among the several States unless it shall annually file in the office of the Inter-State Commission a statement setting forth the names of all officers, directors, and general managers; the amount and market value of its capital stock; the proportion thereof which has been paid in cash and the nature and value of any consideration received in lieu of cash; the amount paid in dividends; the rate of percentage of such dividends, and the times of paying the same. Every corporation must also file a statement of all the stock owned by it in every other corporation, and the number and value of the shares so held; it must specify the amount and value of its own stock held by other corporations; and it must further designate the amount of stock in other corporations held in trust for it, or in which it has any interest, absolute or conditional, legal or equitable. It must also furnish at any time any other statement that the Attorney-General may choose to call for. So much for the precautions taken by the bill to assure publicity. The penalty for non-compliance is, as we have seen, the annihilation of the foreign and inter-State business carried on by the delinquent corporation.

Mr. Hoar does not content himself, however, with these provisions assuring publicity. He proceeds to devise safeguards against monopoly. He would enact that any corporation that shall authorize or enter into any contract or combination for the purpose of driving out of business any other person engaged therein, or that, for such purpose, shall sell any article or product at a less price than it is accustomed to demand or receive therefor in any other place under like conditions, shall be deemed guilty of a misdemeanor, and, on conviction, its officers shall be punished by a fine, or imprisonment, or both. The penalty for a violation of this part of the statute does not stop here by any means. If a corporation be twice convicted of committing any of the acts just named, it shall no longer be allowed to engage in commerce with foreign nations or among the several States. The Attorney-General is charged with the en-

forcement of this prohibition, but it is made optional with him to suspend his tremendous power, if, in his judgment, the interruption of the business of a given corporation will cause serious public loss or inconvenience.

Inasmuch as by far the greater part of all the trade of the United States, whether transacted with foreign nations or between the States, is transacted by and through corporations, it is obvious that the Hoar bill, if it became a law, would invest the Attorney-General, who is an appointee of the President, dismissible at will, with an amount of autocratic power possessed by no other human being, with the exception of the Czar of Russia. Such being the inevitable outcome of the bill, it behooves every American citizen to inquire whether the enactment of it would be constitutional, and, secondly, if the constitutionality be admitted, whether it would be expedient. Does the power which the Federal Constitution gives Congress to regulate foreign and inter-State commerce imply the power to prohibit such commerce altogether? That the power to regulate *foreign* commerce includes the power to prohibit it altogether seems to have been settled by the fact that the Embargo and Non-Intercourse acts of Jefferson's administration were not pronounced unconstitutional by the United States Supreme Court. Whether the power to regulate carries the power to prohibit in the case of inter-State commerce also is the very question which has been thrice argued before the United States Supreme Court, and the decision of which may be soon expected from that tribunal. Should the Court hold that the power to regulate inter-State commerce includes the power to prohibit it altogether, then, of course, the constitutionality of the Hoar bill would be undeniable, provided the Court has no right to take cognizance of the purposes for which Congress may see fit to exercise an expressed power.

Admitting, for the sake of argument, the constitutionality of the measure proposed by Mr. Hoar, we are confronted by the question whether all the evils, actual or prospective, that have been imputed to the trusts, are for a moment comparable in respect of mischievous potentialities with the astounding engine of interference and centralization which Mr. Hoar would fashion and place in the hands of an official not even elected by the people, but the mere agent of the President, to whom his appointment would be due. There has never been a human being to whom such extraordinary powers could be safely entrusted, and never in the history of mankind has any federation of States or any nation of freemen been invited voluntarily to make so unreserved and suicidal an abdication of self-governing functions. From the momer that such a bill became a law, the Federal Attorney-General, or, rather, the President, who would hold him in the hollow of his hand, would exercise an authority over the property of citizens and over their most vital business affairs such as was never challenged by a Cæsar in the darkest days of the Roman Empire.

We do not believe that the Hoar bill can become a law in its present form. We do not believe that it will be reported without trenchant alterations by the Committee on the Judiciary, of which Senator Hoar is the chairman. In whatever form reported, it will have to run the gauntlet of the Senate, and is likely to undergo material changes before it reaches the House of Representatives. It is to the last degree improbable that both Houses will agree upon any modification of the original measure before the 4th of March, when the present Congress will expire. The utmost that Mr. Hoar can reasonably hope to accomplish is the enactment of a remnant of his bill, containing a perfunctory provision for publicity. We doubt whether we shall witness even that lame and impotent conclusion of a vertiginous scheme the fulfilment of which would shake the fabric of American industries to its foundations, and the mere proposal of which may disturb the national prosperity.

A Democratic Combination

At the first of the year the United States Steel Corporation announced a plan by which all its employees may become interested in the business as proprietors. The plan is in keeping with the general policy of this combination. The corporation seeks to be a representative industrial democracy, with a strong executive government drawn from the workers, and it is this feature which helps to make it one of the most interesting of the great industrial experiments of our time. The stock is already distributed among 55,000 stockholders, but the company's management seeks to have it understood that new investors, and even a larger number of shareholders, are desired. From the very first, a dominating single ownership has been frowned upon; and Mr. Carnegie himself, who desired to be paid in preferred and common stock for his own share in the Carnegie Company, was induced to receive bonds, on the theory that voluntarily to admit a single large holder, such as he would be, would be contrary to the company's policy.

The United States Steel Corporation possesses the chief virtue of a co-operative concern, for its working-men can become members very cheaply, being offered preferred stock for even less than the timid investor is now willing to pay for it; while it is practically assured of continued expert management, which, as experience has shown, is not always or generally the case in co-operative societies of wage-earners alone, or in firms or corporations which are owned principally, or controlled, by a few capitalists. Certain working-men of the United States Steel Corporation have had a share in its profits and a share in administration since the organization of the company. The Carnegie works were on a qualified profit-sharing basis, the additions to wages going to superintendents and bosses regularly, and to workmen who, in the course of the year, had rendered services of especial value, or had suggested important labor-saving devices. The corporation itself, which is purely advisory, the subsidiary companies operating the various mines, furnaces, mills, and transportation plants, employs its skilled workmen as inspectors and counsellors.

The wage-earners of the corporation, therefore, have already more of interest and responsibility than usually fall to the share of the working-men. It is now proposed to push still further the democratic theory which dominates the company, and to knit more closely its capital and labor. The purpose of the new plan is to interest as many as possible of its employees in its business, and to tempt, through proprietorship and through extra dividends, all of them, from the president and other high executive officers to the men who work with picks and shovels, not only to regard the interests of the corporation as their own, but to remain permanently in its service. It has been the aim of the corporation to devise some plan which will maintain the incentive formerly felt by the large individual proprietors of the subsidiary companies, "but," to quote from the circular issued to the stockholders, "in place of having it centre in comparatively few men, so to distribute its effect throughout the corporation that every man, in his place, would feel that he had become a partner in the business, and would work from that point of view." The plan is confessedly an experiment. It may be shown by experience to require important changes and modifications, but it is the result of long and careful study and thought on the part of the finance committee, who have consulted the presidents of the subsidiary companies. These and the directors of the corporation have given the scheme their unanimous assent.

The plan has two objects. First, it is hoped to interest a large number of employees in becoming permanent stockholders. With this end in view, there are set aside from the earnings of 1902 the sum of $2,000,000 and as much more as may be necessary for the purchase of at least 25,000 shares of the corporation's preferred stock, and the 168,000 employees of the company are given an option on this stock at $82 50 a share. The employees are divided into six classes, as follows:

A. Those who receive salaries of $20,000 a year or more.

B. Those who receive salaries of from $10,000 to $20,000.

C. Those who receive salaries of from $5000 to $10,000.

D. Those who receive salaries of from $2500 to $5000.

E. Those who receive salaries of from $800 to $2500.

F. Those who receive salaries of $800 or less.

By a recent adjustment of salaries there are not more than twelve men in the first class. Among these is the president of the corporation, whose salary is fixed at $100,000 a year. In the second class, not more than fifty men; in the third class there are about 200 men; and something more than 1500 in the fourth class. There are therefore about 150,000 men in the fifth and sixth classes, who receive from less than $800 to $2500 a year. As salaries diminish, the percentage of them that may be subscribed for the stock increases. Thus, men of Class A may not subscribe a sum to exceed five per cent. of their salaries, while Class B may subscribe eight per cent.; Class C, ten per cent.; Class D, twelve per cent.; Class E, fifteen per cent.; and Class F, twenty per cent. The payment for the stock may be made in monthly instalments, the amounts to be such as the subscribers desire. A purchaser may take as long as three years in paying for his stock, but he receives the seven-per-cent. dividends from the date on which he begins to make payments. He pays five per cent. interest on the deferred payments, but if he defaults he forfeits nothing that he has paid, being permitted to withdraw all that he has paid on account and to retain the difference between the five-per-cent. interest and the seven-per-cent. dividends. In other words, his effort to buy the stock earns him two per cent. on his advances, and he gains notwithstanding his failure to fulfil his contract.

This, in brief, is the manner in which the employees may become owners of preferred stock at low prices and on remarkably easy terms. An inducement is also offered to them to retain the stock thus purchased. If a man keeps his stock five years, and at the end of each year exhibits his certificate at the office of the treasurer of his company, together with a letter from a proper official to the effect that he has been continuously in the employ of the corporation, or of one of its subsidiary companies, during the preceding year, and has shown a proper interest in its welfare and progress, he will receive each year $5 in addition to the seven-per-cent. dividend. Thus continuous service with the corporation makes this stock, when we take its price into account, a

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

ore than twelve-per-cent. investment, which is not affected by the death of the owner or by disability incurred in the service of the company before the expiration of the five years. At the end of the five years there is to be still another dividend to be paid to those investors who have remained in the service of the corporation. Those who drop out before the five years are ended forfeit their right to the extra $5 dividend for the remaining years of the term. These extra dividends, however, are to be paid into a fund, and this accumulation, with five per cent. interest added, is to be divided among those who remain in the corporation's employment for the full term of five years.

The second object of the plan is to interest the "large number of young and able employees in the work of more closely organizing and systematizing the business in all its branches and ramifications," to interest them also in reducing expenses and cost of production, and to offer inducements to them to remain permanently with the company. Profits are therefore to be divided among the presidents, officers, managers, superintendents, and all other men charged with responsibility in managing the affairs of the corporation. The profit to be shared is to be that above $80,000,000, and the amount to be set aside each year for division is to range from one per cent. of the smallest sum to two and a half per cent. of the largest—that is, it is to be one per cent. whenever the earnings are $80,000,000 and less than $90,000,000, and two and a half per cent. when they are $150,000,000 and less than $160,000,000. One-half the sum set aside is to be divided quarterly and paid in cash. One-half is to be invested in stock, half of which is to be distributed at the end of the year, while the other half is to be retained in the treasury for five years. If the person in whose name this stock is held is then in the employ of the company he receives the stock. If he has died meantime, or become permanently disabled in the company's service, the stock goes to his estate or to him. While this stock is held the person to be entitled to it eventually is to draw the dividends earned by it so long as he remains with the company. If he voluntarily and without previous consent withdraws from the company he forfeits his right to the stock, and it then goes into a common fund to be divided at the end of the five years among those profit-sharers who remain in the company's service.

The plan is so interesting and important that we have thought it well to describe it fully. Its working will be watched with interest by all who are studying modern industrial problems, and especially the development of relations between labor and capital. Certainly if this hoped-for industrial democracy realizes the expectations of its founders a long step will have been taken and pointed out towards the abolition of those wasting and destructive wars known as strikes and lockouts.

The Passing of the Beard

NOTHING is presently plainer in a world that loves its little mysteries, and likes to keep the observer in a state of tremulous suspense about a good many things, than the fact that it is beginning to shave again. It has always shaved, more or less, ever since beards came in some fifty years ago, after a banishment of nearly two centuries, from at least the Anglo-Saxon face. During all the time since the early eighteen-fifties, the full beard has been the exception rather than the rule. The razor has not been suffered to rust in disuse, but has been employed in disfiguring most physiognomies in obedience to the prevalent fashion, or the personal caprice of the wearers of hair upon the face, where nature has put it, for reasons still of her own. For one man who let nature have her way unquestioned by the steel, there have been ninety-nine men who have modified her design. Some have shaved all but a little spot on the under lip; others have continued the imperial grown there into the pointed goatee; others have worn the chin-beard, square cut from the corners of the lips, which has become in the alien imagination distinctively the American beard; others have shaved the chin, and let the mustache branch across the cheeks to meet the flowing fringe of the side-whiskers; others have shaved all but the whiskers shaped to the likeness of a mutton-chop; the most of all have shaved the whole face except the upper lip, and worn the mustache alone. All these fragmentary forms of beard caricatured the human countenance, and reduced it more or less to a ridiculous burlesque of the honest visages of various sorts of animals. They robbed it of the sincerity which is the redeeming virtue of the clean-shaven face, and of the dignity which the full beard imparted no less to middle-life than to age.

The clean-shaven face and the full-bearded face were alone logical, and though the full beard was cut to many shapes, square, and forked and pointed, it never was grotesque, so that it is to be hoped that if any form of beard survives the all-threatening razor, it will be the full beard. That is honest, and it hides more of the face than any other, which seems in most cases to be desired. It is, to be sure, very dirty, and that is the best reason for reforming the beard altogether. To be perfectly frank, at the risk of being somewhat disgusting, we must own that the full beard collects dandruff, which plentifully bestrews the neckcloth and the waistcoat; but it is not filthier in other respects than the mustache, which sops itself full of soup, and gravy, and coffee, and all the other fluids which pass the lips, and is absurd besides. In the young, it is grown purely for vanity, with the hope of adding a certain fierceness to the innate sheepishness of the wearer's expression; in age, it forms the penalty of this vanity, for though the wearer would then gladly cut it off, he cannot do so without seeming to remove, in the consciousness of his friends, one of his features. It would be as if he cut off his nose, or the like. The mustache will probably survive every other form of the beard, because it is the most flattering to the vanity of the young.

It is on the upper lip that the down of adolescence, fair or dark, first appears, and gives the world assurance of maturity. The boy with a mustache feels himself a man, and many of the sex who do not wish to wear mustaches themselves but are sometimes obliged to do so, accept him at his own estimate. It helps him to look old, and the look of age is useful in business, and inspires confidence. The youth of twenty-one looks thirty with a mustache, and without it he would look sixteen. This is a real reason, and about the only one for wearing it. In age, the wearer is keenly alive to the fact that if he cut it off at sixty he might appear a blooming youth of fifty, but he is helpless for the cause already given, and can only sigh, and advise his posterity never to grow a mustache. For himself, he can indeed reduce it to the smallest size, as is now much the fashion. The flowing mustache, the up-and-out-branching, the deeply drooping, neither of these is now any more the mode than the mustaches which used to meet the fringing whiskers; and the barbers have even got a name for the close-cropped mustache which remains. They ask you if you want it stubbed.

The flowing whiskers have long vanished; the beard that once streamed meteor-like upon the wind now streams only from the cheeks and chins of rustic sages; the imperial and the goatee are rarer than the mutton-chop whiskers; the square-cut chin-beard has ceased to be significant of our nationality, it is so inadequate to our numbers; all other dots and dabs of hair upon the human countenance have been gathered confluently into the full beard, or have perished before the remorseless sweep of the razor. The gain of manly beauty through the fashion of clean-shaving, has not as yet, it must be confessed, been very great. Those who had not grown beards of course remain as they were, in their native plainness; but it is in the case of those who had worn beards, that the revelations are sometimes frightful: retreating chins, blubber lips, silly mouths, brutal jaws, fat and flabby necks, which had lurked unsuspected in their hairy coverts now appear, and shake the beholder with surprise and consternation. "Good heaven!" he asks himself, "is that the way Jones *always* looked?" Jones, in the mean while, is not seriously troubled. He is pleased with the novelty of his aspect; he thinks upon the whole that it was a pity to have kept so much loveliness out of sight so long. As he passes his hand over the shapeless expanses, with the satisfaction which nothing but the smoothness of a freshly shaven face can give, he cannot resist the belief that people are admiring him. At any rate he has that air.

Perhaps they are; and yet to our own taste, we think he mostly looked better in his beard. Of course it was foul; a beard cannot really be kept clean; but it was natural, and it was dignified. It hid certain things, certain features, expressions, that were best hushed up. That smirk, that sensual pout, that bull-dog clinch, they were all mercifully hidden or they were at least so much palliated that they remained a dark suspicion, and not this dreadful conviction with which they now afflict the spectator. It can be said that there is a gain for honesty, if not beauty in the new fashion of shaving, and this cannot well be denied. But it appears that the Creator could not trust the human countenance to itself, at least as it was given to men, and found it best to hush it up in a jungle of hair. Women were fashioned so fair that they could be allowed to look what they really were, but with men it was another story.

Besides, when the beard began to be worn, half a century ago, many of its champions maintained that it was not only given to man as a mask for his evils and deformities, but that it was very good for his health. They held that the beard which covered the chin and throat was meant to keep them from the cold, and that the beard which covered the lips purified the air that entered the respiratory tracts, and preserved the wearer from consumption. Now that consumption is no longer consumption, but tuberculosis, and is not hereditary but infectious, we believe that the theory of science is that the beard is infected with the germs of tuberculosis, and is one of the deadliest agents for transmitting the disease to the lungs. This is perhaps the best reason for shaving it, and giving the creature a chance to repair the Creator's mistake. But nothing shall persuade us, who grew up in the opposite theory, that thousands of human beings were not saved from consumption before it was tuberculosis, by the air-sifting properties of the beard which now transmits the animate poison to the system it was given to protect.

English Trade-Unionism

By Sydney Brooks

LONDON, *January 5, 1903.*

Is there to be an end of trade-unionism in England? The question is not quite so chimerical as it sounds. Recent events have made it exceedingly apposite. Put in this abrupt form, most people, no doubt, would answer it with a decided negative; though there are not a few leading economists who confess themselves unable to frame any definite reply. The fact is, a succession of legal decisions, the latest of which was delivered only three days ago, has so completely turned upside down the position of trade unions in this country that no one can say with any confidence by what means or in what shape they will emerge, if they do emerge, from their present perplexities. What, at any rate, is evident amid all the confusion of the moment, is that a crisis has arisen in trade unions as severe as it is startling; that privileges and powers which for thirty years have been assumed to be theirs without dispute have now been suddenly taken from them; and that they face a future loaded with unaccustomed restrictions and disabilities, possibly with ruin. English capitalists and employers, in consequence, are for once in their lives in high feather, and chuckling openly. Trade-unionists are proportionately dismayed and cast down, while public opinion is so interested in the situation, that even "the Venezuelan mess" has to take second place. I happen to know that in Italy, where labor organizations are soon to be made a subject of legislation, developments are being watched with the closest interest. Indeed, no country that counts the problems of industrialism among its troubles can afford to be indifferent to what is now taking place in England. The reflex action of the situation here must ultimately be world-wide, affecting Moscow equally with Chicago, and leaving its mark on every form of organized labor.

Trade-unionism in England has gone farther and developed more power than in America or anywhere else. There are at this moment some 1300 unions of workmen with a membership of about 2,000,000. In the United States, with double the population, there is less than half that number of unionists. Nor do numbers make up the only difference. In England the system of collective bargaining, especially in the coal and cotton trades, is carried much farther and on more methodical lines than in America.

Whether that fact points to a greater superiority in the mechanism of English over American industrialism, is a much-argued question. It points, at any rate, to a greater power in English trade unions. That power is further shown in the amount of control trade unions here have contrived to gain over the management of business. It is a control that stretches beyond such questions as hours and wages, and embraces the fundamental points of methods, internal discipline, the maximum output, the number of apprentices, the use of unskilled labor on work hitherto done by skilled labor, the introduction of a new machine, the employment of men not recognized by the unions, and so on. Broadly speaking, these demands have been resisted by American and yielded to by English employers. Americans have stood firm on the vital matter of "control" in a way that Englishmen are never tired of praising. Most employers here let the point go by default against them through lack either of prevision or of courage to force a decisive issue at the outset. The consequence is that the industrial machine in England is geared to a much lower efficiency than in America; the slowest workmen sets the pace; "going easy" is the rule of labor; and work is distributed over the largest possible number of men. Of course it is absurd to ascribe, as many employers do, all the decline in British commerce to "the tyranny of trade-unionism." The employers themselves have much to answer for with their fatal complacency and conservatism, their lordly, unaccommodating ways of doing business, their myopia that will never unreservedly admit that British methods are not the best, and their short-sightedness in not risking a dollar to-day to earn five next week. In speculative pluck and energy they are to the American what the Italian is to the Englishman. But granting all this, it is still the fact that trade-unionism has done more in England than in any other country to limit production, curb initiative, and control output by the uniform, deadening rule of averages. There is something in the atmosphere of England that allows trade unions to thrive as they thrive nowhere else. Englishmen are nothing like such instinctively keen defenders of property and capital as are Americans. They are naturally less conservative, less quick to resent any attack on law and authority. I have often heard Englishmen say, "Ah, there's no Tory nowadays like your American." The way in which public opinion in the United States threw its moral weight against the steel strike and on the side of the "trust" made an immense impression over here. In England a strike, merely because it is a strike, commands an amount of sympathetic support that is difficult to exaggerate. Class spirit, no doubt, has a good deal to do with it; sentiment has more; the pervading sense of the smallness of an Englishman's "chance in life" has more still. The fact, anyhow, is palpable, and its result may be seen not only in the extreme tenderness with which the government treats strikers, but in the subscriptions and gifts of food and clothing contributed by the public to the union resources. Measures that are taken as a matter of course in America for the protection of "scabs" and non-unionist laborers would never be tolerated here. Injunctions are difficult to obtain and harder to enforce; violence is readily condoned and excused; and a government would do almost anything sooner than call out the military to keep strikers within bounds.

English employers, therefore, when they inveigh against trade unions, are complaining of something far more formidable and pervasive than Americans as yet have had any experience of. Their relief is consequently all the greater when they unexpectedly find, as they do now, the powers of these organizations decisively checked. Thirty years ago trade unions were illegal in England. They were "a combination in restraint of trade," and as such under the vigorous ban of the law. They could not even defend themselves against plunder by a dishonest member. As late as 1870 a secretary who was proved to have embezzled the funds of the trade union that employed him, escaped scot-free on the ground that the union was itself established for illegal purposes, and was not, therefore, entitled to the protection of the law. Public opinion condemned trade unions root and branch; the law, which had been but slightly changed since Queen Elizabeth's day, pressed upon them with feudal severity; and workmen on strike were inevitably driven to maintain their position by murder, arson, and every kind of outrage. In the late sixties there was a veritable reign of terror throughout the northern manufacturing districts. A royal commission went thoroughly into the whole subject, with the result that by 1876 masters and workmen were placed on an absolute equality in the matter of contract, and trade unions were fully legalized. These remedial measures together made up the magna charta of trade-unionism, and in a country so lawyer-ridden and so litigious as England one would have thought the scope even of their least important clause had by now been completely ascertained. Yet the House of Lords, sitting as final court of appeal, whose decrees can only be set aside by fresh legislation, delivered only last year a judgment that flatly contradicted all that the Acts of the seventies had been understood to mean. It is on those Acts that the trade unions have built up their overwhelming influence, only to learn from the highest tribunal in the land that the foundation is of sand. Small wonder that employers are set a-capering.

Let me try and explain how it has come about. The sole point which the law lords had to determine was this: Was there anything in the Acts of 1871 to 1876 that made a trade union, as such, incapable of suing and of being sued? I have talked with some of the men who framed those Acts and passed them through Parliament, and I find them unanimous in asserting that the intention of the legislature was to withhold from trade unions the power to sue and be sued. This for thirty years is how the law has been tacitly understood. It has been everywhere assumed that trade unions were purely voluntary associations, with no more legal personality than a football or West End club. After the Lords' decision that assumption can no longer be held. Their judgment amounted in effect to a statement that a trade union registered under the Acts is a legal entity, capable of being sued for the wrongful acts of its officers if committed within the scope of their authority. That is to say, trade unions are henceforward pecuniarily liable for the illegal actions of their executive officers. The immense range of this decision can best be seen by glancing at the case that called it forth. In the summer of 1900 there was a strike on the Taff Vale Railroad. The Amalgamated Society of Railway Servants, perhaps the wealthiest trade union in England, came forward to direct and control it. The railway depot, the works, and other places were picketed; "scabs" and non-unionists were set upon; and there was the usual amount of violence. The company at once applied for an injunction not only against the officials of the society who were superintending the strike, but against the union itself. Damages were claimed to the amount of $120,000. The society asked to have its name struck out of the case on the ground that it was "neither a corporation nor an individual," and could not be sued in a quasi-corporate or any other capacity. This was the point which, after two mutually contradictory decisions in the lower courts, was finally taken on appeal to the House of Lords. The Lords decided that the society enjoyed no immunity from being sued, and its name was accordingly restored in the case. Feeling now sure of its ground, the railroad company at once went on with its action for damages. The case came up before Mr. Justice Wills and a special jury nearly three weeks ago. It lasted twelve days and ended in a verdict on all counts for the plaintiffs, and against the Amalgamated Society of Railway Servants, its general secretary and its organizing secretary in the South Wales district. The amount of the damages to be awarded has not yet been settled, nor is it yet decided whether, in ordering the strike and directing it, the officers of the society went beyond their authority. The vital fact is that a trade union is now held responsible for the deeds of its officers. That is a decision which revolutionizes the status of English trade unions.

The Book of Months

By E. F. Benson

MARCH

I WONDER if any of those who perchance read this know of any formula, Christian, pagan, even Christian Scientist, which ensures, or has any chance of ensuring, decent habit of body or mind during an attack of lumbago? I have been trying my best in all three—that is to say, as a Christian I have tried to be cheerful, to wear a helpful sort of smile, and have said to myself, "Think of the early Christian martyrs, the boiling oil, and the lions, and those horrors." But myself has said to me: "That was for a good cause; besides, they soon died. Now lumbago does not kill anybody, and, as far as I am aware, it is an invention of the devil." Thus Christianity failed to help me.

Then I tried paganism. In other words, I swore. It did not do the slightest good.

Then I tried Christian Science. I said: "There is no such thing as pain—ow!—moral mind refuses to recognize the existence of mortal mind. There is nothing material: all material is mortal mind, and there isn't any. Therefore I have no back, and, consequently, no small of it. It is all a false claim. Thus as there isn't any, it is perfectly ridiculous to think I have a shooting pain there, for there is no such thing as either (1) the small of my back, or (2) pain, either there or anywhere else. I will therefore smile, and get up with a brisk movement." I did. Oh, Mrs. Eddy! The false claim was more than usually claimant.

In fact, for two days I have felt myself such a martyr that I am now, happily, beginning to feel that I cannot possibly be a martyr at all. Nobody can conceivably have suffered such agonies as I have been thinking I suffered and survived. All the same. . .

I was riding down Davies Street on my bicycle two mornings ago, in the very best of health and spirits. Where Grosvenor Street crosses it, a fool of a cabman (though I had rung my bell) drove slowly across my path, and I had to dismount. I exchanged a pleasantry or two with him of a bitingly high-spirited nature, and essayed to get on again. At that moment, so it seemed, I was stabbed in the back, and I heard the cabman say, "Comin' over me like that, and drunk at this hour of the mornin'." Continuing, you will have seen our previous conversation. Bad, untrue, unkind as it was, it was the last word, and so is entitled to a certain respect. But next time I see No. 24,304 I will see if I cannot give him lumbago. (This, evidently, is the pagan mood returning.)

Since that moment the joy of life has vanished. It—I cannot write the word again, and I will only remark that it sounds like a second-rate Spanish watering-place—has known my down-sittings and mind-uprisings, and has smirched my days. I have eaten no meat, I have drunk no wine, I have been incapable of taking part in all social and pleasant affairs. I was told that exercise was good, and I want to skate at Niagara, and retired after one stroke with a cold-dewed brow. I was told a Turkish bath was good, and caught a cold in the head on the top of it. I was told not to think about it—this was the Christian Science treatment, more or less—and the effect was that the Spanish watering-place thought the more of me. Only two hours ago, dressing for dinner—I dined alone in my horrid room—I dropped a sovereign on the floor, seriously considered whether it was worth picking up, and decided it was not. At that moment any tramp could have had it. Then by pure chance my servant came in, and I regained it. I was told to take Lithia varalettes? the only effect, as far as I am aware, is that I am lowered for life. I even went so far as to see a doctor, who asked me whether I had done anything which might have produced a chill. Thank goodness, I had the face to say "No." In consequence he talked of the functions of certain internal organs; into these regions I did not attempt to follow him.

Now all that I have written with regard to the second-rate watering-place is literally true. All the things which I am conscious of enjoying every day, such as reading, good meat, silly conversation, proper wine, violent physical exercise, cold baths, grew pale or impossible. But looking back even from the middle of it all—for to-night it is, if anything, a little more acute, I begin to see that nothing, on the whole, matters less than physical pain. Once before in my life, when I was eight years old, I had bad earache, so my family assure me. Of that I can remember nothing whatever, except that in consequence I went to stay near Dartmouth for change of air. But of Dartmouth I remember much. There was an aloe in the garden, and one of its great fibrous leaves projected across the path, and was cut off. This had to be done by a strong gardener with a saw. A leaf cut by a saw! There were also rock pools in the estuary, with strawberry anemones—so we called them—waving in the water; steamers passed, visible with a telescope, that would go straight on, self-contained, unhelped, till they reached America. *Rutamuraria*, a small mean fern (I cannot even remember hearing its name except then), grew in crevices on the garden wall, and it was rare; it began and ended my collection of ferns. That is what remains to me of the earache. Once again I had a tooth out. That was half a crown.

And now I have lumbago, and from analogy I see that a fortnight hence, and a week hence (I hope), and a year hence, I shall remember nothing of it, except that for a few days I stopped in-doors mostly, wrote notes of regret, and read a variety of delightful books. *Jekyll and Hyde* I have read; I have quaked with Hyde and shuddered with Jekyll; I have been down the "Sambre canalized"; I have been sucked under the fallen tree on the Oise; I have understood why Mr. Crummles deluded himself into thinking the Phenomenon was a phenomenon; I have admired the moral valor of Mrs. Nickelby when she convinced herself about the previous sanity of the gentleman in small-clothes and gray stockings; I have killed the Red Dhole from the Deccan, and have sat (a remarkable feat) with Princess Napraxint in a temperature of over 130 degrees Fahrenheit. But for the lumbago, I should probably have done none of these delightful things. Also I have learned (I shall have to learn it again and again) that the moment is always tolerable. Even this tiny pinprick of a pain can teach one that. "Circumscribe the moment," as Marcus Aurelius said. You can get along all right for the moment: why think of the moments to come? When they come, deal with them. And I hope that if I die of cancerous-cerebro-spinal-sciatica, I may think of that.

Besides—I must justify my conscience with respect to the doctor—I do not think it proved that my night adventure had anything to do with the lumbago. Thus it would have been unfair to cast it, like bread on the waters, to a suspicious physician. And even if it had, it was well worth it. I would do it again to-morrow night, if the mood only could come again.

I wonder how the writing and the subsequent publication of any book, the meanest, affect the average author? No doubt the great powers in authorship, so to speak, care as little when another volume is launched as does the empire at large when another battle-ship leaves the slip to join its mighty brothers. But for the majority, those of us, in fact, who hope some day (however vainglorious the hope, we all cling to it) to produce a book which may rouse laughter or tears or interest twenty years hence, I imagine that there is scarcely any excitement, depression, exaltation, or misgiving that we have ever felt, which is comparable to those attendant on the writing and launching of our little paper fleets. And as I have just launched another little paper boat to go and look after its drowned brothers, and the memory of all the emotions attendant on it is consequently keen, it may be of interest, in however small a degree, to others to read what even so uneminent an author as myself experiences in these times.

Birds, perhaps, give one the only simile possible for the first period. For the idea of the book—its scope, its aim, its plot, and to a certain degree its characters—exists, in my case, before I put a word down on paper. When these features are complete, we may say that the *egg* is there. The writing it, to my mind, is equivalent to the hatching only, but the definite production of the egg, of that which contains potential vitality, is over—complete—at the moment the writing begins. If there is no potential vitality there then there never will be. When I begin to write, I am sitting on my egg. Now this first period—here we dismiss the simile of the egg, and take that of disease—lasts for a very ill-defined period. During it the patient is continually conscious of an abnormality of condition. His spirits are very variable: sometimes for days together the appetite will be good (mine always is), and the only symptoms of the malady is a slightly increased vividness. Speech is coherent, but rather more fluent than usual; he tends to talk nonsense (this must not be confused with the subsequent wandering). Then, without apparent cause, stages of depression, irritability, and general peevishness ensue; he will decry his favorite pursuits, and particularly authorship, and express audibly a desire for a large and settled income in consols. Shortly before the crisis approaches—(*i.e.*, the first dip of the pen in the ink)—a period of feverish excitement ensues; he will put sudden problems to his nurses as to how A would act given B, C, and D did so and so, and whatever the answers given him he will certainly take exception to them. This is the period of wandering alluded to above. Both the period of excitement previous to this and the period of depression are marked by a certain listlessness with regard to other pursuits; the patient takes nothing except his malady quite seriously; and though he performs the ordinary routine of life with correctness, he performs it somehow subaqueously. Indeed, he is never quite himself from the time the seeds of the malady first attack him. All these symptoms are temporarily ameliorated when, to go back to our first simile, the egg is laid. For a time the nurses are encouraged to hope that the worst is over. Large quantities of what is known as "sermon-paper" should be given without stint, and special care taken that there should be in every room where the patient can possibly desire to sit plenty of black ink and suitable pens. For a day or two he may refuse to go out altogether, or play any game, and here it is a mistake on the part of the nurses to urge him to do so. He may, in fact, be entirely left to himself. Probably these favorable symptoms will last for a week or two (during which the supply of sermon-paper should be renewed), and then a change for the worse comes over the patient. The irritability returns, and with

it an attack, more or less severe, of complete idleness and indescribable misgivings. He again expresses a wish for a settled income in consols, and often goes suddenly to stay with his friends, or, if the attack is not so acute, merely lunches and dines out every day, and seems to fear being left alone. Then the malady becomes spasmodic, the periods of inaction alternate with periods of feverish industry, to which succeeds an attack of apparent coma with regard to everything except the disease itself, which is now confluent, and completely encompasses him. A series of absolutely happy days ensue, accompanied by great mental activity, and enormous consumption of sermon-paper. As soon as this definitely sets in the nurses may make themselves quite happy for the time being. All fears of suicide may be considered over, and there is no allusion to consols. And then the egg is hatched in a blaze of hypertrophied glory.

It is hatched—that is to say, the manuscript—such as it is—is complete, and, personally, he is completely happy for about a week. Then ensues a very tedious period, which is at times brightened by finding that something is better than one thought, but oftener darkened by finding that something is worse than one thought. In other words, after a week of idleness I sit laboriously down and copy out the whole thing from beginning to end. Other patients at this point, I believe, use a typewriter, but, personally, on the one occasion when I did so I found that the corrections were not compassable even in triple-spaced type. So, now, when the first manuscript is complete I begin all over again, and write the whole story out again. Chapters are often excised and chapters (more rarely) inserted, since in my first manuscript I find that I much more commonly say too much than too little. (Here is an opening for critics to point out how extraordinarily superfluous the first manuscript must have been.) This period is the tiresome part of the hatching of the egg. The writing of the first manuscript, astounding though it may appear, was attended by a certain excitement; whereas the writing of the second is due to the desire, shall we call it, to catch oneself tripping, to detect, by the painful process of copying, one perhaps of the hundred absurdities that one has committed. Yet there is a certain delight even in this, for since one would not set pen to paper at all unless one thought that one had an idea of some kind, it is mildly pleasant, even now when the first excitement is over, to see in cold blood what the idea was, to emphasize what appears to be its decent points, to suppress its bad ones. After that the second manuscript goes to the typewriter, and peace again reigns.

Now, during the first writing of the manuscript, a curious thing has more than once happened to me—that is to say, a character, or a situation, or even the story itself, takes the bit between its teeth, and, as far as I know, bolts. One had meant to do and say something different, but whether it is that even in the meanest-imagined characters one, so to speak, raises the devil, and cannot be held responsible for his subsequent actions, or whatever the cause, this phenomenon occurs. In the terms of our first simile, this is the cuckoo's egg in the hedge-sparrow's nest. One sits on the thing—writes it, that is—but it is not going to be a hedge-sparrow at all, but something quite different. This has happened to me more than once in —— and —— (my egotism does not go quite so far as to write the names of these obscure tales). I had definitely meant to give a different outcome. I had meant a character to be different in character, and thus to play another part. But writing, I found it was not so. That character would go another way. And did. I followed faint, but pursuing.

To resume: the manuscript comes back from the typewriter's, and the sickening part of the work begins. In print somehow the degrading stuff looks even more degraded, for print, as Hazlitt said, in more senses than one, had he known it, "print settles it." What one suspected was rather sketchy and amateur becomes indubitably so. What one thought was somewhat workmanlike appears merely slipshod carpentering, unplaned, out of line, with screws and nails not driven home. One taps here, one whacks there, one planes down, and finds one has planed too much; one planes down, and finds one has to plane more. One thinks,—and this is perhaps the worst of all,—that A rather resembles one's dear friend John Smith, and ruthlessly takes all the stuff out of him, leaving an enfeebled marionette. Then, like a pinprick to a man on fire, come the inevitable typewritten errors, necessitating reference to the manuscript. Some typewriters omit whole sentences, because they are not certain (no wonder): others rush in where angels fear to tread, with brilliant repartees of a sort undreamed of: others spell a name wrong throughout: others, and they are worse, spell it wrong occasionally. When I have time I will write an article on typewriters. They will not, after that, hold their heads so high.

Then comes the last step. When the typoscript (an awful word) has been corrected, and, if necessary, another made, and also corrected, the whole thing goes to the publisher, and in the course of time come proofs. Proofs are of two kinds, galley proofs and page proofs. Galley proofs are interminable strips of paper which slide off one's desk, and get mixed, and are altogether impossible. Page proofs, though depressing, are manageable, because they come in folded sheets of sixteen pages. Then once again are all weak points glaringly emphasized, the indescribable misgivings return with redoubled vigor, and invariably I long to live the last year, or whatever it may be, over again, in order to have profited by my previous experience and do better. Usually at this stage, perhaps because I am used to it, the "idea" does not seem to me so bad. It is only everything else that is wrong. Yet even then come sanguine moments. Quite suddenly I find myself thinking it is extremely good. How delicate, for instance, is the way in which ——, how uncompromising is ——. Back swings the pendulum; over go these unstable ninepins.

There is probably a revise—there may be two—and the bread is cast upon the waters. As the date for publication approaches I feel ill. If I could, I would recall it all. One has felt a certain situation, or a certain character keenly: was it not enough to have felt it without throwing it, like the early Christians, to the public? They will tear it into shreds, and probably refuse to swallow it.

But just then, when, in my experience, the darkest hour is on one, when one distrusts utterably all one has done, when one is afraid that that which is to oneself a chiefest joy of life is to every one else just a mud pie made by a child in a populous roadway, to be carefully stepped round by three-quarters of the passers-by, to be stepped into by the remaining quarter, who, with a careless cuff to the maker of it, will pass on, remembering it only as they would remember some tiny untowardness in the menu at dinner, then comes quite suddenly the remembrance of an exceeding unexpected joy. A man or a woman, otherwise quite unknown to one, has, on the last occasion of this kind, thought it worth while to send a line, it may be a post-card only, to say "thank you." Once this "thank you" arrived to me from New Zealand, and was accompanied by two frozen sheep bred on the reader's farm. The letter said, "Please do not answer this, as you will think I am wanting an autograph." Or, again, it may be just a press-cutting from a provincial paper, that shows me that some one whom I have never seen, and probably will never see, has understood something of what made me so happy when I thought of it. And that, unreasonably perhaps, more than counterbalances the vituperation or the scorn of those who either do not or will not see. For a friend concerns me very much, and an enemy, or if that is too big a word, an acquaintance to whom I am antipathetic, concerns me not at all. He is a negative quantity, and in this life of ours the negative quantities do not matter, for the man who has one friend is infinitely better off than the man who has no enemies and a million acquaintances.

Acquaintances! Those are the bane and the absurdity of life, and especially of ordinary London life. How often has one heard it said, and, indeed, said oneself: "Such a bore! I've got to go and call on So-and-so." Now if one finds it a burden to go and talk to anybody, for social reasons, it shows a very unbecoming conceit if one imagines that one's hostess will fail to find it a bore too. The custom, for instance, of calling after one has dined at a house is a very sensible and pleasant one, but it presumes that you have been dining with a friend. In this case the call will not bore you. But if the call bores you, it is probable that the dinner bored you too, in which case, unless you dined there for the sake of being fed gratis, why did you dine there at all? Again, a step further, how often have you exclaimed: "What a bore! I've got to dine with —— to-night!" And if you say that, you have no business to eat ——'s cutlet.

Of course there is another side to the question,—for questions with only one side to them cease to be questions at all,—and that is, that at any such house you may meet a friend, or you may meet some one who will eventually become a friend. Then, I grant, it were worth while trudging there a hundred miles on foot, for, from pole to pole, if you search the earth, you will find nothing better than a friend. How many have you? I have nine, and consider myself most fortunate. Or, again, you may find the very fact of meeting a certain number of people, though they are the barest acquaintances, stimulating, just as there are certain plants which thrive better with others of their species than alone. That again is a good reason: only, when social etiquette demands a call of you, do not say, "What a bore!" You have received a benefit; pay the current coin for it, and don't grumble.

Now this herding together of human beings with wealth and leisure into London for several months every year, there to meet their friends, of course, but also a whole host of people who will never and can never be more than acquaintances, is a very curious phenomenon. London—in this sense of the word—was born not so many decades ago, and since then has grown and is growing in a manner perfectly amazing. There was a time, say, eighty years ago, when London in this sense practically did not exist; the "season" was enjoyed by those who now go to London, in a dozen country towns, to which the wealth and fashion of the country flocked, and there made gay on their native pavements. And by all accounts they *did* make gay. Then by degrees this remarkable monster of London began growing. People of leisure—or so I take it—began to weary of that priceless benefit, and, in a couple of generations, have turned themselves into perfect galley-slaves.

To be Continued.

Books and Bookmen

WHETHER or not it be universally true that the Oriental mind matures early and blossoms into rare and beautiful exotic flower while the children of the West are still at play, it is a matter of fact that Onoto Watanna had begun to write her exquisitely perfumed stories and sketches of Japan almost before she had entered her 'teens. She is now in her twenty-third year, yet she has been writing since she was fourteen. Her first book, which, for artistic reasons, she is now ashamed to recall, was published in Chicago when she was only nineteen. Previous to that she had written a number of Japanese stories and articles, some of which the present writer was fortunate among Eastern readers to peruse, for they were confined to the magazines and periodicals of the West. Miss Watanna, it ought to be noted in justice to her, was the first to introduce the delicious broken English dialect which invests the speech of her characters with a *naïf* humor, and which Mr. John Luther Long adopted or hit upon later in his stories of Japanese life. Many of these early stories by Miss Watanna are of the most fragile and delicate *genre* quality—as perfect and original as anything from her more recent pen—but they lie buried for the most part in oblivious journalism.

It was with the appearance of *A Japanese Nightingale* in the winter of 1901 that Miss Watanna aroused general interest and took readers captive throughout the country. The publishers recognized the original quality and inviting grace of her work, and took pains to give it a wide publicity. The book won its way by sheer virtue of the inimitable art of its charm and humor. Here was one who not only reproduced the familiar figures of vase and fan of Oriental fancy, but who put soul into them, and gave us the revelation of the mute anguish and playful humor, and all the gamut of emotions lying between the reaches of tragedy and comedy in the Japanese nature. As Onoto Watanna has revealed the sisters of her race (for it is her feminine creations that attract us most), no words could better epitomize them than Thomas Hardy's, "A child in pleasure: a woman in pain." And, be it noted, Miss Watanna's power to make us feel the reality of her country and her people, as no one has ever done, resides in the fact that she is half-Japanese and half-English. "She can write of Japanese home life," as one has said, "from the inside, and at the same time in terms easily comprehended by minds Occidental. That is a unique gift. . . . Wistaria at her casement in the dew of morning—she lives and breathes." Her English, too, is clear and lucid; frequently aglow with unexpected touches of Oriental splendor and imagery.

A Japanese Nightingale, it has been announced for some time, will be seen on the stage this spring in London and New York. If Mr. Belasco's gorgeous production of "The Darling of the Gods" is but a "Japanized Du Barry-La Tosca-Faust melodrama," grossly misrepresenting Japanese life and history, as a Japanese critic has stated, then we may hope for a dramatic representation nearer the truth when Onoto Watanna guides the stage direction of her story. Meantime her novel, *The Wooing of Wistaria*, already widely known, is enjoying the benefit of the reflected popularity of "The Darling of the Gods." Certain coincidences in the play and the book have incited the author to scent plagiarism in the Belasco drama, and *The Wooing of Wistaria* is in the singular position of being unwittingly advertised by a popular play that is not a dramatization, but which, it is claimed by the author, suggests it in certain scenes. These scenes pertain to the tender, passionate love-story which has led discerning critics, not given to extravagance, to single out the Shining Prince and Wistaria as the Japanese Romeo and Juliet. Certainly, if theatre-goers are enamored of Japanese romance in the tragic loves of Yo san and her prince, they will find unalloyed pleasure in the wooing of Wistaria—wooed and won and lost to be won again at last.

Among our illustrations last week there was a reproduction of the famous artist Lenbach's picture of "Eleonora Duse and Lenbach's child." The pose is eloquent of that maternal brooding which impregnates the subtle feminine quality of Signora Duse's impersonations. Nature, in a scientific, as well as a poetic sense, is potential motherhood, and, as Mrs. Meynell has observed, "the Italian woman is very near to Nature." In one of her prose gems, Alice Meynell flashes more insight into the nature and temperament of Eleonora Duse than will be found in all the columns of criticism that have been elicited by the presence of the celebrated actress on our American stage during her visit which is now being brought to a close at the Metropolitan Opera House in this city. What we dimly descry and dumbly feel, Mrs. Meynell perceives clearly, and gives cogent voice to it. For this reason we trust that not a few of our readers will be grateful for the following selected passages from this rare little volume:

> The Italian woman is very near to Nature; so is true drama. . . . Italians are expressive. They are so possessed by the one thing at a time as never to be habitual in any lifeless sense. They have no habits to overcome by something arbitrary and intentional. Accordingly, you will find in the open-air theatre of many an Italian province, away from the high roads, an art of drama that our capital (London) cannot show, so high is it, so fine, so simple, so complete, so direct, so momentary and impassioned, so full of singleness and of multitudinous impulses of passion.
>
> Signora Duse is not different in kind from these unrenowned. What they are, she is in a greater degree. She goes yet further, and yet closer. She has an exceptionally large and liberal intelligence. If lesser actors give themselves entirely to their part, and to the large moment of the part, she, giving herself, has more to give.
>
> Add to this nature of hers that she stages herself and her acting with singular knowledge and ease, and has her technique so thoroughly as to be able to forget it—for this is the one only thing that is the better for habit, and ought to be habitual. . . . Nowhere at all does the habit of acting exist with her.
>
> I have spoken of this actress's nationality and of her womanhood together. They are inseparable. Nature is the only authentic art of the stage, and the Italian woman is natural; none other so natural and so justified by her nature as Eleonora Duse; but all, as far as their nature goes, natural. Moreover, they are women freer than other Europeans from the minor vanities. Has any one yet fully understood how her liberty in this respect gives to the art of Signora Duse room and action? Her countrywomen have no anxious vanities, because, for one reason, they are generally "sculpturesque," and are very little altered by mere accidents of dress or arrangement. Such as they are, they are so once for all; whereas, the turn of a curl makes all the difference with women of less grave physique. Italians are not uneasy.
>
> Signora Duse has this immunity, but she has a far nobler deliverance from vanities, in her own peculiar distance and dignity. She lets her beautiful voice speak, unwatched and unchecked, from the very life of the moment. It runs up into the high notes of indifference, or, higher still, into those of *ennui*, as in the earlier scenes of "Divorçons," or it grows sweet as summer with joy, or cracks and breaks outright, out of all music, and out of all control. Passion breaks it so for her.
>
> As for her inarticulate sounds, which are the more intimate and the truer words of her meaning, they, too, are Italian and natural. English women, for instance, do not make them. They are sounds *à bouche fermée* at once private and irrepressible. They are not demonstrations intended for the ears of others; they are her own. Other actresses, even English, and even American, know how to make inarticulate cries, with open mouth; Signora Duse's noise is not a cry; it is her very thought audible—the thought of the woman she is playing, who does not at every moment give exact words to her thought, but does give it significant sound.
>
> If Parisians say, as they do, that she makes a bad Parisienne, it is because she can be too nearly a woman untamed. . . . It seems possible that the French sense does not well distinguish, and has no fine perception of that affinity with the peasant which remains with the great ladies of the old civilization of Italy, and has so long disappeared from those of the younger civilizations of France and England—a paradox. The peasant's gravity, directness, and carelessness—a kind of uncouthness which is neither graceless nor, in any intolerable English sense, vulgar—are to be found in the unceremonious moments of every transalpine woman, however elect her birth and select her conditions. In Italy the lady is not a creature described by negatives, as an author who is always right has defined the lady to be in England. Even in France she is not that, and between the French woman and the Italian there are the Alps. In a word, the educated Italian *mondaine* is, in the sense (also untranslatable) of singular, insular, and absolutely British usage, a Native. None the less would she be surprised to find herself accused of a lack of dignity.
>
> As to intelligence—a little intelligence is sufficiently dramatic, if it is single. A child doing one thing at a time and doing it completely, produces to the eye a better impression of mental life than one receives from—well, from a lecturer.

TO ANTHONY HOPE.

(By a Susceptible Reviewer.)

Good ANTHONY (I need not say
We always pardon your "intrusions"),
I've read your book, and wish to lay
Before you some of my conclusions.
Where other heroines are concerned
I pay my homage quite discreetly,
But charming *Peggy Ryle* has turned
My head, and captured me completely.

Of her attractions to indite
Is not the purpose of these stanzas;
Enough that, if her purse was light,
Her face and heart were both Bonanzas.
Enough to hazard the surmise—
Most cheering in this vale of trouble—
That somewhere under English skies
Peggy must have a living double.

She had her failings, I admit,
Professed a creed remote from TUPPER'S,
And oft unchaperoned would sit
At very late Bohemian suppers.
But she was innocent of guile,
She softened hearts, however stony;
She helped the lame dog o'er the stile,
And shared a windfall with a crony.

Imagine, then, my state of mind,
My curiosity unsated,
When reaching the last page I find
Peggy remains unmatched, unmated!
O tantalizing Mr. HOPE,
Your endings only are beginnings;
Give your invention further scope,
Give *Peggy Ryle* another innings!

—*Punch.*

Finance

THE new year seemed to bring buoyancy to the securities-markets; it was natural enough, since the course of stock prices reflected the very decided improvement in sentiment among insiders and outsiders alike. Wall Street concerns itself with the future rather than with history, since the "discounting" process is indissolubly associated with speculation in stocks. But there can be no question that the perusal of the various trade reviews and retrospects of the year 1902 must have caused more than one thrill of national pride, as well as of gratitude and admiration. It was truly a year of remarkable prosperity, and no suspicion of rashness need attach to the men who declare that never in the world's history did a nation enjoy greater material well-being than blessed this country during the year just ended. Statistics make dry reading, but not when they concern ourselves. Nobody ever yawned over the figures which told of his own growing bank account, and the array of numbers all telling of the increasing wealth of our country cannot be uninteresting. However, it was an old story to Wall Street, which found even greater comfort in the opinions of the leading experts regarding the probable continuance of the prosperous movement during 1903. Almost without exception do the present indications point to undiminished well-being in the year just begun.

To be sure, prophecy is a more risky business than history, but when the odds are in favor of the forecast being accurate, it is enough for speculators. The iron and steel plants, for example, have enough orders actually booked to keep them busy during the next eight or nine months. It cannot be denied that, should there be a retrograde movement in general trade, many orders already placed would be cancelled, but it is also well to remember that the bulk of the future business now on the books of the iron and steel companies are for material imperatively needed, which will be used whether general business falls off or not. Much depends upon the crops, and there can be no estimating how much the earth will yield in 1903. But as a "betting proposition," the safest thing to do is to expect normal harvests. In the mean time such exhibits as, for example, the net earnings of the United States Steel Corporation during 1902 must appeal to all students of our industrial affairs. The iron Colossus earned net, after deducting expenditures for maintenance, etc., $132,662,617 last year! These figures are stupendous, and quite beyond the comprehension of the average man. But they are more than interesting also for another reason, namely, in connection with the profit-sharing plan announced by the management. When the annual profits are as great as they were in 1902, not less than $2,600,000, or two per cent., will be set aside. Should the annual profits reach $150,000,000, not less than two and a half per cent. will be distributed. It is small wonder that the announcement of such a policy indicating confidence in future earnings should have been followed by advancing prices for the securities of the company.

The record of the railroads also was remarkable. The gross earnings were stupendous. But toward the end of the year there was a significant decrease in the net earnings, compared with the previous year. The bears spoke of the decrease as ominous. Obviously, it was due to the increased cost of operation, resulting from the higher prices of material and from the higher wages paid. To offset this the railroads propose to advance rates. There appear to be some misgivings in Wall Street as to the feasibility of such advances, but there is none on the part of the railway managers, who point out, first, that railroad rates have not kept up with the advances in other products of our industries, and, secondly, that it is not proposed to advance rates to such figures as will either check the movement of traffic or tempt rivals to "cut." To be sure, there are certain railway shares which are high enough—good dividend-paying stocks of a recognized investment character. These are selling for all they are worth; but that others have decided speculative possibilities is also true. It is probable in these latter that we shall see the greatest activity, despite the shaking of heads of people who would measure all goods with the same yardstick. For example, there are the Rock Island securities. A few months ago the Street classed the moving spirits of the road among the "Western plungers,"—men who, drunken with success in industrial promotions, saw in the Stock Exchange a second Monte Carlo. To-day, quite a different opinion is held of the character and abilities of Messrs. Reid, Leeds, & Moore, who have developed the Rock Island system from a straggling line of 3800 miles into a well-rounded system of 8000 miles, of a strategic importance and possibilities of further development second to none. In the railway history of this country there are few chapters more interesting than that of the Rock Island in 1902, and the faith of the financial community in the road merely means faith of very shrewd judges of men in the very remarkable abilities of Messrs. Reid, Leeds, & Moore. There are other stocks having "possibilities," and these the speculative community will probably discover.

There has been much criticism of the very rapid and substantial rise of prices during the past fortnight, but it is well to remember that the first recovery after the early December slump represented the readjustment of actual values, since prices had gone lower than was really warranted. After, came the speculative rally, as it were, resulting from the improved monetary condition. Money is returning to this centre, and easier rates have followed. That, in spite of the lower cash rate here, sterling should have fallen is due to the increasing exports of corn and cotton.

Harper's Weekly

FOR NEXT WEEK

A SPECIAL FEATURE WILL BE AN 8-PAGE SUPPLEMENT IN COLORS OF THE "CASCADE CITY"

The WORLD'S FAIR at ST. LOUIS, 1904

This is the First Complete Forecast of what the Fair will be from an Architectural and Pictorial Standpoint

There will be Articles and Pictures

On POLITICS
The Opening of the State Legislatures

On TRAVEL and DISCOVERY
The Culture of Unknown Peoples

On ART
The Artists' Festival

On FOREIGN AFFAIRS
The Education Question in England

On INDUSTRY
A Forward Step in American Ship Building

On ARCHITECTURE, On FINANCE,
On all the LIVE, PROGRESSIVE QUESTIONS of the DAY

48 Pages including 16 Pages of Editorial Comment on Current Affairs, and 8-Page World's Fair Supplement in Colors.

HARPER & BROTHERS, NEW YORK

THE REIGN OF QUEEN ANNE

By JUSTIN McCARTHY, M.P.

This new work deals with a period just preceding that covered by Mr. McCarthy's history of "The Reigns of the Four Georges and William IV.," published last year, which, in turn, brings the history of England down to the opening of the author's "History of Our Own Times." Each of these works is complete in itself, yet taken together they form a most valuable narrative from the death of James II. to Queen Victoria's Jubilee in 1897.

8vo, edges uncut, gilt top, boxed, $4.00 net (postage extra)

THE FUTURE OFFICES OF OUR CONGRESSMEN

For years, owing to lack of space, only committees have had rooms in the Capitol at Washington. The fact that the Congressmen have not had private offices near the Capitol building has been a serious detriment. It is now proposed to build a large building having underground connections with the Capitol, where each Congressman may have his own private office

The New York and New Jersey Tunnel

See page 91

WITHIN fifteen miles of New York's City Hall, on the Jersey side of the North River, there are to-day nearly 800,000 people—a population half again that of St. Louis, fourth largest city in the United States. And the bread-earning portion of this vast total, or the major part of it, moves back and forth across Hendrik Hudson's big stream twice a business day.

The average New-Yorker who lives on the eastern side of the stream does not appreciate the fact at all, and berates crowded elevated and jammed surface cars with impartiality and cordial enthusiasm, unmindful of other troubles. But the tired, package-laden men and women who throng the ferryboats, which illuminate the busy river with their hundred thousand lights each evening, have a hale idea of it, nor is their feeling lessened when ice or fog or blocked ferry-slips hold back the big, ably managed vessels, with resultant late dinners, missed engagements, and short evenings.

The North River ferry service is to-day the finest in the world—yet, wholly inadequate. Although the boats are as large as practicable, and, in general, are powerful, splendidly built craft, they do not suffice.

(Continued on page 113.)

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

MANY BEVERAGES are so vastly improved by the added richness imparted by the use of BORDEN'S EAGLE BRAND CONDENSED MILK. The Eagle Brand is prepared from the milk of herds of well fed, housed, groomed cows of native breeds. Every can is tested, and is therefore reliable.—[*Adv.*]

TELEPHONE Service at your house will save many small annoyances. Rates in Manhattan from $48 a year. N. Y. Telephone Co., 15 Dey St., 111 W. 38th St.—[*Adv.*]

LIGHTER hearts and stronger bodies follow the use of ABBOTT'S, the Original Angostura Bitters. At grocers.—[*Adv.*]

IF you are going hunting, you should provide yourself with COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

FOR coughs and colds PISO'S CURE is still the best and most pleasant remedy. 25 cents.—[*Adv.*]

ADVERTISEMENTS.

By

WILLIAM BLAIKIE

Mr. Blaikie has treated his theme in a practical, common-sense way that appeals at once to the judgment and the understanding. A complete and healthful system of exercise is given. Instructions are set down for the development of every individual class of muscles, and there is sound advice for daily exercise. Careful attention is given to the needs of the young, the middle-aged, and the old, both male and female.

Spain's Greatest Statesman

WE can best understand the part played in the history of his country by the late Don Praxedes Mateo Sagasta if we compare him with the great Englishman who was his contemporary, William Ewart Gladstone. In both the principles of extreme democracy were blended with a love of the forms and ceremonies of royalty; and each waged against the extreme radical and revolutionary forces a fight quite as bitter as that which they carried on against the ultra-conservatives and reactionaries. Like Mr. Gladstone, there was something in Sagasta of the doctrinaire and the student, and while the English statesman would have made an admirable archbishop or even cardinal had the Destinies so decreed, Señor Sagasta might, under more peaceful conditions, have mellowed into a genial old college professor, beloved and admired, the prototype of the head of one of our great colleges. Yet, while both were essentially characters of order and tradition, Gladstone and Sagasta alike were driven by fate to the work of destruction and demolition. Gladstone, the most religious of moderns, carried out the disestablishment of the English Church in Ireland; while Sagasta, in every instinct of his nature more royalist than the King, became, against every moral and emotional probability, a leader of revolutions. Again, the names of these two great men are united in history to the names of queens who ruled over England and Spain through the most eventful years of the last three generations; and while the lax life of the first Spanish queen, the ill-fated Isabella, is a total contrast to the pastoral domesticity of Victoria, Señor Sagasta had, in Christina of Austria, a queen as remarkable in virtue and wisdom as the great lady who ruled over England. Finally, to complete the parallel, both Gladstone and Sagasta were identified with periods of national disaster and withdrawal: Gladstone's peace with the Boers after Majuba Hill, and his desertion of Gordon at Khartoum, being as passionately resented by his countrymen as were the defeat of Manila Bay and the loss of Cuba by Spain. The two great ministers, leaving the cares of state, ended their lives in quiet seclusion, the world forgetting, and, so far as practical weight in the conduct of affairs went, by the world forgot. To record, even in outline, the life of Sagasta, would be to write the history of Spain throughout the nineteenth century: the country's long struggle for better government against the old, bad despotism of the Bourbons, linked with aristocratic abuses and ecclesiastical tyranny on the one hand, and the explosive forces of anarchy on the other. Let the Escorial stand for the one danger, and Barcelona, with its red propaganda, for the other. Between these two fiercely contending extremes stood Sagasta, temporizing, building, mollifying; ever holding firmly his principles of mildness and moderation, even though forced to play a part in revolutions and wars. How much the present King of Spain owes to Sagasta for his advice and energetic leadership through the trying period of the war with the United States, and to his judgment in directing the contending factions of his own country after the war, can hardly be calculated. He was in all probability the only man in Spain at that time who could have saved Alfonso's dynasty. That he did succeed in quieting the troubles that threatened to reduce Spanish rule in Spain to the rule of the mob is only one of the enormous debts owed to him by the present King. As the leader of the Liberals in the Spanish Cortes he was not only charged at the outset by the people with criticising unjustly the government of Canova and the Conservative cabinet, but was held by many as an enemy of the state. The concessions he won little by little from the Queen Regent and from the Conservatives had their climax in the events that followed Weyler's false announcement that his reforms in Cuba were successful, and that the entire western part of the island was "completely pacified." His programme for the autonomy of Cuba was one of his diplomatic failures. The refusal of the Cubans to accept the propositions of his ministry after the return of Weyler and the amnesty proclamation of Blanco will be recalled. In the few months preceding the actual declaration of the Spanish war, the Carlists and Republicans seized every opportunity to urge on the government to hostile action. Sagasta held for an amicable settlement. He made every possible effort to learn the actual desires of the government at Washington and to carry them out. But the trouble lay beyond his hand.

(Continued from page 111.)

The growth of the city and its gigantic suburban population demand something more, and as if responding to the call, a great steel shield, with cutting edges and jaws which eat through silt and sand and solid rock down under the bed of the river, is carrying on the march of progress and relief.

For a quarter-century the work has gone on, with occasional lapses, but the time is near now, not indefinite, when the New York and New Jersey Tunnel—the "trolley tunnel," as engineers call it—will be a finished link in the stupendous chain of achievement which is making New York city the world's metropolis.

It is characteristic of the city that this work, or what might be called its renaissance, has not been noticed until the last few weeks. In the rush of $350,000,000 improvements in the greater city and amid the clamor incident to the vast enterprise of the Pennsylvania Railroad, a little thing like the approaching completion of the greatest tunnel yet built was overlooked.

Mr. Cassatt was voted his franchise for the Pennsylvania Tunnel, however, and the morning afterward 4,000,000 New-Yorkers and Jerseyites awoke to the fact that still another big Christmas gift was on the way, which promised quicker aid and wellnigh as rich a blessing to them. Chicago River and Thames tunnels are small affairs besides the New Jersey enterprise which approached its accomplishment so quietly.

A wretched accident, now less possible because of progress in construction, interrupted the work some twenty-odd years ago. Funds gave out, the boring halted, and interest, once world-wide, waned. Then English capital tried it, to fail likewise.

But not many months ago the wheels started again. Far-seeing men took up the task. The long tube, which had been bored over half-way under the river, was pumped out, the immense boring shield made ready again, the machinery renewed. Presently the hydraulic jacks which force the shield forward felt pressure—5000 pounds to the square inch, a total onward thrust of 2000 tons. The silt came in through the doors in the shield-head, and workmen standing amid an air pressure of over thirty pounds to the square inch—made necessary to keep the water out and prevent the men from drowning if water should be encountered, for the rush of the tide is only a few feet above them—attacked the oozy substance, and sent it back on cars to the tunnel's mouth in Jersey City.

The work now goes on with the brain and brawn and backing which promise through cars by next year's Independence Day. The sturdy shield has advanced until it has encountered the solid rock ledge near the New York shore, only a ship's-length from the great piers of red-stacked Atlantic liners.

The shield halted when it hit the ledge, but this time the halt will be brief. The Rock of Ages does not lie on Manhattan Island. The city's progress is not now deterred by water, rock, or earth. A week or so should result in the straightening of the shield's bent cutting edges, and then the rocky ledge, which is not of serious hardness, will be attacked with dynamite, down there under the twin-screw merchantmen, and while the people on the surface of the city swelter in next summer's heat, the tunnel workers beneath the docks will, in all human probability, be joining the Jersey bore with the old, short, completed section under West Street. The remainder of the undertaking—connection with the terminals, building of the stations, and all that—is a stupid, everyday affair. The tunnel is the thing.

Passengers on the Sound boats look up at the men working on the lofty steel towers of the new East River bridge and say that bridge-builders do brave deeds. None will gainsay that, but the strong, grimy, picked fellows who are digging down there in the shield, in a pressure which would set an ordinary man's ears a-roaring like trumpets and guns, deserve also their full meed of honor. Not many men can stand it, and those who, after rigid examination, are allowed to go in through the air locks, by which the sharp change from surface pressure to that in the shield is graded, have the

(Continued on page 116.)

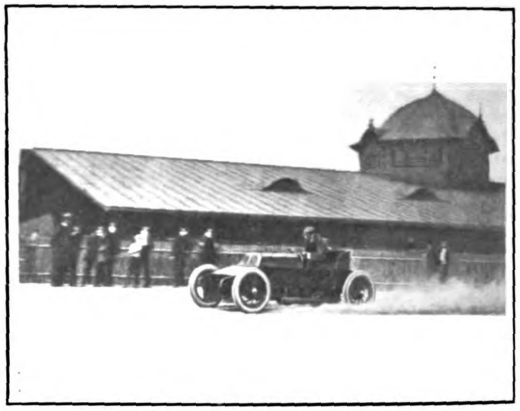
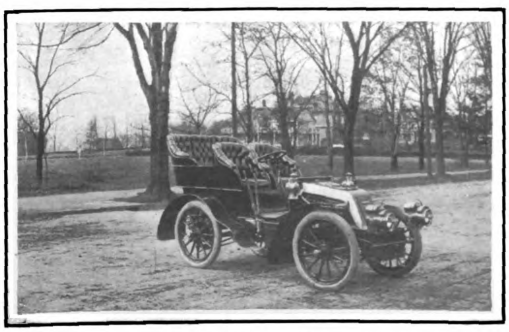
AT this writing no further progress has been made in the selection of American competitors in the Gordon-Bennett race. Alexander Winton is the only one so far chosen by the Automobile Club of America, and he is constructing a machine for the coming race. This motor will be interesting, as it will show the latest developments in American motor construction, and there is considerable curiosity as to the tires which will be used, as they are of vital importance in the race. Mr. Winton expects to sail for Europe on May 1, in order that he may have time to get used to the course. The other two competitors and their machines are to be chosen by the Automobile Club by means of some contest not yet determined. The present candidates for these positions are Percy Owen, who would use a Winton motor, H. S. Harkness, and C. W. Matheson, who is building a car in Grand Rapids, Michigan.



American motor-cars have been greatly improved during the past year: the engines have been constructed with especial attention to simplicity of operation and control and quietness in running; comfort for the occupants has been the requirement of purchasers, and this demand has been more effectively satisfied than heretofore; the foreign "tonneau" has been extensively copied, although this is being gradually superseded abroad by the more comfortable "Limousine" and similar types, which give shelter from bad weather and allow room for luggage. Perhaps in two years from now American manufacturers will begin to copy this style of body, as it is a curious fact that in this industry alone we seem content to remain well in the rear while Europe leads.

Alfred Harmsworth, the well-known English editor, has ordered a car from Panhard and Levassor which is the most radical development in motor-car construction. The car has a gasoline engine of the regular type, but, instead of being used for propulsion, the engine drives a dynamo, which in turn supplies current to a motor coupled directly to the driving axle. If the experiment succeeds, the advantages are obvious: no more gears with their complicated system of lubrication, the clutch is done away with, changes of speed are made smoothly with imperceptible variations, a brake acting through the motor is the most powerful and certain in its action, while the possibilities of luxurious fittings in the way of electric lights, heaters, etc., are almost illimitable. It is not stated whether this machine is to use storage batteries in connection with the dynamo, nor what device is to be used when a stop is to be made. In the case of the ordinary gasoline motor-car it suffices to pull out the clutch when a temporary stop is to be made, thus allowing the engine to run free. Probably it could be arranged to throw the surplus energy into a set of storage batteries by a method which would be regulated automatically, or it might be possible to use some arrangement like a clutch, by which the commutator brushes could be thrown in and out of contact at will. The appearance of this machine is to be but slightly different from that of a gasoline car; the main difference will be the heavy motors on the four wheels and the absence of chains.



The present speed laws in relation to automobiles are likely to be changed in some measure, and in such a way as to favor the sensible driving of the machines. It seems rather unjust to regulate the speed on such open roads as those near Bronx Park by the restrictions which necessarily apply to the crowded streets in lower New York city. The Automobile Club, represented by Mr. Shattuck, and, in fact, all owners of motor-cars, have no objection to limiting the speed to eight miles an hour in places of crowded traffic, but effort is being made to change the law so as to allow a speed of fifteen miles an hour in all parts of the State where houses are more than 100 feet apart. This clause will make the regulations broad enough to allow a reasonable speed in unfrequented parts of the State, and yet will plainly indicate the eight-mile-an-hour limits irrespective of the growth of the city. It is also proposed that Lafayette Boulevard, and St. Nicholas Avenue, in the Borough of Manhattan, be under the fifteen-mile limit clause. This law, however, will not apply to incorporated villages and towns which have their own regulations.

FIFTY-EIGHTH ANNUAL STATEMENT

OF THE

New-York Life Insurance Co.

JOHN A. McCALL, President

346 & 348 BROADWAY, NEW YORK CITY

JANUARY 1, 1903

ASSETS.

(Company does not invest in or loan upon stocks of any kind.)

United States, State, City, County, and other Bonds (cost value, $218,423,051), market value, December 31, 1902	$225,039,295
Bonds and Mortgages (505 first liens)	26,125,318
Deposits in Trust Companies and Banks, at interest	22,622,058
Loans to Policy-holders on their Policies as security (legal value thereof, $35,000,000)	22,093,674
Real Estate (26 pieces, including 12 office buildings, valued at $10,990,000)	12,880,000
Loans on Bonds (market value, $5,949,420)	4,104,000
Quarterly and Semi-Annual Premiums not yet due, reserve charged in Liabilities	3,147,027
Premium Notes on Policies in force (Legal Reserve to secure same, $4,300,000)	2,664,476
Premiums in transit, reserve charged in Liabilities	2,294,277
Interest and Rents accrued	1,870,775
Total Assets (per Certificate of New York Ins. Dept.)	$322,840,900

LIABILITIES.

Policy Reserve per certificate of New York Insurance Department (see below), December 31, 1902		$268,344,420
All other Liabilities: Policy Claims, Annuities, Endowments, &c., awaiting presentment for payment		4,462,361
Additional Reserve on Policies which the Company values on a 3% or a 3½% basis, over the 4% valuation by the Insurance Department		$5,397,325
Reserve to provide dividends payable to policy-holders during 1903, and in subsequent years, per policy contracts—		
To holders of 20-Year Period Policies and longer	23,877,326	
To holders of 15-Year Period Policies	8,270,742	
To holders of 10-Year Period Policies	588,663	
To holders of 5-Year Period Policies	587,401	
To holders of Annual Dividend Policies	800,947	
Reserves to provide for all other contingencies	10,511,715	
Total		50,034,119
Total Liabilities (per Certificate of New York Ins. Dept.)		$322,840,900

INCOME, 1902.

New Premiums (Annuities, $1,712,429)	$15,588,022
Renewal Premiums	49,461,923
Interest, etc. (Trust Fund, $463,831)	14,058,456
Total Income	$79,108,401

DISBURSEMENTS, 1902.

Death-Claims paid		$15,932,507
Endowments paid		4,045,102
Annuities, Dividends, Surrender Values, etc.		10,618,229
Total paid policy-holders	$30,595,838	
Commissions, Brokerages, and all other payments to Agents		8,369,787
Home Office and Branch Office Salaries and Physicians' Fees		4,829,896
Taxes, Advertising, and all other expenses		3,130,070
Total Disbursements		$46,925,591

INSURANCE ACCOUNT.

	Number.	Amount.
Paid-for Insurances in Force, December 31, 1901	599,818	$1,365,369,299
New Paid-for Insurances, 1902	155,440	302,798,229
Old Insurances Revived, etc.	1,444	2,897,000
Totals	756,702	$1,671,064,528
Total Terminated in 1902	52,135	117,436,502
Paid-for Insurances in Force, Dec. 31, 1902	704,567	$1,553,628,026
Gain in 1902	104,749	$188,258,727

CERTIFICATE OF SUPERINTENDENT

OF STATE OF NEW YORK

INSURANCE DEPARTMENT

Albany, January 3, 1903.

I, FRANCIS HENDRICKS, Superintendent of Insurance of the State of New York, do hereby certify that the NEW-YORK LIFE INSURANCE COMPANY, of the City of New York, in the State of New York, a Mutual Life Insurance Company, having no capital stock, is duly authorized to transact the business of Life Insurance in this State.

I FURTHER CERTIFY that, in accordance with the provisions of Section eighty-four of the insurance law of the State of New York, I have caused the Policy obligations of the said Company, outstanding and paid for on the 31st day of December, 1902, to be valued on the following basis: Policies known as the Company's three per cent. Policies, and all Policies issued since December 31, 1900, being valued as per the American Experience Table of Mortality with three per cent. interest, and all other Policies being valued as per the Combined Experience Table of Mortality with four per cent. interest; and I hereby certify the result to be as follows:

Net Reserve Value of Policies	$250,008,234.00	
" " " " Additions	3,332,529.00	
" " " " Annuities	15,248,311.00	
Total		$268,589,074.00
Less Net Reserve Value of Policies re-insured		244,654.00
Total Net Reserve Values		$268,344,420.00

I FURTHER CERTIFY, from the sworn Report of the Company on file in this Department, that the Admitted Assets are $322,840,900.03

Reserve Values of Policies as calculated by this Department		$268,344,420.00
General Liabilities		4,462,361.17
Additional Reserve on Policies which the Company values on a higher basis than that used by the Department, as above stated	$5,397,325.00	
Reserve to provide dividends payable to policy-holders in 1903 and in subsequent years	34,125,078.86	
Reserves to provide for all other contingencies	10,511,715.00	
Total Additional Reserves		50,034,118.86
Total		$322,840,900.03

IN WITNESS WHEREOF, I have hereunto subscribed my name and caused my official seal to be affixed at the City of Albany, the day and year first above written.

FRANCIS HENDRICKS, Superintendent of Insurance.

watchful eye of a physician constantly over them, and oftentimes the doctor is a sadly busy man. Too sudden a change from one pressure to the other brings the "bends," and great care is needed in such cases to prevent fatality.

Whether trunk lines or trollies use this long tube under the river is a matter of minor importance. More tunnels will inevitably come soon, anyway. The main interest lies in the bigness of the undertaking—a thing which always appeals to an American, the saving of time and greater convenience in getting to the towns over the river, the new development which must inevitably follow in the neighboring State, and some lively changes in values in old Greenwich and Chelsea villages. The New York and New Jersey tunnel marks a long step forward.

The New Congressional Office Building

See page 110

PERSONS at all familiar with the domestic affairs of the United States Capitol at Washington have long appreciated that the members of the House of Representatives have been forced to content themselves with sorely inadequate accommodations in the matter of rooms. At the present time every available room in the House portion of the great structure is utilized by a committee, and members who are not chairmen of committees, but who must have some place to attend to their correspondence and other Congressional duties, are forced to either rent an office or take advantage of the courtesy of the chairman of some committee who has a small amount of surplus table space at his disposal. The latter plan is, as may be imagined, far from satisfactory, owing to the fact that a public committee-room is scarcely an agreeable place to conduct private business, while the alternative of renting an office presents a serious objection aside from the expense, in that few offices are procurable in Washington within any reasonable distance of the Capitol.

How serious the situation really is may be appreciated when it is explained that out of a membership of three hundred and sixty-one in the House of Representatives only fifty-two of the legislators are, by virtue of being chairmen of committees, provided with offices, and even these rooms must be shared for committee-work, or, as has been explained, with committee colleagues. Naturally, the situation will be made proportionately more serious with the increased membership of the next Congress, due to the reapportionment based on the new census.

A project for the erection of an office building to serve as an annex to the Capitol has long been under consideration in Congressional circles, and lately the Superintendent of the Capitol Building and Grounds, acting under authorization from Congress, has had plans prepared for such a structure. This action has been taken at a juncture when the need for such an edifice has been shown to be imperative for twofold reasons. A problem long recognized as second only in importance to that of providing additional office room is found in the necessity of providing for the rapidly increasing heating, lighting, and power-plant of the great white-domed building, and now that a vast addition to the main building has been determined upon by means of the extension of the east front, it is evident that the present engine-rooms will not accommodate the additional machinery, and that an annex must be provided that will embrace an extensive power-plant as well as extensive office facilities.

The new office building will be connected with the Capitol by means of a subway, through which will be carried the electric lighting, power, steam, and hot-water systems for heating and illuminating the main building. The subway will connect with each section of the Capitol. It will be sufficiently comfortable for use as a public passageway, and will be provided with means of transportation for both material and persons. The importance of such a passageway between the two buildings will be especially apparent in bad weather, and it will

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

render it possible at all times for members occupying rooms in the new structure to reach the hall of the House almost as promptly as they do now from the present committee-rooms.

In view of the proximity of the new structure to the Capitol, it is proposed that construction shall be carried out on classic lines in complete harmony with the Capitol building. The exterior walls of the new building will be of either marble or granite, probably the former, and the interior will be constructed largely of steel and terra-cotta, together with other fire-proof materials. The court walls will be faced with enamel brick, which has been selected as conducive to cleanliness and good lighting for the interior rooms.

Four different plans have been prepared for the new office building, each being designed with reference to the limitations of a particular site,—all the proposed sites being almost equally convenient to the Capitol. That considerable latitude is allowed by these different plans, among which Congress is to make a choice, may be appreciated from the fact that, whereas two of the plans make provision for 374 and 380 rooms, respectively, the other plans contemplate the embodiment of 536 and 560 rooms, respectively. There is, of course, considerable latitude in the estimates of cost based upon the various plans, but if one or the other of the more extensive plans is decided upon, as seems probable, the expenditure necessitated will be considerably in excess of four million dollars.

Each of the rooms on the street section of the new building will be about sixteen by twenty-five feet in size, while those in the interior section will average about seventeen by eighteen feet in size. Every room will have a window opening outward, and therefore will be well lighted. Even the rooms facing the courts will suffer little in this respect, inasmuch as the courts will be large and will admit much light. Every room and corridor will be heated and ventilated by a forced supply of fresh air, at a constant temperature (during the cold months), and by the use of supplemental radiators, enabling the occupant to control the temperature above that supplied by the fresh air. Each room will be supplied with a lavatory with hot and cold water, and the rooms will be arranged with communicating doors, so that, if desired, suites may be arranged. The wood-work will be limited to the doors and sash, all the floors being of concrete, tile, or marble. That the building shall be most brilliantly illuminated, provision has been made for supplying ten thousand electric lights in the office building alone.

A full equipment of freight and passenger elevators will afford speedy communication between the three floors and the basement of the building, and a restaurant and kitchen will be located on the third floor. It is anticipated that the new heating, lighting, and power plant which will be installed to supply the new building as well as the Capitol will entail an expenditure of $375,000 in addition to the cost of the new building, and the subway which will extend from the office building to the several terminals in the Capitol building will cost at least $118,000 more.

The world is too much with us: late and soon,
Getting and spending we lay waste our powers:
Little we see in nature that is ours:
We have given our hearts away, a sordid boon!
This sea that bares her bosom to the moon:
The winds that will be howling at all hours,
And are up-gathered now like sleeping flowers;
For this, for everything, we are out of tune;
It moves us not — Great God! I'd rather be
A pagan suckled in a creed outworn,
So might I, standing on this pleasant lea,
Have glimpses that would make me less forlorn:
Have sight of Proteus rising from the sea,
Or hear old Triton blow his wreathéd horn.

—*Wordsworth.*

WHEN I tell you that I teach a different kind of exercise, something new, more scientific, more rational, safer, and immeasurably superior to anything ever before devised, I am but repeating what thousands of prominent men and women are saying for me who have profited by my instructions.

If you are not convinced from my previous advertising that my system of Physiological Exercise will do all that I claim for it, the fault is in the advertising and not in the system itself.

What is so strong as the testimony of others?

Mr. J. Logan Jones, Vice-Pres. and Secy. of Jones Dry Goods Co., of Kansas City, Mo., after years of gradual but certain decline, physically and mentally, had a complete collapse. It was impossible for him to sleep without medicine, and he went without natural sleep for the period of about ten months. He tried the best physicians to be had, traveled almost constantly, being unable to remain long in one place; took hunting trips in Colorado and a sea-coast trip to Northern Maine, with no appreciable results. He had been constipated for sixteen or seventeen years, and had to take physic constantly, never having a natural action. The following is an extract from a recent letter to me: "A little over ten months ago I took my first exercise from you, and under the circumstances consider the transformation a positive miracle. Will say that I am getting to be quite a giant. I weigh more than I have ever weighed in my life, and my muscular development is something wonderful. I sleep soundly, my digestion is good, constipation a matter of ancient history, and do more work than I ever did in my life and enjoy it all the time." What could be more convincing? And do you wonder that he is enthusiastic? I could name hundreds of others who have received similar results, but it would not make the system any better. But if you will follow my instructions for a few weeks I promise you such a superb muscular development and such a degree of vigorous health as to forever convince you that intelligent direction of muscular effort is just as essential to success in life as intelligent mental effort. No pupil of mine will need to digest his food with pepsin nor assist nature with a dose of physic. I will give you an appetite and a strong stomach to take care of it; a digestive system that will fill your veins with rich blood; a strong heart that will regulate circulation and improve assimilation; a pair of lungs that will purify your blood; a liver that will work as nature designed it should; a set of nerves that will keep you up to the standard of physical and mental energy. I will increase your nervous force and capacity for mental labor, making your daily work a pleasure. You will sleep as a man ought to sleep. You will start the day as a mental worker must who would get the best of which his brain is capable. I can promise you all of this because it is common-sense, rational, and just as logical as that study improves the intellect.

I have no book, no chart, no apparatus whatever. My System is for each individual; my instructions for you would be just as personal as if you were my only pupil. It is taught by mail only and with perfect success, requires but a few minutes' time in your own room just before retiring, and it is the only one which does not overtax the heart.

I SHALL be pleased to send you free valuable information and detailed outline of my system, its principles and effects, upon application. This information, which I furnish free, is very interesting and cannot be secured elsewhere at any price. Write at once.

ALOIS P. SWOBODA, 593 Unity, CHICAGO, ILL.

THISTLE EDITION

The WAVERLEY NOVELS

In 48 Volumes

By SIR WALTER SCOTT

48 Volumes

$25.00

SCOTT'S classic works will be read as long as the English language endures, combining, as they do, the thrilling interest of romance with historical instruction. They are really a history in themselves, covering the period from the times of William the Red (1190) to George III. (1800)—more than 600 years. No library is a library without them.

HARPER & BROTHERS have just issued a splendid new edition of Sir Walter Scott's Waverley Novels in forty-eight (48) volumes. The pages are decidedly handsome, printed from large type on excellent paper, and the edition contains more than two thousand illustrations from the old English wood-engravings in the original edition, and the binding is of fine, permanent cloth.

OUR OFFER

We will send you the entire set of forty-eight volumes, charges prepaid, on receipt of $1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the $1.00. If you do like them, send us $2.00 every month for twelve months. On receipt of this dollar, we will send you, without extra charge, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or the North American Review. In writing, state which periodical you want.

This same set is also bound in half-leather, with gold stamping on side and back. The price in this binding is $48.00. It will be sent you on the same terms for $4.00 a month for twelve months.

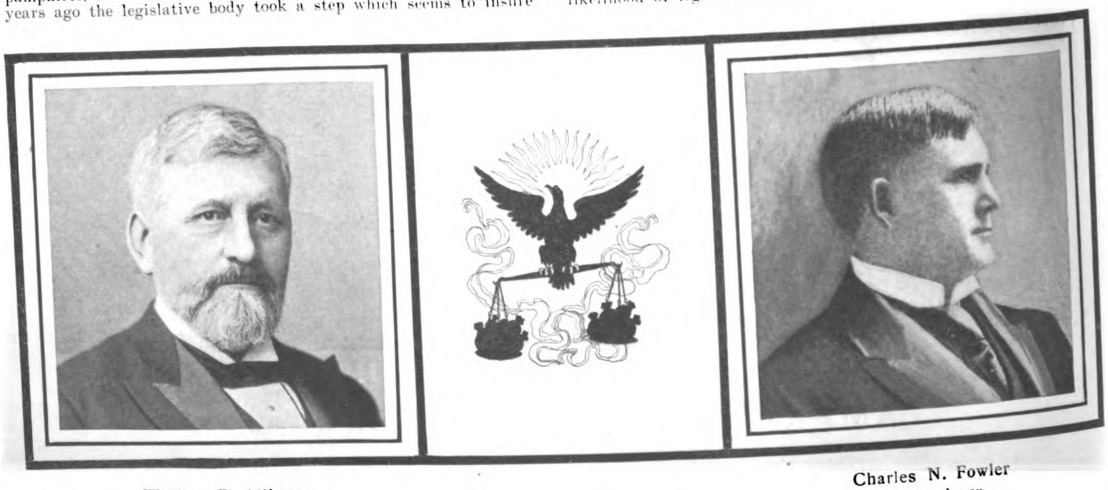
The Outlook for Currency Legislation



IN the process of time all questions that have long been pressing for settlement, all defects or evils that experience has discovered in our statutes, receive the attention of Congress. That busy body some day pauses in the engrossing tasks that are dearest to it, because its attention has been called to the fact that the country is clamoring for something, or that an important interest, which it will not pay to neglect, has asked for a word with the legislative mind.

The banking and commercial interests for thirty years have been asking for some attention to the currency situation. But the question is difficult, and, to most minds, it is dry, and, therefore, uninteresting. Since the panic of 1893 there has been a growing consciousness, among all sections and interests of the community, that something is wrong with our currency system. In that year, greenbacks and all other forms of gold and its representatives were hoarded, for much profit was made by shipping gold abroad, and greenbacks were held out of circulation because inevitably they drew from the Treasury the profitable metal. The national bank-note circulation broke down. It was unable to respond to the demands of business for the payment of ordinary current expenses. Cities and private citizens issued a token currency; manufacturers paid their hands in orders. The Clearing House of New York invented clearing-house certificates which were used in lieu of actual currency for the maintenance of reserves, and, by various makeshifts, the difficult times were endured, and the country emerged from the shadow into an era of prosperity. Still the evil stuck in our currency and banking systems, and at least once a year the enterprising men of the East are obliged to pay their demand-notes at the banks, in order that the latter may send out money to the West for the moving of the crops. This makes money high, and times hard in the East, especially in New York, and it has caused many an undertaking to be abandoned or to halt.

L. M. Shaw
Secretary of the Treasury

In the mean time bankers, in their conventions, writers of books, pamphlets, and of editorials have urged Congress to act. A few years ago the legislative body took a step which seems to insure the permanency of the gold standard, and which brought some relief by slightly increasing bank-note circulation. Nevertheless, this form of currency continues to lack elasticity, and, after a good deal of pushing and exhortation, interest was excited by some members of the House of Representatives, notably Mr. Fowler of New Jersey, Mr. Lovering of Massachusetts, and Mr. Overstreet of Indiana. The Fowler bill is the outcome of the agitation which was thus aroused. It is not a bill which wholly satisfies any one; even its author would probably prefer some changes, while a great many men, of the kind known as sound, are opposed to the theory of asset banking. Although the members named have for some years been eager to secure the passage of some legislation which will give us an elastic currency, and although the desire for such a reform has been growing stronger and stronger, and although its expression has become louder and louder throughout the country, the public men generally have not been deeply moved. So far, no Senator has betrayed the slightest interest in the question, so far as the public knows. The question, however, will be intelligently dealt with in the Senate, when it comes up for discussion, by Senator Allison,—who is the authority in the chamber on questions of finance,—by Senators Aldrich, Fairbanks, Hanna, and by a few others. The differences of opinion as to the proper remedy to apply to existing evils are so many and so great that a long time must elapse before agreement can be reached on any measure that is, in any degree, thorough or radical. A good many factors must be reckoned with. The Middle West, for example, is easily alarmed by any proposition to base bank currency on anything but the national debt. Then there are the enemies of all banks, who still muster a considerable number, and who prefer greenbacks to bank-notes. Then we have those who think that asset currency is not safe; and, again, those who have confidence in asset currency and in branch banks. The question is full of practical difficulties; the session is short. There is, therefore, no likelihood of legislation this year.

William B. Allison
Of Iowa

Charles N. Fowler
Of New Jersey

THE SECRET THOUGHTS OF THEIR HEARTS

Buckingham Palace. His Britannic Majesty's boudoir, done in pink and gold. The crown on hat-rack near the door. On a gilded console, the sceptre and crystal ball, with several yellow-backed novels. His Britannic Majesty, in a cashmere dressing-gown flowered with heraldic roses, is seated in a huge arm-chair, with his feet on a fender-stool. Premier Balfour *is in attendance, outwardly balmy, but inwardly ill at ease.*

Premier Balfour. Well, really, your Majesty—ah! If your Majesty would only—ah! let me speak—ah! . . .

The King (testily). Damme, sir damme! It seems to me you do nothing else! It's too bad, sir! That's what it is! Damme, sir, I say. . . .

Castro, the former President, opens a sardine-can with a button-hook

Balfour. I can understand your Majesty's—ah—shall I say irritation—ah?

The King. Irritation? No, sir; damme, sir, no! Indignation, sir, indignation! Didn't you and Willy tell me it would be all right? "Work—ah—like a charm—ah!" those were your very words! And now look at it! Everybody is mad at me, sir! Mad, sir! and at me! My own people are mad! The American nation is mad, and Rudyard Kipling is mad! At me, sir! at me! at me! Damme, sir, I say, damme! . . . *(And the King relapses into an indignant silence.)*

Balfour (suavely). I trust your Majesty—ah! . . .

The King (snorting). Yes, sir! but how am I to trust you? And weren't you both cocksure, you and Willy? And didn't you know it all, and didn't you pooh-pooh my apprehensions? You're a nice pair, sir! Oh yes! you're a *nice* pair!

Balfour (shrugging his shoulders). Your Majesty—ah! must—ah! pardon me, but no one, not even England's Premier—ah! has the gift of prophecy, or can see ahead with infallible eye—

The King. See ahead! You, sir! Why, you couldn't see a haystack! What did I tell you would happen? What did I tell you? and before the Boer war, too? Oh, you were *so* sure about it! By heavens, sir! do you know what will happen? You will get whipped in Parliament, sir, and I shall have one of those damned fellows for Prime Minister. . . . Oh yes, you and Willy have done it! You hear me, sir? Done it! Done it! *Done it!* . . .

Balfour. Really—ah! Your Majesty—ah! . . .

The Palace, Berlin. Smoking-room, in old Teutonic oak, upholstered in artillery patterns, and adorned with portraits of the Kaiser as Adam, the Kaiser as Noah, the Kaiser as Methuselah, the Kaiser as Alexander the Great, as Homer, and so forth. His Imperial Majesty, in the undress uniform of a field-marshal, pacing up and down, twisting his mustache.

Kaiser Wilhelm. Well, Herr Graf, we are getting on, eh! The great dream realizes itself! The great drama unfolds! . . .

Von Bülow. Ja, Majestät!

Kaiser. Yes, Herr Graf! Yes! We are making history! We are forming events! We are mastering circumstance! We are outmanœuvring Fate! What a privilege you must feel it, to play a part, however small, in all this! to work with the master-mind!

Von Bülow. Ja, Majestät!

The Kaiser. I see before me *(halting in front of the picture of Adam)* my genius foreshadowed in the first man! Here *(pointing to Methuselah)* is a type of my endurance! And here *(twisting his mustache towards Noah)* is a type of my power to ride on the wave of circumstance! Yes, Herr Graf! Yes! It is all very wonderful, very wonderful and beautiful. . . .

Von Bülow. Ja, Majestät!

Kaiser. With what consummate skill I hoodwinked the Russian! And how adroitly, how perfectly adroitly, I wound the Sultan round my finger! And what a lesson it was for all time to see me fascinate the Persian Shah! Was it not delicious—ach, delicious—to see me entangling Chamberlain in my schemes *(chuckles sardonically)*, so clever, so alert himself! Was it not delicious?

Von Bulow. Ja, Majestät!

The Kaiser. And my poor old uncle! and now these Americans! Why, they think they have outgeneralled me!—me! *me!* Outgeneralled *me!* Colossal, is it not, Herr Graf?

Von Bülow. Ja, Majestät!

The Kaiser. Ah yes! let them laugh! let them laugh! *let them!* But he laughs well who latest laughs! . . . That is verse, Herr Graf,—did you notice? . . .

Von Bülow. Ja, Majestät!

The Kaiser. Well, dear boy, leave me now! I feel the divine afflatus coming. . . .

Von Bülow (aside). The deuce you do! [*Exit.*

Among the hills, south of Caracas. President Cipriano Castro *and* Signora Castro. *The President is trying to open a sardine-can with a button-hook, while the Signora mops her eyes with a yellow bandanna handkerchief.*

Cipriano (looking under his eyebrows at the Signora). Oh, come, Maria! What *is* the use of making a fuss about it? We'll lose our job, that's all! Many a good man has done so before. . . .

Signora Castro. Good man! *(sobs). Good* man! And so you call yourself a *good* man! *(sobs again).*

Cipriano. Oh, well, not exactly a saint, you know, but, among men of the world—oh, hang it, Maria, do stop snivelling! it's bad enough without your rubbing it in! Shut up, woman! Confound it all! shut up!

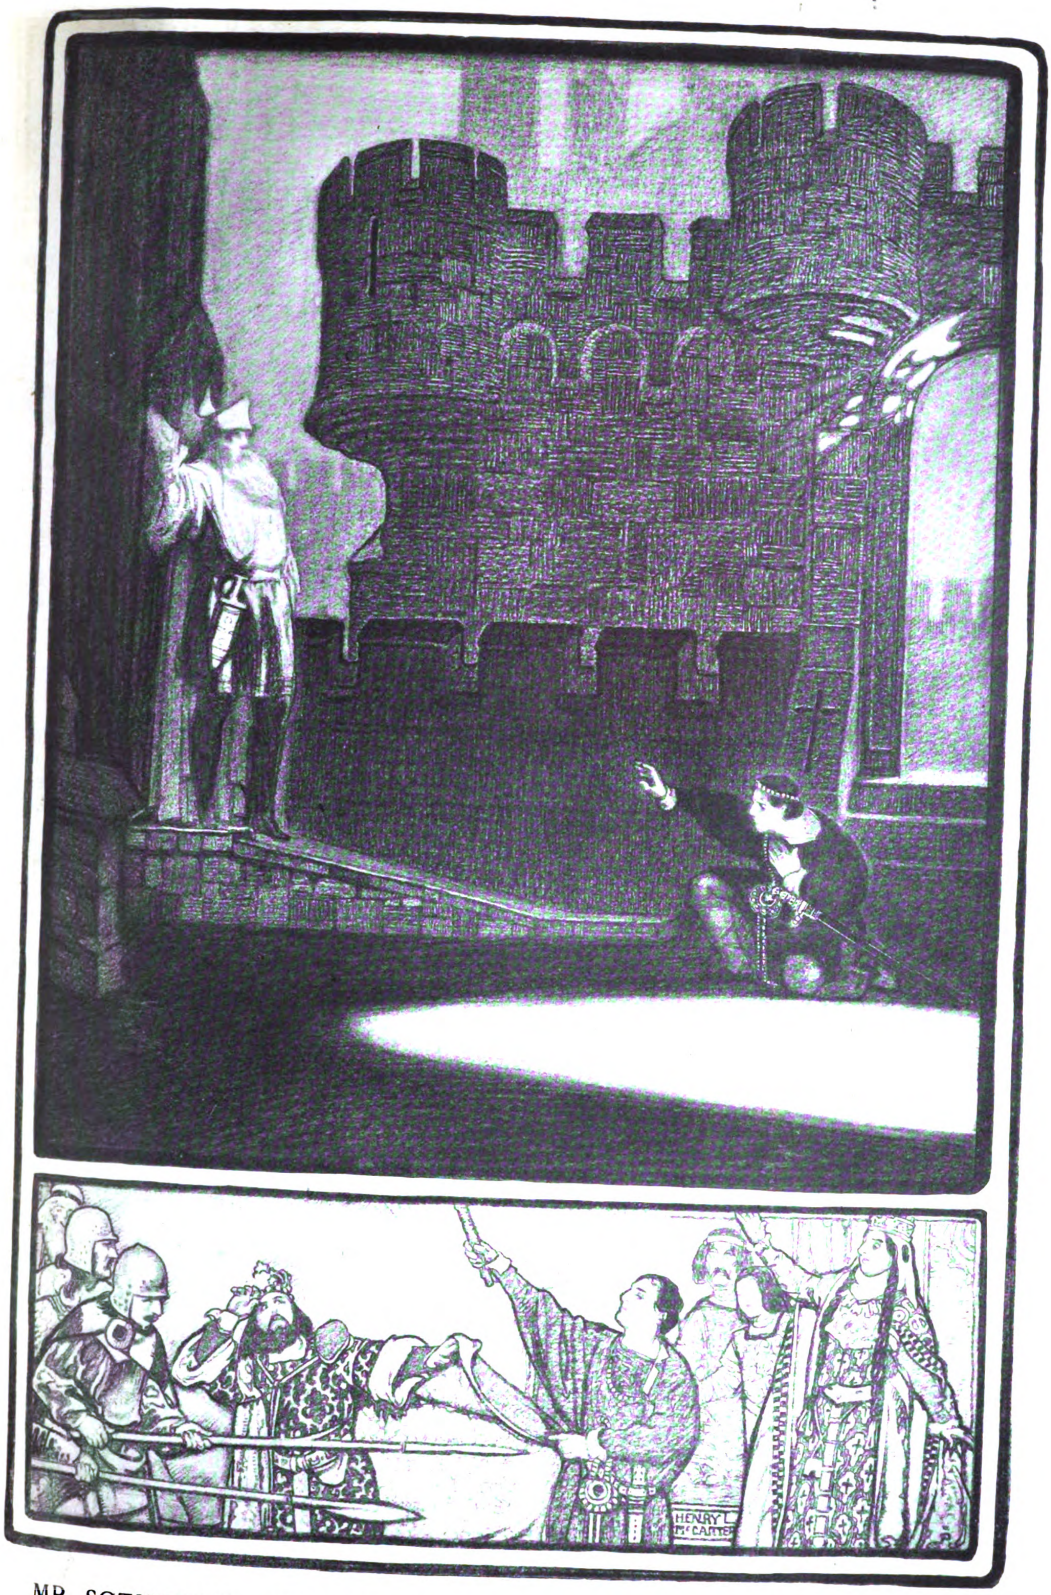
The Kaiser. "I feel the divine afflatus coming." Von Bulow (aside). "The deuce you do!"

Signora (still sobbing violently). No, I won't shut up! I won't! I won't! No, sir, your lawful wife will not shut up! I have suffered everything at your hands, but I will not suffer that! You may strike me, but you must listen! Yes! yes! yes! Kill me, if you want to, kill me, kill me! You would like to, wouldn't you! Why don't you kill me?

Cipriano (aside). Quite an idea! *(Looks at her meditatively, and in doing so jabs his thumb with the button-hook, bounces to his feet, yelling.)* Car-r-r-amba!

Signora (screams). Oh! oh! oh! he's going to kill me! *(Has a prolonged fit of hysterics.)*

Cipriano (trying another tack). Well-ums did-ums then! Poor little thing, then! *(Strokes her head. She gradually quiets down, and he sits beside her, putting his arm around her waist.)* What is it, then! I don't wonder she is tired and done up! It has been a hard time, all these days, with those nasty insurgents pesking at me, and the beastly foreigners cavorting along the coast! Bah! how I hate foreigners! *(The Signora begins to weep again.)* Oh, hang it all, Maria, turn off the water-works! What in the land is the matter now?



Signora (sobbing softly). Oh, Cip! It's the ingratitude! the base ingratitude, of our country, dearest Cip! To have a great man like you, and to—oh! oh!

Cipriano (consolingly). Well, I'm blowed! You're a good faithful sort, anyway—a sort of consolation in distress! Why *(hugs her again)*, do you know *(aside)*—shall I tell her? Yes! *(Aloud.)* Do you know. . . . If we can get away, I've got quite a nice little pile hid in a safe corner. . . . If we can only get away! . . .

The King (to Balfour) "Oh yes, you and Willy have done it! You hear me, sir? Done it! Done it! Done it!"

MR. SOTHERN'S PRESENTATION OF "HAMLET" IN NEW YORK AT THE GARDEN THEATRE

In this drawing Mr. Henry McCarter represents the two most graphic and effective scenes in Mr. Sothern's production—the ghost scene, where Hamlet learns the perfidy of his step-father, and his subsequent denunciation of the King

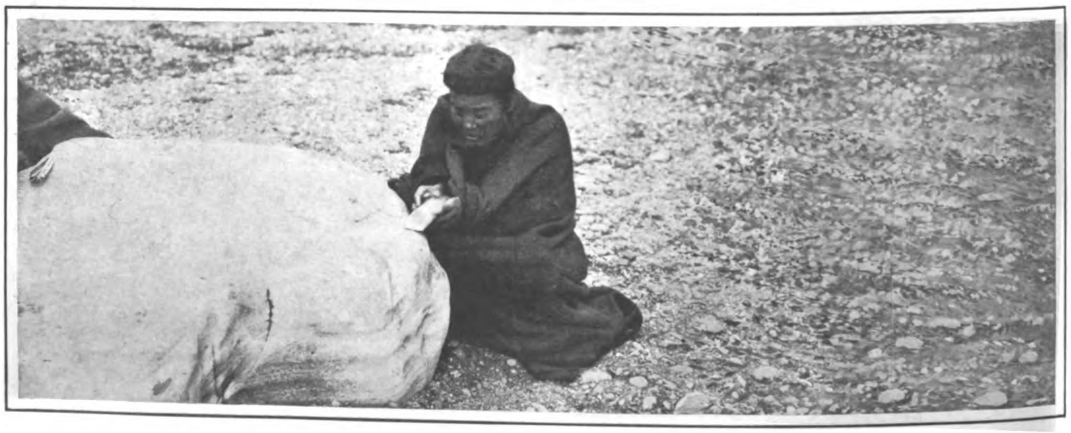
The Culture of Unknown American Tribes

Totem-pole in the village of a Kwakiutl tribe at River Inlet, north of Vancouver

SIX separate expeditions of discovery to unknown northern countries have recently been undertaken through the generosity of Mr. Morris K. Jesup, president of the New York Chamber of Commerce. The expense has been in the neighborhood of $50,000, and the results, now valued at twenty times that sum, have been presented to the American Museum of Natural History.

The expeditions which explored the American side of the North Pacific Ocean, under Professor Franz Boas, Curator of Ethnology of the American Museum of Natural History, and Harlan I. Smith, Assistant Curator of Archæology, found forms of culture of special interest. Indians the world over, Chunchos of South America, Chukchees of Siberia, Eskimos of the farthest north, Aztecs or Moyas of Mexico, and the various tribes of North America, are in their religious beliefs Shamanists. It is only in their forms of worship that they differ. Whether sun or fire worshippers, their belief in spirits still holds. Those American tribes who believed in the Great Spirit were not so far from the universal brotherhood of man which expresses its similar belief in forms of Christianity, Mohammedanism, or Confucianism. The Shaman priests, wherever found on either side of the Pacific, wear robes distinctive of their rank. Such robes are often highly decorated with symbolical figures, but they are seldom found except among the natives of the far north of America or of Siberia. The Shamanists do not pray to their spirits like the Christians. They portray their prayers on birch bark, paddles, or otherwise, and hang them up in the tent where the spirits may see them. This Shaman prayer never takes the form of thanks for benefits received, but of requests for benefits desired. The spirits speak to the Shaman worshippers and give them guidance in visions and dreams.

While tree burial has been long known to scientists, the explorers found examples of it among the Kwakiutl tribes around Fort Rupert on Vancouver Island that are unusual. Instead of placing the bodies of their dead on low boughs just above the reach of animals, these tribes buried them a hundred feet high in the biggest spruces. Other methods, too, of disposing of the dead were found which are remarkable when one remembers the nearness of the tribes to each other in boundaries and in commerce. Like the burial-places of the Druids were the massive rock cairns of Vancouver Island people. Some tribes placed their dead at the bases of mountains, where slides rolled down over them. Some built mounds surrounded by stones, like the mound-builders. Some threw their dead in heaps on the plains. Some Eskimos were found who placed their dead on the shores of the Arctic Sea, to be buried under the ice. It was found that most of the Siberian tribes took their dead to the tundras and burned them.



Human faces in tribal architecture. Here used as carved house-post by Bella-Bella tribe, north of Vancouver

With regard to the way the ancient Indians made their chert arrow points, knives, axes, spear-points, and other implements, the explorers cleared up a little-known subject by finding a Kwakiutl old man actually sharpening his celt on a rock, precisely as did his prehistoric ancestors. Special forms of stone can be used for implements, and they can be sharpened on certain kinds of rock.

Totem-poles and wood carved figures were known before, but not in the gigantic forms discovered on Vancouver Island and on the coast north of it. Some of these wood-carvings in the American Museum stand on the basement floor, and tower up through four or five stories of the building. The totem-pole is usually the emblem of the great deeds of some Indian chief or family. Of the Indian wood-carving found up to this time, animals for the most part have been the subjects. The exact meaning of the huge carved men found by this expedition, and of the totem-tree covered with human heads, has not yet been made clear. It is supposed that the carved human figures which were found represent the crude humorous genius of early tribes. The discoveries of this expedition fill an entire wing of the American Museum, and make a collection that is not surpassed by any in the world.

Two Shaman Priests of the Kwakiutl Tribe

A Kwakiutl Indian sharpening Stone Celt on Rock to make Arrow-heads

This clears up a little-known process of the way prehistoric tribes made their weapons

THE ARTISTS' FESTIVAL

The artists' festival, given this week in Boston, is one of the most interesting functions in the art world of America. It is given once in three years, and each year a different costume period is chosen. This year the scene is a "Twelfth Night Revel," and the picture here represents a fanciful tableau of St. George and the Dragon

A TWENTIETH-CENTURY CREATION

The new Belmont Hotel, now building at Forty-second Street and Fourth Avenue, New York, is distinctly one of the new-century wonders. It not only has twenty-two stories aboveground, but there are five stories underground, as well as underground connections with the new subway and the Grand Central road. One can go from this hotel to San Francisco without leaving the cover of a roof. Interesting new appliances in hotels are told about on page 156

COMMENT

ALL is quiet along the Orinoco. At least, at the moment of writing. At the moment of reading, it may be quite another story. We may have two or three more revolutions, an invasion or two, several dozen ultimatums, and a score or more of international complications while these pages are passing through the press. Venezuelans are an essentially speculative stock. The cause of the present lull is a slump in insurrections, accompanied by a rumored disagreement among the great powers, especially France and Italy, as to which is to be paid first. We regret now that our own claims against Venezuela have not been sent in,—our personal claims, we mean. We believe we would stand about as good a chance of collecting as any of the rest of the high contracting parties. Indeed, there seems something ludicrous to us in thus dividing the skin of the bear and fighting over the choice of pieces for fur collars while the bear is still growling among the mountains; or, to drop the language of poetry, it is rather silly of the powers to fight about who will be paid first, when it is very likely that none of them will get paid at all. That President Castro could not even pay for cigarettes for the powers is pretty evident, for he cannot feed, much less pay, his army of triumphant cowboys and Amazons. We learn that the merchants of the capital are supplying the troops with dinner, until something turns up. But nothing seems at all likely to turn up, unless it be the mustachios of the head of the Hohenzollerns, and that is not likely to help President Castro. Nor are the Andine cowboys and Amazons the only supperless folk in Caracas. There are others, as we learn from Minister Bowen, who, having stood it as long as he could, has wisely decided to come home. He tells us that he has been feeding a hundred Venezuelans daily at the American Legation, but does not say what is to become of them after his departure. Meanwhile the fleets of the allies continue to prowl up and down the coast with dauntless bravery, daring any rash Venezuelan to tread on the tail of their coats. This bristling ferocity has its funny side, though we can well believe that it is invisible to the hundred inhabitants of Venezuela whose dinners have so painfully vanished into the void.

News from China continues uniformly bad. We recently chronicled the alleged advance of the fighting general Tung Fu-Siang towards the capital, and pointed out how formidable a danger to the throne this advance must prove. We now learn of another Mohammedan rising in Chang-chia-cuana, a strategic point of great importance, where the Chinese emperors until lately kept a strong force of troops. We are also told that Kan Hofu, who is leader of the insurrection in Shing-kiang, has a force of not less than a hundred thousand men at his disposition, and holds all the important points in the neighborhood of Monkdei. He has proclaimed himself king, but what limits he sets to his territory we do not yet know. Meanwhile the rebellion in Kwang-si grows, and at least half of that province is now in the hands of the rebels. General Ma has fallen, and the capital of the state is in the hands of the insurgents. General Ma, it will be remembered, won fame during the Boxer rising by quelling the rebellion at Jehol. From Shanghai it is reported that the rebels in the neighborhood are concentrated at Shichen, Nanning, and Taiping,—a name of ill omen; on the left bank of the river at Nanning there are said to be four large bodies of rebels, in all numbering twelve thousand men. Before the close of the year the imperial forces under General Tong were defeated with heavy loss by the rebels in the Lochen-yuen district, the imperial troops being completely scattered. The rebels have erected forts at different points along the river between Kui-yuan and Nanning, and are plundering the trading junks that pass up and down the river. An insurrection has also broken out in the Shan-tung province, at a place called Choo-cou, as a result of the prevailing famine conditions. Altogether, a more gloomy outlook it would be impossible to imagine. The question of silver against gold for the payment of China's indemnities to the powers adds to the evils which are hanging over the Peking court. China asserts that she promised to pay in silver. The powers demand payment in gold. China points out that silver has greatly depreciated since the protocol was signed, so that, if she accedes to the claim of the powers, she must pay a fifth more than she bargained for. The powers are obdurate. There is some talk of referring the matter to The Hague court, but the matter is a perpetual threat to the integrity of China, a continual menace of new danger in the Far East.

Shrewd folk the people of Chile and Argentina. Observing that the Kaiser, Uncle Edward, and Company are on the prowl in South-American waters, that the fashion of sinking the alleged battle-ships of diminutive powers is growing on the Germans, and that the said Germans, considerably nettled at the delay in annexing Venezuela, are spoiling for a fight with some one else,—these shrewd folk, we say, have decided to sell off their fleets before the rush comes. If we owned a small and inoffensive fleet, and saw the Kaiser looming big on our horizon, we should do exactly the same thing. And they have put considerable style into the manner of doing it, too. Señor Drago, the Minister of Foreign Affairs of the republic of Argentina, and Señor Concha Suber Casseaux, the Chilean minister, have not merely hatched a scheme: they have signed a protocol. We always feel envious when other people sign protocols. We feel sure the sensation must be fine. And there is some humor in the wording of the said protocol, too. The distinguished sub-

scribers agree to "limit the naval armaments of the two countries," before the Kaiser gets a chance to limit them for good and all. They are to sell off the ships they now have under construction in Europe, and—the funniest point of the whole thing—if they are not successful, "the ships are to remain under the control of the King of England." If Uncle Edward has them in his keeping, Nephew William will have to leave them severely alone. At least, unless he decides to go to war with Uncle Edward, which would certainly stir things up.

Meanwhile, Argentina's neighbor, Uruguay, has been getting into trouble with Italy, which, considering that Italy is an ally of Nephew William's, seems to us a singularly rash thing to do. Indeed, Uruguay probably realizes that by this time, for three Italian cruisers are already under full steam, headed for the river Plate. The trouble arose thus: An Italian bark had a cargo of hides to carry for some Germans. The captain got interested in a game of old-maid and forgot to sail. The authorities came down on him. He spread the Italian flag on his decks and dared them to come on. This is the naval equivalent for treading on the tails of his coat. The authorities came on. They were careful not to walk on the flag, but they jugged the captain, just the same. Hence, as we recorded, three battle-ships are under way for the river Plate. If Uruguay owns anything in the nature of a battle-ship, cruiser, gunboat, destroyer, torpedo-boat, or even a rowboat with a punt-gun, we advise her to follow the wise example of her neighbors and sell it without delay. We wish to draw the attention of Mr. Moody to the fact that something in his line may be picked up very reasonably just now down near Cape Horn.

It is believed by well-informed persons in Washington that Dr. von Holleben, the German ambassador to the United States, has been recalled. Just how he has incurred the displeasure of the Emperor William II., or of Chancellor von Bülow, is unknown. It is absurd to suppose that he gave offence by the note in which he drew attention to the fact that Lord Pauncefote supported the Austrian minister in an attempt to bring about a joint protest of the representatives of the European powers against our war with Spain. Dr. von Holleben's note regarding that incident was published by the Berlin Foreign Office, and corroborated with additional evidence. It would also be unreasonable to blame Dr. von Holleben for President Roosevelt's ultimate refusal to act as arbitrator in the Venezuela dispute. When Dr. von Holleben suggested that Mr. Roosevelt should be invited to act in that capacity, he had good ground for assuming that the invitation would be accepted. There can be, indeed, no doubt in the mind of any careful observer that his country's interests have been more effectively served by Dr. von Holleben than by any other German minister since the formation of the German Empire in 1871. We deem it probable that his recall is the outcome of an old quarrel between him and Baron Speck von Sternberg, who was formerly First Secretary of the German embassy in Washington, and who, in 1900, was sent as German commissioner to Samoa. Baron Speck's agreement to refer Germany's bombardment claims against the United States to the arbitration of King Oscar of Sweden was viewed with disapproval by Dr. von Holleben, because an adverse decision was expected. It is thought to have been due to the ambassador's influence that Baron Speck was transferred to a place of lower rank in the diplomatic service, namely, the post of consul-general at Calcutta. As it turned out, however, that King Oscar rendered a decision sustaining Germany's claims, Baron Speck was restored to Emperor William's favor, and seems to have convinced his imperial master that he (Speck) had been treated harshly by Dr. von Holleben. One effect of Dr. von Holleben's recall and the substitution of a new ambassador will be that Germany's representative will forfeit the coveted position of dean of the diplomatic corps, a post that is held by the ambassador who has been longest in residence.

There seems to be some ground for the belief that in the Fifty-eighth Congress Mr. Richardson of Tennessee will not figure as the leader of the Democratic minority in the House of Representatives. We have no desire to speak harshly of Mr. Richardson, neither do we expect impossibilities from any minority leader. It is nevertheless true that the Democrats have never played so insignificant a part in the popular branch of the Federal legislature as they have played under the leadership of the Tennessean. It is also certain that they must wake up and do something to challenge the respect and confidence of the country if they are to further the success of their candidate for the Presidency in 1904. It now seems probable that Representative John Sharpe Williams, of Mississippi, will be Mr. Richardson's successor in the leadership of the Democratic minority in the House. That the leader should be chosen from the representatives of Southern States is but equitable, since those States contribute 123 of the 178 members of the Lower House elected in 1902. Events are causing the Gulf States to regain the ascendency which they possessed in Democratic councils before the civil war, and they should make ready to assume the responsibility that goes with power.

Some Republican newspapers seem to have entered into a conspiracy of silence for the purpose of hiding from thoughtful persons the ominous significance of the returns exhibiting the growth of Socialism during the last two years. It is no sincere or far-sighted upholder of individualism who acts upon the theory that anything is to be gained by a suppression of unwelcome facts. If, on the face of official statistics, there is spread proof of the fact that Socialism is likely two years hence to become as formidable a political power in this country as Populism was ten years ago, the sooner the fact is recognized the better. Eternal vigilance is the price of economical salvation. Individualists cannot conjure the spectre of Socialism by shutting their eyes and pretending that they see no signs of it. The startling truth is that, while Eugene V. Debs, the Socialist candidate for President in 1900, received but 86,000 votes, over 400,000 votes were polled for Socialist candidates for Congress at the recent general election. If the voting strength of Socialists should increase at the same rate during the next two years—that is to say, at the rate of 500 per cent.—they would be able to cast almost two million votes in November, 1904. In other words, they would be twice as strong as the Populists were in 1892, might carry a few States, and would hold the balance of power in others. What is much more serious, they might tempt one of the great political parties in 1908 to a species of fusion such as Mr. Bryan brought about between the Democratic and Populist parties in 1896. It is not by blinking and pretending to ignore it that the best means of coping with so grave a danger can be devised.

There is a curious report that the great and influential State of Texas intends, even at this early day, to commit itself to the selection of Chief-Judge Parker as the candidate of the Democratic party for the Presidency in 1904. Evidently the Texas Democrats assume that Judge Parker could carry the State of New York next year. The grounds for the assumption are hypothetical. Unquestionably, Mr. Parker was elected to his present office in 1897, the year after McKinley carried New York by an immense majority, and the year before Mr. Roosevelt carried it by less than 18,000 plurality. But, if the returns for 1897 be closely examined, it will be found that very many thousands of electors in New York city, who voted for Mr. Low for Mayor, omitted to support the Republican candidate for Chief Judge of the Court of Appeals; or, in other words, threw away their votes, so far as that office was concerned. Chief-Judge Parker has never carried the State of New York in a sharply contested election turning on his candidacy. Much less is there any reason to assume that a man so little known outside of a small circle of lawyers and litigants could carry Connecticut and New Jersey, even if he could manage to obtain a small plurality in the State of New York. We repeat what we have formerly said, that if the Democracy are to win in 1904, they must have a candidate who there is good reason to believe will carry not only New York, but Connecticut, New Jersey, Indiana, and at least one other Northern State. There is really no basis for the supposition that such wide-reaching success could be achieved either by Judge Parker or by Mr. Olney. The latter would inevitably fail to carry his native State. There is but one Democrat alive who swept four Northern States in 1884 and more than five Northern States in 1892. We do not need to name the only Democrat who has occupied the White House since the civil war. If our friends

in Texas will take our advice, they will wait until the spring of 1904 before putting forward a candidate for the Democratic nomination for the Presidency. Before that date the whole political situation may have been changed, and new men may have come to the front.

A great deal of fun used to be made of Mr. Thompson, when he became Secretary of the Navy, on the assumption that citizens of inland States could know nothing of maritime affairs. The assumption is certainly unfounded, so far as the States bordering, like Indiana, on the Great Lakes are concerned. The day is gone by when anybody could be pardoned for overlooking the enormous proportions of our interlake commerce. It is now well known that the tonnage passing through the Sault Sainte Marie Canal is far greater than the tonnage passing through the Suez waterway. There is, obviously, no reason in the nature of things why men who have served on sailing-vessels or steamships engaged in our lake commerce should not quickly adapt themselves to the conditions of navigation in the Atlantic or Pacific as employees either of our national navy or of our mercantile marine. This is one of those cases where he laughs longest who laughs last. The British press-gangs that were so active in the wars against Napoleon were quite too shrewd to confine their operations to seaport towns. The recruiting officers of our navy have long since extended their field of search from seaports to lakeports, and of late they have found excellent material in inland districts. What is wanted now is just what was wanted by the British press-gangs a hundred years ago, to wit, young, healthy, and vigorous men. It is of no importance that they may never have smelled salt water; they will get their sea-legs in good time. Lieutenant J. P. Morton, U. S. N., has just completed the most fruitful recruiting trip known in many years. He has traversed Montana, Utah, Colorado, Texas, Arizona, and New Mexico—a section of the interior never before canvassed for navy recruits — and he has enlisted no fewer than 1200 men and boys. In Texas alone Lieutenant Morton got upwards of 400 men. If we may judge by this record-breaking expedition, we should find it easy to secure in parts of the country hitherto neglected the complement of enlisted men which our large navy requires.

Again we express regret that a man like Senator Foraker, justly and widely held in high esteem, a man to whom the advocates of the war for the liberation of Cuba are under profound obligations, should lend his weight and influence to the Omnibus Statehood bill—that is to say, the bill which proposes to admit to the Union not only Oklahoma, but also New Mexico and Arizona as States. Even if New Mexico and Arizona were joined together and admitted as a single State, they would have, collectively, a population of less than 350,000, an aggregate too small when, as the censuses have shown, the process of growth is slow. The growth of Oklahoma, on the other hand, has been phenomenally rapid, and that Territory is already more populous than Arizona and New Mexico combined. The right solution of the Statehood problem is to bar out Arizona and New Mexico for an indefinite period, and to admit Oklahoma and Indian Territory as a single State, due precautions being taken to safeguard the treaty rights of the Indians. Those Democrats who advocate this method of disposing of the question argue against their party interests, for no well-informed person doubts that, whatever political combinations may be temporarily made, both Arizona and New Mexico six years hence will be represented by Democrats in the Senate. What is party interest, however, compared with the welfare of the country as a whole and the perpetuation of the Union? What is more certain to aggravate the dissatisfaction of populous and wealthy States with our existing Federal Constitution than the neutralization, not to say drowning, of their voice in the Federal Senate by the purchasable pipings and whinings of rotten boroughs?

Plain Mr. Greenlees has made a bid for fame as the John Hampden of South Africa. At the recent official dinner at Pretoria, at which his Sublime Highness Mr. Secretary Chamberlain was present, plain Mr. Greenlees was invited to make a speech, proposing the health of his Transparency Lord Milner. He made a speech. He proposed the health of his Transparency. He did more; he committed an epigram. Alluding to the fact that the Transvaal is a crown colony, he said the Pretorians wanted "less crown and more colony." That phrase is likely to become the rallying-cry of a campaign which can have only one end: the transformation of the Transvaal into a self-governing state, which will in due time become one of the Federation of South Africa, a practically independent nation, just as Canada and Australia already are. We congratulate plain Mr. Greenlees. We also congratulate the Transvaal; for it is becoming apparent that Lord Milner has had that wigging from his chief which we took some pleasure in predicting. Indeed, the reply of Lord Milner to plain Mr. Greenlees looks to us like a preparation for climbing down. In that light and airy way of his, which always reminds us of a rhinoceros dancing, Lord Milner spoke of a rapidly approaching time when he would lay aside the cares of the Transvaal, putting the burden of responsibility on the shoulders of the Lieutenant-Governor, Sir Arthur Lawley. As Sir Arthur Lawley has had his training in Australia, a country where "more colony and less crown" has been sedulously practised, the change is likely to work well; we suggest that Lord Milner should offer his services to the Sublime Porte, especially in the work of "pacifying" Macedonia, which will begin a few weeks hence, when the snows retreat up the rugged flanks of Mount Olympus. Lord Milner would find a congenial spirit in Abdul Hamid; but we console ourselves with the thought that they are destined to meet later on.

That gorgeous and perfectly useless celebration, the Delhi Durbar, has come to an end. And the bill has come in. It is said to be over ten million dollars, or, roughly, thirty million rupees. As Rudyard Kipling remarked on a similar occasion, the one person conspicuous by his absence was the starving ryot, who pays the bill. Let us, for a moment, look at the matter from his point of view. He is, as Kipling says, starving. Not merely at the present juncture, during the Durbar, but chronically, as a steady thing. And there are three hundred million of him, with incomes of a few cents a day, to feed a whole family. Or rather, not to feed them,—to leave them unfed. It is useless to say that, of the ten millions fooled away at Delhi, only about four millions came out of the coffers of the British Indian government, while the rest was paid by native princes. The starving ryot paid that, too. These native princes are merely ornamental drones, who do whatever they are told, and spend their money giving champagne dinners to British Indian officials, for which they get decorations and stars. Said decorations and stars also paid for by the starving ryot. There is no very marked condition of famine in any part of India at this moment, so far as we know; only several hundred millions of wretches half starved, with their women and children also half starved. But they are used to that. With their limited wants, or rather limited chances of supplying their wants, the sum squandered in glorifying the Curzons and their guests, and, in a minor degree, the new Emperor of India, would have fed the whole population of India for a day, at the rate of the last famine relief. Or, to put the thing in another way, it would have fed a million for about eight months,—quite a help in the next famine. But Lord Curzon had to be glorified, and so there it is. It is of interest to learn that, with all this, Lord Curzon has not succeeded in making himself popular. As a despatch says: Visitors accustomed to King Edward's court declare that there was more bowing and scraping in a week at Delhi than in a lifetime at Buckingham Palace. The affability and graciousness of the Duke and Duchess of Connaught afforded the pleasantest contrast to the manner of the Viceroy, who seems to have behaved like a reincarnation of the Grand Mogul. Evidently Lord Milner and Lord Curzon would trot well in double harness.

Mr. William Digby, British merchant, editor, writer, and close student these many years of Indian concerns, published a book last year whereof the conclusions indicate that, if all we are told of Lord Curzon is true, he is a man sorely needed in the land he rules. Mr. Digby considers that India is on the verge of collapse. He finds it very, very poor, and poor because its British rulers have continued for many decades to drain it of its wealth. He considers that British rule, as exemplified in India, is one of the least, if not absolutely the least, beneficent government ever known to mankind. He credits the British with important social reforms

in India, and with building valuable irrigation-works and railroads, but he says India's railroads, worth $1,500,000,000, are owned almost wholly in Europe, and that she owes England $175,000,000 for her irrigation-works. England, he insists, has throttled her national industries, and denied to her able men of native birth the opportunity to develop their administrative abilities. Her government is very expensive. She pays more than fifty-two million dollars a year in salaries to civil officers, of which more than half goes to 8000 Europeans, while the rest is divided among 130,000 Indians and 6000 Eurasians. Famines, he declares, are far more frequent than they were a century ago, and though in the worst years enough food is grown to feed the people, they are too poor to buy it. Estimating the total wealth annually produced in British India and deducting the sum paid to officials, he finds that the unofficial population has an average income of about one pound a year. Accepting a generous estimate of Indian hoards, he finds they amount to about $4 50 per head of population, whereas the wealth of Great Britain is about $1500 for each individual. So he thinks India extremely poor, and calls upon his fellow-countrymen to do better by her. No doubt he is an enthusiast riding his hobby, but his opinions have at least enough statistical basis to be worth the consideration of persons who see in British rule in India a model for Americans to follow in the Philippines. They are adapted also to stiffen the backs of supporters of the Monroe doctrine, which seeks to secure to all American states a chance to work out their own salvation, and, finally, to secure government for the benefit of the governed, rather than for the profit of the governors.

Our newspapers have given a good deal of attention to the suggestion that the salary of the President of the United States should be made more commensurate with the dignity and importance of the office. As we formerly pointed out, the President's salary is no larger than that allotted to the Governor-General of Canada, and is only one-fifth as large as the salary received by the President of the French Republic. As everybody knows, the Constitution (Art. II., Sec. 1) provides that the President's compensation shall neither be increased nor diminished during the period for which he may have been elected. If, therefore, the salary of our Chief Magistrate should now be increased by law, Mr. Roosevelt would not benefit by the increase during his present term; but the benefit of the new statute would accrue to him on and after March 4, 1905, provided he should be elected President in November, 1904. We have expressed the opinion that the President's salary should be at least double. Such a change would be desirable, not only in itself, but because it would raise the standard of remuneration for the occupants of many high executive and judicial offices authorized by the Federal Constitution. We send six ambassadors to foreign powers, but none of them receives more than $17,500 a year. The British ambassador to the United States receives more than double that amount, and is provided with a commodious house.

It ill accords with the spirit of our institutions that the United States should be represented at the chief European capitals mainly or exclusively by rich men; yet, as things are now, only a rich man can afford to accept an embassy. Even more egregiously underpaid are the Justices of the United States Supreme Court, who receive but ten thousand dollars apiece, except in the case of the Chief Justice, to whom an additional five hundred dollars is given. Unquestionably the honor attached to this judicial office is a superlative one; but he who faithfully discharges an exalted and momentous function is worthy, not only of honor, but of adequate remuneration. There are scores of lawyers practising at the American bar who earn four or five times as much as the sum annually allotted to a Justice of the United States Supreme Court. In England, the Lord High Chancellor receives fifty thousand dollars a year during his tenure of office, and twenty-five thousand dollars a year when he retires from office. The Lord Chief Justice receives forty thousand dollars a year. Yet the duties of our Federal justices are incomparably more important, since they can declare an Act of Congress unconstitutional, whereas no English judge can pronounce an Act of Parliament invalid. It might be well to begin by increasing the salaries of the Federal Supreme Court Justices and Circuit and District Judges, because the Constitution permits this to be done during their term of office. Such a step should be promptly followed, however, by an increase of the President's compensation, and a proportionate increase of the salaries received by the Vice-President, the members of the cabinet, and ambassadors. We do not believe that a move in this direction would encounter any strenuous opposition, and we hope to see the change made, by either the Fifty-seventh Congress during the short remnant of its life, or by the Fifty-eighth Congress, so that the enlarged salaries would be payable after March 4, 1905.

When we go into the king business we shall hire an enthusiast to shoot at our royal carriage about once in three months. Nothing booms a tottering dynasty like an attempted assassination. We should, of course, show our royal clemency in dealing with the suborned delinquent; first, because clemency is a great and kingly virtue, such as we should naturally possess; and, secondly, because the delinquent might otherwise be tempted to blow on us, which would be bad for business. We should confine him in one of our monarchical fortresses, and supply him with free smokes and libations, and such other rational amusements as might appeal to him, and ask him to the palace on off days. And our loyal subjects—we feel that this is exactly in the style of King Edward—our loyal subjects would line up along the streets and cheer us as we went past in solemn but cheerful state. This vein of reflection is, as our readers have divined, suggested by the recent desperate shooting at the King of Spain, who has lost no time in conforming to what is now a part of royal etiquette. No monarch is complete without it. We have two different sets of names applied to the would-be regicide, or chamberlainicide, as he prefers to be called, and we do not know which to choose; therefore we shall speak of him as the bloodthirsty villain.

The bloodthirsty villain seems to have been a particularly mild person, who had been promised a post as assistant bottle-washer, or something, at the palace, and went gunning for the Duke of Sotomayor, when that fine old grandee of Spain failed to make good. In a democratic country like our own we can smile at the naïvety of the bloodthirsty villain; fancy any one thinking that he was going to get an office merely because somebody in politics promised it to him. Incidentally, we are informed that the bloodthirsty villain had in his pockets unmailed letters addressed to our Mr. Roosevelt, King Edward, the Only Supreme Head of the Hohenzollerns, and, as an anti-climax, the Chief Justice of Mexico. We are told that the bloodthirsty villain explains that these persons are on his wife's visiting list; that she had given them to him to post, that he had promised faithfully so to do, put them in his pocket, and forgotten all about them. We understand that Mrs. Bloodthirsty Villain has previously threatened or even attempted to have him shut up in a lunatic asylum. We suppose he went about for a month with letters of hers to the Tsar of All the Russias, the Mikado of Japan, our Mr. Morgan, and other awesome persons. We can sympathize with her perfectly. The bloodthirsty villain seems to belong to that weary and wind-blown class whose motto is: Wherever you see a crowned head, strike it.

There is danger that, in Utah at least, Apostle Smoot is going to be loved for the enemies he has made. The President openly opposes his candidacy for the Senate, and when a President meddles in State concerns, and takes sides against a candidate for an elective office, he usually makes votes for the man he opposes. States are jealous of interference from Washington, and properly so, and though there is no politics in the President's objection to Smoot, and though most of us heartily sympathize with it, it seems more likely to help the apostle than to hurt him. The Woman's Christian Temperance Union is also down on Smoot. It objects to him as a Mormon leader. It objects to all Mormons who are, were, or hope to be, polygamists. We all do. We object heartily to polygamy, and like it no better for being allied with Mormonism. We had rather that if a man is to have an assortment of wives, he shall have them in spite of his religion, than in accordance with it. They say Smoot is not a practising polygamist, but merely a high ruler of the Church that has disgraced the country as far as it could with its degraded

habits, and which still has polygamy up its sleeve and plays it when it dares. If Utah sends him to the Senate, no reason appears as yet why he should not take his seat. To be sure, he represents Mormonism, impure and dubious, but that does not affect his right to sit in Congress if he is chosen. We have to tolerate Mormonism while it lasts, though there is nothing in the Constitution to hinder our holding our noses while we do it. Perhaps it may be for the best, in the long-run, that the Mormons should send an apostle to Washington. It calls attention to them and stimulates public disgust with their institutions. They have thriven on ignorance, obscurity, and sensuality. Attention—the irritated attention—of decent and enlightened people is the last thing that will profit them.

That was an interesting decision rendered the other day by the United States Supreme Court, and read by the new member of that tribunal, Mr. Justice O. W. Holmes. The decision upheld the law of California which declares void all contracts for the purchase or sale on margin of the shares of the capital stock of any corporation, or for the purchase or sale of shares to be delivered at any future time, and which authorizes the recovery of money paid on such contracts. In the case of Otis against Parker, the plaintiff sued to recover money paid the defendant as broker in a margined transaction, and now the United States Supreme Court says that the State law authorizing the suit is valid. It remains to be seen what effect this decision will have on stock speculation in San Francisco. It is not unreasonable to suppose that if the States of Illinois and New York were to pass similar laws, the effect on the stock exchanges and produce exchanges of Chicago and New York city would be catastrophic. Judge Holmes announced that, in the opinion of the Court, the treating of stocks of combinations as a class subject to special restrictions could not be looked upon as unjust discrimination, or as a denial of the equal protection of the laws. It was perhaps suggestive of the pressure exercised by sectional sentiment that Justices Brewer and Peckham dissented from the opinion of the majority of the Court.

By another opinion of the United States Supreme Court, read by Chief-Justice Fuller, it was decided that, so far as this tribunal is concerned, there is no presumption in favor of the survival of the male or of the younger of two persons who perish simultaneously, so far as all the evidence obtainable goes. This was the case of a mother and son who had drowned at sea in the wreck of the steamer *Elbe* in 1895. Many courts would have held, in such a case, that the son survived his mother, both because he was a male and because he was younger, and presumably, therefore, possessed a greater capacity of resisting death. This was, in fact, the decision reached by the Washington Court of Appeals, from which an appeal was taken to the United States Supreme Court. According to the decision read by Chief-Justice Fuller, the presumption is, in the absence of evidence tending to show the order of dissolution, that the two persons perished simultaneously. The effect of such a decision on the testamentary distribution of estates is obvious.

A deep impression is likely to be made upon public opinion by the contrast in the conduct of the large coal companies on the one hand and of individual operators on the other, as regards the prices charged for anthracite coal. The coal companies, desirous of giving the consumers of the combustible all the relief possible under the abnormal conditions caused by the protracted strike, have faithfully carried out their promise to charge only five dollars a ton wholesale for coal, in order that the retail price of the commodity might not exceed six dollars and seventy-five cents. They have contented themselves, and will continue to content themselves, with five dollars a ton, when they might have obtained ten dollars had they chosen to profit by the operation of the iron law of supply and demand. It is not the coal "trusts," but the individual operators in whose interests the coal trusts are to be "busted," that have shown themselves determined to wring the uttermost penny out of the people's necessities. The individual operator, at the prospect of whose extinction Senator Hoar drops a sympathetic tear, is resolved this year, as he always has been, to take advantage of the cold weather to force the consumer to pay him an exorbitant price. Meanwhile the so-called "trusts" will go straight on accommodating the public with anthracite to the extent of their ability, at the price of $6 75 a ton. No doubt the income of the coal trusts during the winter months will fall materially short of the figures to which it would have attained had they taken advantage of the people's necessities. They have preferred to give the trust-busters an object-lesson that is worth many times more than it will cost.

Lamentations come from Niagara Falls over the intrusion of power-houses and industrial innovations upon the scenery. The American side has not been helped æsthetically by the various means devised to make the river run in harness, but the reservation of the State of New York seems to have been reasonably well guarded. Victoria Park, on the Canadian side, has not fared so well. Vociferous complaints are made about the alarming concessions of the Canadian commissioners to tunnel-builders and power companies on that side of the river. Several power-houses are being built in Victoria Park itself, and, worst of all, another is building in the gorge at the foot of the Horseshoe Fall. The Canadian commission has shown itself so indulgent to industrial companies that confidence in it is violently shaken. The New York commissioners have made a protest against its concessions, and the feeling is that, bad as is what has been done, there is only too much reason to fear that worse remains behind. Another ominous enterprise is going on at Niagara. An American company is using electricity to extract nitrogen products from air. Mr. Wells wrote a prophetic story that turned on the discovery of a process for getting nitrogen out of the air and turning it into food. The upshot of the tale was that the atmosphere was deprived of so much nitrogen that the resulting excess of hydrogen made every one tipsy, and things went from bad to worse, until finally the atmosphere took fire. If any such process as that has begun at Niagara the police should be notified. Whatever needs to be done to restrain the liberality of the Victoria Park commission must be done by the people or government of Canada. All we can do is to spread the tale of vandalism and stir remonstrance.

If the State of New York determines to spend between fifty and a hundred millions in reconstructing the Erie Canal, it will, of course, be vitally important to provide that the money shall be well spent. The State put nine millions into the canal some years ago, and the general sentiment is that most of it was wasted. The *Engineering News* has been discussing who should have charge of the work now proposed. Under the State Constitution, the State Engineer and the Commissioner of Public Works have charge of work on the canals. But so great a work as that now projected would call for a special arrangement. The *News* advocates an amendment to the Constitution which will put the work in charge of a non-partisan commission of engineers. Major Symonds of the United States Engineer Corps, who is called the originator of the 1000-ton barge canal project, suggests an advisory and supervisory commission of engineers, who should have the real charge of the work, though nominally subject to the State Engineer. It is still very doubtful whether the work will be undertaken at all, and unless it is going to be done it is not necessary to settle who shall do it. But there is no doubt about the importance of determining who shall build the canal before the money is voted to build it.

The United States Circuit Court of Appeals has confirmed the decision of Judge Lacombe in the lower court that Rudyard Kipling is not entitled to damages from the Messrs. Putnam. It will be recalled that the Messrs. Putnam bought unbound sheets of Mr. Kipling's works from his American publishers and bound them up in sets. Two hundred sets were issued, of which fifteen were ornamented by an elephant's head. Mr. Kipling held that the elephant's head was his trade-mark. He sued for infringement of it, and of his copyright, and charged unfair competition. He asked for $25,000 damages. Judge Lacombe decided that he had failed to make out a case, and the higher court has confirmed that decision. The court deprecated the idea that an author should protect his writings by a trade-mark, as though they were pills or soap, and it found that, anyhow, Mr. Kipling's claim to a trade-mark was not good against the Putnams. It acquitted the Messrs. Putnam of violating the copyright law and of unfair competition, though it suggested that their use

of the elephant's head was "an impropriety." Mr. Kipling's suit has enabled him to record formally and impressively his opinion that he was ill-used, and possibly that result is all that he hoped for. At any rate, it is all that, to the mind of dispassionate observers, he ever seemed likely to attain.

The Filipinos seem to know a good thing when they see it. Their earnest desire to have Governor Taft continue in office is as creditable to their sagacity as the Governor's consent is to his sense of duty. By foregoing for the present the satisfaction of his wish to go on the bench of the United States Supreme Court, he has made us all his debtors. He represents ably and adequately the best intentions of the Americans towards the Filipinos. He is obstinately solicitous that the Philippines shall be as good a country for the Filipinos as they can make it, with the Americans to help them. He is fighting off just now the proposition to introduce Chinese labor. It would undoubtedly hasten the development of the islands, but the resulting riches would not go to the Filipinos. The Filipinos do well to trust him, for he is their friend. He is our friend too, for every day's work done for good government in the Philippines is a day's work done for American honor.

Congress has been invited to put its mind on music and art, and provide for such instruction in them in this country as shall make it unnecessary for aspiring young Americans to go abroad for training, which at present they cannot get at home. To this end, last May, Congressman Metcalf, of Oakland, California, introduced in the House "a bill to establish a national conservatory of music and art for the education of advanced pupils in music, . . . as well as in painting, drawing, and etching." The bill proposes a national conservatory, with four branches of equal standard, to be located in Washington, New York, Chicago, and San Francisco. Its control is to be entrusted to a general board of regents, consisting of the President of the United States, the President of the Senate, the Speaker of the House, the chairmen of the committees on education in the Senate and the House, and seven other citizens, to be appointed by the President. This board is to choose a general director, manage the conservatory in Washington, and help manage those in the other cities, which shall have their own regents, appointed by the President. The course of instruction is to be four years, or possibly five. The standard of admission is to be fixed by the regents, and pupils are to pay an entrance-fee of fifty dollars, but no other fees whatever. In support of this bill it is urged that there are now about 40,000 American students abroad studying art and music, at a cost of $25,000,000 a year; that many of them are exposed to hardships and unedifying associations in Europe, and get no good there; that our government, by having art and music properly taught at home, can keep most of these students at home, keeping their money in the country, and saving them from grave moral risks, and at the same time can put American art and American music in such a case that they can stand on their own legs and compete successfully with Europe. These arguments seem to be reasonably well founded. No one can doubt that among the American students of art and music abroad, a good many are getting no good, and might better be at home. Neither will it be questioned that it is desirable that music and art should be as well taught in various parts of this country as anywhere else in the world. But whether Congress should undertake the work, and, if it did undertake it, could prosecute it successfully, is another question. There is little by which the Congressional disposition towards music can be estimated, but judging from the tariff on works of art, its sentiment towards art is not very cordial. There are, of course, art schools and conservatories of music in our large cities already, but we have nothing to compare with the Beaux-Arts in Paris, and the Germans beat us in music. The plan which Mr. Metcalf's bill proposes would cost, to carry it out, perhaps a million dollars a year. Congress will undoubtedly invest many millions every year to much worse purpose.

The deserving effort to raise a fund of $100,000 with which to erect a memorial building to Henry Ward Beecher next to Plymouth Church, Brooklyn, and the discussion of the genius of Phillips Brooks, which has been revived by commemoration of the approaching tenth anniversary of his death —January 23—both have served to make thoughtful men consider the present status of the American pulpit. Great figures such as Beecher and Brooks were do not loom against the horizon. It is claimed that never was the average of attainment and character among the clergy so high as it now is, and the claim probably is valid. United States Senator Platt, of Connecticut, has recently argued in the Senate that the reason why there are not more giants there is because the average Senator is so large a person that to be a giant nowadays calls for the impossible. This claim also is urged with respect to the pulpit and its occupants. There are not a few men among the clergy who have what might be called a national reputation, and who, if they visit a large centre of population and their presence is duly advertised, may count on a crowded church. But Boston has no preacher to-day comparable to Brooks, nor Brooklyn one that equals Beecher or Storrs. With the death of Hugh Price Hughes and Joseph Parker, British Nonconformity is much bereft, but it still has Alexander Whyte, of Edinburgh, Alexander MacLaren, of Manchester, and R. J. Campbell, of Brighton, as stars of the first magnitude. But even so, Mr. Campbell himself is preaching mournfully on "The Poverty of Ability" in the English pulpit.

Three appropriations already made by the Carnegie Institution indicate what may be expected from that valuable addition to the educational and scientific apparatus of the country. Funds have been placed in the hands of Professor William O. Atwater, of Wesleyan, with which he is to continue the investigation of the conversion of food by the human body; Professor Chickering of the Astronomical Department of Harvard University has had $2500 set apart for use by his assistants in comparative investigation of the large accumulation of stellar photographs which are at Cambridge, having come in from the outlying stations of the observatory in South America and our own Southwest, as well as being nightly recorded in Cambridge; and now there comes word that $8000 has been set apart for use by experts of the Department of Agriculture for setting up a desert laboratory where the vegetable growths of the arid regions of our country can be studied in their native soil and normal environment.

Colonel T. W. Higginson has begun a course of lectures on American Literature, before Bostonians, under the auspices of that admirable institute named after Lowell—not the poet and essayist. As was becoming, he defined literature before proceeding to talk about it, as revealed in the writings of Americans. Literature, in his opinion, dates not from thought or feeling alone, and language is but its material. "Literature," he says, "goes beyond the word, and begins with 'the perfection and precision of the instantaneous line.' Its foundation is thought, but it demands the further impulse or instinct which leads men to give to thought continuity of form. You must get beyond the vivid phrase to the vivid line. When we reach this, literature is born." Virile and prolific Colonel Higginson shames many a younger man by his activity and productivity in these golden days of his life. To have brought forth biographies of Longfellow and Whittier during the past year and to have kept pace with his other customary literary output is a record which justifies his boast that he never was busier or happier.

William B. Leeds, whose portrait appears in our series to-day, typifies the West. Beginning work as a railroad man, he first learned his business thoroughly, then associated himself with other young, aggressive men from his own section in manufacturing pursuits, and finally, like the shoemaker, returned to his last, as the president and directing force of the Great Rock Island system of eight thousand miles. Incidentally, while doing all this—and it is a fact significantly illustrative of present possibilities—he acquired, within a space of ten years, a fortune supposed to be greater than that left to his children by Jay Gould. The difficulty of guessing at his future achievements is indicated by the fact that he is only forty-one years old.

The Official Anti-Trust Bills

THE communication addressed by Attorney-General Knox to the Judiciary Committees of the Senate and House of Representatives was supposed to indicate that the drastic method of dealing with the trusts proposed by Senator Hoar did not meet with the unqualified approval of the Administration. What we may reasonably regard as the official measures are the bills subsequently introduced in the House of Representatives by Mr. Jenkins, Chairman of the Judiciary Committee of that body, who avowed that the bills had been prepared by the Attorney-General. It is still uncertain whether these bills represent the minimum of anti-trust legislation which the Administration will accept. That the President has a definite minimum in mind may be inferred from his declaration that, unless effective steps toward the regulating and controlling of the trusts are taken by the Fifty-seventh Congress he will convoke the Fifty-eighth Congress in extra session soon after the 4th of March.

It behooves us to look somewhat carefully at the details of measures which purport to represent the purpose of the President and the professional acumen of Attorney-General Knox. One of these bills proposes to amend the Sherman law of 1890; the other, to create an anti-trust commission. The former would make it unlawful for any person to offer, grant, solicit, or accept any rebate, concession, or service in respect of the transportation of any property in inter-State or foreign commerce by any common carrier, by virtue of which concession such property should be transported at a less rate than that named in the tariffs published and filed by such carrier. A violation of this provision is to be punished by a fine of not less than five thousand dollars. Any joint stock company, corporation, or combination, however, which shall be convicted of violating this provision shall not only be subject to the fine mentioned, but shall be prohibited from transporting any article owned or produced by such company from the State within which the article is produced or manufactured. Cut off, also, from inter-State or foreign commerce will be any joint stock company, corporation, or combination which shall offer or give any special prices, inducements, or advantages for the sale of articles owned, produced, or controlled by it to purchasers in any particular locality in order to restrict or destroy competition in the sale of any such articles within that locality. The enforcement of the proposed law is intrusted to the Circuit Courts of the United States and to the United States District Attorneys, who will act under the direction of the Attorney-General. We observe, lastly, that any person who shall be injured in his business or property by any other person or persons, by reason of anything forbidden or declared unlawful by the proposed law, may sue therefor in any United States Circuit Court in the district wherein the defendant or defendants reside or are found, without respect to the amount in controversy, and shall recover threefold the damages by him sustained, together with the costs of suit and an attorney's fee.

Now this measure drawn by Attorney-General Knox differs from the bill introduced in the Senate by Senator Hoar in that a violation of its provisions is punishable by a fine, instead of by a fine or imprisonment or both. A fine of five thousand dollars would scarcely act as a deterrent upon powerful corporations engaged in inter-State or foreign commerce. The lenity of the Attorney-General, however, is more apparent than real. A fine is not the only remedy which he provides for a violation of the proposed law. The third section of his bill gives the United States Circuit Courts the power to issue, upon petition, and at any time before final decree, a restraining order or prohibition, and the failure to obey such order on the part of officers of a defendant corporation would be punishable by imprisonment for contempt of court. That is to say, if for any purpose any corporation give a preference or discrimination, its whole inter-State or foreign commerce may be arrested in a summary proceeding.

We pass to the Attorney-General's bill creating a commission to aid in carrying out the provisions of the Sherman Act, as amended by the measure just mentioned. It would be the duty of this commission, to be appointed by the President, and to be made up of representatives of both political parties, to investigate the organization and conduct of all stock companies, corporations, and combinations engaged in inter-State or foreign commerce, and to lay the information thus obtained before the President on the first day of October in each year, or oftener, if he shall require it. It shall also be the duty of the commission, whenever requested by the Attorney-General of the United States, to investigate the acts and methods of any particular corporation or combination, and to report to him the result. The commission may invoke the aid of any United States court for the purpose of compelling attendance and testimony of witnesses, and the production of all books, papers, contracts, agreements, and documents relating to any matter under investigation. No person shall be excused from giving testimony on the plea that such testimony may tend to criminate him, or subject him to a penalty or forfeiture, but no person shall be prosecuted or subjected to any penalty on account of any transaction concerning which he may testify or produce evidence. Any person, however, who shall make a false or fraudulent statement shall be deemed guilty of perjury, and subject to the penalties provided for that crime by the revised statutes of the United States. Moreover, any person who shall neglect to attend and testify, or to produce books and documents that are in his custody or control, shall upon conviction be punished by a fine of not less than five hundred, nor more than five thousand, dollars, and by imprisonment for not more than one year.

It is obvious that this second measure, which is ostensibly intended to secure publicity, would clothe the commission with intolerable powers of harassment and oppression, powers which easily might be so used as to drive out of business any corporation which happened to be obnoxious to a majority of the commissioners. As for the measure first described above, which, by way of punishment for a single violation of its provision concerning rebates or preferences, would annihilate the inter-State and foreign commerce of a corporation, we submit that the punishment would be out of all proportion to the offence, and, therefore, would fall under the prohibition set forth in the Eighth Amendment of the Federal Constitution, which enacts that no excessive fines shall be imposed, nor shall cruel and unusual punishments be inflicted. It is also questionable whether the second bill, requiring corporations to produce all contracts and documents relating to their private business, does not violate the Fourth Amendment of the Federal Constitution, which declares the right of the people to be secure in their persons, houses, and effects against unreasonable searches and seizures.

We say of these bills, as we said of the Hoar bill, that they ought not to be passed, and we do not believe that they have any chance of becoming laws in their present form. The utmost that the Fifty-seventh Congress, or, for that matter, the Fifty-eighth Congress, is likely to do is to pass some measure which shall be calculated to assure a reasonable amount of publicity for the proceedings of corporations, but which shall stop short of the vexatious, inquisitorial, and business-destroying processes advocated by the Attorney-General.

England's Interest in the Monroe Doctrine

ADMIRAL LORD CHARLES BERESFORD is credited with expressing an opinion which, we think, will be ultimately shared by all of his countrymen who are possessed of common sense and foresight. He averred that it would be to England's advantage to come right out and say not only, "We support the Monroe doctrine," but also, "We are willing to fight for it." It will be easy to show that such a position would be identical with that assumed by England eighty years ago; that it would greatly strengthen her hold upon her dominions in the New World; and that it would permanently assure to her an open market in Latin America. We have formerly pointed out that, if the originator of a thing is entitled to give his name to it, the Monroe doctrine might, with a fair show of justice, be called the Canning doctrine. It was George Canning who, in August, 1823, proposed to Richard Rush, the American minister in London, concerted action for the purpose of establishing the principle that Spain's former colonies in the Western Hemisphere should not be exposed to conquest at the hands of any European power. It was not until the 2d of December in the same year that President Monroe accepted and formulated the same principle in his annual message. We add that a declaration emanating from a country relatively so weak as was our republic at that time would have exerted but little restraining influence on the great powers represented in the Congress of Verona, had not a similar prohibition gone forth from the British Foreign Office. Beyond a doubt the Spanish-American commonwealths are at least as much indebted to the United Kingdom as they are to the United States for the abandonment of the projected attempt to deprive them of their liberties.

The course pursued by Canning when, as he said, he called a New World into existence to balance the Old, has long and justly been regarded as one of the most splendid triumphs of British statesmanship. Why, then, should not Great Britain announce to-day her adhesion to a doctrine in the original propounding of which she bore a conspicuous, if not a leading, part. Earth-hunger and commercial greed now constitute dangers no less formidable to the independence of weak states than those which were threatened by the absolutist programme in the first quarter of the last century. We have seen a temporary coalition of Germany, Russia, and France oust Japan from the Liau-tung peninsula, and proceed to reward themselves by mutilations of China. Who can say that a like combination may not undertake a partition of South and Central America when the completion of an isthmian canal shall once more fix the eyes of commercial nations on the Caribbean Sea? In the twentieth century we have as much cause to fear a league for territorial acquisition and for spheres of influence as in the nineteenth century there was reason to dread the Holy Alliance.

Now let us see what Great Britain has to gain by a formal adhesion to the Monroe doctrine; that is to say, by asserting that existing American commonwealths must not be regarded as subjects of conquest or

colonization on the part of any European power, and that, while the existing possessions of European powers in the New World ought not to be disturbed, these possessions should not be extended. From the moment of the adoption of such a position, the United Kingdom and the United States would be inseparably bound together by a community of interests and by a common policy, so far as the Western Hemisphere should be concerned; no definite alliance would be needed to insure their co-operation. From that moment British North America, the prospective value of which is incalculable, would be secured against aggression on the part of the only power that could conquer it, to wit, the United States. The British West Indies and the British coigns of vantage in Central and South America would be protected not only by British, but also by American, war-ships, since it would be to the obvious interest of the twin guarantors of the Monroe doctrine to defend each other. Again, no far-sighted British statesman can desire to see either Germany or Russia acquire points of strategic value in or near the Caribbean. The future, however, may hold contingencies with which Great Britain, single-handed, might hesitate to grapple. Suppose that Bismarck had looked forward in 1871 to the colonial expansion of Germany, and had demanded, as one of the conditions of the Peace of Frankfort, the cession of the French West Indies and of French Guiana. Would Great Britain have deemed it expedient to prohibit such a cession? We think not. Neither would the United States have been likely to prohibit it, because at that time the commercial and naval power of Germany was very much less redoubtable than that of France. Thus we see that, but for Bismarck's lack of prevision, his country might have acquired several footholds in the New World.

Now suppose that Germany, by conquest or by voluntary fusion, should acquire Holland; would it not be equally prejudicial to British and to American interests that the Dutch island of Curaçoa should pass into her possession? Suppose that Germany should conquer Denmark; could we or Englishmen survey with equanimity her acquisition of the Danish West Indies? Suppose that Russia should conquer Sweden; how should we like to see her assume control of the Swedish island of St. Bartholomew? It is evident that the intrusion of either Russia or Germany into the New World would seem to England, as well as to the United States, to be pregnant with unwelcome complications. No such intrusion would be even contemplated if it were known that Great Britain and the United States had agreed that the French, Danish, Dutch, and Swedish possessions in the New World should suffer no change of ownership, unless they passed under the sovereignty of the United States.

The formal adoption of the Monroe doctrine by England would mean precisely what George Canning intended it to mean, namely, that all the commercial advantages derivable by foreign purveyors and consumers from trade with Latin-American republics would accrue to the guarantors of their liberties. It was not expected by Canning, and it would not be expected now, that those republics should give any tariff preference to their protectors; but gratitude and sympathy might be counted on to prevent any discrimination against them. All that Englishmen and Americans desire is a fair field for commercial intercourse in Latin America. Such a field neither we nor Englishmen would ever have in any part of the New World which had been transformed into a German or Russian colony. What England has at stake, therefore, in the New World is precisely what she has at stake in China, to wit, the maintenance of an open door. The door may be kept open forever if, by proclaiming her adhesion to the Monroe doctrine, England shall become a joint guarantor with the United States of the immunity of the New World from foreign aggression. Nor is it only freedom of access to Latin-American markets that Great Britain would secure by the assumption of such a position. She is almost as deeply interested as is our own country in the constructing and safeguarding of an isthmian canal. It is, therefore, a matter of nearly as much concern to Englishmen as it is to ourselves that neither Germany nor Russia shall acquire a coaling station near either of the termini of the projected waterway. We have indicated the plausible ways in which coaling stations might be acquired, and we have shown that no attempt would be made to acquire them if England should signify her acceptance of the Monroe doctrine.

The President and Federal Appointments in the South

In every section of the republic sensible persons will regard with disgust and abhorrence the declaration made by the New Orleans *States* that Mr. Roosevelt's negro appointees in the South will be killed or run out of the country. If this newspaper could be looked upon as representative of Democratic opinion in the Southern States, we might as well abandon the notion that Southern Democrats can resume the leadership of their party. We are unwilling to believe that the New Orleans *States* represents anybody except the editor. Northern Democrats will never countenance the violent expulsion of Federal appointees from office, whether their color be white or black. The sooner that fact is understood the better. For a Southern newspaper to preach such monstrous doctrines as this at a time when upright and thoughtful men are seriously thinking of committing the guidance of the nation to the Democracy is at once a crime and a blunder. Mr. Roosevelt may make mistakes in his appointments to Federal offices in the South; but for the correction of those mistakes we look exclusively to the pressure of enlightened public opinion. The last thing that a sane and intelligent man like Mr. Roosevelt can desire is a revival of race conflict in the South. It will be no fault of his, but the fault of rancorous and reckless men like the editor of the New Orleans *States*, if we are once more confronted with such an atrocious state of things.

The leaders of the Democratic party in the Southern States now have an opportunity—the first since the close of the civil war—of convincing their Democratic brethren at the North that they deserve to be intrusted with the function of shaping platforms and designating candidates in a Presidential year. If those who wish them ill had intended to entrap them they could not have given them worse counsel than that which is offered by the New Orleans *States*. If astute Republicans desired to disqualify Southern Democrats for a reassertion of their former influence in national affairs, they could hit upon no better plan than to provoke them to acts of violence against negro appointees to office. Do our Southern brethren forget that they profess not to discriminate against the negro as such in those new State Constitutions upon the validity of which the United States Supreme Court has yet to pass? And will they now give the lie to those professions by virtually asserting that negroes have no right to hold office even under the Federal government? Having undertaken to debar them from office in many a State, will they now presume to debar them from Federal office also? Addressed to sane and far-sighted Southerners, such a question should answer itself.

We feel the more strongly on the subject of this ill-timed appeal to violence, because we believe that public opinion would have convinced Mr. Roosevelt that he has been ill-advised in one or two of his recent acts connected with the tenure of office by negroes in the Southern States. So far as the case of Mrs. Cox, the colored postmistress at Indianola, Mississippi, is concerned, we have already pointed out that, inasmuch as she has resigned, and has refused, under any circumstances, to recall her resignation, the President seems to have no status for interference in the premises, beyond instructing the United States District Attorney to inquire whether Mrs. Cox believes herself to have suffered any wrong remediable by a Federal statute. The President has no right, in our opinion, to suspend the service of the United States mails to Indianola, both because we know of no statute that invests him with such discriminating power, and because he would obviously be punishing the innocent as well as the guilty. It is a barbarous jurisprudence that makes a whole village answerable for the crime of one of its inhabitants. We add, with regard to the designation of Mr. Crum for the post of Collector of the Port at Charleston, that the appointment seems to us unreasonable. We think that Mr. Roosevelt would find it difficult to show that there are any colored men among the importers of foreign products into Charleston, or among the wholesale dealers in such products at that place. If colored men have anything to do with such products, it must be as retailers in a very small way of business. Under the circumstances, it would seem expedient to choose for collector some one who would be acceptable to those members of the community with whom, principally or solely, he would be brought in contact. It is inexpedient to select for the post a man known to be obnoxious to all of the business men, but for whose capital and industry there would be nothing for a collector to do. We do not understand Mr. Roosevelt to assert that there are no white men in Charleston qualified, in respect of experience and character, to discharge the duties of Collector of the Port. He simply asserts that Mr. Crum is equally qualified from those points of view, and should not be the victim of discrimination on the score of color. It may be true that Mr. Booker Washington is as well qualified, on the score of ability and character, as are most white citizens to represent the United States at the Court of St. James. Would Mr. Roosevelt feel himself justified in appointing Mr. Booker Washington to that post? Would he not hold that the susceptibilities and prejudices, whether well or ill founded, of the British court and of the British nation ought to be considered? But are not the susceptibilities of the importers of Charleston deserving of as much consideration as are those of foreigners?

It takes two to make a quarrel. If the leading Democrats of the South keep their tempers and evince the wisdom for which their forefathers were distinguished, they will silence the editor of the New Orleans *States* and other ridiculous persons who talk about killing negro appointees to Federal office or running them out of town. That sort of talk is only fit for idiots. Meanwhile the outcome of a good-tempered and judicious attitude on their part will probably be the recognition by Mr. Roosevelt that he and his advisers are not infallible, but in the selection of appointees to Federal offices in the South may have made one or two mistakes which ought to be corrected.

The Russians in Manchuria

High affairs of state rarely have a genuinely humorous coloring; nor do we habitually turn to world-politics for amusement and entertainment. Yet we may find abundance of both in the story of the recent "evacuation" of Manchuria by the Russian armies, and the manner in which that evacuation has really been carried out. That solemn withdrawal, so often foretold, so often denied, has at last, we are told, been consummated; and we may add that the manner of this consummation is a lesson in statecraft for all time. It will be remembered that the Russian convention with China set dates, many months ago, for the withdrawal of the Tsar's troops successively from the three Manchurian provinces; the first date has just passed, and the second and third follow it at intervals of six and twelve months. After these dates were announced, the world was suddenly informed of the signature of the Anglo-Japanese treaty, avowedly directed against Russia's growing influence in China generally, and more particularly in Manchuria. Immediately on the heels of the treaty came a Japanese arrangement with Korea, and a resurgence of Japanese influence in the Hermit Kingdom. Japan's advance in Korea was not only a menace to Russia, but also a strategic advantage; for the campaign of 1895 had made Korea and the Chinese contiguous territory thoroughly familiar to Japan's generals; and a rapid advance from the Korean frontier on Mukden might easily cut Russia's line of communication, and isolate Dalny, Port Arthur, and the Russian fleet from their bases of supplies in Siberia and Vladivostok. We expressed at the time the opinion that Russia could not afford to overlook this aggressive step by Japan, and that the evacuation of Manchuria would most likely be deferred indefinitely as a result. When, notwithstanding, it was announced a few weeks later that Russia was preparing to carry out the original plan of evacuation on the day fixed, and, finally, when the evacuation itself was announced, we very decidedly expressed the view that more was meant than met the ear; that Russia had in all probability gained so firm a hold, secured so strong a position, that she had nothing to fear from Japan, and was, consequently, able to carry out her policy without endangering her influence in Manchuria and her hold on the railroad to Port Arthur. Facts are now to hand from the Far East which show that we were perfectly right; that Russia, while carrying out her treaty engagements with formal and scrupulous exactness, has really been laughing in her sleeve at the Anglo-Japanese treaty, and, to speak idiomatically, has simply walked all around British, Japanese, and Teutonic diplomacy. The ascendent genius of the Slav was never better shown than in this latest Russian achievement.

To begin with, it is quite certain that Russia, during her five years of occupancy, has done wonders for the commercial and civil development of Manchuria. We are accustomed to speak as if the Anglo-Saxon alone had the *gift* of successfully colonizing and assimilating new territories, but we have only to become more closely acquainted with the work of Russia in Merv, or Samarkand, or Tashkent, or in Eastern or Western Siberia, to see that the Slav has been everywhere extremely successful, and has everywhere been able to assimilate the moral life and feeling of the earlier races with her own in a way the Anglo-Saxon has so far never mastered. In Manchuria, the constructive genius of Russia is apparent on all hands. She has obtained from the suzerain government of China, for what consideration or by what inducements we are not told, a whole series of "conceded areas" along the line of the railroad, averaging several square miles in extent, and on these are rapidly growing Russian colonies, with houses, factories, fields, with thousands of Russian men, women, and children growing every day more at home on what is technically, as well as really, Russian soil.

This matter of the "conceded areas" is really the key to the political and military situation. As soon as we grasp its significance, we see how the "evacuation of Manchuria" was not only possible, but easy,—and we begin to smile at the grave simplicity of the thing. The string of concessions along the railroad line—the chain of colonial areas, each several square miles in extent—having become Russian territory, are no longer a part of Manchuria in the strict sense of the term. Therefore such Russian troops as hitherto occupied Manchurian territory have simply to walk over the line into the nearest conceded area, and, lo! the "evacuation" is complete! As Carlyle says, there is much, nay, everything, in names. To illustrate the value of names: since the evacuation of the southern province was completed, and the railroad was turned over to China, there are no longer any "railroad guards" in Manchuria. But there are 30,000 or more "frontier guards,"—the same men with a new title. Theoretically, all the "railroad guards" have been withdrawn. So with the rest of the "evacuation." The Russian troops in the country west of the Liau River have literally fulfilled the terms of the convention—by moving one march eastward to the Russian "conceded area" at Mukden, where they remain as a permanent garrison. The Russian troops at Niu-chwang had only to make one hour's march up stream to the Russian concession at Tashi-chiao to their strongly built stone barracks, and their part of the "evacuation of Manchuria" was ended. The Russian troops within the walled city of Mukden—the ancient and sacred city of the Manchus—had only to march through the gate to "Russian territory," an hour's walk distant, to their permanent quarters. The evacuation of Liao-yang meant the removal of Russian troops within the wall to the railway concession outside the wall, with its forts, barracks, nearly two hundred brick houses, engine-sheds, and hospital. The last two posts will each have a garrison of about five thousand men. So much for the southern province of Manchuria.

The "evacuation" of the central province, for which April is the date fixed, will be carried out in exactly the same way,—with the most scrupulous adherence to the letter of the convention. Thus in Kirin, the capital of the province, with nearly half a million inhabitants, the "evacuation" will consist in the removal of the Russian troops one hour's march to a "railway concession" on the branch line to Kwang-chengtsze. In like manner, the Russian troops in Tsitsihar, the capital of the third and most northerly province, will do their part of the good work by moving to a "conceded area" only sixteen miles away. The frontier city of Ninguta is in much the same position; the troops will have to withdraw as much as a dozen miles.

It must be understood that all these "conceded areas," with their permanent barracks and forts and strong Russian garrisons, are joined to one another, to Asian Russia, and to the open sea by the railroad; so that Russia's hold on Manchuria is about as perfect as anything can be in this vale of tears. It is admitted by English critics, who cannot be suspected of undue partiality, that the whole country is growing rich under Russian tutelage; that the Russian troops are now treating the natives with marked humanity; and that there is a growing spirit of friendliness between the Russian officers and the Chinese officials and merchants, in strong contrast to the thinly masked hostility and mutual suspicion at Hong-kong and Singapore. The Chinese are said, by a recent English visitor, to be experiencing a degree of material prosperity the like of which they have never known.

Finally, the end of this chain of Russian conceded areas is guarded by the almost impregnable fortress of Port Arthur, with its heavy guns, its quick-firing batteries, its fleet of six battle-ships, four armored cruisers, a dozen gunboats, and a number of torpedo-boats. Taking into consideration that the Russians are only Slavs, and not highly gifted Anglo-Saxons, they seem to have managed the "evacuation" of Manchuria fairly well.

The Real Wagner

It is doubtful if any figure in the history of musical art has so continually dwelt in the shadow of misconception and misrepresentation as the poet-composer who imagined a "Ring des Nibelungen," a "Tristan und Isolde," and a "Parsifal." Partly through an unaccountable popular obtuseness, and largely through his own theoretical professions, he has been blindly accepted at his own fantastic valuation—as a dramatist who was only incidentally a musician, as an admirable poet, as a master of subtle and profound philosophies,—as anything, in short, save that which he pre-eminently and paramountly was: a transcendent musician, an incomparable musical humanist, an authentic and inspired, but unconscious, mystic.

We are moved to these meditations by the recent notable performances at the Metropolitan Opera House of "Der Ring des Nibelungen," and of that work of Wagner's which, one would imagine, should most unmistakably reveal his essential greatness—that consummate and splendid flower of his genius, "Tristan und Isolde." We cannot easily conceive it possible to yield oneself to the sway of this magnificent tone-poem—this music which is truly, like the poetry of Shelley, "a singing and soaring flame"—and not realize, with the utmost conviction, that here is no mere *dramma per musica*, no stage play with an accessory musical accompaniment, but rather a lyric rhapsody with a wholly incidental text—a tone-poetry so incalculable in its beauty, so exhaustive in its emotional range, so surcharged with spiritual ecstasy, that one knows not where to find its parallel. If ever music achieved supreme magic of utterance, an ultimate eloquence and sublimation, it is in this immortal and most marvellous song of songs. And yet there are those who would have us believe, as Wagner himself believed, that his music is to be rightly regarded only as the handmaid of his dramatic invention—a kind of modern variant, as we have been so elaborately instructed, of the exegetical chorus of the Greek plays. To a certain superficial extent it is, of course, that; but its ultimate excellence, its ultimate and inestimable value inheres, not—as Wagner fancied, as so many of his disciples have fancied—in its dramatic appositeness, but in its miraculous range and eloquence as an instrument of abstract emotional utterance. For, in his endeavor vividly to heighten and intensify every moment of his dramatic psychologizing, he voiced (almost, one is tempted to say, accidentally), with incredible beauty and poignancy, every elemental mood of the human soul,—every note of passion, of desire, of grief, of terror, of pity, of delight, of aspiration. His range is universal: "his lyre has all the chords."

An English Election

By Sydney Brooks

LONDON, *January 5, 1903.*

THERE is an election going on in East Cambridgeshire, and I would give a good deal to know Mr. Croker's private opinion of the way it is being run. Happily, one need not travel down to Wantage to find out. No one who turns an American eye on an English election can wonder that from time to time Mr. Croker finds England intolerable. Imagine Paderewski living within earshot of the music-room in a "young ladies' seminary," and you may faintly conceive Mr. Croker's emotions when from the security of his country seat in Berkshire he watches Englishmen bungling along the road he himself has learned to tread with such colossal assurance. New-Yorkers are quite wrong in thinking that it is a mere tender regard for their interests that convoys Mr. Croker every odd year or so through the Narrows. The truth is, he is driven from England by the respect he owes to himself and his art. All his sensibilities rise in revolt when he sees what it is that Englishmen conceive by an electoral campaign. The contempt of the professional for the raw bungling of amateurs sends him hurrying from the spectacle in disgust. To a man who can carry conventions, and dictate plattorms, and coolly command that all checks shall be made payable to his order, and direct voters and heelers, not in twos or threes, but in whole battalions, what final pleasure can there be in a country where canvassing is done by volunteers, most of them women, where primaries and machines are not, and where each candidate makes his own little platform and runs on it to suit *himself*? How can a man of Mr. Croker's opportunities be really at ease in a land where any ten voters in a constituency can nominate any candidate they please, where money spent "on account of bands of music, torches, flags, banners, cockades, ribbons, or other marks of distinction" (46 and 47 Vict.: c. 51, s. 16) makes an election void, and where the electorate has a thoroughly impertinent habit of taking matters into his own hands, and even insists on knowing in detail just what measures are favored and what opposed by the man who is seeking its suffrages? Even with his fat smiling pasture and farm lands, his quiet country mansion, his stables, and his racing, Mr. Croker is far more miserable than one would think. A single bye-election is enough to upset him; two in quick succession utterly prostrate him; and a general election sends him flying to New York to recover his self-respect. Mr. Croker's health is always in inverse proportion to the amount of political activity that is going on around his English retreat.

This bye-election in East Cambridgeshire was brought about by the sudden death three weeks ago of Colonel Harry McCalmont, the sitting member. Mr. McCalmont inherited an enormous fortune from his uncles, who built it up partly in the West-Indian trade and partly by shrewd dealings in American railroads. He was a first-class sportsman, won the Derby in 1893, owned one of the finest game-preserves in the country, was a member of both the Jockey Club and the Royal Yacht Squadron, a close friend of the King, who frequently shot over his coverts, served eight years in the Guards, and snaffled a C. B. from the Boer war. Americans may remember that just before the Spanish war he sold his yacht, the *Giralda*, to the Spanish government. It was intended to use her as a cruiser, but for some reason or other she never left home waters. He came in for some severe criticism from the press for running so publicly counter to the general feeling of the country, but nothing could do much damage to his popularity in the East Cambridgeshire division. He was a prince of good fellows, lived in the constituency, was generous to a fault with his money, and had, besides, the imperishable halo of a Derby-winner. The chief town in the constituency is Newmarket, and Newmarket, as every one knows, is the head racing centre of all England. No one who is not a sportsman need trouble himself with East Cambridgeshire. It is a turf constituency through and through, and would never dream of intrusting its political fortunes to a man who was not a member of the Jockey Club. Colonel McCalmont filled the bill exactly. At the election of 1900 he was proposed, nominated, and returned at the head of the poll during his absence at the front and without holding a single communication with his constituents except to cable his acceptance of the nomination from Pretoria. It was at that election that Loates, the well-known jockey, spoilt his ballot paper by writing across it, "I votes for Mr. McCalmont and no mistake." For the rest, the constituency covers a wide area, some thirty miles long by twenty broad. It is dotted with small villages and market towns, and makes up on the turf what it loses on agriculture, and altogether is a very charming specimen of rural England. About 9000 voters are on the register.

The candidates this time are Mr. C. D. Rose, who is standing as a Liberal-Imperialist—a "Rosebery man," as he would be called in America—and Mr. Leonard Brassey, who, like the late member, is a Conservative. Both are wealthy men, both have country places in the neighborhood of Newmarket, both are members of the Jockey Club, both ride to hounds, patronize coursing, and know more than a little of farming. Mr. Rose is a well-known and popular figure on the turf, and races horses of his own breeding. Four of his sons went through the war in South Africa, and two of them fell there. Moreover, he is a really keen Liberal and an effective speaker. In this he has the advantage of his opponent. Mr. Brassey, who is barely thirty-two, knows as little of politics as it is possible for any intelligent man to do who goes through the world with his ears *open* and catches something of what is being said all round him. He received the invitation to contest the seat, as he ingenuously admitted, while smoking a cigar after a day with the hounds. He thought it a nice safe Tory seat that could be won and kept without much trouble. Instead, he finds himself expected to hold forth on the Education Bill, the alliance with Germany, the Sugar Convention, and all sorts of absurd and bothersome topics. Frankly, his handling of these questions has proved a disappointment, and I notice the local papers that support him are now laying stress on his "handsome and most English-looking face," and proving that a man who stands six feet two in his socks and is as straight as an arrow can well dispense with such a vulgar and entirely commonplace attribute as knowledge of the issues that are before the country. Mr. Brassey may not be a great politician, but he is masterly on horseback or on the box of his four-in-hand; and the sight of him at the covert-side, or judging a coursing-match over Newmarket Heath, or galloping his four-in-hand down the village street with horns a-tooting and banners flying, is a powerful electioneering argument. Mr. Rose does most of his canvassing on a motor-car, and should by rights have been had up for furious driving at least twice a day for the past fortnight. I spent a day with each candidate, and toured the constituency with them. Methods are pretty much the same on both sides. Each has his country house stocked full of friendly M. P.'s who have come down to help; each visits from ten to fifteen villages a day and addresses as many meetings; each has a paid agent, one or two paid sub-agents, and a whole army of voluntary workers, men and women, boys and girls, who cover every inch of the ground on foot or wheel, in carriages or traps, with canvassing cards, leaflets, photographs, and such native powers of persuasion as Providence has given them; and each has still an hour or so to spare for receiving deputations, consulting prominent supporters, and entertaining his guests. Mr. Rose has one of the few covered tennis-courts in the kingdom—not lawn-tennis, but the real thing—and finds time for a daily game; and if there is a meet of fox-hounds or harriers anywhere in the neighborhood, Mr. Brassey will somehow contrive to make it fit in with his day's programme. It is all very pleasant and good-humored. There are no parades, nor torch-light processions, nor fireworks, nor bands, nor campaign ditties, nor street-corner meetings, nor "wash" bets, nor "straw" votes, nor the maledictions of rival bosses, nor hourly newspaper interviews. The two candidates are near neighbors and old friends, and whenever they meet in country lane or village street each descends from his motor or four-in-hand for a five minutes' laughing chat. Their wives invariably accompany them, and Mrs. Brassey, who is a daughter of the Earl of March, is a past mistress of the arts whereby the wives of rural butchers and farm hands are won over to guide their lords to the true political faith. For one dazzling fortnight the East Cambridgeshire laborer finds the Squire and the Squirearchy and all its women folk the humblest of suppliants for his favors; and the way he is wheedled and coaxed and harangued and argued with and deluged with leaflets by his fair inquisitors would make an American woman gasp and stare. And I am not sure that even Mr. Croker might not learn something from it.

But beneath all the seeming easy-goingness there is real hard work and keen rivalry. You would not doubt it after a day with either candidate. Mr. Rose thinks nothing of taking in six villages and addressing a meeting in each as an after-dinner pastime. The meetings are not large, but they are full of incident. Their size is limited to the capacity of the local schoolhouse or the upper room of the village inn, and an audience of two or three hundred is thought a good one. But the speaker does not have things all his own way. It is an unwritten law in England that he is liable to contradiction. Any man in the audience may get up and dispute any statement he pleases, and the orator is not allowed to disregard the interruption, but has to stop and argue the matter out with his adversary. The heckler has a recognized standing, and all Englishmen are hecklers. There is nothing they like more than badgering a speaker. Not infrequently paper and pencils are handed round at the end of the candidate's speech, and the voters present are invited to write down any further points on which they would like to hear his opinion. The invitation is very freely accepted, and while I was in East Cambridgeshire I attended three meetings that wound up in a series of joint debates between the candidate and some pertinacious hecklers. These contests are followed by the audience with supreme zest and good-humor, but a man needs all his wits to emerge from them with credit. There is another custom which makes for liveliness. An English audience will not tolerate a bore. Directly a speaker grows tiresome there come shouts of "Toime! Toime!" If a man can't hit the nail on the head at once he is not given a second chance.

The Book of Months

By E. F. Benson

APRIL

I HAVE been here nearly a month without spending a single night away. That in itself is a sign of improvement, for I suppose—to my shame I own it!—that it must be years since I have spent thirty-consecutive nights in the same lodgings. And what, I believe, is a greater sign of improvement is that I have not wanted to go away, and I do not want to go away. I like these level, uneventful days, these mornings of work, followed by a few hours of out-of-doors, and in the evening, "the face of a friend," in this house or another. How dull I should have thought it, not long ago!—how antipodal to dull I find it!

I said uneventful just now—that was a mistake. I have been through fierce trials, in the shape of a cook who could not only not cook decently, but could not cook at all. In any case, she didn't, and I have eaten raw flesh on the altar of rusticity. Then there was a personage who represented herself as a charwoman. Though I cannot say she was a house-breaker, she was certainly nearer that than anything else; though she did not actually break the house, she broke everything inside of it. She began "cleaning," so she called it, before it was yet day, and till nightfall the house was resonant with fracture. When there was nothing left to break she upset her wash-pail over anything that came handy—brocade, for choice. She upset also permanganate of potash, with which I was staining a floor, over a green carpet, and one evening I found her eating asparagus (my asparagus, too) in the scullery. Thereupon I said "board wages," and it is my belief that she simply added board wages to her ordinary diet, which she ate at my expense. Otherwise there is no possible way of accounting for the fact that a sirloin of beef which had come in in the morning— Enough. She is gone.

Stevenson recommends weeding and cocoa-seed-planting as a suitable pursuit for any one who thinks he can make his living out of writing "measly yarns." But now I have one advantage over that divine author: I know a far better employment. It is to paint floors with permanganate of potash (otherwise known as Condy's fluid), but you can get much more of it for your money, though it is cheap, anyhow, if you buy it in the raw. For a shilling you get enough to stain all the floors in your house (unless you live in an exceptionally large one) the most beautiful brown. The very process reminds one of the scene of the powder-mixing in *Jekyll and Hyde*. It is laid on dark purple: before your eyes it changes to a livid angry green, and while yet it is wet it becomes a dark brown. You lay it on with a large pastebrush, and feel you are saving money. Incidentally, you get a quantity onto your hands, and it is apparently indelible. Then you rub it with beeswax, and your deal floor becomes primitively ancestral. A few Persian rugs then bring you back from a villa to the Conqueror. But even before I stained the floors I bought seeds and planted sweet-peas and nasturtiums broadcast, also (these in seedlings) jackmanni and tropæolum and tobacco-plant, and two crimson ramblers. Then, as a day to be marked with red in the annals of scarification, I took a trowel and a pocket-knife and went into the highways and hedges to cut standards for rose-trees. But I took no gloves. *Hinc illæ lacrimæ*. Anyhow, I cut seven standards.

This is the way *not* to do it. I started cheerfully along an unfrequented lane. Larks hovered trilling, spring was bursting in numberless buds, and the green mist of leaves hung round the hedgerows. Before long I saw in the hedge by which I went a suitable standard. It was rather inaccessible, but the lust of the gardener burned in me, and I took a sort of header into the hedge. A short spray of the coveted standard retained my cap, another took one arm in keeping, a third gently fixed itself to my left hand. That had to be very carefully disengaged, since the thorns were encompassing it, and in disengaging it I dropped the trowel. An incautious recovery of this trowel, drew the first blood. Then I began.

It is necessary in cutting a standard to get a piece of real root. This particular standard, however, seemed to have no particular root. It went on and on below ground without object, as far as I could judge; infirm of purpose it could not begin. When it did begin it was already mixed up with a bramble, the thorns of which were set on the parent stem on a totally different principle, and I did not want the bramble. But with a totally undeserved popularity on my part, the bramble wanted me. It got me, in pieces which I hope were of no use to it, and I began to see that under certain circumstances, and to a certain extent, as Mr. Gladstone might have said, gloves were, if not necessary to human life, at any rate a protective agent against possibly fatal hemorrhages. Just then the root began.

I destroyed the bramble, root and branch. I destroyed a hazel (branch), and I destroyed the standard (root). That was all at present.

Clearly this would not do. I was as far from standards as ever, but I was bleeding like a pig. So I went home, got some gloves, and became successful. But to be successful in a soul of adventure is to become dull, and with a view to avoiding this as much as is possible short of writing at all, I will merely say that I cut seven standards on that divine afternoon, and—but that I cannot sing—went home singing.

The cat next door, so it appeared, had observed the planting of the jackmanni with a disapproving eye, and even as I went into the garden with my seven standards (like a Roman emperor) I saw a stealthy form moving slowly away from the corner (invisible at the window) where I had put one of them. Now I know something about cats, though nothing, it appears, about standards, and without the least hurry I walked into the garden and said, "Poor puss," and saw out of the corner of my eye (I dare not look honestly now for fear poor puss should see) that my jackmanni was entirely disinterred, and a flurry of pebbly dry earth lay near it. There were therefore two courses open to me,—either the direct, which lay in taking the cat, which (with the shallow diplomacy of its species) had advanced towards me, straight to the disinterred jackmanni, and there slapping it, or the subtle course. I chose the subtle. The cat was a knave; I knew that perfectly well. I chose to be the knave set to catch it. So I said "Poor puss" again, and went to the uprooted jackmanni, and planted it again in the sight of poor puss. Then I went slowly in-doors, a very Bismarck. Once arrived inside I fled to the lumber-room, and with feverish hands unearthed a large garden squirt, and filling it with cold water (I wish it had been iced), fled to what we long called the wing of the house (it consists merely of a back room) which commands, strategically speaking, the jackmanni. The window was open, and with great caution I advanced to it and looked out. Already once more that very stupid knave of a cat was busy in the bed. I took careful aim, and the cold water drenched the knave. I will teach it, at least I think I have taught it, that I do not plant jackmanni merely to give it a few moments' senseless amusement. Besides, to-morrow I shall have a fox-terrier. So the garden squirt was the kindest sort of cruelty.

I am afraid that in talking thus vaguely of "the house" and "the garden," the reader may have formed a totally erroneous impression of scale, and I must inform him at once that "the house" is the kind of house which is called "The Cedars," because apparently it has one withered furze-bush in the garden. It is semidetached, stands on the outskirts of the town, and is of an external appearance which is better forgotten. Inside, however, the rooms are good, high, and airy, and, anyhow, it suits me. There is a small strip of garden in front, in which at present I take no interest, and a space of garden behind measuring some sixty or seventy feet by thirty, encompassed by a walk of old and very large bricks. A strip of border sown from end to end with sweet-peas runs up one side. At the far end is a small raised terrace of grass, on which grow an apple-tree and a plum-tree by which I have planted the crimson ramblers. The seven standards to be bedded next month stand in a formal row below the terrace, and parallel to the border of sweet-peas stand half a dozen tubs in which are sown nasturtiums of the large climbing kind. This leaves a space of grass twenty feet by forty, and on this is being now erected "the shelter," a wooden room with trellis on two sides, match boarding on one, and entirely open on the other. Felt will be laid down over the grass, and over the felt, rugs. There will be a couple of basket chairs there, an old French mattress covered with rugs, a writing table, and a small dining table with four chairs. There I propose to live as soon as the summer comes. Over one side the nasturtiums in the tubs will trail their green and ruddy arms, and I shall look towards the seven standards and the scarlet ramblers. In the evening an Arab lamp with electric light, brought on a long cord from the house, will illuminate it. The very planning of the shelter was an absorbing joy; absorbing, too, is it to see it rise, smelling clean of freshly chiselled wood. Then it will be painted green and ready for habitation. In front of it, towards the terrace, will stand a sundial which will not get, as far as I can see, any sun at all, since the stately shelter will entirely shade it. However, I dare say, it will do better in the shade, like lilies-of-the-valley. Besides, one never uses a sun-dial in order to tell the time.

I often wonder how large an area of house and garden it is possible to get really fond of. The fact of broad acres and limitless corridors may and often is delightful to the possessor, especially if they are of long-standing possession, but to be fond of a place in the way that I mean implies to be intimate with every separate inch of it. Your own niche, your own particular *angulus terræ*, must, I think, be small: the great reception-rooms, the huge lawns, are delightful to have, but you will often find the owner of such choosing a small room for himself to work in and live in, and making perfect according to his own taste some sequestered angle of his garden, shut out from vastness, and brought within the scope of his invention. The great lawn and shrubberies he may plan and take pleasure in, but he will not be fond of them with the personal affection he feels for his own room, his own garden corner. And it is the personal aroma, the definite impress of an individual taste on rooms and gardens that makes them alive with their own individual entity; they are parasitic, like mistletoe, drawing their life from a parent stem. The large rooms, the rows of marbles, the acres of signed can-

vas are beautiful and wonderful things, but no one man can appropriate them and fasten them to himself, or himself to them, for they are too large, and are the setting not for one person, but for the brilliant crowd. But his own "den," where he has the books he wants, the chair he likes, the few pictures he loves, it is there that he is *chez lui*,—at home. That is the good part: to have the other is enviable, no doubt, but one does not envy it with the sense of need. Of course no two people may have the same idea of a *chez lui;* and it is always with a certain anxiety that one awaits the arrival of a friend who has not seen one's own. He may easily not like it at all (as I have said, the appearance of the house outside is among the things to be forgotten), and if he does not, it is part of me he does not like. But it takes all sorts to make a world. If it were not so the world would be infinitely less entertaining than it is, and infinitely less lovable.

Almost exactly opposite my windows is an old graveyard, the stones in which are for the most part mossed and gray. A gravel-path winds in and out of the sleeping-place of men long dead, and round it stand a half-dozen of fine elms. It borders on the road, and is separated from it by only a low paling. And looking out of my window this morning I saw there one of those very simple little common things that give the lie to cynics. It was a fine sunshiny morning, and the road was populous, and among others there came down it two big strapping privates out of the regiment that is stationed here, all trappings and scarlet, while between them, with a hand in the arm of each, walked a little old lady dressed in black. Each of the two men carried a cross of white flowers, and they walked very slowly, hanging on their steps, and suiting their pace to the woman. All three passed in at the cemetery gate, and went across the grass to a tomb which lay underneath the elm, and had an old weather-worn stone to mark it. On it the two soldiers laid down their crosses, took off their forage-caps, and all three knelt side by side for a couple of minutes, it may be, at the foot of the grave, close by the road. Then they rose, and the old lady kissed both her sons very tenderly, and stood with them there a minute more, a hand clasped by each, while they talked together, I suppose, of the dead. Then they passed out of the cemetery gate again, and, for aught I know, out of my life. But a little later I went across the road, and to the grave where the crosses of lilies lay. The stone, as I had said, was of old standing, and I read that it was in memory of a man who had died in the year 1880, on April 17, so that to-day was the twenty-second anniversary of his death. Two days afterwards I happened to ask the colonel of that regiment whether there were two privates of a certain name among the men.

"Yes," said he, "excellent steady fellows; they look after their old mother who lives here."

So the reconstruction was simple enough. The father must have died while the two sons were still boys of five or six; yet on the anniversary of his death, so it seems, they still go to the grave with their mother, quite simply and naturally, and say a prayer there with her. The grass, too, on the grave itself was, I noticed, kept short and carefully tended, so I suppose they go there not infrequently. I think the man who lies there must have been a good husband. God keep all our memories as green in loving hearts!

Meantime, April is here, and it is good to be in England, for in no other country that I have ever seen is the rush of color more jubilant. Flowers you may get in plenty on the Grecian hills when, blossom by blossom, the spring began, but nowhere do you get such green as that in which here April hangs the trees and hedgerows. Star-like the pink-petalled daisies shine in the grass of the water-meadows, and soon the yellow shower of buttercups will make sunshine on the earth. In lonely places the daffodils dance together for the joy of their renewed life, and the warm wind shakes the snow of almond and apple blossoms onto the thick-bladed turf. Morning by morning fresh spears of living stuff have pierced the earth, rising upwards in obedience to the great law that moves all life,—to look on the kingdom of the sun,—and every day the sap and growth hum and tingle to the end of twig and tree, bursting forth through pink-sheathed buds into stars and crescents of leaf and blossom. On the great downs the grass of last year already shows gray and withered by the newness of the excellent emerald, soon to be wrought with tapestries of thyme, where the bee scrambles heavy-legged with the pollen of its fragrant labor, and the chalices of the fairy-bells, to which, so the legend of the countryside has it, the fairies dance, leaving a deeper green where their feet have trod. Brimful from bank to grassy bank the chalk stream, drawn from their cool deep brain of the downs, hurries steadfastly through the meadows, setting the weeds quivering and jerking. Here its course lies over beds of white chalk and gravel, each pebble shining lucently, jewel-like; here the water-weeds, growing thickly from bank to bank, are combed and waved by the passage of the water; here the stream is set on a more sober and earnest purpose, as it knits itself together in the bricked and narrowed passage that leads to the melodious thunder of a mill, from which, having accomplished its work without any loss or fatigue, it emerges in a soda-water of bubble from the dripping sides of the sluice and the mist of its own outpouring. There in the pool below lie its great mysterious citizens, the aldermen of the river, for whom on many days I shall, with my heart in my mouth, cast flies upon the water. Think if I should catch him, Lord Mayor himself, an eight-pounder at least, so the miller tells me, who has broken as many lines, it appears, as there are pebbles in the stream, or heads of racing thistledom in a windy meadow! And if, as is highly probable, the lord of the stream defends his own, and will put such slight wisdom into the heads of his fish that not even the least cautious stripling among them is lured by me, yet he cannot cast out from me that fond hope that this cast or this will meet its reward; or when evening comes, and the creek is still untenanted, take away from me the benefit of those water-side hours, the combing of the water-weeds, the translucency of sunlit ripples, the infinite refreshment of companionship.

To be Continued.

Smoot

What's the matter with Smoot?
Isn't he smooth? Isn't he cute?
What will he represent?
Lust and lies and women's tears,
Darkness, greed and craft and fears.
Let like by like be sent!
Evil branch of evil root,
Why won't he suit?

Send him, Mormons, if you will.
Nor jostle,
Senators,
Utah's apostle!
Make room for Smoot;
Smooth, cute Smoot!
He fills the bill!
Evil branch of evil root,
Why won't he suit?

The Golden Time of Good Queen Anne

It seems a little strange that the three reigns of the greatest fame in English history, and destined to remain the dearest to the fancy, should be the reigns of the three queens who at wide intervals have broken the long line of her inadequate and uninteresting kings. It is as if the order of events had put itself gallantly out, and hurried or stayed to accumulate in the times of those ladies the greatest riches of incident and of character, the highest achievements in literature, science, and art; but very likely nothing of this sort could be proved, and we must remain with the riddle of their supremacy unread. It may simply have happened that the ages which we call after them are the most splendid in English annals. They were not ladies of the greatest authority naturally in the regions where their celebrity resides. Elizabeth was rather a horrid old harridan, vain, wilful, cruel; Victoria was a good mother of a family, kind, just, and true, but not, one would say, very luminous; Anne was good, too, in her seventeenth-century way, but narrow-minded, of a rather childish fancy, and perhaps somewhat stupid. Neither was of strong appeal to the hearts or heads of men, and we shall never know by what occult means the heavenly powers were conjured to make their times among the greatest in the human story. One does not get nearer the answer to the conundrum by recognizing that these queens had themselves, of course, little or nothing to do with illustrating their epochs. They might each have been altogether different from what she was, and still her reign would have been illustrious.

Of the three reigns that of Anne must longest remain the playground of the imagination. We are too far from Elizabeth's to be at home in it; too near to Victoria's to see it in "the light that never was." But we have about the right distance on Anne's, and the more clearly it is ascertained, the more charming is the glamour in which it is wrapped. It may be that we find there the beginning of the modern spirit, the sane, prose spirit that reasons and proves, and accepts nothing that is not reasonable and probable, and that this is why we like so much to read about it. If we are more for poetry we must go back to the Elizabethan days, or pause in the Victorian. Of the highest and deepest poetry it has long been known that Anne has little or none to give us; but as the human spirit is more comfortable in prose, or in the verse that has its clearness and ease, it is probable that it will continue to seek that middle distance, at least in its modern moods, and take its pleasure there. In the spacious vacancy of the background one is rather lost, and in the crowded foreground one is jostled and poked about too much. But there in good Queen Anne's time one is just enough related to the motives and meanings through one's own to have the sense of an agreeable hospitality from the polite and charming presences of the past who really understand one. There are enough people, and as yet there is no crowding of distinctions upon the imagination. Marlborough, Pope, Bolingbroke, Addison, Arbuthnot, Harley, Swift, Newton, Lady Mary Wortley Montagu, Steele, are of the company one meets; Blenheim, Ramillies, Malplaquet, the *Tale of a Tub*, "The Rape of the Lock," the "Essay on Man," Inoculation, Gravitation, *Cato*, the *Spectator*, are the events which engage men's minds and form the topics of conversation.

It is the beginning of English literary criticism, and the beginning of English science, which is a sort of criticism of the uni-

verse: of English satire, which is the criticism of society. It is the beginning of English journalism, and almost of English fiction: quite that, indeed, if we consider the *Spectator* a sort of imaginative work in the whole, as it is a journalistic work in the parts. It is the beginning of the English ethicism from which nothing wrong in art or science or politics has since escaped without self-reproach, without being finally brought to book. The poet, when first

He stooped to truth and moralized his song,

confessed the advent of a new influence which was to fix in the soul that sense of responsibility which Puritanism had vainly endeavored to implant, and which Agnosticism has never dreamt of disallowing.

All this and more is what Mr. Justin McCarthy makes clear in his delightful history of *The Reign of Queen Anne*, which we have been reading with more pleasure and instruction than we should be able to make evident. It is all very familiar ground, in a way, that the book covers, but the familiarity is of the sort through which one feels the charm of novelty. One has the dreamlike perception of having been there before, in *Henry Esmond*, in the *Spectator*, in Macaulay's essays and history, in the tales of Swift and the verses of Pope, and the letters of lots of brilliant people; but this does not weaken or obscure the effect of Mr. McCarthy's view of the events and characters of that interesting and important reign. He no more sees them newly than you do; he could not without putting them in a false light; there they are in the plain day where they have always been. They have no secrets darker than Swift's loves for Stella and Vanessa; they are immensely simple in every aspect; and this is the surprise, the ever-novel charm which the latest view of them imparts.

It is a very literary view, and the book is all the better for having the character of a succession of clever and agreeable papers on several topics suggested by the events of Queen Anne's reign. The fact does not accuse them of superficiality; superficiality and lightness are very different, and superficiality may be heavy, and lightness deep. Apparently the "original sources" have not been troubled by Mr. McCarthy's studies, but we know them too little to be sure that they have not been profoundly roiled. What we are sure of is that no turbidity has got into the results distilled from them, which are beautifully clear, and through which the past shows itself as through a window of advantageous outlook.

The various papers are all literary, but the reader who has not yet come to them need not fear from this praise anything of that pseudo-pictoriality which once attempted the rehabilitation of this or that period, and gave to history the gaudy unreality of historic fiction. That danger to the past is over, and it was never to be feared from an artist of Mr. McCarthy's make. An artist we must own he is, first of all, but we do not see why in the abstract that should disable him from seeing clearly and judging fairly. In the concrete he always does that, we think, and the entire amiability of his book is consistent with its impartiality and its manly and generous conclusions.

The object of sarcasm is chiefly to give pain; the object of irony is chiefly to give pleasure, either by a sense of amusement or of novelty.—*The Spectator.*

A thing is worth precisely what it can do for you, not what you choose to pay for it.
—*Ruskin.*

More from Mark Twain about Christian Science

THERE is a deal of thoroughness about Mark Twain. When he sets out to relieve his mind he is apt to relieve it fully. He stops not at the end of the page, nor at a convenient point, but when he gets through. When that happens it is usually found that he has made a mark that will stick. The reader may differ with his views, but he does not forget them. They are too well pounded in for that.

The first instalment of his observations on Christian Science has been considered in the WEEKLY. The second, in the *North American Review* for January, is at hand, and there is a third to come next month. These discourses were written in Europe in 1899, and have been seasoning for three years. This month's chapter is mainly devoted to the amazing profitableness of Mother Eddy's monopoly. Mark insists that the old lady will be worshipped in due time by her following; meanwhile he guesses how much money she must have made, and what are the financial prospects of what he calls the Boston Christian Science Trust. He can find no evidence that this trust ever gives anything away. It sells many things —the great Eddy book, hymnals, manuals, miscellaneous writings of Mrs. Eddy, and the like, "always at extravagant prices, and always on the one condition—*cash*, cash in advance." From end to end of the Christian Science literature, says Mark, "not a single (material) thing in the world is conceded to be real except the dollar. But all through its advertisements that reality is eagerly and persistently recognized."

Mark has a keen scent for money-changers in the temple, as readers may recall. The trust, he finds, now collects a fee of three hundred dollars for a finishing course of seven lessons at its metaphysical college in Boston, and a tax of one dollar a head, annually, from all members of Christian Science churches. He thinks its revenues from all these sources—books, souvenir-spoons, fees, and taxes—must already be very large, and bid fair to be enormous. And he cannot find that it has any serious expenses, or that it supports any charities. He is very deeply impressed by Christian Science as a commercial enterprise in the hands of a small trust, not accountable to any one for its receipts. He insists that it is destined to win an enormous growth. He guesses there will be ten million Christian Scientists in America in 1910, and that they will be a political force. He guesses that they will be politically formidable in 1920, and in 1930 "the governing power of the republic—to remain that permanently." "And I think it a reasonable guess," he adds, "that the Trust will then be the most insolent and unscrupulous and tyrannical politico-religious master that has domineered a people since the palmy days of the Inquisition."

As for the curative branch of Christian Science, Mark declares that the power which a man's imagination has over his body to heal it or to make it sick is a force which none of us is born without. But because, if left to himself, a man is likely to use only that half of the force which invents imaginary ailments, it takes two imaginations, his own and some outsider's, to help him.

The outsider must imagine that he is doing the work, and the patient must imagine that this is so. "I think," says Mark, "that it is not so at all; but, no matter, the cure is effected, and that is the main thing." The outsider's work, he says, is unquestionably valuable. He likens it to the work done by the engineer when he turns on steam and starts the engine. The power is in the engine, but if left alone the engine would never start of itself. Whatever you call the engineer—Christian Scientist, Mind Curist, or Hypnotist, he is simply the engineer, and turns on the same old steam and the engine does the work. The reason why the Christian Scientist engineer beats all the others is partly, Mark thinks, because he has the takingest name and wears religious overalls, but chiefly because he has organized the business, backed it with capital, and concentrated it in Boston in the hands of a small and very competent trust. It is on the existence of this trust that Mark has based his expectation of the vast spread of Christian Science. If it were loosely conducted, as such enterprises usually are, it would do no better than "unorganized great moral and commercial ventures" usually do. "But I believe," he says, "that so long as this one remains compactly organized . . . in a trust, the spread of its dominion will continue."

So ends Mark's second lesson on this subject. It is not convincing in its prophecies, but it is highly suggestive. Who is the real John Rockefeller of the Christian Science Trust? Is it the venerable Mother at Concord? She is an old woman. Who is her understudy? Who are her colleagues?

An enormous amount of mental cure is being sold nowadays outside of Christian Science. In the Sunday edition of an important New York paper a few weeks ago were three advertisements, each about a column long. One advertised free cures by absent treatment by Professor X; another advertised that Doctor Y, the noted scientist, had given a sum of money to be spent in free distribution by a noted college of a book on personal magnetism; the third advertised to give away books disclosing the wonders of Professor Z's system of personal influence. Each advertisement gave a different mail address, but all came from the same thrifty concern that sells hypnotic (absent) treatment, literature, lessons by mail, and diplomas on an astonishing scale. It is only one of many such establishments in various parts of the country, most of which are working overtime and making very satisfactory profits.

The United States Post-office Department has tried from time to time to throw some of them out of the mails, but the United States Supreme Court believes in free trade for mental healers, and protects them in their postal privileges. Possibly it is averse to giving Christian Scientists a monopoly of the business. At any rate, the trade in mind-cure is so extremely brisk that even the enormous size of the field can hardly save the traders from feeling presently the effects of competition. Probably the very success of Christian Science will breed its own checks, and limit within safe bounds the growth that Mark Twain seems to think will be so overwhelming.

The Full Hour

WHEN a woman is but a thing
For a man to fondle and pet,
Let her dance and sing—
Her hour is not yet.

When a man is but a staff
For a woman to cling to, dumb,
Let him strut and laugh—
His hour is not come.

LOUISE MORGAN SILL.

Correspondence

THE INDUSTRIAL PROBLEM IN FRANK NORRIS AND IN MISS WILKINS

To the Editor of Harper's Weekly:

In the January Easy Chair of HARPER'S MAGAZINE Mr. Howells surprised and honored a certain "polite correspondent," to whom he refers, by himself answering certain questions which this same correspondent had proposed to criticism in general. Among them: "What are the conditions from which springs, we will say, Mr. Norris's theory of the novel?" and "What makes the difference between Miss Wilkins's *Portion of Labor* and, say, Hauptmann's *Weavers*?" Mr. Howells's answers are themselves so individual, so provocative, that the correspondent finds herself restating her own answers to the questions anew, and even writing them out—her only excuse being that Mr. Howells has made the questions themselves so much more interesting by his discussion of them.

Frank Norris's theory of the novel was, indeed, broadly speaking, Zola's theory of the novel; but the question remains, in the mind of the correspondent, why did Zola's sociological method seem to adapt itself so well to Mr. Norris's American theme—to the great exultant, practical and material civilization of the West? But Mr. Norris's practice was more than Zola's, it was his own—to quote the Easy Chair again; and if *The Octopus* succeeded in embodying the spirit of our Western civilization as no mere sociological novel could have done, and indeed as no other contemporary novel has done, it was because, one thinks, Mr. Norris was himself moved to so much sympathy with it. There is a hard and critical light on the work of certain novelists of the "Chicago School" that betrays them to be really spiritual aliens from the society which they describe. Mr. Norris was no such alien. He laid bare the brutalities of a great economic struggle in which human lives and human souls went down with candor, but, in spite of himself, with zest in the intensity of the drama. Nor is his conclusion intentionally pessimistic. If I read *The Octopus* aright, it finds the sacrifice of these souls a heroic one, since it has helped to solve the great feeding problem of the world. This is truly the faith in a material progress to which the great lusty life of America is at present dedicated. Mr. Norris was characteristically American also in his recently expressed conviction that the novelist must read his newspaper and not his Ruskin or his Carlyle for any returns to his art. Of course this is partly the academically trained young man's revolt from the academic training, when he has to face actual life and actual creation; but it has in it, too, a youthful scorn for the strains of personal and ideal reflection that used to shape our own authors, and still go into the making of a Tolstoy, a Hauptmann, a Björnson, a Meredith—and a Howells. "Mere Literature" has certainly very little place in the novelist's equipment, unless it is to deepen the personal springs of his life, and make him look out on the Real World with a more complete self-consciousness.

Miss Wilkins's *Portion of Labor* is also, in a different way from *The Octopus*, characteristically American, and when put alongside of Hauptmann's *Weavers* is a strong illustration, as the correspondent herself had in mind to say, of two different civilizations. But as she reads Miss Wilkins's story, there is no such despair of present society in it as Mr. Howells finds; certainly none such as is to be found in Hauptmann's drama—nothing like the same picture of awful and hopeless destitution which certainly does make *The Weavers* more "effective" in the dramatic sense, but less real to the American's experience than Miss Wilkins's story. In the New England village the penalties of labor are heavy, but not so heavy as to crush the soul. The laborer still eats, even if he cannot educate his daughter "like a lady." And his deprivations and the deprivations of his fellows call for the steady exercise of self-sacrifice, such as the rich never know. Labor and poverty are their own education, Miss Wilkins seems to say. And it is a characteristically American touch, one with which we are familiar both in her stories and in Mr. Howells's own, that even though the strikers fail in her factory village, natural democracy reasserts itself, and the son of the capitalist marries the daughter of the laborer. Say that there is something of our provincial faith in democracy surviving in Miss Wilkins's story, it is yet that faith which is the heaven of American life. To the present writer there could be no better examples of Christianity, as the Old and the New World receive it, than the *Portion of Labor* and Hauptmann's drama. The Weaver has exhausted his hope in the present world, and so he looks beyond it to that other world where the physical order is reversed, and the humble, the weak, and the oppressed are inheritors. Miss Wilkins finds in the life of labor its natural present compensations—as indeed the society that she pictures yields them. For the American idealist, Christianity is yet the hope of social progress; to the European it is the consecration of suffering.

Yours, etc., E. B. B.

THE CURB-BIT IN THE ARMY

NEW YORK, *January 15, 1903.*

To the Editor of Harper's Weekly:

SIR,—Your article in a recent issue, on Adjutant-General Corbin's report, must have proved interesting to those who are informed or care about the apparent effort being made by the War Department to modernize the methods, system, and equipment of our army. I hoped to find that the report contained a recommendation to abolish the antiquated, unnecessarily severe, and cruel bit specified by the regulations—perhaps it escaped the editor's attention, or perhaps General Corbin regarded it as a detail beneath his notice in comparison to singing classes and matrimonial discouragement. It is, nevertheless, of great importance, and will be, just so long as horsemanship plays any part in warfare.

With all the improvement made in our army and its equipment, the single curb-bit has been allowed to remain; it exerts practically the same force against every horse, whether he needs it or not, and, therefore, is just as sensible as though every trooper had to wear the same size boot; it is opposed to the best results of horsemanship, primarily because it ruins a horse's mouth. In all of the real tests of horsemanship—for example, hunting, polo, etc.—what could be accomplished with a single curb-bit? The cowboy (an example of the best riders in the world) puts aside the curb-bit when he undertakes to train a pony for polo, just as the army officer rides his charger with the regulation curb, but knows that it would be useless to try to obtain any result in a contest where real horsemanship is called for, with such an implement, for example, a broad-sword contest.

Did General Corbin notice the "single-curb" bit on any horse in the German cavalry? From personal observation of that magnificent branch of their service, I can venture the reply that he did not, nor could he have seen such a bit in use in the English, French, Russian, Belgian, or Italian cavalry; certainly this must mean something—horsemen know what it means.

Polo has been encouraged at West Point, because it was found that at several army posts it was an excellent means of developing horsemanship and other qualities essential to a useful soldier. Have the cadets found it possible to engage in a contest of horsemanship when using a "single-curb" bit? Not with one horse in fifty. The Sixth Cavalry, when stationed in Washington, was one of the first cavalry regiments in the United States army to start polo, and they began with army saddles and bridles. Their first match ended the experiment, and they replaced the curb-bit with the usual "bit and bidoun," or so-called double-rein bridle.

In the National Guard of New York State, which assimilates closely to the regular army, there are two cavalry organizations in the city of New York, containing many splendid chargers. In drill these horses are misused by the regulation bit; but their owners, who are horsemen, rarely, if ever, when off duty and riding the same horses, employ such a useless and harmful implement. One of these cavalry organizations has developed polo very extensively in their regiment, having upwards of sixty players. General Roe regards this as particularly advantageous, but every one of the sixty men know that enforced use of the army curb-bit would end this attempt to improve horsemanship.

The interest of your valuable journal in army reforms and improvements may well be directed to the omission from reports of recommendations to abolish "single-curb" bits, and thus to add to the usefulness of the cavalry.

HENRY M. EARLE.

The Truth about Chicago

WHEN local color comes into a story or into a picture or into any other work of art, the local color must come in secondarily and subconsciously. Manifest attempts at reproducing local color fail. Yet there is no real art that does not speak of its habitat and the soil that grew it. And the best art, whether it be that of the picture-maker, the sculptor, or the writer, is the art that grinds the local color into the form and substance of the creations, and makes the form and substance great of themselves and for themselves; while the local color they may carry is the blood that makes the world akin.

The best thing about George Horace Lorimer's *Letters from a Self-made Merchant to his Son* is that they tell the truth about Chicago so unconsciously. Lorimer in his letters has created a paper man as vital as any of the men made by American story-writers. "John Graham" is strong, hard-working, broad-gauged after the Western fashion, mean to his enemies, provincial, country bred, city made, an automatic philanthropist, and what the country papers call "a kind father, a loyal husband, a generous friend, and a good citizen." Graham has more philosophy than the Shepherd of Arden, but it is the philosophy of business; cynical as a cold south wind. But the marvel of the whole book, John Graham, Pierrepont, his "Ma," Helen Heath, and all of the simple *dramatis personæ*, is the way it reproduces and reflects Chicago. In no other book is the dirt and riches and unformed mass of the town more vividly yet consciously set down than in these "letters." The book is Chicago boiled to an essence. The barbaric yawp of protest and the careless whoop of approval that Chicago voices where she pleases, are in the book. If a statue typical of Chicago were to be made it should represent "John Graham" writing to his son: "Repartee makes lively reading, but business dull. What the house needs is more orders."

The local color in the book does not stick out in dialect. It is in the blood of it

Finance

THE course of the securities-markets lately has been what unprejudiced observers of the situation looked for; that is, after a period of great activity and strength has come a halt in the upward movement. The development of the "reactionary" tendency, inevitable from the extent and rapidity of the previous advance, led to as inevitable a curtailment of activity. And the speculative community finds itself hesitating, like stock values. Always in these indecisive periods the trading assumes what Wall Street calls a "professional" character. The outside public being absent, the bulk of the buying and the selling comes from the professional speculators, whose operations are more apt to be based upon technical market conditions more or less transitory, that upon general business or financial conditions, upon which must rest really important or extensive campaigns, either for the rise or the decline.

The rise in stocks was violent. Many of the features of the "old-fashioned bull market" were present in last week's trading. Transactions were on an enormous scale, far beyond anything witnessed for many months, and Wall Street again had its "million-share days." While the heaviest dealings were in a few stocks, there was a fairly wide distribution of activity, and, moreover, the air was full of rumors and talk of deals, surcharged with the "mystery" that has proven so often potent to stimulate the public appetite for stock-gambling as no array of printed statistics, however favorable, could. The bull fever and its symptoms were there. The extent and rapidity of the advance were so great as to frighten the more conservative, and a torrent of warning, printed and spoken, poured into Wall Street—even as it always does at the beginning of all bull markets. It is probable that the sober advice of impartial observers of the situation had some effect, but it was not so much a sudden-born desire to be conservative which checked the advance, but the enormous sales to realize profits on the part of cliques and individual operators to whose efforts and manipulation the entire upward movement was due. Some outside demand for stocks had been created by the *simulacrum* of a bull market. When this demand was satisfied, aggressive manipulative operations for the rise having been suspended, the market fell into the hands of professional traders, who saw only one way for prices to go, and that down.

The great hue and cry against the January rise, because it was so transparently due to the aforementioned "manipulation" by daring market cliques, was scarcely justified. To be sure, precisely such operations were indulged in by a coterie of Western plungers last summer and autumn, and they, as is well known, came to grief. But the manipulation then ended disastrously because it was ill-timed. Conditions were against the plungers, and natural conditions are stronger than men, even Chicagoans. In the slump that followed, prices fell first from the inflated level to the level of actual value, and then, because on such violent movements prices always go much further than is strictly justified, they fell below the real value level. The first recovery obviously consisted of the readjustment of stock prices to the proper or investment value. Then those speculative influences which had precipitated the slump having disappeared when the danger of serious money stringency passed, the second or speculative rebound followed. That it was assisted, or, indeed, even caused entirely by manipulation was not a market crime. It has been stated repeatedly in this column that stocks do not go up. They are put up. Left to itself, that is, to investors, the market would fluctuate but slightly.

MRS. EDDY'S WRITINGS

Mrs. Eddy's publishing agents having refused to sell me her book called "Miscellaneous Writings," to my great inconvenience, I have placed an order for this work with Messrs. Harper & Brothers, and shall hope that some one possessing an extra copy of it will be willing to sell it to them for me. Please communicate with them. MARK TWAIN.

Three Gringos in Venezuela and Central America

By RICHARD HARDING DAVIS

Illustrated. Post 8vo, Cloth, $1.50

Venezuela

A Land Where It's Always Summer

By WILLIAM ELEROY CURTIS

With a Colored Map. Post 8vo, Cloth, $1.25

Chatty and entertaining, and gives us an interesting picture of scenery, history, and life. An appendix contains the official correspondence between the United States and Great Britain. The story of the life of Guzman Blanco, self-styled "The Illustrious American," is well worth reading for the glimpse it gives into the ways of South American politicians, as well as for its portrayal of a unique personality.

INTERESTING FICTION

The Reflections of Ambrosine

By ELINOR GLYN

Author of "The Visits of Elizabeth"

If Elinor Glyn charmed novel readers by her first work, she has certainly added to her popularity with this newly published story. The keenness of observation, the audacity, of "The Visits of Elizabeth" are here, but, in addition to this, she has given us a strong love story and a novel of real dramatic power.

$1.50

The Maid-at-Arms

By ROBERT W. CHAMBERS

Author of "Cardigan"

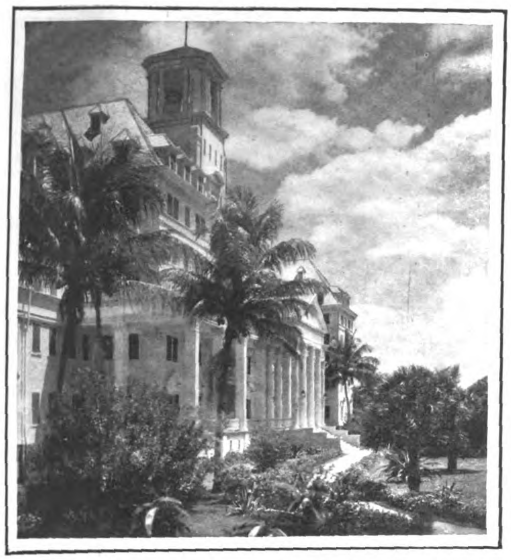
Mr. Chambers has long since won a most enviable position among contemporary novelists. The great popular success of "Cardigan" makes this present novel of unusual interest to all readers of fiction. A stirring novel of American life in days just after the Revolution. It is a story with a fascinating love interest, and is alive with exciting incident and adventure. Some of the characters of "Cardigan" reappear in this new novel.

Illustrated by Howard Chandler Christy

$1.50

The Intrusions of Peggy

By ANTHONY HOPE



Author of "The Prisoner of Zenda," "The Dolly Dialogues," etc.

A charmingly entertaining story of London life of the present day, full of wit and cleverness. A rich and attractive young widow, Trix Trevalla, goes to London to make her social way in the world. Into all her adventures, matrimonial or financial, Trix's friend, Peggy Ryle—a breezy and ingenuous young woman—intrudes, much to the reader's amusement. It is, indeed, a highly clever comedy, brilliantly written and of unflagging interest.

Illustrated by William Hurd Lawrence. $1.50

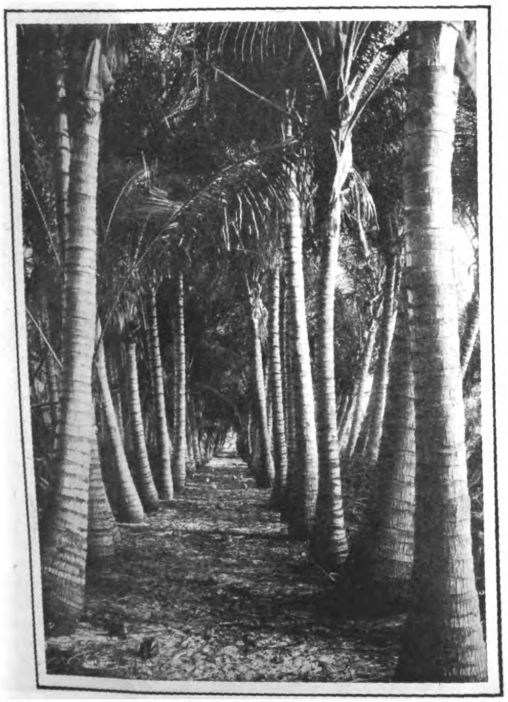
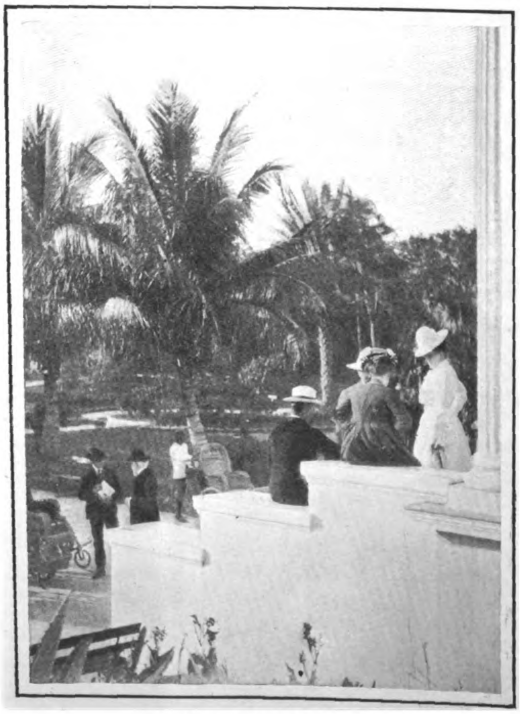
The Royal Poinciana at Palm Beach

The Regular Way of Getting About



A Show Resort in the South

PALM BEACH is one of the great "show" places of America. It has been called the "American Riviera," but the Riviera has nothing to compare with it in gorgeous tropical setting. It used to be a swamp and a jungle. The wealth of one man has converted it into the most beautiful mile or two of water-front on any sea. There are ocean bathing nearly all winter, and fishing and good sailing on Lake Worth, which is an arm of the sea. Being wheeled over shady paths in bicycle-chairs is the regulation way of getting about.



Between the two hotels—The Breakers, on the sea-front, and the Royal Poinciana on Lake Worth—is an *allée* which for beauty defies description. It is arched over with the fronds of palms and the branches of cocoanuts, which come in regular alternation, while between them glows the gorgeous red of the hibiscus softened by the tender pink of oleander. The color scheme is dreamlike in its beauty. Yet the arrangement was regularly planned and carried out, though so artistically that it seems part of tropical nature.

The days are spent mostly outdoors, in golfing, sailing, fishing, and bathing, with an occasional détour into the Everglades by the Nimrods with a Seminole guide. But every night at Palm Beach is "opera night." The Royal Poinciana at night is the centre of the show. Evening dress is *de rigueur* for dinner. There is immense wealth (if not always refinement) shown in the costumes and jewels of the women at dinner, and when it is borne in mind that over a thousand people easily can be seated in the Poinciana dining-room, the brilliancy of the scene can be imagined. Palm Beach is a show-place in more senses than one. After dinner the display continues in the parlors and on the broad verandas. Some women, whose bank accounts are more flourishing than their family trees, literally seem to stagger under the weight of their jewels.

Down the beach is the Monte Carlo of the resort, where private dinners are served, and where every evening can be heard the click of poker chips, the whir of roulette wheels, and the voice of the dealer at faro.

Details of one of the St. Louis Fair Buildings

WHEN the Louisiana Purchase Exposition opens its gates to the people of the world, they will probably see the most beautiful structures which have ever been designed and erected for any display of this character. The promoters of the Exposition have had ample opportunity to study styles of architecture which would be appropriate yet ornamental, and judging from the plans which have thus far been accepted, they form masterpieces of American architecture.

Those who have planned the buildings have had ample space allotted them in the 1200 acres appropriated for the Exposition grounds, while a very generous portion of the $20,000,000 which will probably be spent before all of the arrangements are completed will go into these truly magnificent structures. The director-general is authority for the statement that the "White City" at St. Louis will far excel even that at Chicago, the beautiful "Rainbow City" at Buffalo, and even the displays in that centre of art — Paris. The illustrations on this page, of the structure which is to be devoted to mining and metallurgy give an idea of the truly exquisite exterior of the principal buildings. These views form a perfect representation of the building in question, of which a perfect model has been made. Although in miniature, it defines every feature, and is in perfect proportion with the one to be completed. The main entrance is the most ornate feature, and the colossal group which surmounts it is artistic in every detail, as can be seen at a glance, while the columns rising at either side complete the stately effect. It will be one of the most elaborately decorated structures, so far as statuary is concerned, of any of the group, but every portion of the exterior, it may be said, represents the handiwork of the artist, even in the smaller columns forming the various sections. As its name implies, the building will be devoted largely to an exhibit of the mineral resources of this country, for which the States and Territories comprised in the Louisiana Purchase are especially notable. Consequently, it will be one of the most important of the structures from an educational standpoint, and this fact the directors have evidently appreciated. The building is the conception of a local architect, Mr. Theodore C. Link, of St. Louis.

Progress in American Ship-building

Launching a Ship from the Slips of One of the Largest Ship-building Companies in the World

A View of the Yards in San Francisco where the "Oregon" and "Olympia" were Built

In this yard, and those connected with it, there are facilities for making every possible part of a war-ship, from the armor to the most intricate machinery

Drawn by F. Cresson Schell

IT is doubtful if the average citizen realizes the tremendous significance of the changes that are going on in American marine interests. American ingenuity and American capital are now engaged persistently in building up the shipping industry of the country. The era of new railroad construction is practically past; the era of ship construction, which means the restoration of the American flag to the high seas, has only just begun.

Already the United States occupies a peculiar position in the matter of ship-building. On the Great Lakes the cheapest merchant vessels in the world are built. On the sea-coast the cheapest men-of-war in the world are being constructed. The one thing now needed in our ship construction is the power to build merchant vessels on the sea-coast as cheaply as they can be constructed on our inland lakes. When that stage of commercial development is reached the United States should lead the world.

A step of great importance to secure that end has just taken place in this country. It is the formation of a ship-building organization that for the first time in the world can turn out a finished war-ship solely from its own plants—hulls, engines, auxiliaries, armor, and guns. What this means in war-ship construction may be understood thoroughly when one considers that in England the Armstrong Company makes men-of-war and guns for them, but no armor. In Germany the Krupp concern makes guns and armor, but builds no ships. In France, Schneider of

(CYRUS CHAMBERS, JR.)

52nd and Media Sts., Philadelphia

Creuzot, makes the armor and guns, but no ships. In this country we now have a company, the new United States Ship-building Company, which builds ships, guns, and armor, as well as the great number of auxiliaries needed in ship construction.

But this is not all. The first step has been made for the cheaper construction of merchant vessels on the sea-coast. This step lies in a system of organization. Most persons said, when the United States Ship-building Company was formed, "Here's another trust." In the loose sense in which the word trust is used, the statement that one had been formed in the ship-building trade would seem at first to be correct. It is not a trust in the sense that it has or is to have a monopoly in our sea-coast ship-building. It controls only about forty per cent. of our sea-coast ship-building plants, and it has monster rivals in the Cramp, the Newport News, the Fore River, and other plants. It is simply an organization formed from a community of interests to get economical production.

The great reason why our sea-coast ship-yards have lagged behind those of the Lakes in building cheap merchantmen is that the yards on the coasts have all been built for the war-ship trade. They have been organized under the most costly conditions. They have had to be ready to turn out a battle-ship as well as a tug. The fact is indisputable that if we can build the cheapest merchantmen in the world on the Lakes, we should also do it on the sea-coast. But a ship-yard made and managed to do the expensive work of building battle-ships cannot turn out cheap freighters to advantage.

The new ship-building combination was formed to classify this work, so far as possible; to build small boats at one place and big boats at another; to have an elaborate organization at one plant and a simple one at another, and not to fritter away the system necessary to make a battle-ship in producing a tugboat.

The country owes a greater debt to William C. Whitney for the development of American ship-building than most persons realize. When he became Secretary of the Navy the United States had no plants capable of turning out forgings for the machinery or guns of a modern man-of-war, and there were no facilities for making armor in the country. He was determined to build up the so-called New Navy. A committee of Congress waited on Mr. Whitney, and told him they would give him the right to import all such forgings. They would be satisfied if he would simply build the boats here. That of itself, it was thought, would be a great achievement.

Mr. Whitney told the members of this committee that they could put the provision in the law if they wished, but under no circumstances would he take advantage of it, for he was determined that American men-of-war should be built exclusively by American workmen and of American material. This decision was of stupendous importance to industrial America. It has meant the expenditure of millions upon millions of dollars in this country, and the effect upon varied industries concerned has been widespread. It not only kept alive our ship-yards, which had the coastwise trade of the country for their sole support, but it caused most of them to be enlarged, and others to be built, so that now they have the facilities to build the largest merchantmen afloat.

Within a year the largest two American-built vessels, surpassed in size by only half a dozen vessels in the world, have been put in commission. They are the *Korea* and *Siberia*, of the Pacific Mail Line, built at Newport News, and they are engaged in the contest on the greatest battle-ground, so to speak, for commerce in the world,—the trade of the Pacific Ocean. In a few months, at the most, what are said to be the largest ships ever built, vessels of 33,000 tons each, will be finished at the great shipping-plant at New London, a plant that never would have existed had it not been for the fostering care of American shipping by Secretary Whitney and his successor, Benjamin F. Tracy.

Mr. Whitney caused the establishment of great forging-plants of the country, and

New York Roads: Present and Future

An Automobile Road in New York

Broadway, near Kingsbridge, New York

ON the 1st of December, 1902, a bill was introduced in the House of Representatives which opens the way to far-reaching results for the benefit of farmers and all persons who make use of the public highways. It is a bill "to create in the Department of Agriculture a bureau to be known as the Bureau of Public Roads, and to provide for a system of national, State, and local co-operation in the permanent improvement of the public highways." The director of this bureau is to have authority to use his discretion as to whether the road petitioned for is necessary and advantageous to the community which it serves.

The expense of construction is to be divided as follows: one-half is to be paid by the State or county in which the road is located, the other half by the Federal government in proportion to the number of inhabitants in each State. Under the census of 1900 the maximum pro-rata distribution would be $1,949,000 for New York State, $752,000 for Massachusetts, $243,000 for Connecticut, and for other States in proportion.

The sponsor for the bill is Colonel W. P. Brownlow, member from Tennessee, and son of the famous Parson Brownlow. Colonel Brownlow introduced the rural free-delivery bill, the first appropriation for which was $50,000, and has shown the scheme to be so financially successful that an appropriation of $12,500,000 is now asked for. He hardly expects the Roads bill to go through in its present form, but hopes in time to get a satisfactory measure passed. The important feature is to get the idea of Federal assistance as applied to highway construction well in the minds of the public. As the last government appropriation for rivers and harbors amounted to about $70,000,000, chiefly applied to the seaboard States, it does not seem too much to ask for $20,000,000 for the use of every State in the Union. The macadam roads completed and in process of building will form a circuit of about one hundred miles, starting from White Plains to Peekskill and around back. It is hoped eventually to have the road extended north through Pawling, about fifty miles, and that a State road may follow the Hudson as far north as Albany. These plans, however, are but possibilities, as it is unlikely that they would be petitioned for in the near future. Under the Higbie-Armstrong bill, for the aid of road construction in New York State, $10,000,000 is appropriated, yet it will take at least ten years to build the roads already petitioned for under that bill. New York State pays one-half the cost, the county thirty-five per cent., and the town fifteen.

It would seem as though some recognition should be given by even the most rabid "motor-phobiac" to the endeavors of the Automobile Club of America to procure immediate, practical legislation to the end that good roads may be the rule rather than the exception. Aside from the general scheme outlined above, very active work is being done to further the building of good roads in the immediate vicinity of New York city. The condition of Jerome Avenue, Seventh Avenue, from Central Park north, and St. Nicholas Avenue has been brought to the attention of the city authorities, and it is hoped that this spring will see the repairs well under way. One difficulty is that the city wishes to put down a pavement more expensive than the property-owners are willing to be assessed for.

A Hold-up in the City Limits

A "Good-Road" Breakdown

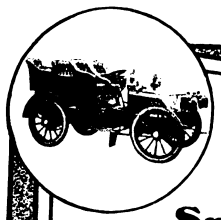
(Continued from page 153.)

General Tracy insisted on building battleships as large as the best English battleships of the time, and he also insisted in making these battle-ships do one-third more work than those of the English type. The man who assisted them in this work, the young naval officer who designed the *Oregon* and her sister ships, Lewis Nixon, is now at the head of the new ship-building combine, whose purpose it is to take another forward step and to try to build merchantmen, as well as war-ships, as cheap as or cheaper than they can be built anywhere else in the world.

There are five ship-yards, three of them of large size, in this new combination, and four large auxiliary plants.

With the resources of these plants there is nothing about a ship of importance, whether it be a war-vessel or a merchantman, that cannot be made entire by a single ship-building concern, and it is this feature that gives the concern its especial strength, and adds to American renown in the latest field of industrial development in the United States.

Under the supervision of Mr. Nixon this company is now constructing no less than thirty-seven vessels, whose tonnage amounts to 178,000. The value of this work reaches, in round numbers, the enormous sum of $50,000,000. The plants concerned cover 375 acres, of which 48.7 are under cover. The company employs 15,000 persons, and has an annual pay-roll of about $8,500,000.



When one realizes that this represents only about forty per cent. of the ship-building on the coast, who shall say that American ship-building has not revived, or is not in a most flourishing condition? Then consider the condition of ship-building on the Lakes. There are no less than eight enormous plants there, five of which have been united in the American Ship-building Company. This concern alone built no less than forty-one vessels in the year ending June 30, 1902, with a tonnage of 198,500, and at that time there were in its yards thirty unfinished vessels.

This Lake traffic is a most impressive revelation of American skill. Ten years ago the largest of these Lake vessels was only 300 feet long. Since then they have grown to a length of 500 feet; but it has been found that a length of 430 feet is best suited to the requirements of the trade. Through the Sault Ste. Marie Canal in 1891 there passed a tonnage of 8,888,000. Ten years later this had grown to a tonnage of 28,400,000. Some of the finest and swiftest passenger vessels afloat also ply on these lakes. Thus it will be seen what an important place a new ship-building combination on our coast may hold.

It is a sign of the coming of what this country needs most industrially—a merchant marine in keeping with American ideas, American growth, and complete American independence.

The Openings of the State Legislatures

In nearly forty States the open legislative season has come. For sixty days, at least in these States, it will be lawful to level bills and aim petitions and resolutions at almost any object that comes within the range of desire for private gain or public welfare. The supply of ammunition seems inexhaustible. Thousands of bills are already on the calendar or in readiness; and they concern every relation and interest of life from the registration of a child's birth and the care of its eyes in infancy, to burial precautions, from the protection of the Jerseyman's diminutive oyster-beds and the guarding of the Coloradoan's irrigation ditches, to the attempted regulation of trusts. For with the increase in population and complexity of life and with constant change in the conditions which environ the citizen, readjustment seems to be ceaselessly necessary. More and more the individual demands protection against the possible dishonesty or greed of his neighbor, and more and more the State is besought to extend its functions to include services that once

FLAME PROOF CO., New York City

were left to private initiative and activity. Bills relating to sanitation, the protection of game, the prevention of adulteration of foods; bills entrusting to the State the examination and licensing of barbers, undertakers, actors, and plumbers, as well as of physicians and teachers; bills making State provision for the care and treatment of epileptics and persons afflicted with tuberculosis—these are but indices pointing the direction in which the legislation, both proposed and enacted, of our commonwealths is travelling. It is of interest in this connection that avowed Socialists have in two States at least—Massachusetts and Illinois—been elected to the Lower House of the legislature this year, a fact which accentuates the tendency that has found expression in the increasing paternalism of the State.

But the first task which many of these forty legislatures have to perform is the election of United States Senators. Among those whose terms expire in March of this year are Senators Platt of New York, Platt of Connecticut, Teller of Colorado, Fairbanks of Indiana, Mason of Illinois, Allison of Iowa, Penrose of Pennsylvania, Gallinger of New Hampshire, Foraker of Ohio, Vest of Missouri, Jones of Arkansas, McLaurin of South Carolina, Perkins of California, and Spooner of Wisconsin. Several have already been elected to succeed themselves, and there is likely to be but slight change in the present personnel of the Senate. Senator Mason of Illinois will probably be succeeded by Congressman Hopkins; Senator Perkins's re-election is assured at last accounts; Senator Gorman succeeds Senator Wellington; Senator McCreary takes Senator Deboe's seat, and Senator Jones of Arkansas, the manager of Bryan's two campaigns, is not to be his own successor.

The return of Senator Spooner, which the country at large desires, and which now seems assured, calls attention to the anomalous situation in Wisconsin, where the Republicans have endorsed the La Follette platform, to some provisions of which Senator Spooner has been hostile, and yet have demanded that Mr. Spooner be sent again to the Senate. In other States there are complications between State and national interests, which but add support to the movement in favor of the popular election of Senators. And it is probable that a renewed effort will be made this winter to secure the concurrence of two-thirds of the States in compelling Congress to call a convention for submitting an amendment to the constitutional provision, relating to the choosing of Senators.

What the various legislatures are likely to accomplish in the way of specific legislation cannot now be predicted with any certainty. In 1901, when the same legislatures were in session, the distinguishing features of their enactments were: the tendency to increase the number of State boards and commissions and to centralize these administrative agencies; the extension of home rule for cities (though Ohio in 1902 took a decided step in the other direction); more extensive provisions for secondary education; the affording of care and treatment to classes of defectives hitherto left to private charity; greater concern for the health and moral environment of working-men, working-women, and children; greater precautions against the spread of disease, both among men and animals; the protection of forests and game, restriction of hours of labor, and the disposition to refer an increasing number of matters of a legislative character to a popular vote. The futility of most State trust legislation will probably discourage further serious attempts in that direction.

A Twentieth-Century Hotel

See page 131

THE new Hotel Belmont, which is to be built at Forty-second Street and Park Avenue, by the promoters of the subway, from the designs of Warren & Wetmore, will be the tallest, most thoroughly fireproof, and most modern of its class. Snowshoes and Sledges
By KIRK MUNROE

The story of a journey, with dog-sleds and snow-shoes, from St. Michaels, in the northern part of Alaska, to a point two thousand miles up the Yukon.

Illustrated. Post 8vo, $1.25

HARPER & BROTHERS, PUBLISHERS

to blast from the solid rock. The new hotel will have five stories below the street level and twenty-two above, with a half-story on the roof. From foundation-stones to cornice it will rise three hundred and sixty feet, and its ground area will cover the lot two hundred feet on the west side of Park Avenue, by one hundred and five feet on Forty-second and Forty-first streets. It will contain nine stories of public, service, and storage rooms, and seven hundred and fifty bedrooms. Nearly a thousand employees will be necessary to run it. The building and site will represent an outlay of five and a half million dollars.

The manager of the new hotel will be able to direct every detail of service from a central office, facing both the Park Avenue and the Forty-second Street entrances. The telephone exchange will be as large as that of a good-sized town, and seven hundred and fifty telephones will be installed in the bedrooms alone. No bell-boys will sprawl and wrangle in the lobby of the Belmont. They will have quarters behind the office, out of sight, and their trips to other floors will be made in four service elevators at the back of the five guests' elevators which will face the broad Park Avenue entrance in the centre of the building. All these elevators will be enclosed in a fire-proof shaft, into which nothing more combustible than the clothing of passengers will ever enter. Separate elevators will be provided for freight. Nor will bedrooms be made uninhabitable by the noise and vibration of elevators, for none will adjoin them. Two well-lighted staircases will reach from the street floor to the top of the building at considerable distance from the elevators, and broad corridors will extend from street to street, their windows opening to daylight and fresh air. The bedrooms will be entered through corridors, with a bath-room at one side and a large clothes-closet at the other; so that the occupant of a room may, in Oxford phrase, sport his oak, and, connected with the outer world only by telephone, rest immune from noise and interruption.

Space and dignity of treatment will mark the public and semi-public rooms, and the gorgeous decoration of the usual great hotel will be happily lacking. The main Forty-second Street entrance will lead to a lobby one hundred feet broad and thirty high, and corresponding with it at the Forty-first Street side will be a dining-room of like dimensions. On the Park Avenue front will be smaller dining-rooms. The inevitable palm-room will lie between the lobby and the great dining-room and connect with them. A mezzanine floor, giving upon the lobby, the halls, the palm-room, and the dining-room, will afford ample lounging and writing rooms, while, in emergencies, it will be available for dining.

The café will occupy all of the basement which is not needed for kitchens, and will extend beneath the sidewalk on the Park Avenue side in a series of alcoves. Under this floor will be a billiard-room, a large barber shop, and an entrance to the Vanderbilt Avenue station of the underground road, while a corridor under the surface of the street will connect with the waiting-room of the Grand Central Station. The dweller in the Belmont who selects his down-town office with discretion will be able, therefore, to transact his day's business without exposure to unpleasant weather, and may, if he chooses, attain the happy condition of the white ants so graphically described by Darwin, and, reduced to a brain and a stomach, get on very comfortably without legs. Three basement floors are devoted to servants' kitchen, dining-rooms, and laundry, and to storage and machinery.

The exterior of the building will be simple and imposing in treatment. The French Renaissance has been employed, without elaboration of ornament. Harvard brick and Indiana limestone of a warm tone will be the materials used. The floors will be of tile, mosaic, marble, and concrete, and the small amount of wood essential to the trim will be fireproofed. It is believed that all danger from conflagration has been eliminated by the architects, and that persons whose purses permit may dwell secure above the noise, mosquito, and fly belts in the upper stories of this cloud-piercing structure. The Belmont will be under the management of Mr. B. L. M. Bates, of the Everett House.

A HISTORY OF THE AMERICAN PEOPLE

In Five Volumes

By WOODROW WILSON, Ph.D., Litt.D., LL.D.

President of Princeton University

PRESIDENT WOODROW WILSON has devoted the best years of his life to the preparation of his great work, "A History of the American People," from the earliest times to the accession of President Theodore Roosevelt. The work, which is just completed, is monumental in character and scope, represents the genius of the greatest historical writer of the present time, and is written in that delightfully flowing style which translates historical facts into the romance of a nation. It is printed from new type specially cast in 1902. In the matter of illustration, every field of human activity has been searched, and hundreds upon hundreds of new portraits, prints, maps (in colors), plans, and pictures make the pictorial features alone tell their wonderful story of the finding of the continent and the birth and growth of what is the United States of America. There is a photogravure frontispiece to each volume, and portraits in India tint and black. It is a curious fact that there was not a single complete narrative history of the United States in existence until now. Dr. Woodrow Wilson's is the first It is bound in dark-blue vellum cloth, leather-stamped, lettered with gold, untrimmed edges, gilt tops, etc. The edition is in five volumes, and the price is $25.00.

OUR OFFER *We will send you the entire set of five volumes, charges prepaid, on receipt of* $1.00. *If you do not like the books when they reach you, send them back at our expense, and we will return the* $1.00. *If you do like them, send us* $2.00 *every month for twelve months. On receipt of this dollar, we will send you, without cost, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or the North American Review. In writing, state which periodical you want. Address*

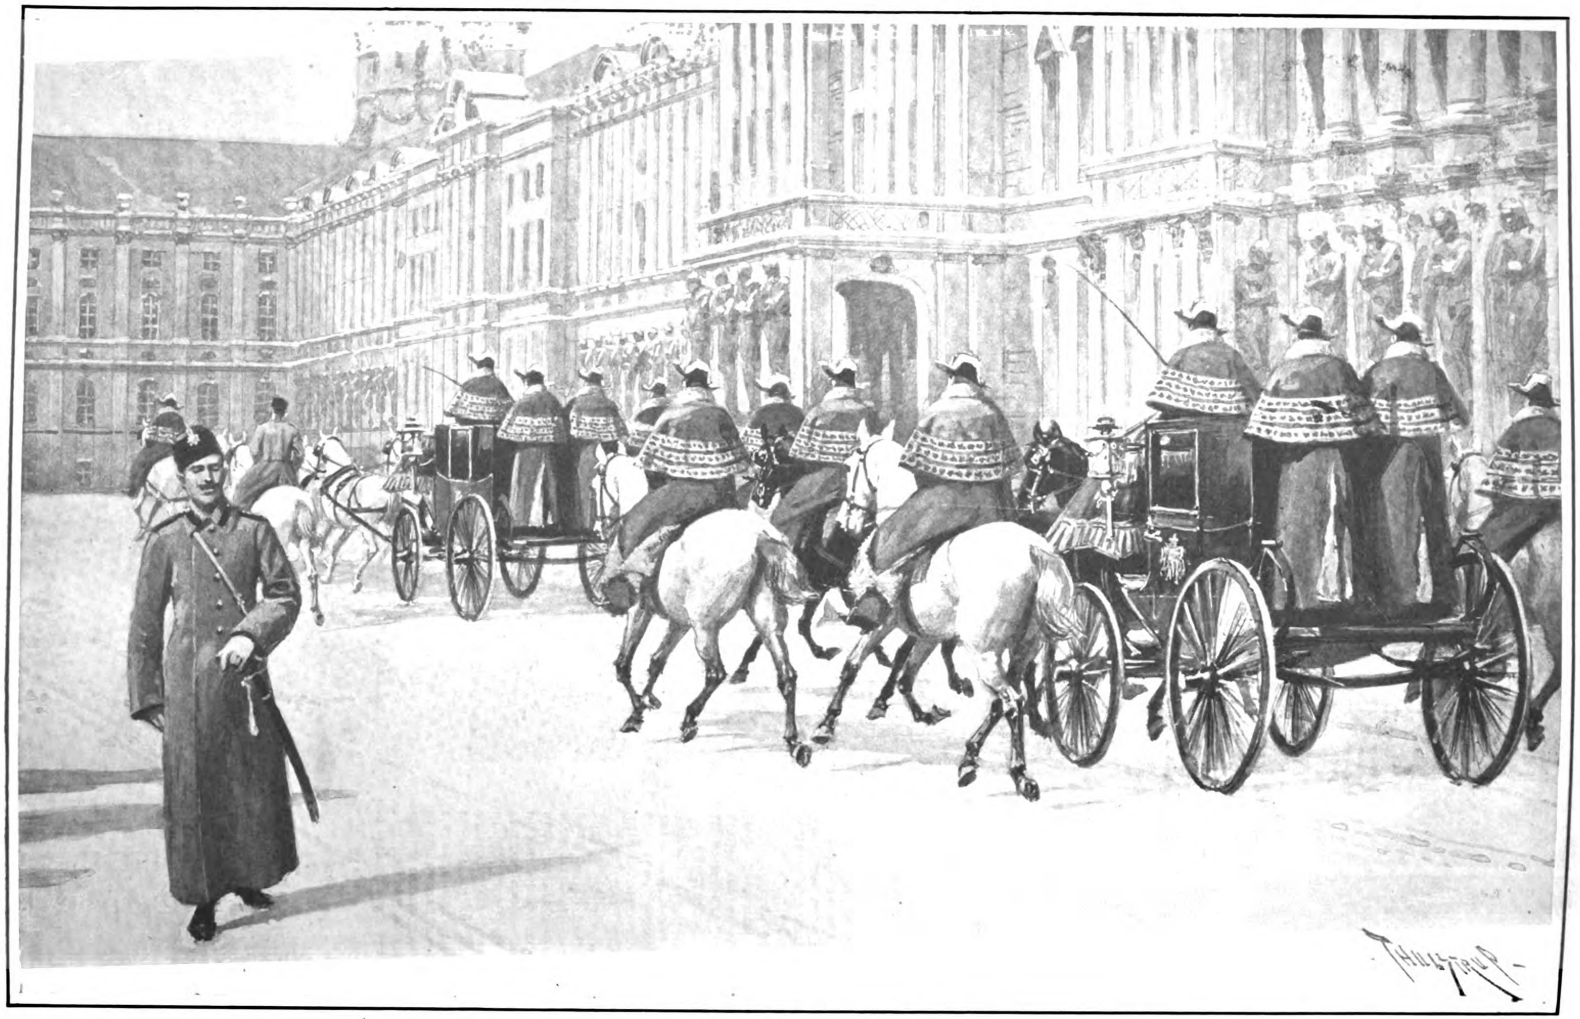
Sir Michael Herbert Baron Speck von Sternburg

Signor Mayor des Planches Herbert F. Bowen

THE VENEZUELAN CONFERENCE AT WASHINGTON



IN the Venezuelan conference at Washington to settle foreign claims, Venezuela is represented by Minister Bowen, Italy by its own ambassador, England by Sir Michael Herbert, and Germany by its new diplomat, Baron Speck von Sternburg. For obvious reasons the part of the English ambassador is especially embarrassing and difficult. Minister Bowen has been so much in the public eye since this South-American imbroglio began that little need be said about him. He has practically made his reputation by his skill, tact, and firmness during the last trying months, and his departure from Caracas was a personal triumph. All parties vied with one another in showing him honor. President Castro and his cabinet saw the distinguished minister to the railroad station; delegations from the British, German, and Dutch colonies read addresses to him, while a committee of negro masons and carpenters wished him a happy voyage. He was accompanied to the port by the representatives of Spain, France, and Belgium, and his gifted wife received no less than sixty bouquets, a quite formidable consignment of garden produce. The recollection of these splendors will lighten for Mr. Bowen the heavy hours which he must pass through before he once more sights the port of La Guayra. Baron Speck von Sternburg is rather more of an unknown quantity, though, in justice to the brilliant German, it must be said that he has made strenuous efforts to correct this, and to make the inner workings of his mind familiar to us all.

He was born in England, had an English-Scotch mother, and a German father, and has married one of the fair and brilliant women from Kentucky, whom he has so eloquently described, and has, of course, had a long training in diplomacy at our national capital. England's representative at the conference has our sympathy in his extremely difficult task. His government is officially allied with Germany not only in this Venezuelan affair, but also in the Far East, as twin guardian angels of China against the rapacity of the Bear. And his nation heartily distrusts this alliance, and never loses an opportunity to say so. We have been told that England's naval officers in South-American waters have so far forgotten their duty as to criticise the whole history of the Anglo-German alliance, which seems a rather grave breach of discipline: and we do not need to be told that the English press is almost unanimous in denouncing the plan of co-operation with Germany as a piece of extravagant foolishness, even attributing it to the hypnotic powers of the Kaiser in person. All this cannot tend to profound spiritual unison between the English and German members of the conference; nor can the equally outspoken expressions of the German press on the Monroe doctrine be supposed to make the position of German's ally any easier. We have been told a good many times recently by influential German papers that the Monroe doctrine, the keystone of our foreign policy, is an incredible piece of impudence; and one notes that, while Baron Speck von Sternburg has much to say about our fair women, our genius, and the transcendent qualities of our young writers, he does not give any hint of his views on the foreign policy of President Monroe. Does it, in his opinion, rank among the immense things which we do so easily, or is it a mere piece of intellectual levity? In any case, it seems that in this conference England's representative will be unpleasantly conscious of attempting to sit on two stools at once.

The conference has really only two questions to decide: How much Venezuela owes to each of the claimants; and, How is the money to be raised? As to the sums claimed, it is probable that they will undergo a pretty severe process of shrinkage as soon as the conference actually gets to work. The Maximilian episode showed how claims of this sort grow. Mexico all along maintained that a large part of the English, French, and Spanish claims was either fraudulent or usurious, and doubtless the Venezuelan authorities will say much the same. As for securing payment, there seems to be only one possible way: to hypothecate the customs, thus putting Venezuela in much the same position as China and Turkey, and bringing on the South-American republic the evils which afflict those two much-suffering lands. Venezuela is practically dependent on the customs for her revenue, and the various departments of government are likely to go to rack and ruin if this source of supply is cut off. At least there will be the less to attract plunderers.

Yet it cannot be concealed that the parties most vitally interested in the outcome of the conference are the other South-American republics, with their foreign debts, and the United States, which must steer between the Scylla of political complications and the Charybdis of financial obligation assumed for these younger brothers.

OUR NEW AMBASSADOR AT ST. PETERSBURG

The new United States Ambassador to Russia, Mr. Robert S. McCormick, recently presented his credentials to the Tsar and Tsaritza at the Tsarskoe-Selo palace, St. Petersburg. The Ambassador and the first and second secretaries of the American Embassy were met at the station by the Tsar's state carriages, with out-riders and postilions, and were conducted to the palace, where the formal ceremony of presenting the credentials took place. In the above drawing Mr. de Thulstrup has pictured the arrival of the Ambassador and his party at the palace

A PHASE OF THE SITUATION IN NORTHERN AFRICA

A Caravan of Tuaregs in the Great Desert

AGAIN the fringe of civilization which European nations have established on the northwestern coast of Africa is threatened by the barbarians who still inhabit southern Algeria, Morocco, and even the Sahara itself. If these tribes are persuaded by the fanatical Moslems to enter into another "holy war," there is good reason for the activity of the French, Spanish, and Italian governments in sending troops to northern Africa, for it means a struggle with a people who do not know what fear means, and who believe that in yielding up their lives in battle they will gain the reward of the Prophet. In equipment and discipline they are, of course, far below the standard of the military forces which would be sent against them, but they are so numerous that an army of 100,000 men could easily be raised from the various tribes who inhabit this portion of the continent.

These barbarous tribes go under various names, but all are of the Hamitic family, and are descendants of the aboriginal inhabitants of northern Africa. The Algerians know them as the Kabyles; in Morocco they are called Shelluh; while the portion who have remained in the Sahara or on its threshold are called Tuaregs or Tawarcks. Generally known as the Berbers, their population has been estimated by travellers in this region at nearly 4,000,000, and to-day they entertain the same hostility towards the white race which prevailed among their ancestors centuries ago. While the tribes frequently battle against each other, all are united in their hatred of the European, and as they rank among the most bigoted of the followers of Islam, taken as a whole they have been a veritable "thorn in the flesh" to the French, Spanish, and other Europeans who have colonized the shores of northern Africa.

A Tuareg Warrior

Very few of the true Berbers reside in Algiers, Fez, or other cities of the European tributaries. While called by this name, they are generally of mixed blood, being part Arabic, part negro, and, in some cases, partly European. In spite of the long period which has elapsed since the Arabs overran northern Africa, the people whom they drove from the shores of the Mediterranean into the mountain country, as well as into the oases of the Sahara, have intermingled but little with other races, and, it is stated, to-day follow most of the customs inherited from past ages. They may be divided into three classes—one, the agricultural class, who maintain small herds of sheep and cattle in southern Morocco and Algeria, grazing them upon the scanty vegetation which is to be found in some of the valleys; also olive-growers, and the owners of vineyards.

The most barbarous of all are the Tuaregs, who are the original nomads of the desert. Although driven here and there by invasions of the Romans, the Goths, and the Arabs, they are still unconquered, and may be called the masters of the Sahara, for they practically control the great caravan routes from northwest Africa to the Sudan, and with their herds of camels transport the bulk of the merchandise between the North-African cities and Timbuctu. They are noted for their expert horsemanship as well as their skill in camel-riding, and while some still carry such crude weapons as the spear for arms, they are quite well supplied with guns, swords, and ammunition, which are actually manufactured by the mountain tribes of Berbers who inhabit the Atlas district.

Although they are supposed to recognize the authority of the ruler of Morocco and the French governor of Algeria, it is well known that the Berbers in general have very little respect for these officials, and while some of the tribes have representatives or embassies at the capitals, they are sent merely as a matter of form, and act as spies to keep their people informed of the political situation. Really no one has control over the Tuaregs except their chiefs and the Moslem priests. The word of the latter is law with them, and this is one of the facts that make the situation in northern Africa just now all the more menacing.

THE PRESIDENT'S DINNER TO THE DIPLOMATIC CORPS

The new state dining-room in the White House was filled recently with some eighty guests of President and Mrs. Roosevelt. The occasion was the annual formal dinner to the foreign ambassadors, ministers, and their wives. This function is always an important one, but this year, with the stimulus which the Roosevelts have given to social life in Washington, the dinner was unusually brilliant

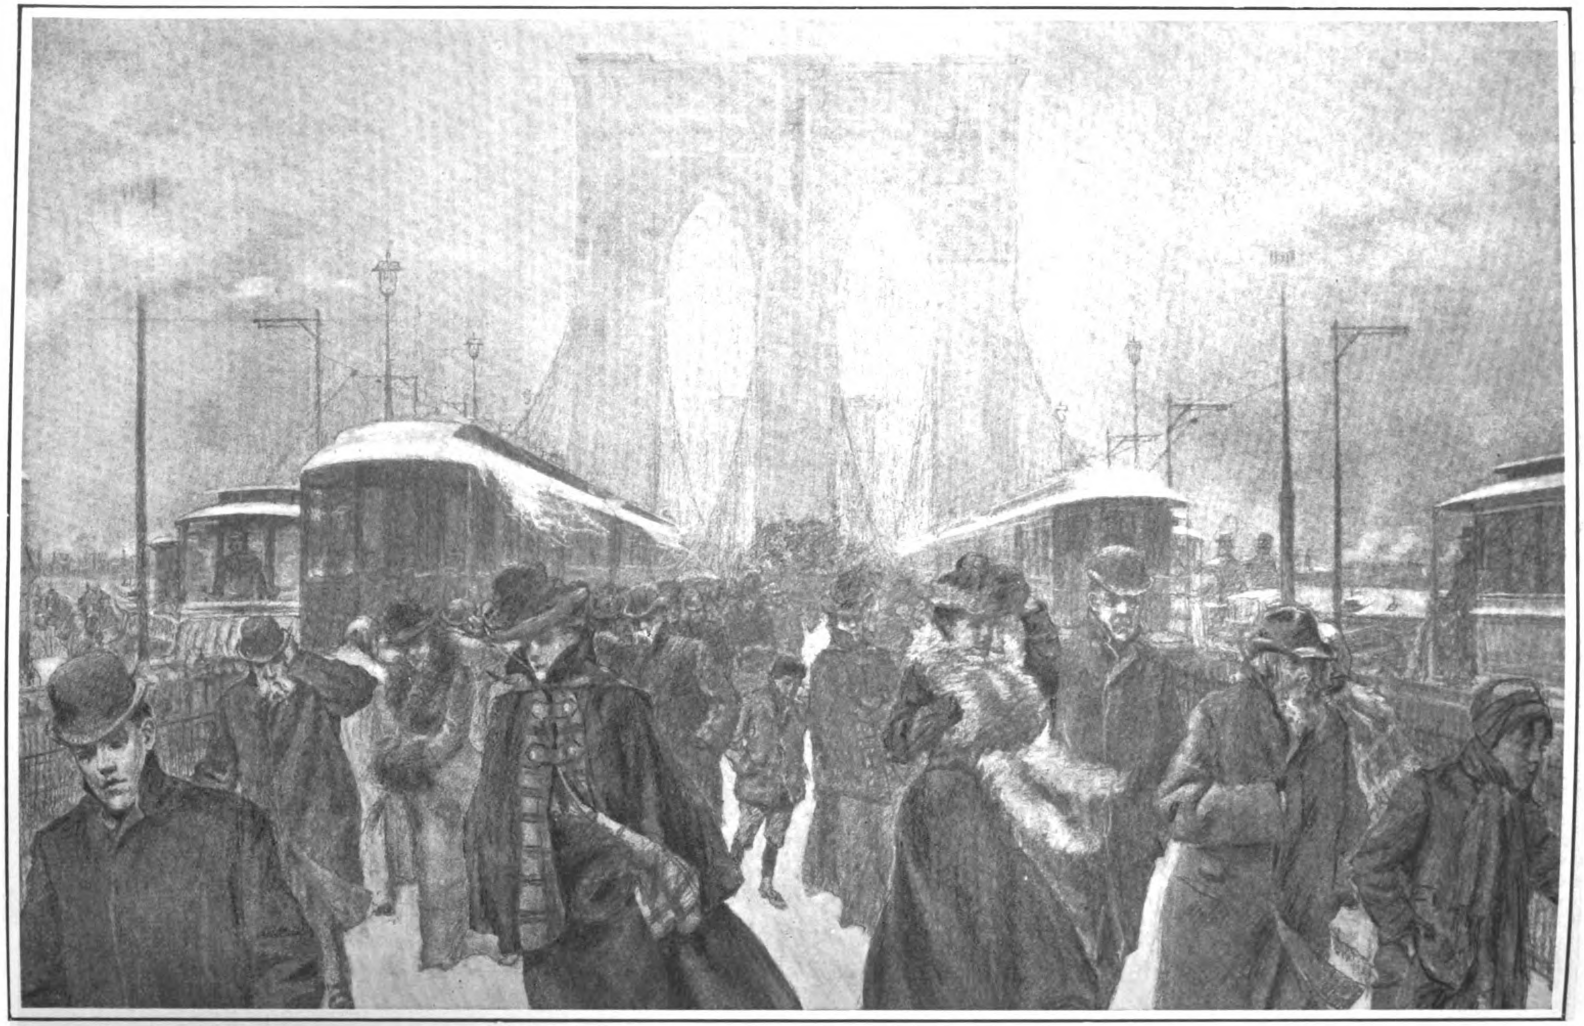
The Subway and its Stations

A View of the Interior of the new Subway in New York, showing the general Arrangement of Tracks and Stations
Drawn by H. M. Pettit



IN the new Subway in New York crowding will be eliminated by the simple device of providing one stairway for entrance and one for exit, and by making the platforms large enough to accommodate several hundred persons at once. There will be broad staircases of easy grade, ticket booths designed with reference to appearances as well as use, and the stations will have lofty, vaulted ceilings well lighted by day through bull's-eye glass and at night by electric lamps. The decorations will be of tiles, faience, and glazed terra-cotta, with the name of the station plainly marked in panels. All the ornamentation has been designed to help the passenger recognize his station without the necessity of listening for the announcement of the guard or reading the signs. Express stations at the City Hall, Fourteenth, Forty-second, Seventy-second, and Ninety-sixth streets naturally divide the local stations into groups. For each group a general scheme of decoration has been devised, and no two stations in a group are decorated in the same colors. For example, the ornamentation of all stations between the City Hall and Fourteenth Street will be characterized by long horizontal lines. The walls will be a white glass tile, the cornices of glazed terra-cotta, and the prevailing color of cornice and name panels will be, at the Worth Street station, dull green; at Canal, yellow; at Spring, white; at Bleecker, blue; and at Astor Place, bright green. Between Fourteenth and Forty-second streets, the decorations will be richer, and in panels instead of horizontal lines. Designs significant of the locality will be used wherever they can be appropriately. At Astor Place, beavers will appear in the designs; at Thirty-third Street, eagles; at Columbus Circle, Fifty-ninth Street, caravels; at One Hundred and Sixteenth Street, the blue and white of Columbia University. In other words, while no series of railway stations in the world will be so attractive to the eye as those of the Subway, there will be no meaningless ornamentation.

Repeated experiments have convinced the architects and engineers that the moisture and drip familiar to explorers of caves and tunnels can be avoided in the Subway stations by building air-chambers behind walls and ceilings. Accordingly, this method of construction has been adopted, and the underground will be dampproof. The tunnel will be cooler in summer and warmer in winter than the upper air. Subway trains will be made up of coaches a little larger than the new cars of the Elevated roads, five in local trains and eight in expresses. The third rail and the motor-car have been adopted for propelling the trains, and the same system will be employed to run the suburban trains of the New York Central, Harlem, New Haven, and Portchester roads to the City Hall loop. The cars will be heated and lighted by electricity. The carrying capacity will be greater than that of the four lines of the present Elevated system, owing chiefly to the greater speed of trains and the ease with which passengers can enter and leave stations and trains. Thirty miles an hour, including stops, will be the rule for expresses, and local trains will make considerably better time than the Elevated under existing conditions. Where the tunnel is near the street level, there will be fewer stairs to climb than at Elevated stations, and where the street is not readily accessible by stairways, as at the One-Hundred-and-Twenty-fifth-Street Viaduct, elevators will be provided.

A typical Station of the new Subway, showing proposed Arrangement and Architectural Details

AN INCIDENT IN NEW YORK'S GREAT TRANSPORTATION PROBLEM

The Brooklyn Bridge connecting New York and Brooklyn carries over half a million people each day. The cars crossing on the four tracks cannot begin to accommodate the crowds, and as a result thousands of people walk in all kinds of weather in throngs that make even the pedestrian anxious for his own safety. The completion of the new subway will go far toward relieving the congestion, especially at night, at the New York end of the bridge

Experiments just Made in Telephoning without Wires

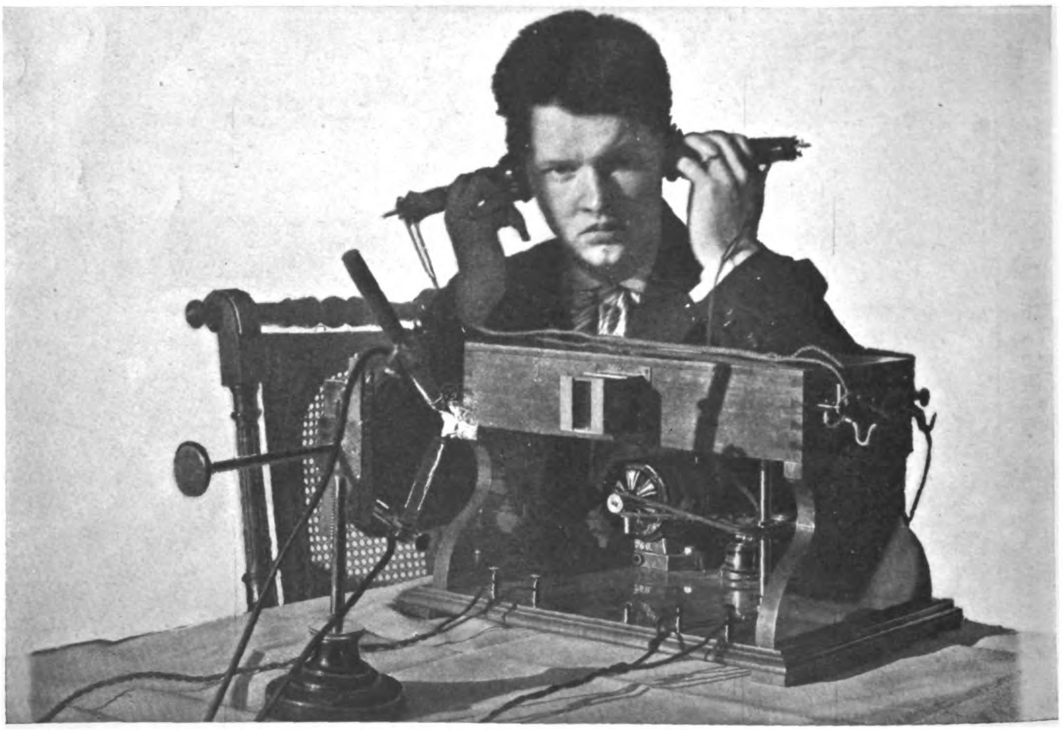
THE principles of light-telephony were discovered by Professor Alexander Graham Bell in 1880. To the apparatus used for this method of transmitting sound Bell gave the name of "photophone." The sound waves are transformed into light waves by a transmitting device, and these are again converted into sound waves by the receiving instrument.

In the photophone invented by Bell, a beam of light, from the sun or from an electric light, is brought to a pencil point by means of a lens, and centred on a little concave mirror fastened to the back of the diaphragm of an ordinary telephone transmitter. When spoken into, the circular iron plate, or diaphragm, of the transmitter vibrates in unison with the sound waves impinging on it, and the concave mirror reflects more or less of the light shining upon it. The amount of reflected light depends upon the intensity of the vibration of the diaphragm.

The Apparatus for Telephoning on a Ray of Light

The reflected light passes through another lens for the purpose of sending out a concentrated beam to the receiving station, where the beam of light falls upon a selenium cell connected with a battery and a telephone receiver. Selenium is a metal which possesses the property of conducting a current of electricity with less resistance when exposed to the light than when in the dark, so that when the beam of light falls upon the selenium cell its resistance is instantly lowered, and the current from the battery will flow through it and so operate a telephone receiver.

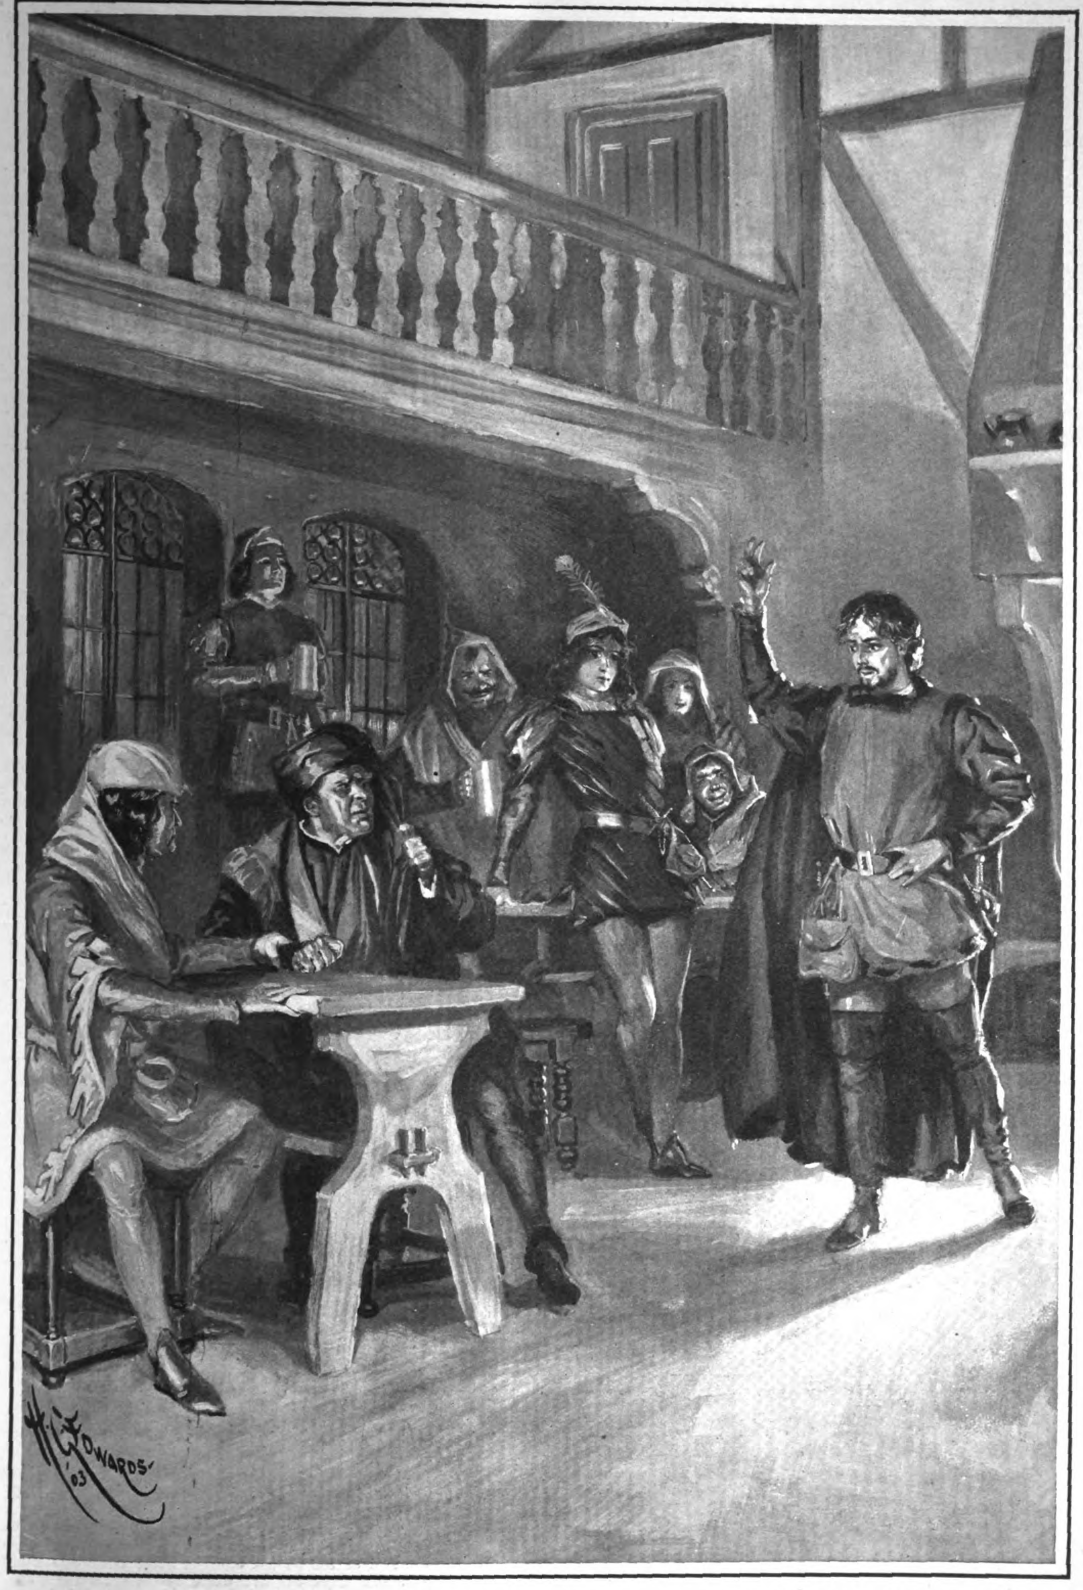
Every modification of the beam of light will make a corresponding change in its inherent quality of conducting a current of electricity, and therefore a corresponding difference is made in the sounds in the telephone receiver. Until Herr Ruhmer of Berlin began experimenting with the nature of selenium, the photophone had been confined to the laboratory, as it was adapted to the transmission of speech over a distance of a few feet only, but by constantly improving the transmitter, the receiver, and making each conform to the requirements of the other, Herr Ruhmer has evolved an apparatus which promises well for military and naval service.



Herr Ruhmer has done away with the necessity for having the reflection of light at the transmitting end of the apparatus. He has found that by connecting an arc-light in circuit with an ordinary telephone transmitter the arc will reproduce every word spoken into it both audibly and luminously.

This is due to the fact that the resistance of the arc is varied by the changes in the current flowing through the telephone transmitter, and as the resistance is increased or decreased, however slight the change may be, the temperature of the arc-light and the intensity of the light emitted by it vary. These variations of light values in the arc cannot be observed by the human eye, but to the sensitive electric eye—the selenium cell—the slightest change in the intensity of the arc-light causes a corresponding change in its resistance.

The arc-light, on which is superimposed the rapidly alternating current caused by the speaker's voice, is placed in the focus of a reflector like those used in search-lights. From here the small beam of light issues and is propagated in a straight line through space to the receiving instrument, where it is received by a similar curved mirror. This mirror converges the diffused beam into a pencil of light which falls upon the selenium cell.



The selenium cell is connected with a telephone receiver and a battery, and as the resistance of the cell changes, the current flows through both the cell and the receiver, and reproduces clearly the words spoken into the transmitter at the sending station.

The experiments with the light-telephone were made on the Wannsee near Berlin, with the transmitter mounted on board the electric launch *Germania;* the receiving apparatus was stationed at different points on the shore. Tests were made in the daytime, when the sun was shining, and the results were eminently satisfactory. Experiments were also made when the atmosphere was heavy with fog, and under these conditions articulate speech was transmitted and received a distance of four miles.

Herr Ruhmer of Berlin, who has made the most important recent Experiments in Wireless Telephony, taking a Message through his Light-Phonograph

An English Artist Here

THE art world of America experienced a ripple of surprise in '97 when Sir Philip Burne-Jones came to this country, bringing with him his great picture, "The Vampire." The artist is again in America, and is about to exhibit his paintings in the cities of the West. Sir Philip and his work came as an innovation to the prevalent trend of American art. He was received with the common salutations of the lion, the wailing of critics,

Along no set line or groove, as is the American custom, does Sir Philip work. Here a selection from Browning's *Pippa Passes* is exquisitely pictured with a daintiness befitting the subject. Here Henry James's sad story of *The Madonna of the Future* is illustrated, radiating with the whole deep feeling of tragedy of the never-to-be-realized ambition of ideal. Portraits of some of New York's beautiful women are among the latest from his brush,

Sir Philip Burne-Jones in his New York Studio

and the gnashing of press teeth. In the last period, however, the world American has awakened to the fact that a difference in subject selection as well as technique and handling is a distinction rather than a crime.

A wonderful scope of imagination is evinced in all Sir Philip's work, and especially in a recent production entitled "Earthrise from the Moon." The spectator is supposed to be upon the surface of the moon. The huge disc of our earth is seen to the left, rising behind the mountains and craters. The skeleton of an extinct Lunarian lies in the foreground. The picture, in its breadth of creative fancy, gives a flight of soul far "into the invisible."

giving a tone of conventionality, while in his "Vampire" is displayed the symbolical feeling for which Sir Philip is famed.

The broadest horizons of subject have been attempted by Sir Philip Burne-Jones. And already the Western art world is aquiver with anticipation of the advent of these great pictures into their midst. In a few days the art world of New York will know these works no more, as they start on a tour for exhibiting purposes only some time within the present month. The work which Sir Philip came here to perform seems to have been accomplished —the work of introducing to the American art world English art stripped of English environment,—of proving to the world that English art, as he conceives it in his work, is art the world over.

COMMENT

ENGLAND'S action in combining with Germany to sit on Venezuela has found two severe critics in England itself; we cannot say two English critics, since one of them happens to be an Irishman and the other a Scotchman. The former is that redoubtable "broth of a boy," Lord Charles Beresford, of Waterford and the British navy, and now on a special mission to this country in the interest of Anglo-American friendship. He is reported as finding fault with the Anglo-German alliance from beginning to end. He strongly hints that there is already much concealed ill-feeling between Germany, England, and the United States, and thinks that Mr. Balfour's cabinet has shown the worst possible judgment throughout the whole affair. We wonder, incidentally, whether Lord Charles objected on the same principles to the alliance of England first with Germany and then with Japan, for the avowed purpose of checking Russia; what he goes on to say would apply with equal force in the Far East. Great nations, says Lord Charles, always know their own business best; if they combine, they may do something which would lead to mutual annoyance. Therefore, it was a conclusion, in his mind, that Germany and Great Britain should have gone it alone in their demands against Venezuela. Surely there is something wrong about this argument; for, if it holds water, then any alliance between two powers is to be deprecated, since great powers know their own business best. Yet we find Lord Charles arguing a little later for an ever stronger and stronger alliance between England and the United States, though he expressly bars written treaties and protocols. But, if nations know their own business best, then England and the United States know their own business best, and should decide to go it alone, to use Lord Charles's own phrase. Clearly it is a bad argument; but let that pass. More interesting is the way Lord Charles goes for Rudyard Kipling and "The Rowers," which he regrets very much, as being in bad taste and not chivalrous. Lord Charles does not approve of saying nasty things about other countries, but says that, if you are going to fight, you should fight, and not grow abusive like a fishwoman. The abusive fishwoman is obviously friend Rudyard. It is now up to him to say something about Lord Charles. Finally, our good guest indulges in a sentiment which vividly reminds us of the recent bouquet handed to the American nation by our prospective German ambassador. He tells us that in our enterprise and adaptability to new conditions we undoubtedly lead the world—which, of course, is the merest justice to our great and admirable qualities.

The Scotch critic of England's Venezuelan muddling is Mr. Primrose of Dalmeny, or, to speak in the language of British oligarchy, the Earl of Rosebery. Delivering an oration at Plymouth a few days ago, he said most of the things against the Anglo-German alliance which Lord Charles Beresford said, and a few of the many things which we ourselves have said, and a small modicum of things which no one else has said; but the evident trend of the whole is that Mr. Balfour ought to abdicate, and open the door of power to the one really capable man in Great Britain, to wit, the Earl of Rosebery. The mischief of it is, that while people in general in Great Britain are obviously getting very tired of Mr. Balfour, as witness the recent bye-elections, culminating at Newmarket, people in general are very far indeed from being convinced that they would be any, if at all, better off if they put Mr. Primrose in his place. It is all very well to pull the work of other people to pieces; we ourselves are always ready to do it, when needed, and can do it to admiration. But governing an empire according to an intelligent design is quite another matter, and one which we would only undertake with much diffidence and inward shrinking. Even Lord Charles Beresford can propose nothing more hopeful for England than holding on to the coat-tails of Uncle Samuel, which is, of course, one way of governing the world's biggest empire.

The Venezuelan situation is extraordinarily complicated by the German attack on Fort San Carlos, if the cabled reports are anything like the truth. The German gunboat *Panther* opened fire on the fort, which commands the entrance to the inner bay on which Maracaibo lies, some twenty miles away. There was, apparently, no provocation from the Venezuelan side, nor any warning or preliminary notice, ultimatum, or what not, from the German side. Captain Eckerman of the *Panther* seems to have opened fire on the fort, acting on the general neo-Teutonic principle: Wherever you see a fort, shoot at it. Greatly to his surprise, this particular fort shot back, and not only shot back, but shot to some purpose. Seemingly as a result of this return fire, two explosions followed on board the *Panther,* and it is said that two sons of the fatherland were killed. At any rate, the *Panther* seems to have suffered serious damage, as she ceased firing, and presently steamed away from the fort. So much for the event. But the event itself is by no means the most extraordinary part of the story. It is said, on what seems good authority, that the whole thing was deliberately planned and ordered from Berlin. President Castro is reported to have received warning from Curaçao that some days later the fort of San Carlos would be attacked, and that the German commander had been specially ordered to make the attack before the arrival of Minister Bowen in the United States. It will be remembered that this same gunboat—the *Panther*—presided at the obsequies of the Haitian *Crête-à-Pierrot,* and we shall not be astonished to learn that the shade of the late Admiral Killick was seen pointing the guns at Fort San Carlos. Needless to say, the streets of Caracas were full of triumphant crowds, wild with delight over the defeat of the haughty Teuton; but we need hardly point out that local feeling on the subject sinks into

insignificance when compared with the international complications which must ensue.

It is an old saying that when in doubt as to which of two courses to take, you would do well to see which course your enemies or rivals would like you to pursue, and then adopt the other. Suppose we apply this rule to the Cuban reciprocity treaty. There is no doubt that our commercial rivals in Great Britain and Germany desire our Senate to reject that treaty. If we may judge from the position taken by the Berlin Foreign Office in 1878, when we entered into a reciprocity treaty with Hawaii, then independent, Germany will hold that she is entitled, under the "most-favored-nation" clause of her treaties, to the benefit of all the concessions that the United States and Cuba may make to each other. International law affords no basis for this assertion. An agreement to give a particular country all the privileges granted to the "most favored nation" refers to gratuitous privileges only, and not to such as may be granted in return for a valuable consideration. In the reciprocity treaty between the United States and Cuba no gratuitous privileges are granted: a consideration is offered for every concession. The opposition evinced in England to our reciprocity treaty with Cuba has even less foundation in law or ethics. The Marquis of Lansdowne, the Minister for Foreign Affairs, has agreed to receive on January 22 a deputation representing various British chambers of commerce, for the purpose of hearing objections to the pending treaty between Cuba and the United States.

The objections are based upon two grounds—first, that the treaty is a breach of the original undertaking of the United States in regard to Cuba, and, secondly, that the treaty, if adopted, will shut out other nations from the trade of the island. There is, obviously, nothing in the first objection. We pledged ourselves to give political independence to Cuba. We did not pledge ourselves to refrain from making with the independent insular government such a reciprocity treaty as we formerly made with Spain, or as we made with Hawaii. The second objection is based on an economical fact, but it is a fact with which the British Foreign Office has no concern. We deem it possible, and we certainly hope, that the reciprocity treaty will enable us to monopolize Cuba's import trade, and thus shut out both Great Britain and Germany from traffic with the island. What of that, provided that Cuba is convinced that she is getting a *quid pro quo*. Great Britain and Germany cannot offer a market for her cane sugar. We can; and if Cuba can secure it by giving us a monopoly of her imports, she will make an excellent bargain. She will do exactly what Hawaii did in 1878, and there is no reason to doubt that she will find the compact equally profitable. The fact is generally overlooked that, if we may judge from our experience with Hawaii since 1878, one outcome of the reciprocity treaty with Cuba will be greatly to increase the number of ocean-going vessels carrying the American flag.

Anglo-American unity must surely be pretty complete when the fine old British merchants feel called on to consult with Foreign-Secretary Lansdowne over our reciprocity treaty with Cuba. At a recent conference, deputations from various chambers of commerce throughout the United Kingdom discussed the treaty with Lord Lansdowne, and were pretty unanimous in declaring that the treaty was going to hit them hard. The discussion had merely a psychological interest, as it is doubtful whether the Senate will see its way to consulting the feelings of either Lord Lansdowne or the fine old British merchants who called on him to protest. As Orlando remarked, there was no thought of pleasing them when the treaty was drafted. There is, indeed, something decidedly comic in the attitude of these worthy Englishmen, who are so unfeignedly perplexed at the fact that arrangements can possibly be made which leave them out of account. There is a flavor of bygone grandeur in this assumption that the world exists for the British merchant. From a wholly different source we receive the suggestion that the prolonged fight in Cuba itself against the reciprocity arrangement with the United States was primarily inspired and promoted by those foreign powers whose trade with Cuba will be badly damaged by the treaty. Surely this cannot refer to Lord Lansdowne's friends, the fine old British merchants of the late conference? Can it be possible? perish the thought! It is a psychological impossibility. The fine old traders of the Thames who are so firmly convinced of their divine rights and prerogatives as to assemble and solemnly protest against our treaty would never do anything so painfully modern and up to date as buying a Cuban Congressional opposition. The two things belong to different geological epochs. What a contrast in the unselfish devotion of certain local industries in Cuba, who will also be hurt by the treaty, but who, nevertheless, appeared before the Cuban Committee on Foreign Relations to declare that they would not in any way oppose the treaty, even though injured by it themselves. It is a matter well worth speculating on how far our own Southern States will profit by the stream of trade to Cuba which the treaty will create.

Mr. Chamberlain, whom we discuss at some length elsewhere, seems to be convinced that evident destiny points to him, and not to Lord Rosebery, as the man to steer the British Empire. We are not quite so convinced of this. His policy seems to be to look about for portable property, and when you see it to grab it. Quite an intelligible policy in its way, until some one else sights the same thing, as, for instance, the trade of Cuba, or the Atlantic shipping. There is something peculiarly sordid in the turn matters are taking in the Transvaal: the too palpable consideration for value received, paid over by the mine-owners of the Rand to the imperial government. It is as though it were openly confessed at last that the men for whom the Boer war, with its incalculable sacrifices and irreparable losses on both sides, was waged, were the speculators whom one English writer has recently described as "a gang of cosmopolitan Jews." This is surely the seamy side; and it is characteristic of the man, that Mr. Chamberlain should apparently fail to see the incongruity of all this with the high talk about British glory which has been lavished from Durban to Pretoria. There is also the question of importing Chinese cheap labor for the Rand mines, and it is suggested that Mr. Chamberlain is ready to advocate this, in return for the special contribution of thirty millions sterling from the people characterized as the "gang of cosmopolitan Jews." Unless we are greatly mistaken, this Chinese question will arouse very strong feeling, not so much on the part of the Boers, as on the part of the British colonists in Cape Colony, Natal, and Rhodesia, who will thus have the "yellow peril" brought home to them, as it has been brought home to their brothers in Australia.

Our good friend Minister Witté has once more been getting himself into immortal print. He has, indeed, been "talking back" to Great Britain, and his talk is both amusing and instructive: amusing to Minister Witté, and instructive to Great Britain. The subject of his sprightly repartee in the present instance is that famous sugar bounty which Russia says she does not pay, and which nearly all the rest of the world, including our own Treasury Department and Supreme Court, says she does; and it appears that England, through the mouth of that rather infelicitous person, Lord Lansdowne, has been advising Russia to drop the bounty which Russia asserts she does not pay. Fancy Lord Lansdowne solemnly advising Minister Witté, the strongest financial power in the Old World, as to the management of his local finances! Minister Witté finally mastered his astonishment enough to rejoin, and his rejoinder was thusly: Great Britain's contentions, he says, are attempts to interfere in Russia's domestic legislation, and he strongly repudiates the idea that another state may, in its own interests, press for a change in Russian internal legislation, or, in the event of Russia's not agreeing to its proposals, that it can penalize Russia's products without violating existing commercial treaties. Minister Witté goes on to declare that Russia can under no circumstances give her adhesion to the Brussels agreement, and concludes by saying that, as Great Britain declines arbitration, and as the penalty clauses cannot be applied to Russian sugar until the international commission declares the Russian system to be a bounty system, any further exchange of views would, at present, be fruitless. That is one way of getting the last word. It remains to be seen whether Lord Lansdowne can think up something crushing to retort. Meanwhile Minister Witté has not only been writing letters; he has also been receiving them. The latest is from the autocratic Personage who modestly signs it, "Ever your grateful well-wisher, Nicholas." The imperial well-wisher declares that his

confidence in Minister Witté's devotion to the throne and the empire has greatly lightened his own labor for the country's welfare. His Majesty goes on to compliment Minister Witté on his ten years of most successful work at the Finance Ministry by the Neva, and also on his instruction of the Tsarevitch, younger brother Michael, in the principles of political economy. It is a pity that Lord Lansdowne could not have been included in the lessons. Well-wisher Nicholas ends his letter with the hope that the throne and country may long retain Minister Witté's valuable services at the Finance Ministry, and no more at present from yours truly.

Nothing could so strongly have marked the new order in Eastern politics as the Dardanelles incident between Russia and England. We all remember the part England, in the person of Lord Beaconsfield, played toward Russia after the Russo-Turkish war. The San Stefano treaty, which incidentally freed unhappy Macedonia from the grinding oppression of the Turk, was set aside at Berlin, and a new treaty was made, which undid most of Russia's work of liberation, and robbed her of the best fruits of her victory. England posed as the affectionate brother of Abdul the Damned, receiving Cyprus as a fraternal recompense, and, incidentally, barring the Dardanelles in perpetuity against ships of the Russian navy. The real purpose of this last move was to keep Russian battle-ships, of which there are ten or twelve, splendidly equipped, in the Black Sea, away from the Suez Canal and the road to India. Recently Russia had four torpedo-boat-destroyers in the Mediterranean, which she wished to take through to the Black Sea. She asked the consent of the Qualified Abdul-Hamid, who, mindful of the huge unpaid arrears of war indemnity still owing to Russia, promptly acquiesced. England as promptly protested, and called on Germany and Austria, as two chief parties to the Berlin Treaty, to join with her in protesting. To England's profound astonishment, both Germany and Austria declined to do anything of the sort; and the Russian boats went safely through, and are now at Sevastopol. This is one of the greatest setbacks English diplomacy has suffered in a generation, and is one more evidence that Lord Lansdowne's notions are archæological. The point of the story is that the thing was not really of the slightest importance to England; Lord Lansdowne apparently protested merely for the sake of doing something disagreeable to Russia.

This is not the only field in which Russia has cause for congratulation. Minister Witté's recent budget statement shows that in the industrial world also a change has come over the great empire of the north. He has the satisfaction, to begin with, of declaring a surplus of over eight million dollars, which is not doing so badly for a country which we are so often assured is on the ragged edge of bankruptcy. Then, in the department of expenditure, nearly a hundred millions are to be entered as permanent investments, chiefly the building of government railways. Russia is, in fact, rapidly becoming a gigantic trust, with the well-wishing Nicholas as honorary president, and Minister Witté as chairman of the board. Minister Witté goes on to tell us that it is his pleasure this year, for the first time in a long period, to be able to give the assurance that the general conditions of Russian economy show evident signs of changes for the better. Russia has just had a splendid harvest, the best in ten years, the yield being nearly a third more than the yearly average. The condition of the money-market is also improved; and Russia has a balance of exports over imports of $150,000,000. It was just when Minister Witté was gently rubbing his hands over this condition of things that Lord Lansdowne came along with his advice as to how Russian finances ought really to be managed.

At the hour when we write, the outcome of attempts to elect United States Senators in Delaware and Colorado is still uncertain. Delaware would have two Republican Senators if the "Regular" and "Union" Republicans would combine; but there is no prospect of such a combination. The Democratic members of the Legislature have offered to give the "Regular" Republicans one of the Senators if the latter, in turn, will help to elect the Democrat. We adhere to the opinion which we formerly expressed that the interests of the State have been sacrificed to the supposed interests of faction long enough in Delaware. It is unquestionably better that one of Delaware's Senators should be a Democrat than that the State should continue to be wholly unrepresented in the United States Senate. It is difficult to understand on what ground the "Regular" Republicans, who only number ten in all, can reject the Democratic proposal. In Colorado the Democrats have a majority of each branch of the Legislature on the face of the returns. The Republicans assert, however, that seventeen Democratic members of the Lower House were elected by fraud. If the right to vote is withheld from these seventeen members, the Republicans will not only control the Lower House, but will have a majority in joint session. The Democrats, however, who control the Senate, declare that for every Democratic member unseated in the Lower House they will unseat a Republican Senator. If this threat is carried out we are likely to witness a protracted deadlock. The two principal candidates for the vacant seat in the United States Senate are well known. If the Democrats have a majority in joint session, Mr. Teller will remain in the Senate six years longer. Should the Republicans be numerically preponderant, Mr. Wolcott will have a chance of returning to the Senate, though it is not certain that he can gain all the Republican votes.

The bill designed for the regulation of the trusts has not yet been reported from the Judiciary Committee to the House of Representatives. It is understood, however, that the provisions of the measure, in its ultimate form, will be much less drastic than were those of the bills introduced by Mr. John J. Jenkins, chairman of the committee, or than those which were desired by Mr. Littlefield, chairman of the subcommittee. We learn on good authority that the bill, as reported, will not embody the assertion that Congress has the power indirectly to crush a corporation created by a particular State, through depriving it of the privilege of selling its products in other States. We do not believe that the United States Supreme Court would have sanctioned such a revolutionary extension of the right to regulate inter-State commerce vested in Congress by the Constitution. We are glad to learn, however, that the question is not likely to be raised by the bill about to be submitted to the House. That measure confines itself, we are told, to arrangements for a more rigorous enforcement of the regulative law already on the statute-book, and for bringing the search-light of publicity to bear on the transactions of large combinations of capital. If this outline of the forthcoming bill be correct, we have no reason to doubt that it will be passed by the Fifty-seventh Congress. It may be that publicity will prove unwelcome to the Standard Oil Company and the American Sugar-refining Company, but it seems to be viewed without any apprehension by the United States Steel Corporation. The last-mentioned body, from its inception, has set a good example by taking the public voluntarily into its confidence.

It is hard to treat seriously Mr. Jenkins's resolution which proposes an inquiry into the power of Congress to seize the Pennsylvania anthracite coal mines by means of the assertion of an alleged right of eminent domain. If a right of eminent domain is given to Congress anywhere, it is in the seventeenth clause of the eighth section of the First Article of the Constitution, which empowers it to exercise exclusive legislation in all cases whatsoever over such district (not exceeding ten miles square) as may, by cession of particular States and the acceptance of Congress, become the seat of the government of the United States; and to exercise like authority over all places purchased, *by the consent of the Legislature of the State in which the same shall be,* for the erection of forts, magazines, arsenals, dockyards, and other needful buildings. If the strictness of the limitation thus imposed on the right of eminent domain be not patent to Mr. Jenkins on the face of the document, let him examine the text in the light of the *res gestæ*—that is to say, the proceedings relating to that clause which will be found set forth in Elliot's Report of the Debates in the Philadelphia Constitutional Convention. The danger of conceding to Congress a right of eminent domain was clearly recognized by that body, which, not content with the restriction of the right to the purposes above recited, added the further condition that, even for those purposes, land could not be taken without the consent of the State in which the land was situated. Assuredly, Mr. Jenkins

cannot imagine that the State of Pennsylvania would assent to the seizure of her anthracite coal mines by the Federal government. Even if the State would consent to sell them, it is impossible to find in the clause that we have recalled any basis for the assumption that the Federal government would have a right to purchase land for mining purposes. We had supposed that Mr. David B. Hill had pre-empted the eminent-domain absurdity, but it seems that the ex-Senator's claim is disputed by the chairman of the Judiciary Committee of the House of Representatives.

It remains to be seen whether the coal famine will be mitigated to any extent by the Act of Congress granting a rebate equivalent to the duty on all kinds of coal imported during the year following the passage of the measure, and also repealing the duty of sixty-seven cents per ton on anthracite coal containing less than ninety-two per cent. of carbon. In the course of the debate a good deal of light was thrown on the circumstances in which the last-named duty was imposed. Several Senators declared that, under the Dingley tariff, true anthracite was intended to remain precisely where it had been for many years, to wit, on the free list, and they explained that the duty of sixty-seven cents per ton was intended only to prevent the importation of a semibituminous, semianthracite coal from British Columbia into San Francisco. That was the view of the provision taken by President Roosevelt, and by many other careful students of the Dingley tariff, but the customs officials held otherwise, and, had not the duty been repealed or suspended, all foreign anthracite brought into our Atlantic seaports would have been subject to it. Congress is, of course, to be commended for doing what it could to relieve the suffering caused by the scarcity of fuel, but we doubt whether coal will be imported in quantities sufficient to produce a material effect upon prices. The dearth of the combustible is due to many causes, some obvious, others obscure. Owing to the prolonged strike, the stock of anthracite usually accumulated in the summer was lacking. So much is plain. It is also true that, since the strike ended, the anthracite mines have not been worked to their full capacity, owing to the refusal of the miners to exhibit exceptional diligence and energy. It is also certain that the independent operators have tried to profit by the people's necessities, and have obstructed the anthracite-carrying railways by keeping large quantities of coal in cars, instead of transferring the supplies promptly to their yards. By thus creating a fictitious scarcity, they have been enabled to raise prices.

But, while all this is true enough and deplorable enough, how does it happen that the bituminous mines, wherein work went on all summer unchecked by any strike, are so unable to cope with the demand that the price of that combustible also has undergone a surprising increase? One explanation of this latter fact is that the transportation capacity of the bituminous coal-carrying railways is not adequate. The Pennsylvania Railroad Company asserts that it is short of locomotives. Upon what other theory can we explain the fact that the bituminous coal shipments of the Pennsylvania Railroad are actually less than they were at the corresponding period last year? Either we must admit that the transportation powers of that great public servant are unequal to its duties, or else we must assume that the soft-coal operators, like the independent operators in anthracite, are taking advantage of the public necessities.

Between thirty and forty bituminous, or soft-coal, mine-operators and dealers have been indicted by a grand jury in Chicago on charges of illegal combination in restraint of trade and to fix prices. The indictments are based on the State statutes. This action, growing out of the agitation, suffering, and financial loss which have followed in the wake of the anthracite strike, is the most radical so far taken anywhere in the country. The specific charges on which the indictments were found are that some of the men indicted controlled the mining of soft coal in the Indiana and Illinois fields; that they and their fellow-conspirators took advantage of the situation to cancel yearly contracts with customers for coal supplies at an agreed price per ton, and forced such customers to go into the open market and buy coal at greatly advanced figures; that an abundant supply of soft coal was actually on hand, but was so handled and manipulated that the consumer was obliged to pay double prices for it; that regular scales of prices were fixed, and retail dealers forced to live up to them on penalty of having their supplies of coal cut off. The evidence before the grand jury went to show that in some cases the mine-operators also acted as jobbers, under a different corporate name, and even as retailers, and that mine-operators, jobbers, wholesalers, track team dealers, and retailers were all closely bound together in a series of associations, all controlled from a common centre. It was shown that retailers who did not sell at the price fixed by the jobbers had their coal supplies entirely cut off, and were practically driven out of business. Much of the evidence was furnished by the Illinois State Manufacturers' Association, many members of which have been obliged to shut down their plants and throw thousands of men out of work because they were not able to get coal at prices that made profitable manufacturing possible. In the mean time more than $30,000 has been raised in Chicago by public subscription and spent in the purchase and distribution of coal among the suffering poor of the city. It will take the trial of the men now under indictment to determine how far the charges against them are well founded and to show how far such a conspiracy—if proved—is responsible for the present situation.

We are unable to see why $25,000 of the public money should be appropriated, at Senator Hoar's request, to collect statistics relating to marriage and divorce in the several States. If he wants statistics relating to marriage and divorce in the Territories and the District of Columbia, there is no reason why such data should not be furnished at the public cost, for it is the business of Congress to regulate marriage and divorce in that part of the national domain which is under its exclusive jurisdiction. With marriage and divorce in the States, on the other hand, Congress has nothing to do, and never can obtain the power to do anything except through a constitutional amendment. It is incredible that three-fourths of the States—the number required to pass a constitutional amendment—would ever delegate to Congress their reserve powers to deal with matters of such vital moment to themselves as marriage and divorce. It is well known that, as regards the causes for divorce, there exists among the several States a very wide difference of opinion, which difference, of course, is reflected in State legislation. If a uniform divorce law were obtainable at all, it could only be reached by a compromise, which would be as unacceptable to the few States that now make divorce difficult as it would to the many States that now make it easy. It is not impossible that the States might agree as to the legal definition of a marriage, but it is scarcely conceivable that they should agree regarding the legal grounds of divorce. Under the circumstances, the public money could be better expended than for the purpose suggested by Senator Hoar.

We hope that in the next, if not in the present, Congress serious attention will be given to a bill introduced on January 16 by Mr. Fitzgerald of New York in the House of Representatives, a bill intended to encourage, promote, and develop the merchant marine of the United States. It may, at the first glance, be thought that a bill so entitled has a subsidy in view. This is not the case, however. The bill simply proposes to allow a rebate of ten per cent. of the duty imposed by law upon all merchandize imported into the United States from any foreign country, or from the Philippines, when such merchandise is carried in vessels of American registry. That is to say, while avoiding subsidies, this bill, if it became a law, would give American-built ships a tremendous advantage over vessels of all other nations. Not only would our native shipbuilding industry be stimulated, but our importers would get cheaper freights, for there is no doubt that, in practice, the rebate proposed by the bill would be divided between the freight-payer and the freight-carrier. What would be the probable amount of the rebate? We answer that during the fiscal year ending June 30, 1902, the United States collected in customs duties $254,444,708. Had there been enough ships of American registry to carry all the goods imported into this country, the aggregate rebate allowed would have amounted to $25,444,470. Half of this sum—the fraction that would have accrued to the native freight-carrier—would have

helped him quickly to recover that large share of the world's carrying trade which we possessed in the fifties. The United States could well afford the rebate, inasmuch as our surplus revenue last year exceeded $91,000,000.

We referred last week to the importance of increasing the salaries of the Federal justices and judges. Beyond recalling the fact that the functions of the justices of our United States Supreme Court are more exalted and more arduous than are those of the English Lord High Chancellor and Lord Chief Justice, we need not repeat the reasons for pronouncing it an absurdity that the members of our highest Federal tribunal receive but ten thousand dollars apiece—the Chief Justice gets five hundred dollars more—while the Lord High Chancellor receives fifty thousand dollars annually when in office, and twenty-five thousand dollars in retirement, and the Lord Chief Justice forty thousand dollars a year. We desire to re-enforce our argument at this time by pointing out that the nine judges of the United States Circuit Courts receive only six thousand dollars apiece, and the judges of the United States District Court only five thousand dollars each, except in Alaska, Arizona, New Mexico, and Oklahoma, where they receive only three thousand dollars each. Now will anybody pretend that the functions of a United States Circuit judge are less onerous and dignified than are those of justices of the Supreme Court of the State of New York, sitting in the first and second judicial districts of that State? Of such judges in the first and second judicial districts of that State there are no fewer than thirty-four, and every one of them receives $17,500 a year, or seventy-five per cent. more than a justice of the Supreme Court of the United States, and almost three times as much as a judge of a United States Circuit Court. Even in the rural districts of the Empire Commonwealth the justices of the State Supreme Court receive $7200 apiece; when sitting in the Appellate Divisions of the First and Second Districts they are paid at the rate of $17,500 a year, and, if assigned to duty in those districts other than in the Appellate divisions, their additional compensation is ten dollars per day. The notion that the justices of a State court earn more than the justices of the Supreme Federal tribunal is, of course, preposterous, and the assumption that the cost of living is less in Washington than in New York is equally unfounded. A justice of the United States Supreme Court is a great personage; it is a mooted question whether he should not take precedence of ambassadors. He has, therefore, a certain state to keep up; whereas the style of living adopted by a justice of the New York Supreme Court is a matter of unimportance to himself or to anybody else.

It is no secret—it is not even news—that the University of Oxford feels very poor. A book has lately been issued setting forth its pressing needs, to which the London *Times* has called attention. The Rhodes scholarships, instead of helping it, have increased its burdens. Its great library, the Bodleian, is cramped for room, both for books and readers, and has not funds enough to buy the books needed to keep it abreast of the times. Its deficiencies are so serious that the Oxford Board of Modern History reports that the scientific study of European history cannot at present be prosecuted at Oxford. In science its wants are manifold. It lacks equipment for the study of metallurgy, its instruction in geology is wofully inadequate, it needs a mechanical laboratory, with instructors, buildings, and machines; it has no engineering department, and it is far behind the times in the attention it pays to physics. Something seems to be wrong with the relations of England to Oxford. Perhaps the trouble is that the old university has been so long regarded as a rich man's university, and as a source of income and maintenance to fortunate fellows, that the British public is slow to realize that the venerable nurse of learning herself needs to be fed. There is no lack of money in England, but the British millionaires seem not to have formed the habit, so widespread here, of giving money to universities. Dr. Andrew White, defending his countrymen from the charge of greed, said last November, in a valedictory speech in Berlin, that the gift of over seventy million dollars to American colleges in 1901 abundantly proved that if the American knows how to chase the mighty dollar, he also knows how to use it. The British are earnest money-getters, but they don't seem to have the American accomplishment of letting go.

Mothers must be careful what they read to their children, or, without suspecting it, they may ruin, or at least badly injure, the morals of the rising generation. They may not safely confine themselves to *Jack and the Beanstalk, Bluebeard, The Three Bears,* and other time-honored classics of childhood. Mrs. W. D. McClintock, of the Department of English at the University of Chicago, declares that each of the tales specifically mentioned above has a vicious "moral squint," and that many of the tales read to children are positively immoral. Mrs. McClintock would allow no child to read to itself until it is twelve years old. And for the benefit of mothers generally she has laid out a programme of safe and improving reading, beginning when the child is two years old, and running through, by years, until it has reached the age of fourteen. From two to seven years, fairy tales which have no "moral squint" should be read; from seven to nine, such tales as *Robinson Crusoe,* with a whole year spent on that especial joy of boyhood; from nine to ten, the *Robin Hood* tales and animal stories; from ten to twelve, carefully expurgated tales of the old Greek heroes; from twelve to thirteen, stories dealing with the adventures of good knights, without too much romance; from thirteen to fourteen, at least one such play as the "Merchant of Venice," and some one of Scott's novels. As a general prescription this may do very well, but in actual practice it would doubtless show the grave defects of the cure-all patent medicine—it would fail to fit the individual case. How, for instance, shall a mother read fairy tales, "without a moral squint," to a small son who is only interested in stories of animals? And little girls have been known who yawned and went to sleep over the pages of *Robinson Crusoe.* At any rate, Mrs. McClintock's warning may serve to remind mothers that what their children read or have read to them during the first ten years of their life is certain to have a deep and lasting effect upon them. The subject is one which the women's clubs might profitably consider.

The reports of the successful use of formalin to cure blood-poisoning are of very great public interest, and indicate a new discovery of the highest importance in medicine. Formalin is an extract of wood-alcohol. It has been used in the form of vapor in the treatment of tuberculosis of the lungs, but failed in that use because it destroyed the lung tissues. Its value as a germicide in blood-poisoning cases was first demonstrated last Christmas day at the Bellevue Hospital in the case of a colored woman who had blood-poisoning as a consequence of child-birth. The case was desperate. The woman had a temperature of 108, and was dying. Blood drawn from her arm was found to be crowded with the virulent bacteria of septicæmia. Dr. Charles C. Barrows, feeling that the case was one in which the trial of a desperate remedy was warranted, injected formalin in considerable quantity into a vein of her arm. The effect was magical. Improvement followed almost instantly. Examination of the blood showed a vast diminution of bacteria. The patient's temperature dropped. Two days later a second injection was made. No ill effects followed, and ten days later the woman seemed well. This case, reported at a meeting of the New York Obstetrical Society, excited the most enthusiastic interest. The new remedy has since been tried in several obstetrical cases, with good results. It is too soon to consider its efficacy established, but there is every reason to hope that medical science has been enriched by a discovery of the first importance.

Mrs. Eddy has been heard from. She has read extracts from Mark Twain's articles on Christian Science, and is stirred to a number of disclosures. She says it is no fault of hers that the Scientists call her "Mother." She discouraged it, but vainly. She still thinks the name inapplicable, for she says: "I stand in relation to this century as a Christian discoverer, founder, and leader. I regard self-deification as blasphemous: I may be more loved, but I am less lauded, pampered, provided for, and cheered than others before me—and wherefore? Because Christian Science is not popular, and I refuse adulation." Again, after other remarks, she makes this disclaimer: "I believe in but one incarnation, but one Mother Mary, and

know I am not that one, and never claimed to be. . . . I have not the inspiration, nor the aspiration, to be a first or second Virgin Mother — her duplicate, antecedent, or consequent. What I am remains to be proved by the good I do." It will be seen that, modest as she is, she takes herself pretty seriously. Mark Twain advertised in the WEEKLY of last week that he was anxious to get certain of her writings which he had not been able to procure. She can easily get sight of his writings on Christian Science, and it is to be hoped that she will not rest content with the sight of mere extracts from them, but will read all his articles all through. Then perhaps she will ease Mark's fear that she thinks she is the woman of the Apocalypse, and, possibly, will also make some statement about the so-called Christian Science Trust, its powers and profits, actual and prospective, which will relieve the minds of apprehensive observers.

The dinner to John Hay by the Ohio Society was a deserved tribute to a scholar and a statesman. But we do not intend to follow in the footsteps of his hosts more than to express our pleasure that the Secretary of State was thus honored. One speech of the occasion, however, is worthy of special mention, because some of the allusions to it suggest that it was taken as a satire on President Roosevelt. Mr. James H. Hoyt seemed to praise Mr. Hay for the possession of every quality which Mr. Roosevelt is supposed to lack. He said, among other things, for example, that while "we Americans are aggressive, and greatly admire push and courage and dash and pluck," there is a "strong strain of conservatism in us"; that "away down in our hearts we Americans like, above all, a safe man. When one of our public servants has fairly won our confidence in his discretion, he always becomes deservedly great in our estimation." He also said, "while John Hay remains Secretary of State we Americans can sleep nights." He expressed the opinion that while Mr. Hay would be careful to sustain the honor of the nation, "he will never lower the dignity of that majestic emblem by needlessly flaunting it in the face of the world." In the mouth of an enemy these remarks might be counted as a reflection on the President, as at least rather broad irony. But there is no reason to believe that Mr. Hoyt meant them thus, and it is certain that if he did, Mr. Hay would not have been pleased. In fact, Mr. Hay is indeed very different from the President. This difference very much alarms some of the people of Massachusetts, who do not want to believe that Mr. Lodge will succeed in forcing Mr. Hay out of the cabinet. But the President also recognizes the difference, and it is partly because of it, because Mr. Hay supplements him, that he is desirous that the honored guest of the Ohio Society shall remain in the cabinet, and at the head of the State Department.

In his public relations Abram Stevens Hewitt exemplified that earlier and loftier conception of citizenship, "when to be citizen rang Roman yet." Scarcely any other man of his day could have offered a more plausible excuse for declining to take an active part in politics, for from the beginning to the end of his adult life he gave his time and his strength to the development of a great national industry. If he had never given an hour to State and municipal affairs, he would still have had a claim to be remembered, for his name is inseparably associated with the history of iron and steel manufactures in the United States. He considered himself indebted, however, to the political conditions of his country for the opportunities of personal advancement which he turned to memorable account, and he considered it his duty to discharge the obligation by keeping steadily in view the welfare of his city and of the nation. A firm believer in Democratic principles as they were propounded and applied by Jefferson, he was no slave to party, but co-operated with Tilden in the overthrow of the Tweed Ring, and he was one of the leaders of the great secession of Gold Democrats that assured the defeat of Mr. Bryan in 1896 and 1900. He used to say in these latter years that the Democratic party had left him, rather than he the party, and there is reason to think that had his life been prolonged he would have been seen once more among the chiefs of a revivified Democracy. He had none of the arts of the politician—he lacked the patience and the pliancy which the acquirement of those arts demands—but, considered as a statesman in the large and high sense of the word, it is doubtful whether since De Witt Clinton the State of New York has given birth to a son better qualified for public service. He must be largely credited with the fact that the problems of rapid transit in the city of New York and of intercommunication between the boroughs of the metropolis have at last been brought near solution. To him also, more perhaps than to any other Democratic leader, the country owed its escape from civil war in the winter of 1876-7, when the rival claims of Hayes and Tilden to the Presidency were referred to an electoral commission. A less impressive, but eminently useful, outcome of Mr. Hewitt's connection with national legislation is the United States Geological Survey. We add that the clarity and vigor of his intellect remained undiminished almost to the last. None of his earlier public papers is better worth reading than are those penned in the last year of his life, in which he defined his attitude toward the so-called "trusts," and discussed the political and economical questions raised by the strike in the anthracite coal region.

With the death of the Paris correspondent of the *Times* the journalistic world loses its most distinguished, or at least its best-known, member. M. de Blowitz, a Hebrew of the Hebrews in race and appearance, was born in Bohemia, close to Pilsen, the great home of lager-beer. He went early to France, apparently adopted the honorific particle on his own responsibility, and became a language-teacher in the south. He shouldered a musket in the Franco-Prussian war, and rendered good service to the government during the red days of the Commune. He was offered a consulship in Russia, but about the same time Laurence Oliphant asked him to interview M. Thiers for the *Times*, and this was the first step up the ladder of journalistic fame. With a gift for self-advancement amounting to genius, M. Blowitz managed to make himself an international personage. Ministries in Paris came and disappeared, but Blowitz went on forever. He damned with faint praise, or praised with faint damns, as the humor took him; and all Paris looked in the *Times* to learn how it had been behaving during the last twenty-four hours. He had more power than an ambassador, and the world of letters should erect a statue in his honor, as a type of the old Jovian school of journalists, whose personal view and personal word had weight in the destiny of nations. No figure has loomed so large in Paris during the last thirty years.

Readers of HARPER'S WEEKLY and HARPER'S MAGAZINE lost an old friend by the death of Julian Ralph. Newspaper readers of mature years remember his long and brilliant service as a reporter and correspondent of the *Sun*. He joined that paper about 1875, and continued on its staff for twenty years. No American paper ever had a better lot of reporters than Mr. Dana got together in those days, and the *Sun* never had a better reporter than Julian Ralph. He could see and remember and write. He had imagination and humor and a genial spirit. Some of his stories, continued from day to day, read like novels, and good novels at that. Political conventions and occasional murder trials gave him great opportunities, and what he wrote, hastily as it was done, made wonderfully good reading, and came near being literature. In 1895 he went to London as correspondent of a New York paper, and happened unluckily to be there when the Boer war broke out. He went to South Africa as correspondent of the London *Mail*, suffered great hardships there, lost his health, and came home in 1902 much the worse for his experiences. Last November he was appointed Eastern representative of the St. Louis Fair, but six weeks ago he was seized with illness, which caused his death on January 20. He wrote nine books, of which seven were published by the Harpers. His death at fifty is a sorrowful consequence of his labors as a war correspondent.

Mr. Edwin A. Alderman, whose portrait appears in our series this week, has devoted his best years to education in the South. Apart from his duties as a university president—he was at the head of the University of North Carolina from 1896 to 1900, and is now president of Tulane University in New Orleans—he has been for some time a director of the Southern Education Board, of which Mr. Robert C. Ogden is president. The work of this board in connection with that of the General Education Board has already shown splendid results. Mr. Alderman is contributing largely, especially in the Southwest, to the successful carrying out of their energetic educational policy. He is now forty.

The South and Cuba

THERE has been manifested a curiously narrow view of their duties by some of the Southern Democratic Senators. We do not write for the purpose of prevailing upon them to vote for the ratification of the Cuban treaty, because it is to be hoped that before these words reach them the treaty will have been ratified, or, at least, that they will then have abandoned their opposition to it. Their first thought, however, whether they continue to entertain it or whether they abandon it, affords the country still further evidence that the South cannot take a leading place in national politics until some of its hasty sons are taught a lesson of wisdom.

Senator Bacon of Georgia is a man of ability, but he was not serving the Democratic party when he announced his opposition to the Cuban reciprocity treaty, for the simple reason that his position was hostile to the best interests of the country, while it was inconsistent with a proper regard for the national honor. Moreover, if now or hereafter Senator Bacon and those Democrats who have thought with him succeed in committing the Democratic party to their view, that party will be open to the suspicion of having been acquired by the Louisiana and the beet-sugar interests. Nothing could be more suicidal than the adoption by his party of Mr. Bacon's views concerning the proper attitude to be maintained by the Southern States towards the tariff and towards tariff questions. He says: "I am opposed to protective tariffs *per se*. I am against the whole principle of protection." Then he proceeds to say that he is opposed to the Cuban reciprocity treaty because it involves an assault upon the industries of the South. He meant by this, undoubtedly, that the reduction of duty on Cuban sugar for five years would injure the Louisiana sugar industry. He overlooked, therefore, the more rapidly growing beet-sugar industry of the Northwest, which, comparatively small as it is, is not a Southern interest, so that, even on Mr. Bacon's low plane of political and economic philosophy, the Cuban treaty is not sectional.

Mr. Bacon and other Southern public men who think as he does have helped to make the Democratic party impotent for good ever since the close of the war of secession. One of the evils of our high protective tariff law is that it promotes sectionalism. One of the great opportunities of the Democratic party is that it may help to mitigate a policy which is not only a burden upon all our agricultural producers and upon all our consumers, but which is growing to be a restraint upon manufacturing, as it has long been upon commerce.

Unless the Democratic party assumes the policy of enlightenment, unless it advocates industrial and commercial freedom, unless it is to insist upon the gradual dissolution of the existing corrupting partnership between the great combinations and the government, a partnership formulated in the protective tariff law, there is little reason to prefer it to its opponent. A fine practical opportunity for showing its good faith, for proving that it is for liberal commerce, for fair international dealing, is presented by this Cuban reciprocity treaty. Another excellent opportunity was presented last year when the Philippine tariff bill was before the Senate. When the measure was in the House of Representatives, the Democrats then voted to increase the tariff concession to the archipelago; but when the bill reached the Senate a sufficient number of Democrats voted against the Foraker amendment to deny to the Filipinos a reduction of fifty instead of one of twenty-five per cent.

Last winter, the excuse was that the Democratic Senators believed in free trade with the Filipinos. Therefore they would take nothing less, a decision which has resulted in serious loss to the islands and such an obstacle to our commerce with them that, this year, the Republicans themselves have been forced to consider a concession of seventy-five per cent. This year Mr. Bacon follows up the folly of a year ago, and says that while he favors a liberal policy, he will not do anything that will injure his section, regarded from a purely protectionist point of view, for Mr. Bacon's view of Southern interests is a protectionist, and, therefore, a local, view. The real interests of his section will be promoted by an expanded commerce, and not by tying the whole South to the sugar industry of Louisiana, a policy which, so far as that State is concerned, has made it Republican on every issue, with the exception of the race question. More important still, the real interests of the South are to be best promoted by an emergence from sectionalism on to the broad plane of nationalism.

The country follows the President on this subject of Cuban reciprocity. It believes with him, or as he did believe when he wrote his first message to Congress, that common principles of fair dealing demand that we should keep the promises which the Cuban commissioners understood to have been made to them by Mr. McKinley and Mr. Root. It is not an answer to say that Mr. McKinley and Mr. Root could not promise what it was within the power of Congress alone to grant. The question is, as Secretary Moody once put it, "What did the Cubans understand?" We are too big, too powerful, to be ungenerous or technical in our interpretation of that promise. Mr. Roosevelt believes that it should be fulfilled. Mr. Root is sure that it should be. The country is in agreement with them. So universal is the feeling that the nation's honor is involved in the matter, that even the beet-sugar States gave their Senators and Representatives to understand that they had made a mistake in bringing about the defeat of the bill for Cuba which passed the House of Representatives at the last session of Congress, but, by caucus tactics, was made to fail of consideration in the Senate.

These Southern Senators ought to have realized by this time that the nation is growing stronger and larger in the imaginations of the people, and that the sections are growing smaller and of less importance. The man or the party who now puts himself or itself athwart the path of the nation is likely to be swept aside, and perhaps destroyed. Mr. Bacon's false notion of his duty to the sugar-cane growers cannot be permitted to prevent the keeping of the nation's faith. Neither the sugar cane nor the sugar beet, nor the South alone, nor the West alone, nor New England alone, can rule this country. The sooner the Democratic party realizes this, the sooner will it put itself in the way of victory. There are many Southerners who have risen up to the modern conception of the nation, and to the fact that the interests of the whole country are to be considered first. The Republican party, based on protectionism as it is, cannot fully comprehend the need of the time. With few exceptions, its leaders are clinging to its sectionalizing polity. The opportunity is therefore open to the Democrats. It is especially open to Southern Democrats, who have only to insist upon the old economic doctrine of their party. If this opportunity is not seized, it will pass away and into other hands. The paltry policy announced by Mr. Bacon is like the refusal of a golden crown. If it is symptomatic of the Southern Democratic party, if the South cannot grow to the proportions of a national policy, its day of return to leadership is yet far off; but it is sincerely to be hoped,—and there is evidence to sustain the hope,—that Mr. Bacon has not spoken for those Southerners who can take the leadership if they will.

The German Emperor and the Monroe Doctrine

THE attitude of the German Emperor towards this country furnishes food for interesting speculation. It is no longer a secret in well-informed circles in Washington and elsewhere that Dr. Von Holleben has been recalled because he did not satisfy the Emperor. The question remains, however, as to how and where he fell short in carrying out his master's wishes. He was certainly, in many respects, an impressive minister and ambassador. He was much in society. Among the many self-amusing and mutually entertaining people of the capital he was fairly popular. He did his best to carry out the Emperor's purpose to establish German and weaken English influence in this country. He was faithful. He was, however, a dragoon in diplomacy, having entered the service, as they say, by the back door, coming from the army. Intent as he was on furthering the interests of the Emperor, he did not quite comprehend his master's purposes. In the opinion of that master, his ambassador cultivated the wrong kind of society. He was too much at Harvard, and too little in Wall Street. Too many of his American and German-American friends were academicians, and too few were financiers. The Emperor was not appealed to as deeply by the LL.D. at Harvard as he would have been by the news that his representative at Washington was in the habit of riding wildly with the President. Dr. Von Holleben thought that his best plan was to cultivate the friendship and to gain the confidence of the scholars and thoughtful men of the country. The Emperor entertained a different notion; he believed that Germany's purpose would best be served by winning the President, courting the alliance of the captains of industry, and exciting the plaudits of the multitude. Dr. Von Holleben was not happy enough to become intimate with the President, nor did he make progress with the financial interests or with the people. So far as the President was concerned, his ill success was noticeable, and the Emperor himself did not aid him by his inopportune attempt to deny the reality of Lord Pauncefote's friendship for this country. Indeed, Dr. Von Holleben distinctly fell in the estimation of the members of the administrative circle when the Emperor's action revealed, or provoked, a question of veracity between the German and British representatives.

From his point of view, the German Emperor's policy is correct. If he is to accomplish what he has set his heart upon, his ambassador must be what Dr. Von Holleben was not, and must do what he failed to do, or what he neglected to undertake. The German Emperor has adopted a new policy in his relations with the United States. Until the conclusion of the Spanish war, he agreed with Bismarck that the Monroe doctrine was an "impertinence,"—an "American impertinence." Some Germans of importance, whose minds are not so agile as the Emperor's, continue to think thus. One of them repeated the odd re-

mark—odd in the light of recent revelations—only a week or so ago. Dr. Von Holleben, however, is not one of these, but he seemed, nevertheless, to believe that the Emperor's change of policy simply meant that he was trying to get the better of the doctrine by blinding us to his purpose by blandishments. This was not astute. It was a hasty jump at a conclusion, and naturally, therefore, resulted in a wrong landing. It resembled the ambassador's error in asking Lord Pauncefote to entertain Prince Henry at dinner. Dr. Von Holleben had seen and recognized signs that the Emperor did not wish to alienate England to the point of unfriendliness, and he made the request of Lord Pauncefote in the happy confidence that he was anticipating his master's inclinations. He was rudely awakened to the knowledge of his blunder by a cable which informed him that under no circumstances would the Prince be permitted to dine with the British ambassador.

The Emperor, doubtless, did think at one time that he could unite Europe, including England, in hostility to the Monroe doctrine. When he found that this purpose would not work: that England was wise enough to stand by the doctrine which an English statesman invented, and the maintenance of which is quite as important to British interests as to those of the United States; that the insolence of Von Diederichs did not help Germany with England, and that the assault upon Lord Pauncefote actually injured Germany and impaired Dr. Von Holleben's influence with the Washington administration—he quickly composed a new design, and in the accomplishment of this new design his old ambassador could not be useful, partly on account of his failure to comprehend it, and partly because the Emperor himself had made him ineffective. The truth is that our administration was so enraged at the attempts upon Lord Pauncefote that a man as bright as the Emperor could not fail to understand that by it he had made his tool at Washington utterly useless.

The Emperor's new policy is to secure shelter under the Monroe doctrine. To accomplish this he must not only cease to regard the doctrine as an impertinence, but he must accept it as a rule of international law, and must assume towards it the attitude which, as we pointed out last week, is the attitude which England ought to assume by reason of her interests and of her historical responsibility for its adoption and declaration by President Monroe. The German Emperor looks to colonization in South America. German emigration to Brazil and the Argentine has awakened a dream of empire on this side of the Atlantic. The promise at present is small, but if it could be certain that his rule might accompany it, the Emperor would undertake to stimulate the popular movement. This, of course, was in his mind, and, before that, it was in the mind of Bismarck when the policy was denunciation of the doctrine. The German purpose has not changed, if the method of effectuating it has been revolutionized. The purpose is to secure the right of colonization in South America; the new method is to induce this country to assent that the German Empire, as well as England, shall be a partner with the United States in asserting and maintaining the doctrine. The resistance to be overcome before this method can be successful is very great. The official and the public opinions of this country and of England are opposed to the establishment of a piece of the German Empire, with its strong inclination for tariff wars, on this side of the Atlantic. Such an establishment would greatly injure a market which England already possesses, and would prevent our establishment of one that we desire. The Emperor, however, has set himself to the task. He has succeeded in securing an alliance with England for a small raid on a South-American republic, hoping to perpetuate it and to secure the aid of his uncle's kingdom in bringing about a permanent and sympathetic union which will exempt from the operation of the doctrine German colonies to be, as existing British colonies are already exempted.

In furtherance of this object, the Emperor has also selected Baron Speck von Sternburg as representative to succeed Von Holleben. The new envoy is not of ambassadorial rank, but that matters nothing, for the Emperor will supply him with sufficient rank for his purpose. Baron von Sternburg will be a welcome addition to Washington society. He has long been an intimate friend of Mr. Roosevelt. He can ride as hard and as fast as the President. He is as strenuous and as reactionary. He can charm the people whom he will meet at the capital, and he will be able to excite popular enthusiasm. He will stimulate the excitability of the Washington atmosphere; but when he comes to the effort to induce the President to assent to a modification of the Monroe doctrine so that German South-American colonies may be set up with the concurrence of this government, he will doubtless discover that the Emperor's new and amiable plan is no more effectual than was his first and hostile scheme. The President will not admit the German Emperor as a partner in the Monroe doctrine (first) because he does not want the association, and (second) because, if he did, he knows that the country would object. As conditions exist, it is no more possible for Germany to crawl under the Monroe tent by prevailing upon us to look the other way for a moment than it is possible for the Emperor to rush the guardians.

The Kaiser's New Envoy

THE Kaiser has done a shrewd thing in sending, as his envoy extraordinary to Washington, Baron Speck von Sternburg. There are various reasons for congratulating him on his choice. It would not be in consonance with the rather rigid rules of preferment obtaining in the diplomatic service of Germany for the Kaiser to make Baron Sternburg the immediate and full-fledged successor to Baron Holleben, with the title and rank of German ambassador to Washington. Baron Sternburg has not been long enough in the diplomatic service for that, nor has he had that large measure of varied experience in responsible and representative positions at a number of European courts which is deemed requisite in Berlin to fit a man for one of the seven ambassadorships which are the seven "sugar plums" and the highest offices attainable, in the purely diplomatic line, in the service of the Empire. Baron Sternburg joined the German diplomatic ranks much later than is habitual there. His youth and his early manhood were spent in the German army. He was a dashing cavalry officer and had served with distinction in the 18th Hussar Regiment, forming part of the Saxon contingent, when he turned to diplomacy. Thus, he has barely a decennium of diplomatic service as a score, and this fact, if the man had not shown unusual aptitude, coupled with great tact and other qualities that are rare in the diplomatic service of any country, would in itself have sufficed to prevent his rising too rapidly. Men who joined the German diplomatic corps simultaneously with him have scarcely gone higher as yet than to a second secretaryship at one of the more important courts, or else to some minor post. It speaks plainer than words for Sternburg's great ability that he has managed to break through the meshes of that network of tradition and custom enwrapping Germany's entire diplomatic service on several conspicuous occasions, that he has been intrusted with independent missions of a highly delicate and important character, acquitting himself to the entire satisfaction of his sovereign, and that, in so short a time, he has attained a high rank and an enviable reputation, both at home and abroad. No confidence is violated when it is said that he is *persona gratissima*, not alone with the Kaiser, but with President Roosevelt and the American official and political world. With the Kaiser he became so solely through his merits, and on this side of the water it has principally been the efficiency and tactfulness, together with the sympathetic manner in which he was largely instrumental in laying that silly but annoying Samoan ghost, a couple of years ago, which for a time seriously threatened to strain Americo-German relations, and the extraordinarily well-informed manner in which, before and since, he had fathomed and then reported home the spirit of the American people as he had found it during his connection with the German embassy in Washington. In arriving at correct conclusions as to the temper and aims, likes and dislikes, currents of thought and driving forces in the political life of the American people, Baron Sternburg has been enjoying more than ordinary means. His English birth and childhood; his English mother, and the fact that English is his mother-tongue and his favorite vehicle of expression; his varied travels and official experiences in English-speaking countries, a large part of which was in this land; and, finally, his marriage to a lovely and highly accomplished Kentucky girl,—all these factors combined to give him a clear and sympathetic insight into both the American and the English mind and character, and to thus make him an exceptionally valuable interpreter of it to his government. Neither the Kaiser nor his government will, without pressing need or for exceptional reasons, disregard the hoary traditions as to "seniority" and the regular scale of advancement in vogue in the German diplomatic service. And it is, therefore, doubtful whether Baron Sternburg, even if his mission to this country should turn out as successful as one may confidently expect it will, will be promoted in the immediate future, over the heads of scores of other and older competitors, to the rank and emoluments of a German ambassador to Washington. He is still a young man, it must be remembered, and he has so far held no independent diplomatic post at even one of the smaller courts. But it may be foreshadowed for him that he will be, first, *de facto*, a very efficient diplomatic representative of Germany at our national capital, under whose guidance the German part of the Venezuelan imbroglio will be disentangled in a way to give no needless offence to American susceptibilities, and next be promoted to the regular ambassadorship itself. Certainly, it would be a graceful thing for the Kaiser to do. In this connection it may be timely to destroy an erroneous opinion, frequently expressed in the American press, viz., that Baron Sternburg lost favor in Berlin when he had, as Germany's special commissioner to Samoa, settled, in conjunction with the British and American commissioners, that hornets' nest of tripartite squabbles to the

satisfaction of the three parties. It has also been stated since, on many occasions, that his transfer to Calcutta, as German consul-general, was in the nature of a degradation and punishment therefor. The exact opposite is true. The high opinion the Kaiser holds of him dates from the very time Baron Sternburg showed such statesmanlike qualities in removing for good and all the Samoan problem from the international horizon, the conciliatory manner of his doing it subserving Germany's best and most vital interests. And as for his appointment to Calcutta, that was distinct preferment. If at that time one of the minor ministerships, to either Denmark, Switzerland, or elsewhere, had been vacant, no doubt it would have been offered Baron Sternburg. But in the absence of that the post to Calcutta, one of the highest-paid and most important in the German service, was given him, his English sympathies being also taken into consideration. It has, besides, been an open secret in Berlin for years that the Kaiser has had his eye on Sternburg for Washington, and there were good and potent reasons for it. The only serious competitor, for the space of several years, in his way was another German diplomat very popular in Washington, namely, Mumm von Schwarzenstein. The latter it was who effected the so-called Saratoga Convention between the two countries, an agreement on tariff matters which did considerable for a time in allaying mutual recriminations in the matter of levying duties. But the despatching of Herr von Schwarzenstein as German minister to China removed that gentleman from the list of "possibilities," and his usefulness to Germany in China has proved too great to admit of his being recalled from there for years to come. Besides, Schwarzenstein's American experiences lie farther back, ten years ago and over. With the present mood of the American people, with the political currents here to-day, he has little, if any, acquaintance. The field is, therefore, free for Sternburg.

To the Jews a Stumbling-block and to the Greeks Foolishness

A YOUNG man who has great possessions, and is also the teacher of a Bible class in a church of this city, grappled a few Sundays ago with that difficult text of Scripture relating to the hardships of a rich man in entering the kingdom of God. He frankly debated it with the members of his class, and did not spare himself the tacit or explicit inferences in the minds of his hearers, however personal he may have felt them. He reasoned first that when Jesus bade that other young man who had great possessions go and sell what he had and give to the poor, conditions of society were very different from the social conditions of to-day. He then held that there were many things a man might give up for Christ's sake besides his property, as, for instance, legitimate pleasures, though he did not say why he need; that it was always a matter between Christ and His follower what should be given up; and he suggested that Christ might have perceived that the heart of that young man was mainly set upon his possessions, and therefore their sacrifice was the sacrifice due from him. He thought that we ought to take Christ's words in a broad sense, yet he applauded the disciples who left their nets and followed Him, though he seemed to feel that their merit was in their obedience rather than in the surrender of their property. When one of his class asked, "How about Tolstoy, who gave up everything in life, all his worldly possessions?" the young man did not take the usual short and easy way with Tolstoy, and say simply that he was a crank, and that was how about him, but answered that his was "certainly a very noble example," though he urged again the difference of the present social conditions, and argued that a man could serve God while attending strictly to business, and we must not take Christ's sayings in a literal sense.

Upon the whole, his discourse as reported, was pathetic, for he said quite what that other young man who had great possessions might have said to a Bible class in the synagogue, after parting very sorrowful with Jesus. No one can read that plain story without a heartache, if he has a heart: it is awfully human; and no one, if he has a heart, can withhold a throb of compassion for the young man with great possessions who finds himself in like case to-day: who hears that call and longs to obey, but cannot because of his great possessions. Then, as now, such a young man would have told the members of his class that "the conditions of society" were different from those of a time when a person could give up his property for the sake of life everlasting. He would have made excuses, and said that those fishermen who had left their nets at Christ's call had certainly set a very noble example, "and that the lesson to be derived is obedience to the words of Christ," but you must first make sure whether He meant His words to be taken figuratively or literally. The young man would probably have argued that it would do very well for a lot of poor fishermen, who had little to lose, anyway, to take them literally, but that a person of independent property, realizing all the high responsibilities of wealth, had better think twice before he did so. He might even have shown that obedience in some such cases would be essentially impossible: that if, for instance, a certain very wealthy man of that day gave every village in Judea a free library, still he would probably not succeed in dying poor. Perhaps if Jesus Himself had been present at the debate He would not have been able to refute the young man's position.

Still, we think that in the very first of them the young man was wrong. The conditions of competitive society are now just what they always were, without the shadow of change. The world, the flesh, and the devil we have had always with us. It is no harder in New York now to do the will of Christ, to fulfil his sayings literally, than it was in Jerusalem two thousand years ago. There were then rich and poor, as there are now, and there was the same buying and selling and getting gain. The question is whether the literal fulfilment of His sayings was not always impossible. A few of His immediate followers thought not, and formed themselves into a little republic, in which they had all things common, but that was where they fell down, and their republic with them. They still left the well-meaning to ask themselves how they could enlarge the eye of the needle so as to enter the kingdom of God with their assets, after having given the deserving poor all they could without pauperizing them.

But that answer to the young man who had great possessions was not the only hard saying of the Master, who, we are instructed, ought to be obeyed in what He meant rather than what He said, though without His words His meaning is difficult. He also said, "He that looketh upon a woman to lust after her, hath" done something worse than begin a harmless flirtation; but if this were taken literally, there could be no more décolleté toilettes. He said, "Thou shalt not kill," but if he were obeyed in this there would be no chance of a great people constituting themselves a world power. He said, "Do unto others as ye would they should do unto you," but if we had taken this command seriously what would have become of the helpless Filipinos? He bade us turn the other cheek to him who has smitten us, but if people did so, there could be no such thing as the honor of a gentleman. His teachings in regard to divorce were such that if they were taken on their face large numbers of our fellow-men and fellow-women would not be living now in what they regard as holy matrimony.

Were these and other sayings of Christ too hard for human nature? It would really seem that they were; and the church is founded on the spirit of words whose letter killeth. It comes mercifully between the absolute love and purity and righteousness and the trembling sinner who would like to obey, but does not want to, and offers him a compromise, a *modus vivendi*, which he can accept. Sometimes it does this in one way, and sometimes in another, according to its special creed, or his special need, and as the churches are several, and by no means all of the same mind, there is hope for almost every sort of sinner. The church has tried to have the children of light do as wisely in their generation as the children of darkness, and it cannot be said that it has not succeeded. It offers a compromise, a *modus vivendi;* but nobody contends that this is final. Perhaps we are really, though unconsciously, waiting for the conditions to be changed, so that the precepts of Christ shall be practicable. In that time, whenever it comes, no young man having great possessions will be obliged to account for their retention, for there will be no such young man. Meanwhile, with Christ figuratively taken, Christianity gets on very well, while with Christ taken literally, it bristles with apparently insuperable difficulties.

The Crocus

I

On mountains the crocus
  Ere hollows be clear
In the bed of the snowdrift
  Will rise and appear.
Aloft the pure crocus,
  Born under the snow,
In the sun is left trembling,
  All bare to his glow—
Like the heart of the woman who listens
  To love in the forests below.

II

The Lover speaks:—
O light-born, how oft
  Shall I drink in like wine
Thy body cloud-soft,
  Earth's marvel, yet mine?
How oft shall I dare,
  Unabsolvèd by death,
In the flood of thy hair
  And the flame of thy breath?
From the incense-boat sun hast thou wandered,
  A dream from a time beyond death.

III

And she yearns to respond
  To that strain out of reach,
To the glowing and subtle
  Stream spirit of speech.
But she weeps—ah, too childish
  For love is the span
Of the half-bestrung lyre
  Of the language of man.
So she breathes the sun-song of the crocus—
  Reveal it, repeat it, who can!

HERBERT TRENCH.

Mr. Chamberlain

By Sydney Brooks

LONDON, *January 7, 1903.*

VERY curious is the position Mr. Chamberlain holds in the public life of England. His triumphal progress through South Africa marks the climax of one of the strangest careers that has ever been interwoven with the tale of English politics. Disraeli himself, from the moment his first speech was laughed down in the House of Commons to the day when he stood up before the Berlin Congress, the world's central figure, hardly surpassed its shifting fortunes. It was said of Sir Robert Peel that "of almost all the great measures with which his name is associated, he attained great eminence as their opponent before he attained even greater eminence as their advocate"; and it has taken volumes to explain and justify Sir Robert. A whole library will be needed to explain and justify Mr. Chamberlain. He has boxed the entire political compass. He began life as an extreme Radical, with more than a touch of half-baked Republicanism about him. There was a time when people seriously looked to Chamberlain and Dilke as the forerunners of an English republic. Those were the days when he denounced the aristocracy as a class that "toils not, neither does it spin," when he spoke as though the ownership of property were a crime, when the rosy-cheeked country gentlemen in the House of Commons almost shrieked at the idea of his entering the sacred precincts, and when Lord Salisbury publicly commented on the appropriateness of Mr. Chamberlain's initials, inasmuch as they were also those of Jack Cade. Well, this same Mr. Chamberlain is now a member of the stiffest Tory government that England has known for thirty years. He started as a Little-Englander of the most provincial and Labouchereau type, and confessed himself prouder of his work in Birmingham than of the whole British Empire. He lived to be so ashamed of his early speeches that when some thoughtful enemy collected and published them, he bought up and destroyed every copy of the volume he could lay his hands on. He has now made himself the exponent of an equally pronounced Imperialism, and written himself on history as the first Colonial Secretary with a policy of his own. He was "a home-ruler before Mr. Gladstone," yet he broke up the Liberal party on the home-rule question: a Dissenter, yet he votes for doles to the Established Church; a foremost advocate of secular education, yet a member of a cabinet that, as the Education bill showed, will risk anything in support of the denominational system. He began by attacking the House of Lords: he may end by sitting in it. He has joined every party and been on both sides of every public question, and yet stood always alone.

That is the way his opponents usually sum up the case against Mr. Chamberlain, and it is not to be met by his simple statement, "It is circumstances that have changed, not I." Mr. Chamberlain has changed too, and as most people who have read his early speeches will agree, it is very much to his credit and advantage that he has. But there is a good deal in the argument that the inconsistencies of his career have, as it were, been forced upon him. Americans may conceive his position exactly if they will imagine an able and strenuous Democrat who, finding himself honestly unable to vote for free silver, has joined the Republican ranks. So long as the party he has left continues to pin its faith to the objectionable measure, he is constrained to number himself among its opponents. Once granted that that is the only right course open to him, and it is easy to understand how close and constant association with the Republicans may modify his views on the tariff and "government by injunction" and so on. This has been Mr. Chamberlain's case precisely. He left the Gladstonians, and doomed himself and those who seceded with him to ten years of political exile because he regarded the particular form of Irish home-rule proposed in 1886 as the beginning of the disruption of the Empire. In the past seventeen years the alliance with the Conservatives has grown into an indissoluble union, and as a practical politician Mr. Chamberlain has been obliged to recognize the fact. It has undoubtedly toned him down in some particulars; on the other hand, he, just as undoubtedly, has contrived to rub off some of the Conservative angles. There has been an approximation on both sides. He has liberalized the Tories, and the Tories have partially deradicalized him. For the rest, he has grown in breadth as the whole country has grown, saving only the stern and unbending relics of Gladstonianism, like Harcourt and John Morley. He no longer wishes to tinker at the old and tried institutions of the country: no more does anybody else. It is perhaps less correct to say he has changed than that he has not stood still. At heart he is a Radical even now, but a passive Radical, a Radical with a juster sense of what is possible. He would still, if he could, disestablish the Church of England, "reform" the House of Lords, and utterly secularize education; but he knows that he can't. Towards genuine Toryism, which is far more a matter of instinct and mental habits than of opinions, he has scarcely advanced an inch. Of all things, the "philosophy" of Toryism has the least attraction for him. The Conservatives feel this. They know him to be a recruit, but not a convert, very able, very useful, but still not one of themselves, and liable at times to wild Radical relapses, as, for instance, in the matter of old-age pensions. Such a man they could not accept as a leader. Toryism in England has, it is true, again and again profited by the services of brilliant outsiders, and even at times submitted to be led by them. But in all cases they have been *men* who had the Tory instinct. Disraeli was otherwise as incongruous a captain for the Conservative party as could be imagined, but they followed him like sheep, not only because his genius was indispensable to them, but because he never had the remotest sympathy with the Radical view of things. If he laughed at the extremes of Toryism in his sleeve, he had a quite sincere respect for its appanages. They pleased his historic and artistic sense and drew him willingly to their defence. But Chamberlain is still essentially what he was thirty years ago, with the crudity worn off and a more temperate judgment in the place of it; but otherwise, the same.

Do Englishmen trust Mr. Chamberlain? It may, I think, be said they are beginning to—but with reservations. There are many who hate him both personally and politically; there are more who intensely admire him; but there are comparatively few whose complete confidence he has managed to win. Some final sense of insecurity seems to mingle with the popular estimate of the man. No Englishman, for instance, would think without a shiver of Mr. Chamberlain being made Foreign Secretary. He has, for one thing, the knack of inspiring an extreme animosity without the compensation, which Gladstone enjoyed, of an equally extreme enthusiasm. All his life he has been in hot water, always attacking and attacked. France hates him as she hated Pitt; Germany for the past three years has been in a very tempest of anti-Chamberlainism; in Spain and Italy he lacks not only a single defender, but any one who will do him even bare justice; and Russian journalists are encouraged to say anything they please about him, so long as it is to his discredit. The description he gave of himself a few years ago needs amplifying to-day. He is not only "the best-abused man in England," but in the world. At home there has been nothing in all English history to compare with the hunt of obloquy of which Mr. Chamberlain is the quarry. This universal hatred has had something to do with popular distrustfulness. The superficial gyrations of his career have had something more. The English masses do not look very closely into the heart of things, and Mr. Chamberlain's always vehement expression of whatever faith he may be holding is a further obstacle in the way of dispassionate judgment. Moreover, he "betrayed" a man whose mastery over the minds and affections of his followers took on an almost religious completeness. When all is said and done, there is no charge that damns a politician so effectually in the estimation of the many-headed as that of "inconsistency." Mr. Chamberlain laid, or seemed to lay, himself open to it, and has suffered by having withheld from him the last degree of trust.

And very largely Mr. Chamberlain himself, his manners and his nature, are to blame if the country does not think as highly of the man as of his abilities. Somebody once said of Gladstone that he was Oxford above, *but* Liverpool below. Chamberlain is Liverpool, or rather Birmingham, above, below, and all through. He makes a personal matter of politics, in a way that rather jars on Englishmen. He fights always and openly for victory, and he is diabolically clever at it. No point is so small that he will not score it if he can, and having scored it, he drives it home with real zest. He is never satisfied that his victim is really disposed of till the tomahawk has done its work. One feels too bluntly the lack of the humanities in both his manner and his methods when Chamberlain is on the warpath. There is a disenchanting absence of "bigness" in his character and instinctive way of looking at things, a too obvious readiness to corner his opponent and turn the most trivial incident into a means of personal glorification. He has no moderation in him, whether his adversary be Campbell-Bannerman or Russia or Count von Bülow; and in this way he often trespasses against good taste and sometimes defeats his own object by over-statements and acrid asides that drive men into antagonism. He is not only warlike in himself, but is the cause of war in others; and being by all odds the keenest hand-to-hand fighter in English public life, he glories in this sort of conflict and is careless of the wounds he may leave behind. His strongest point and most statesmanlike gift is his exceeding quickness of intuition; but his outlook is not naturally a broad one, and there are many who accuse him of a provincial narrowness of mind. A man who always knows precisely what he wants and the shortest road to it is usually liable to some such accusation. There has, however, been no lack of elevation in his speeches on the Empire, even if the imaginative flights that come so easily to Lord Rosebery are altogether beyond his practical, matter-of-fact mind that prefers, for the most part, absorption in the here and now. He is, in a word, the type *par excellence* of the business man in politics, with all the good points and a good many of the bad that the definition implies.

The Book of Months

By E. F. Benson

MAY

MAY has come in with gleams of sunshine and gusty fits of tears; half the time one is out-of-doors one is being soaked, the other half being dried by the sun and the warm boisterousness of the west wind. The heavens, indeed, are like some wayward woman, scolding and storming, then suddenly showing the divinest tenderness. "I didn't mean it," says the sun and the west wind. "I only wet you for fun. Oh, don't go indoors and change; I will make you quite dry in a minute!" But for as long as I live, I think every May that comes round in the circle of months will be to me not the May of the year whose course is now running, but the May of three years ago. So, too, when we come to June you will find the June of two years ago. For to me now and to me always, so I think, May will mean the things that happened then, and June will mean the things that happened thirteen months later. I will tell you that story. It concerns three people only, and two of them are dead.

Dick Alington and I were very old friends. We had been at school together, and his father's house was next to ours in the country, the woods belonging to each running contiguous, and separated only by the park paling. In consequence, from our frequent passages the one to the other, a beaten track lay through the woods in a bee-line from house to house, and the paling at the particular point where the bee-line crossed it was, from the frequent scrambling over it, broken and splintered, till after the lapse of some years it was no more than a stile that could be walked over without any scrambling at all, and the path was known as the "boys' path." We had remarkably kindred tastes, because we both of us liked practically everything except parsnips and being indoors, even down to and including London fogs, when we used to have games of hide-and-seek in Berkeley Square, where we both lived, which for sheer excitement and mystery beat any pursuit in which I have ever been engaged either before or since. The game itself is one of the utmost simplicity. I stood in the porch of either house while Dick was given ten seconds' law. He had then, without leaving Berkeley Square, to remain uncaught for five minutes, while I pursued him blindly in the fog. We were not allowed to run or to hide, but only to walk about the space, and we were properly dressed with tall hats and gloves, so that in case of the fog clearing rapidly we should appear respectable. Of course, for the whole of that five minutes we were utterly lost, and we usually caught each other by walking straight into each other. Hence the excitement; the pursued guiltily turned from every figure that loomed through the fog, the pursuer eagerly peered at such, to vanish precipitately again if this was not his quarry, to merely annex it if it was. At the end of the five minutes, if the pursued was yet uncaught, both returned (if they could find it) to the house from which they set out, and pursued and pursuer changed rôles. I have not, indeed, yet heard of any employment with which we did not amuse ourselves, and we ranged from birds' eggs to carpentering, from chess to knucklebones, from football to the writing of Tennysonian lyrics with equal fervor. We also revised the pentathlon, as follows: Dick won the toss, and said "golf," and I retorted with tennis. He then chose billiards and I croquet. The odd event was, of course, selected by the winner of the toss. Two games were barred, namely, single wicket at cricket, because we neither could ever get each other out; and long jump, because Dick could jump just about twice as far as I. The whole pentathlon had to be decided on one day, so that endurance came in as well.

Then a stormy day would come, too bad for man or beast to be abroad in, and we had pentathlons of the intellect — playing chess, draughts, backgammon, the poetry game, and halma in feverish succession. Here, also, games at cards were barred, because of Dick's strange inability to grasp the hang of any card game whatever. He merely fell asleep over them. So that made it quits in the matter of the long jump—in fact, the balance was in my favor, since there is only one long jump, but there are many games of cards, and I could have named all the events, of which I had the call among them.

So from school we passed out into life: Dick went into the army, and I took up as a profession the work on which I am at this moment engaged. We had many mutual friends, and there never came, as long as Dick was alive, any break in our intimacy, nor until a certain day did either of us, as far as we were aware, grow any older. Then pentathlons continued with unabated fervor, and I should be ashamed to say how old we were when we last played hide-and-seek in Berkeley Square. It would appear hardly credible to any sober and right-minded person, while those who did believe it would be filled with contempt for us. And it is bad to be contemptuous, so I will not mention the ages.

Now there has always been in our lives a third person, a girl rather younger than either of us, a neighbor both in town and country, and a distant cousin of Dick's. For years Dick and I had liked Margery, but had necessarily despised her because she was a girl.

Then there succeeded years when we had begun to be men, not boys, and Margery not a girl, but a woman. The contempt ceased (that was so kind of us), and we three formed what I may call an alliance of laughter. Margery was always present at the pentathlons, acted as umpire in case of disputes, and was even allowed to join in them herself. Then, quite suddenly, I became aware that I had fallen in love with her. And it was in this manner I knew it:

It was at the conclusion of the golf event in the pentathlon, and on the eighteenth green. Dick had holed out his last putt and won from me; he had also won from Margery, and Margery had a long putt of five yards to halve with me. She looked at it for some time, standing with her back to the sun, so that her brown hair was flushed and gilded with it; her eyes, very blue and vivid with thought, were intent on the line to the hole; her mouth was a little drooped; and the white line of her teeth showed below her lip. Suddenly she said, "Yes, I see!" and putted.

The ball travelled smoothly along the turf, and she threw her arms wide.

"It's going in," she cried. "*What* a darling!" and as the ball dropped into the hole she looked up at me. Then something caught in my breath. It was no longer the Margery I knew who stood there, but she—she who was the completing and perfect woman to me a man.

For a time the old intimacy of the alliance of laughter went on externally, I suppose, as before. I think we laughed no less; we contested as many pentathlons; we made plans for every day of Dick's leave, and usually abandoned them for subsequent improvisations. Then, not more than a week afterwards, there came a day when Margery had to go to town, and Dick and I were left alone. She was coming back in the evening, and we were to go to the station to meet her, have tea there, and ride our bicycles back over the ridge of Ashdover's Forest, down home in time to be exceedingly late for dinner.

The afternoon was very hot and sultry, and Dick and I abandoned our game at tennis we had begun, for we were both slack and heavy-handed, and strolled through the woods up the "boys' path" for the coolness and shelters of the beech-trees. The ground rises rapidly near the broken paling, and finding a suitable bed of bracken, we lay down and smoked, looking out from cover over the great ridge of gorse and heather that stretched below us. The air was full of the innumerable murmurs of a hot day, and a warm heathery smell hung idly on the air. Near at hand was a flaming bank of gorse, and as we lay there, far more silent than our wont, we could hear the popping of the ripened seeds. The birds, too, were very silent in the bushes; only the grasshoppers chirped unwearyingly in the grass. Dick, I remember, was cleaning his pipe stem with yellow grass stems, his straw hat tilted over his eyes; I, though lying there, was in reality waiting for the train at Victoria, No. 6 platform. It started in five minutes, and had two hours now before it. Then Dick sat up.

"Look here," he said, "I've something to tell you. There's no doubt about it; I've fallen in love."

I think I knew almost before he spoke what he would say; certainly before he spoke again I knew what was coming.

"Yes, Margery," he went on. "My God! I have fallen in love."

He turned his brown eyes suddenly from the hot reeling landscape in front to me.

"Why, Jack," he said, "what's the matter? You look queer, somehow."

"Dick, are you—are you sure?" I asked.

"That you look queer?"

"No; that you have fallen in love with Margery."

"Sure? You'll be sure enough when you do the same. There's no mistake about it, I can tell you. Why, Margery is the whole point of the pentathlons now!"

"She has been so to me for the last week," said I.

Dick said nothing for a minute. Then, below his breath, "What do you mean?" he asked.

"That you and I are in the same boat," I said.

"How long have you known this?" he asked.

"A week yesterday."

"And you didn't tell me."

"No, I couldn't. It has been too wonderful to speak of. I'm made like that. I should have told you, though, before long."

"Have you spoken to Margery?" he asked. "No; of course you haven't."

"No, I haven't spoken to anybody."

Dick got up.

"Come away," he said. "I don't like this place. And what are we to do?"

I looked at my watch.

"Start for Braceton at once," I said, "or the train will be in before we get there."

Dick put his arm in mine.

"I say, Jack," he said, "whatever happens, we'll behave decently, won't we?"

"I know you will," said I.

"That's all right, then. We won't talk this over to-night. It must simmer a bit before we can get used to it. Don't let us say another word about it now."

So we rode off through the heat to Braceton, found the train already in, and Margery waiting for us on the platform, looking, for all the oppressed stagnation of the day, like some nymph of Grecian waterways, and Dick and I looked thirstily on her, but

feared to meet each other's eye, for life and love were in the balance, and we were friends.

That evening, when the others had gone to bed, we sat on in the chairs that had been taken out of the smoking-room to the lawn for coolness. The odor of the hot summer night hung heavily, and nothing stirred in the windless air, except that from time to time a faint ghost of a breeze whispered from the beds of tobacco-plant, and brought with it a waft of the thick scent. The sky had grown overcast; from a bank of clouds which rose slowly in the west, the fires of lightning flickered, and a note of distant thunder answered. In the rooms downstairs the lights were already put out, but the bedroom above showed illuminated squares of blind. Nearly opposite us was Margery's room, and now and then her shadow crossed it. Then that light was put out, and presently afterwards we heard the whir of the blind updrawn, and at the open window through the darkness her white figure glimmered dimly.

We could neither of us move nor speak, and in the silence I remember hearing the creak of Dick's shirt grow more rapid as his breathing quickened. Then in a bush close at hand a nightingale suddenly burst into bubbling song,—no lament, as the Greeks thought it, but the lyric passion of mating-twit, when the stir of love goes through the world, and the lion seeks the lioness, and the Libyan hills echo to the roaring of his unmastered need; when the feathered and bright-eyed birds lie breast to breast in their swaying habitations; when the man seeks the woman, and cannot rest till he has found her.

Then a flash of lightning somewhat more vivid lit up for a moment the lawn and the house, and she must have seen us then, for from her window came a little stifled exclamation, and before the thunder answered she was gone.

"The storm is coming up," said Dick. "Let's get indoors and talk there. Besides, I'm as dry as dust, and I want a drink. We'll go up stairs; all the lights are out down here."

Our rooms were next each other, communicating by a door, and, drawing our chairs up to the window for coolness, we sat down.

"Somehow or other we've got to settle it now," said he; "settle it, that is, as far as we are able."

How long we talked I do not know, but before we had finished we had to shut the window, for the storm came nearer, and burst round us in sheets of heavy rain and violet fires of lightning. Then it passed, and still we sat there, till at the end the moon came out and rode high in a clear-washed heaven, with the stars clustering round her like swarming bees, while to the east the sky grew dove-colored with the first burst of dawn. At last I rose.

"It remains, then, just to toss," said I, and spun a coin.

"Heads," said he.

"It is. You speak to Margery first, then," I said.

He got up, too, irresolute, and we looked at each other gravely, rivals in that which makes life sweet, but friends. And that makes life sweet too.

"And whatever happens, Jack," he said, rather huskily, "we will do our very utmost not to let this stand between us, and to keep all knowledge of it from her."

"Yes, whatever happens," said I. "Time to go to bed, Dick; good-night."

I went into my room, closing the door of communication, but before I was half undressed it opened, and Dick came in.

"One thing more," he said. "We didn't settle when."

"That must be left to you," said I, "but, Dick, for God's sake, let it be soon. Surely it had better be soon."

His face lit up with the unimaginable light of love.

"Yes, the sooner the better," he said.

I slept long and late that night, from the mere exhaustion, I suppose, of thought and suspense; did no more than turn and sleep again when I was called, and woke finally to find it was after ten, and the calmness of the promise in the dawn had been fulfilled by a perfect day of unclouded blue. I went through into Dick's room, but he had already dressed and gone down, and even as I passed the window I saw him and Margery cross the conservatory and out on the lawn, surrounded, as was her wont, by a wave of dogs. But this morning it seemed that Dick had no word for any of them; thus they passed out of sight behind the bushes. And I knew as surely as if the thing had happened already that Dick would have something to tell me when they came back. What that should be I had no idea. We three had played like children together for years. Had Margery her secret, even as Dick and I had had? Or had she none? Were both of us her playmates?

It could not have been very long before Dick came back, for I was still in the dining-room, staring blankly at the morning paper, with my breakfast yet untasted. As soon as I saw him I knew.

"So it is you," I said, and stopped. Thus our compact and our friendship aided me. "Oh, make her happy, Dick," said I.

The dear man sat down on the left of the table.

"Jack, I'm cut in two about it all," he said, and never have I seen so radiant a happiness on the face of living being. "Really, I'm— Oh, damn it all! And Margery told me to come and tell you, and she wants to see you. She says she'll see you about it first, and then we'll all play the fool together, as we've always done. So I had to lie to her. First thing I did was to lie to her, and I told her that you were not particularly fit this morning — thunder-storms kept you awake—and that I didn't know if you'd be up to a pentathlon."

He broke off suddenly.

"My God, if it only wasn't you!" he said.

I remember feeling then as if I was a piece of mechanism external to myself. This mechanism saw Dick sitting on the edge of the table, saw breakfast waiting, and ate it, and spoke and moved in obedience to an instinct that seemed to have nothing to do with me. Behind, somewhere, sat Me watching what went on.

"No, a pentathlon by all means," said the tongue of the mechanism. "We've got to have one more to settle the last, and you go back to-morrow. It begins with croquet; Margery chose that."

Dick's eyebrows suddenly grew into a frown, and he bit his lip.

"Oh, Jack!" he said.

Then for a moment I took possession of the mechanism.

"It's no use talking," I said, "the thing is so, and all I can do at present is to behave with some semblance of decency, anyhow, so that Margery shall not know. I can manage that perfectly, and it will give me something to do. It is no use your being sorry for me, my dear man; besides, it's not humanly possible for you, nor would it be for me, if I was in your place, to have sorrow predominant. Margery fills the world for you: she does for me—"

"No, not fills it," said he. "You don't understand."

"I understand perfectly. You're a decent sort of fellow,—and, well, I am your friend. It's no manner of good talking about it. All we settled last night I feel fully, fully. Do you understand? I can only assure you it is so. Whatever happens—do you remember saying that? I do, and—oh, for God's sake—don't—Dick—there's a loathsome tear standing in each of your green eyes. I never saw such a devilish behavior."

Dick got off the table, turned his back to me, and blew his nose very long and loudly, and, drawing up a chair, sat down by me with a quivering lip.

"I've made a fool of myself, I suppose," he said, "and I've done not a particle of good, but only made it harder for you. That's like me. I'm happier than I thought it was allowed for a man to be, and I'm wretcheder than I hoped was permitted. That's all; there was no need to say it, because you knew it. But I had to."

Then again the mechanism moved, and I sat and watched. And now I find it is quite easy to write down what happened, for I only watched. But it was hard to write down what happened when, as on the last page, I was doing it myself. If you think of it, you will see it must be so.

"Where is Margery?" I said. "Oh, Dick, don't be a fool!"

Again he blew his nose.

"Out in the garden," he said. "Are you going now?"

"Yes, the pentathlon begins in ten minutes. Nothing has happened. Just the pentathlon."

I walked out of the dining-room, leaving him still there, into the blinding blaze of sunshine. She,—the She,—was sitting in a chair at the end of the lawn, and my mother beside her. The latter got up as I came near.

"You have heard?" she said. And I saw that look which I have seen in her beloved face three or four times in my life when great sorrow or great joy has brought us into that union which, so I verily believe, can only exist between mother and son. I knew that she had guessed what unspoken word to Margery had been on my lips.

"Yes, Dick told me," said I.

"Be a man, then," said she, seeing that I knew that she knew. "And God bless you, my darling, and comfort you."

It was but a step to where Margery sat, and I held out both hands.

"Oh, Jack, I am so happy!" she said, and with that she ran on tiptoe, put her arms round my neck, and kissed me.

It was all right, you see, that she should do that now, for she was my friend, and I was Dick's friend, and she loved Dick!

There is but little more to say about that May, since even in a diary like this one has to avoid egotism, in order to avoid being unbearable. The pentathlon was played, and I won. Also, I had ten minutes with my mother that night, while Dick and Margery were together. Nothing much was said on either side, but I knew again, with the vividness that usually comes only with a thing heretofore unrealized, that she was my mother, and that I was her son,—part of her being, born from her body, indivisibly, while ages lasted, hers. Hers was every little effort that I made towards ordinary human decency of behavior—hers was the resolve, I made then, and have tried (with how many failures), to keep since, to realize that these things could not have happened with any but a benignant purpose, blind and incomprehensible as it might seem to me or to her, and that to become in the least degree embittered, or to fail in the smallest particle of friendship to my friend, or of love to the woman whom I loved, was to miss the divine purpose, and to make yourself a senseless animal.

To be Continued.

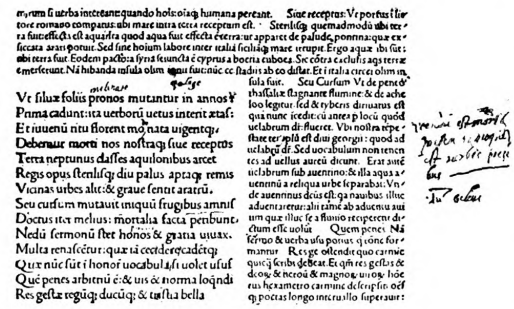
Little Stories in Rare Books

By John Paul Bocock

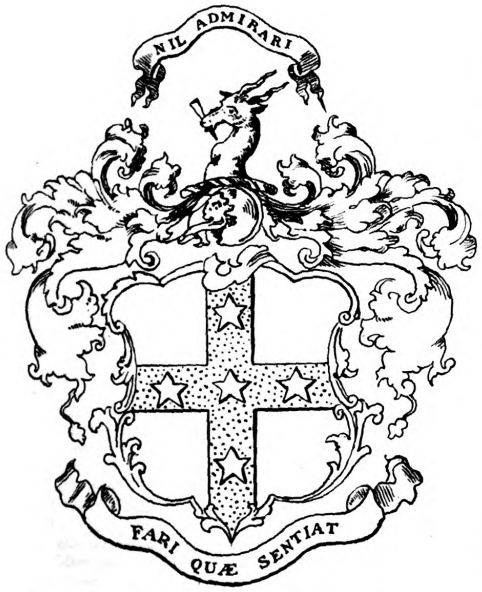
OLD books tell their stories to the most select audience in the world. The book-plate of Murray, Earl of Dunmore, in this Dacier of 1709, is water-stained, and recalls the wild nights on the James when the hot-headed royal governor bade the Council come sit on board a British war-ship, which the Virginians would not do. Instead, they made the country too hot for him, and when he went back in haste to England, in 1776, with his books and his servants and his plate hurried on board, this particular volume of Dunmore's favorite Horace got such a bath as has wellnigh disabled it this century and a quarter. Who fished it up and found its nine unwashed fellows there is no knowing. But here is the set, complete. And now and then the present Earl of Dunmore comes over to talk Christian Science and commune with Mother Eddy. How Horace would have delighted in that!



Old John Randolph of Roanoke put his coat of arms with its mottoes on the inside cover of this Tonson variorum of 1717—in which Milton made his début as an Horatian scholar. *Fari Quæ Sentiat* (Say What You Think), and *Nil Admirari* (Marvel At Naught) — how well the eloquent Virginian lived up to them! When his bones were disinterred a few years ago shreds of paper, the good rag-paper of our fathers, were found in his grave. Perhaps he took another Horace into the ground with him. This one was almost in rags when I got hold of it, the book-plate creased in four.

Empsi Roma Xembris 1815, wrote Baron Glenbervie, of Kincardine, when he bought his first edition *Fea*, in Rome, just four years after it came from the press in two octavo volumes under the learned direction of the Prefect of the Chisinian Library and of the Roman Antiquities. Then he pasted in his book-plate, which is the more a curiosity inasmuch as this Douglas was the only Baron Glenbervie, the title having been created for him and dying with him in 1823. At Aberdeen and at Leyden he learned a great deal of Latin, but not enough Horace to despise a title. Sheridan pasquinaded him:

Glenbervie, Glenbervie,
What's good for the scurvy?



Baron Glenbervie's Book-plate in Fea's "Horace"

Vt siluæ foliis pronos mutantur in annos
Prima cadunt: ita uerborũ uetus interit ætas:
Et iuuenũ ritu florent modo nata uigentq;
Debemur morti nos nostraq; siue receptus
Terra neptunus classes aquilonibus arcet
Regis opus sterilisq; diu palus aptaq; remis
Vicinas urbes alet: & graue sentit aratrũ.
Seu cursum mutauit iniquũ frugibus amnis
Doctus iter melius: mortalia facta peribunt.
Nedũ sermonũ stet honos & gratia uiuax.
Multa renascẽtur: quæ iã cecidere cadẽtq;
Quæ nũc sũt i honor uocabulã si uolet usus
Quẽ penes arbitriũ ẽ: & ius & norma loqndi
Res gestæ regũq; ducũq; & tristia bella

A Page from the Forlivio Folio of 1483
Showing Tasso's MSS. and annotations

Every annotated page of these beloved volumes, pondered and cherished by a score of honest hearts in the centuries, has its own story to tell. Who of us will live, like Horace, even in a folio four hundred years old!

Book-plate of John Randolph of Roanoke in the Tonson "Horace" of 1715

Armorial Book-plate of Governor Dunmore of Virginia in Dacier's "Horace"

In pigskin, calf, and crushed levant,—each famous Horace exudes the mystery of its own history. Earls and churls, bookbinders and proof-readers do their worst: the great Roman Commoner smiles on.

Books and Bookmen

Of late years American fiction has been getting away from the Civil War as a field of action, and concerning itself more with the post-bellum life of the people under social, industrial, and agricultural conditions. Two noteworthy novels, however, have lately made their appearance which are not lightly to be passed by. One is by a new writer, the other by one who has already made his name familiar as a household word, and contributed a distinct creation to literature in the character of Uncle Remus. *Gabriel Tolliver*, by Mr. Joel Chandler Harris, is, one can imagine, the patient work of many years' observation and quiet reflection. One feels that the author has lived with his characters—the story breathes from him in a reminiscent, leisurely way, and denotes the pen of a desultory, unhasting writer at variance with the hurrying pens of our modern scribes. This means that in order to enjoy these pages you must give yourself up to the mood of the author, and when once the reader has allowed himself to come under the spell of his author, he will read on delighted and absorbed by the intimate human charm of the narrative to the end. It covers the Reconstruction period, the day of the crafty carpet-bagger, with which Mr. Thomas Nelson Page made us notably familiar for the first time in *Red Rock*. Mr. Harris's art is best displayed in his handling of character—his humor, his sympathy, his love of home, and the sweet ties that bind in human fellowship; these are the qualities that shine clear and strong in his work, and it is a rare art that exhibits them more forcibly in character than in incident. The new writer is Mr. Rupert Hughes, whose first novel, *The Whirlwind*, is a remarkable piece of work. It opens in ante-bellum days, carries the hero through the war, and signalizes the hour of his triumph by a tragic bolt from heaven, like Jove recalling his favorite. The action is rapid and seldom halts, yet there are chapters that are as idyllic, especially in the early part of the book, as a shy lake sheltering among caressing hills. Alabama is as bewitching a damsel as ever came out of the old South. With all due deference to Mr. Hughes, we love her better than the gentle heroine, for all her high spirit and fine graces of womanhood. Elkanah Tew, who loved his Shakespeare so that he called his wife Rosalind, and adorned his speech with Elizabethan English, is a fresh, humorous figure in fiction. But it is to John Mead and his heroic little mother that the memory clings closest. If a novelist is to perpetuate his genius in fiction it must be in the creation of individual character, in the appeal of man to man; and long after the vivid coloring and brilliant effects of the battle-field have grown dim and faded in the memory, the pages in which John and his mother live in humble obscurity, and struggle by dint of the inevitable toward their common ambition, will be unforgotten. There is something here of the light that never was: the gracious art of artless writing that goes to the making of literature. *The Whirlwind* is a book that Americans may well be proud of, and Mr. Rupert Hughes has reason to feel that he has made a strong entrance into American fiction. He will be heard of again, and we shall look for his next book with eager expectations. Meantime, let us hope *The Whirlwind* will not be neglected.

Seldom has an old house been so poetically idealized and commemorated in fiction as has the Old Manor at Chiddingfold, near Godalming, nestling among the downs of Surrey. "Perdita and I," says Mr. Le Gallienne in the opening sentences of *An Old Country House*, "almost as soon as we dreamed of keeping a house together at all, had agreed that, if possible, it must be an old house. . . . It was a dream that had to wait." But the time arrived when "the dream of the old house came back. An old house with an old garden—cut trees, a lawn of green velvet, and a sun-dial. Already I knew that Perdita saw herself on that lawn in the spring sunshine, leading a flower by the hand, with the sun-dial and two white peacocks against the well-clipped yews." The dream came true, and the Old Manor in Surrey where Richard Le Gallienne and Max Beerbohm have spent many happy days—not forgetting Perdita—has piously materialized through the sympathetic imagination of the poet in *An Old Country House*, one of the most beautiful books that has ever housed an exquisite idyll of "love and the quiet life." Nothing quite so idyllic in charm, so fresh in feeling, so poetic in fancy and color has come to us in the recent literature of country life. Mr. Le Gallienne in his feeling for nature never neglects the human touch. In the old familiar haunts of an old country house he finds the romance of life and love fresh as the dew of morning, still at its Spring; and like Stevenson, we learn afresh that "the most beautiful adventures are not those we go to seek." Mr. Le Gallienne's friend, Max Beerbohm, once cleverly caricatured the poet at a time when the critics were wont to laugh at the wealth of his dusky locks. We have reproduced this caricature. Mr. Beerbohm, who has a reputation as a wit and a wag in London, recently sent the following plaintive verse to Mr. Le Gallienne, who is now in New York:

Mr. Richard Le Gallienne
By Max Beerbohm

Bewitched by American bars,
Pan calls you back home on his pipes;
We love you for loving the stars.
But what can you see in the stripes?

It was in 1894 that Mr. Stopford A. Brooke published his book on *Tennyson: His Art and Relation to Modern Life*, and announced his intention of following this up with a companion volume on Browning. We have waited a long time, but at last it is in our hands. Mr. Brooke's sympathetic study of *The Poetry of Robert Browning* was well worth while waiting for; the fine qualities of mind that made his work on Tennyson a classic in spiritual interpretation have contributed a like distinction to his Browning. Mr. Brooke writes not idly or dispassionately as a mere critic, but as a man with a message, rather as one bent on making clear and strong and vivid the message which lies at the heart of the poet, out of a profound earnestness and love of beauty and truth. His style is noble, clear, uplifting; something of the joy and glory of the thought and passion of Browning has informed his own thought and feeling with dignity, and given to his diction a sonorous rhythm and stately music. It is, perhaps, because of these insistent qualities of quiet, earnest passion, and manifest spirituality in literary interpretation that we are reminded by Mr. Brooke of our own Mr. Mabie, more than of any other critic. If there is one function of criticism that Mr. Mabie has made so distinctive and active in all his writing as to give it the appearance of originating with him, it is the function of spiritual discernment and emphasis. This arrestive note appeared very early in his literary career. "Has it not been a strange oversight in the study of literature," he wrote in 1890, "that while the river courses and the mountain ranges have been traced and located with precision, observers have taken little thought of those overhanging heavens which are as much a part of every landscape as running stream and everlasting hill? This upper sky of spiritual truth, ideal, and relationship is too often left out of account in our surveys of the field of literature; and yet it is the spiritual element which adds immeasurably to the complexity and variety no less than to the wealth and power of modern books."

There is a review of Mr. Stopford Brooke's *Poetry of Robert Browning* in an admirably edited magazine which must have caught the editor napping, for it begins with a sentence so atrocious in taste, construction, and language that it ought to be held up in future Treatises of English Grammar as an awful warning. Here is the sentence:

Dead at Venice, more than twelve years ago now, with the "proofs" of his last book, *Asolando*, in his hand, his brave voice with its last word—"greet the unseen with a cheer"—fled into silence, and his keen eye closed forever to all "Italia's rare o'errunning beauty," the body of Robert Browning was brought to England and laid to rest in Westminster Abbey.

It is related of Thackeray that when he read the number of *Dombey and Son* containing the description of the death of Paul, he went to the *Punch* office and flung it down before Mark Lemon, exclaiming: "There's no writing against this. One hasn't an atom of chance; it's stupendous!" Yet the author of *Vanity Fair*, then in course of publication in parts, was at that very time describing the memorable death-scene of George Osborne:

No more firing was heard at Brussels—the pursuit rolled miles away. The darkness came down on the field and city, and Amelia was praying for George, who was lying on his face, dead, with a bullet through his heart.

Notwithstanding Thackeray's praise and self-depreciation, we have here Dickens at his worst—Thackeray at his best.

Finance

WHEN, despite enormous transactions, certain stocks failed to advance beyond a certain level, professional Wall Street, guided by the lamp of experience, decided that the pools and stock manipulating cliques had carried their operations for the rise as far as they meant to; for the time being, at any rate. If a stock has been bought aggressively for a week or longer, and then transactions in one day aggregate close to 200,000 shares, leaving the price at the end of the session practically unchanged from the previous night's closing quotation, the professional trader concludes that stock has been "distributed" by the manipulators in such quantities as to mean a halt in the upward movement. In nine cases out of ten it works out that way, and that proportion amply justifies men who speculate daily for a livelihood in betting accordingly. The stock-market has afforded many such examples of late. First came Reading, though, to be sure, the culmination of the movement in those shares came logically to an end with the official announcement that the control of the property had passed to interests identified with the Pennsylvania and the New York Central railroads. The "mystery," always so alluring to stock speculators, had ceased to be a mystery. The "news was out." Then the stupendous transactions in Rock Island, and the small net gain in the quotation. Finally, Erie. Beyond a certain figure, prices would not budge. They soared no longer. And the professional element on the Stock Exchange made up its mind that stock had been marketed. It turned the professionals from mild bulls to positive bears. The market at first hesitated. Then the volume of business dwindled. The public was not in the market as buyers. The manipulators could not sell in a narrow market, and the traders had things their own way, within reason. At first prices held steady enough. If the public wasn't buying, neither was it selling. Spasmodic attempts were made by one or another pool to advance the price of its specialty, but as the market became duller and outside speculative apathy more pronounced, such efforts were abandoned. Then followed the "professional trading-market," with its absence of interesting features.

If the technical condition of the stock-market has undergone no significant change of late, neither have basic conditions outside of Wall Street changed to such a degree as to justify important modifications in market views or in stock prices. Speculative apathy prevails in the securities-markets of practically all the financial centres of the world. It is attributable, abroad as at home, probably to the uncertainty with which the future is regarded, for if the investor sees nothing to make him buy stocks, neither does he perceive the advisability of selling the securities which he holds. It results in a species of speculative deadlock which has been witnessed not infrequently during the past year.

General trade conditions in this country continue good. There is every likelihood that an enormous business will be done in nearly all lines during 1903. Spring orders for many classes of merchandise are on a huge scale. The railroads have planned to spend fully a quarter of a billion dollars in improvements during the coming twelvemonth. Traffic in every section of the country suffers no diminution. It continues record-breaking. The present facilities of even the best equipped roads are inadequate to cope with the volume of business offering. To such an extent is this true, and so inconvenienced by the freight to be handled are some of the largest systems that one of our most prominent railroad officials stated in private conversation the other day that much of the business would have to be done at a loss.

MRS. EDDY'S WRITINGS

Mrs. Eddy's publishing agents having refused to sell me her book called "Miscellaneous Writings," to my great inconvenience, I have placed an order for this work with Messrs. Harper & Brothers, and shall hope that some one possessing an extra copy of it will be willing to sell it to them for me. Please communicate with them. MARK TWAIN.

The following paragraph appeared in HARPER'S WEEKLY of July 5, 1902

We anticipate that, within the life period of the majority of those who will read these lines, America will dominate the world in literature, art, science, finance, commerce, and Christianity; and believing, as we do believe, that, by virtue of the intelligence, industry, and conscience of her people, she is the nation best fitted to hold that commanding position, it becomes the chief mission of this journal to hasten the day and to help to perfect the equipment of those upon whom the responsibility must fall for the successful performance of their duty to progress and civilization.

Some of the Features of HARPER'S WEEKLY for Next Week following along these lines will be

NEW NEW YORK

A double-page drawing, with an interesting, comprehensive article, showing the proposed changes in architecture and so on that will make New York one of the most artistic municipal centres in the world.

THE KAISER'S IMPERIAL NAVY

What it will be in 1906, and the completed plan for 1925, with pictures and plans of the new type of German war-ships

THE DISCOVERY OF A NEW PEOPLE

An important article, with pictures, showing the results of an expedition just returned from the western part of America

NEW THEORY OF MARTIAN CANALS

A scientific article, with illustrations, based upon recent investigations of European scientists

NEWS IN MID-OCEAN

Full-page drawing, showing a phase of the ocean travel of the future

Etc., Etc.

There will be, besides, a number of other full-page drawings and articles on PROGRESS, and on subjects of vital moment

ALSO **16 Pages** of Editorial Comment upon all Events Worth Considering

"The Vampire"

Sir Philip Burne-Jones's Greatest Painting

This painting, which is soon to be exhibited in the principal cities of the West, is the conceded masterpiece of Sir Philip Burne-Jones. "The Vampire" is the painting which suggested to Rudyard Kipling his poem of the same name

The Machine and the Working-man

By Cy Warman

At Rossland, British Columbia, as in many other parts of this earthly vineyard, the machine is beating the working-man out of his job. That well-dressed, retiring, velvet-fingered "gent," the faro-dealer, who has spent long days and nights learning to deal from the bottom of the deck, is unknown in a Canadian camp. Just picture in your mind's eye one of these dapper gents alighting with his layout from the afternoon stage. Follow him to the leading gin, and watch the four-card flush fade from his handsome face when he meets that bloodless usurper, the slot machine.

For the next thirty days he will haunt the café, flooding his grief with champagne, and going against the machine between drinks. Finally, when his dust has dwindled, we see him in the back yard of a cheap boarding-house, halting between a sawbuck and the jail. It is, indeed, a pathetic picture.

I went into a little cigar-store with Mr. Hector. The shop is run by one James Crow. Upon the counter there were two

(Continued from page 201.)

and that the increase in wages has not been in proportion to the increase in expenses.

A careful analysis does not bear out these contentions fully. There can be no doubt that if the average family lives precisely as it did five years ago, the money cost would be more now than then. For example, if the same quantity and quality of meat were eaten to-day that were eaten five years ago it would cost the householder perhaps thirty per cent. more for his meat. But the standard of consumption does not remain fixed. When meats went up enormously last year the average householder cut down his supply both in quantity and in quality. Statistics based upon a fixed ratio of consumption are therefore not fully correct, except upon a mere theoretical basis.

The average wage-earner is likely to run from the specific to the general in his reasoning on prices, especially when so important an article as meat takes a great jump in price. He forgets that other things have gone down. The price that makes him wince is the one that he remembers. It was so with meat. There had been a partial failure of the corn crop in 1901. Farmers rushed their cattle to market to avoid feeding expenses. As a result in 1902 there was a shortage of beeves. Vegetables were high in 1901 and meat was cheap in comparison. In 1902 meat was high and, owing to the great crops, vegetables were cheap. Potatoes that were worth $1 25 a bushel in 1901 were worth only forty to fifty cents a bushel in 1902. The householder thinks little about the drop in potatoes, but thinks much about the high price of meat.

Many sets of statistics have been gathered upon this subject of living-expenses. The commercial agencies, like Bradstreet's and Dun's, and the Department of Labor in Washington, besides several State agencies, have done a great deal of figuring upon this matter. But to bring the matter down to a most practical basis, I am at liberty to tell in a general way of an unusual experiment, the results of which have just come to the Bradstreet agency. A large railroad contracting firm, buying supplies in Chicago, wrote that it had taken work on the Northwestern Railroad at a close figure. It had to feed its laborers. For two years it has kept the closest watch upon the expenditures for exactly 100 men, giving them precisely the same amount and kind of food in each year. There was no change in the meat schedule or any other.

The figures for these 100 men who dig and who require a large amount of food are considerably lower for 1902 than for 1901. The story is told briefly in a sentence. Meat is higher this year than last, but vegetables are much lower. Now this was an actual experiment with a certain grade of men as compared with the theoretical estimates based upon the fluctuation of prices, with the idea that consumption remains the same when prices are high as when they are low. In this case the consumption did remain the same—it was made so for a purpose—but in the ordinary family it does not remain fixed, and the conclusion from such reasoning is that if there has been a great increase in certain prices the householder has adjusted his manner of living to it, and really is spending only a little more in comparison to what he did five years ago.

But there is another set of actual figures which throw light on this question. They are collected by Horace G. Wadlin, Chief of the Bureau of Statistics of Labor in Massachusetts, and regarded by all experts as an authority in such matters. He has taken 152 working-men's families at random in Massachusetts as a basis of comparison. He finds an actual decrease in the cost of flour, coffee, and sugar in 1902 since 1897. He finds a great increase in the cost of meats. It is not fair to include fuel, because the coal strike has produced abnormal condi-

What PURITY Means

Schlitz
THE BEER THAT MADE MILWAUKEE FAMOUS

Purity requires pure water.

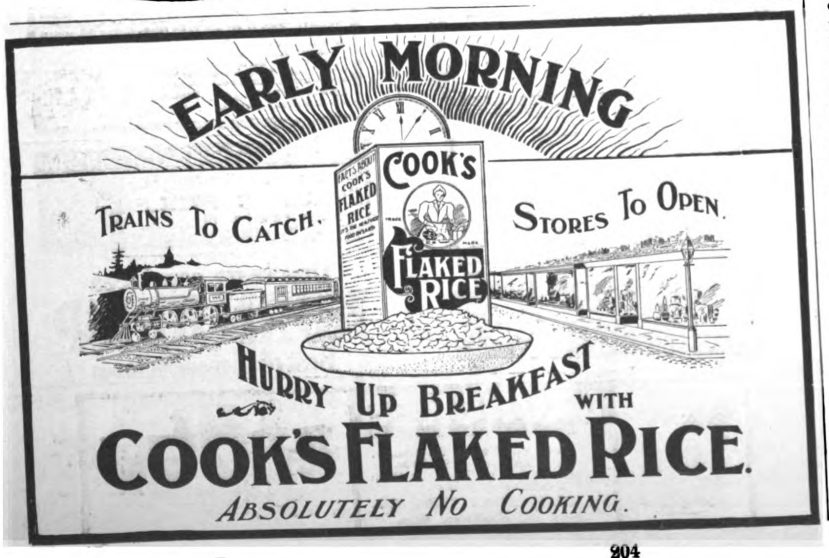
We get it from six wells, driven down to rock. No purer water flows anywhere in the world.

Purity necessitates pure air.

All the air that touches Schlitz Beer, after the boiling process, passes first through an air filter.

Pure beer must be filtered.

Every drop of Schlitz Beer is filtered by machinery through masses of white wood pulp.



Pure beer contains no germs.

Schlitz Beer is sterilized after it is bottled and sealed, by a process invented by M. Pasteur, of France. It requires one and one-half hours.

That's how we double the necessary cost of our brewing. We do it to make purity certain—to make Schlitz Beer healthful.

Will you drink common beer, and pay just as much for it, when Schlitz Beer can be had for the asking.

Ask for the Brewery bottling.

tions. Dry-goods have gone up very slightly in the amount of annual cost, and shoes have advanced only a trifle. Rents have increased heavily, owing to the great improvements that the working-men now seek and apparently can pay for.

On the other hand, probably the most striking figures that have been produced in this quest for the cost of living are that the price of board for the working-man in Massachusetts has declined seventy-one cents a week since 1897, and that for women has declined thirty-two cents a week since 1897. Put in percentage figures, one dollar would purchase 17 per cent. more board for men in 1902 than in 1897, and 9 per cent. more for women.

In the matter of meat and butter, a dollar would buy less than in 1897 by these percentages: roasting-beef, 16 per cent.; veal, 23; mutton, 32; lard, 40; butter, 20. Although there have been many increases in price since 1897, the figures show that practically every kind of provision is cheaper now than in 1872. The price of groceries decreased 7 per cent. in 1902 as compared with 1897, and the prices of meats have increased 19 per cent. as compared with five years ago. Since 1872, however, groceries have declined 44 per cent., and meats nearly 9 per cent. This shows that although meats in five years have gone up greatly, groceries have declined nearly half as much in the same time, and that if the family expenditures for food are adjusted to the new scale of prices there need be little more expense in that branch of the cost of living.

The statistics show that 28 per cent. of the family income is used for groceries, and 17 for meats. An increase in the grocery account and a decrease in the meat account, such as have been made undoubtedly by most families of small means, would soon bring the expenditure down to a normal basis. The percentages show also that there is an annual decline in the expenditure for food, while for clothing it remains the same. What is saved from food is going into higher rents and extras, such as newspapers, church dues, and pleasures.

If the family expense had remained precisely the same in 1902 as in 1897 the figures show that an increase of income of nearly 14 per cent. would be required. Well, there has been a general increase in wages and, what is more to the point, there has been steady employment, and hence there is reason to believe that if the family food schedule has been changed a little from meats to groceries, that fact, with the undoubted increase in income from higher wages and constant work, has brought down the living-expenses of the average man to only a little more, at the most, than they were five years ago. What a working-man has left over tells the tale about as well as anything. This surplus in 1902 was about $16 on the average for the 152 families as compared with $24 in 1872, but the working-man of to-day is not helped out by child-labor, as he was then, and spends more for extras, and especially for rent. The conclusion is, that with slight changes of dietary the working-man is spending only a small sum more than he did in 1897 for living-expenses.

Dun's index numbers show that what cost $96,891 in 1901 cost $100,648 in 1902. But it does not follow that the average citizen purchased the same quantities and qualities of goods that he did a year ago. Certainly he does not in meats. Speaking of the general increase in wages, *Dun's Review* says: "The official returns from the State of Massachusetts indicate that the balance is in favor of the wage-earner by a wide margin." Bradstreet's publication says, in reference to the compilation of statistics as to the cost of living by the Government Department of Labor: "It appears from

this summary that the group of farm products reached the lowest average in 1896, and the highest in 1891; that of food, etc., the lowest in 1896, and the highest in 1891; that of cloth and clothing, the lowest in 1897, and the highest in 1890." So it would appear that the prices to-day are by no means the highest in recent years.

Summarizing the price conditions for September last as compared with former prices, this journal says:

"The approximate index number on October 1 is shown to have been 87.42, a gain of six-tenths of 1 per cent over September 1. It is an advance of six-tenths of 1 per cent. over September 1. (Dun's figures, based on a theoretical fixed consumption, are an increase of 4.1 per cent. for the month.) It is an advance of 2.7 per cent. over January 1, of this year, and a gain of 4 per cent. over the low point reached on June 1, 1901, and is, in fact, the highest index number reached since October 1, 1900, just two years ago. In all, thirty-six prices have advanced, while twenty-five declined and forty-four remained unchanged during the month."

The conclusion of the whole matter is that, eliminating the high price of meats and considering the increase in wages and in the number of days of employment, the average man is paying only a little more, if anything, for the cost of living. There is reason also to believe that the cost of meat will decrease this year. A great corn crop was raised last year, and hundreds of thousands of farmers are raising live stock for meat so as to catch the high prices. This year meat promises to be comparatively cheap.

Jonathan to John

(With apologies to "A Hoodlum.")

ONCE we were good-and-hunk as hunk can be;
You could have packed your puttees in my trunk,
Gone whacks with me on junk and bunk and drunk;—
Say, John, for fair you had a cinch with me.

No kick is comin', not a little bit;—
If you prefer His Whiskers cellar door
Then cut it out, and slide with me no more:—
I thought you wise on Willy;—aber nit!

Get next, get next! Say, John, it ain't too late.
Back to the woods with Geezer Willy's crew!
They didn't try to do a thing to you
Ere Oomty Paul was counted out,—a skate!

When first I sailed into Manila Bay
Strange lands and customs to admire an' see,
Up paddles dotty Willy, joshin' me,—
An', John, I told him not to get too gay!

Say John, I never piped you for no saint,
But I'm dead sore to see you chase that bunch—
—A mixed-ale push a-huntin' Dago lunch
With Weary Willy raggin', fresh as paint!

Get busy, friend, and shake that bum bazoo,
For, honest, I don't have to stand for it.
That gang must git—or else I've got to quit.
You know me, John; and now it's up to *you!*

The Vultures

By

HENRY SETON MERRIMAN

Author of "The Sowers"

The atmosphere of this book suggests the novelist's great success, "The Sowers," for it is a tale of Poland and is saturated with Russian and Polish intrigue. The romance of the young Countess Wanda and Reginald Cartoner, the reticent English diplomat, is an intensely dramatic one. This decidedly popular novel secured second place on the list of the London *Academy's* voting contest for the most popular novel of the year.

$25.00

SCOTT'S classic works will be read as long as the English language endures, combining, as they do, the thrilling interest of romance with historical instruction. They are really a history in themselves, covering the period from the times of William the Red (1190) to George III. (1800)—more than 600 years. No library is a library without them.

HARPER & BROTHERS have just issued a splendid new edition of Sir Walter Scott's Waverley Novels in forty-eight (48) volumes. The pages are decidedly handsome, printed from large type on excellent paper, and the edition contains more than two thousand illustrations from the old English wood-engravings in the original edition, and the binding is of fine, permanent cloth.

OUR OFFER

We will send you the entire set of forty-eight volumes, charges prepaid, on receipt of $1.00. If you do not like the books when they reach you, send them back at our expense, and we will return the $1.00. If you do like them, send us $2.00 every month for twelve months. On receipt of this dollar, we will send you, without extra charge, beginning at once, a year's subscription to either Harper's Magazine, Harper's Weekly, Harper's Bazar, or the North American Review. In writing, state which periodical you want.

This same set is also bound in half-leather, with gold stamping on side and back. The price in this binding is $48.00. It will be sent you on the same terms for $4.00 a month for twelve months.

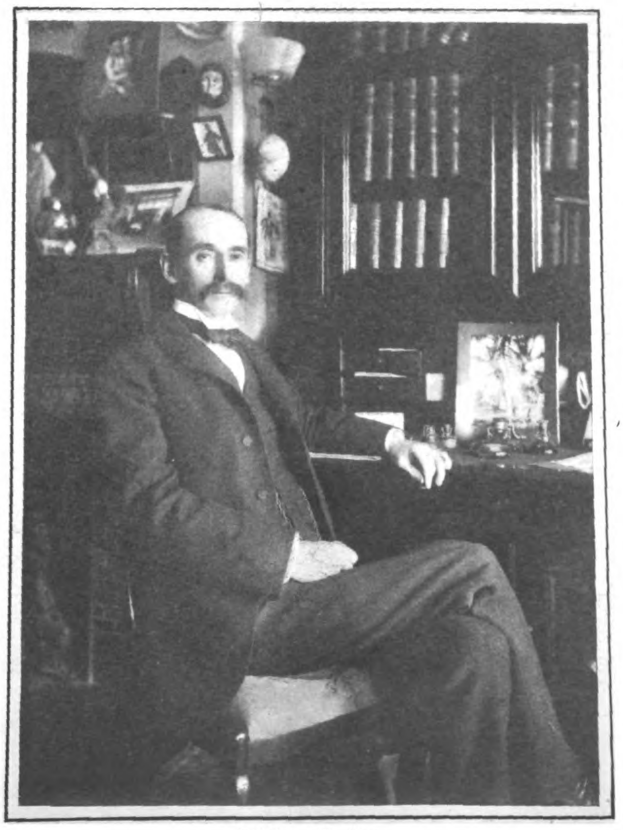
THE NEW JUSTICES OF THE SUPREME COURT

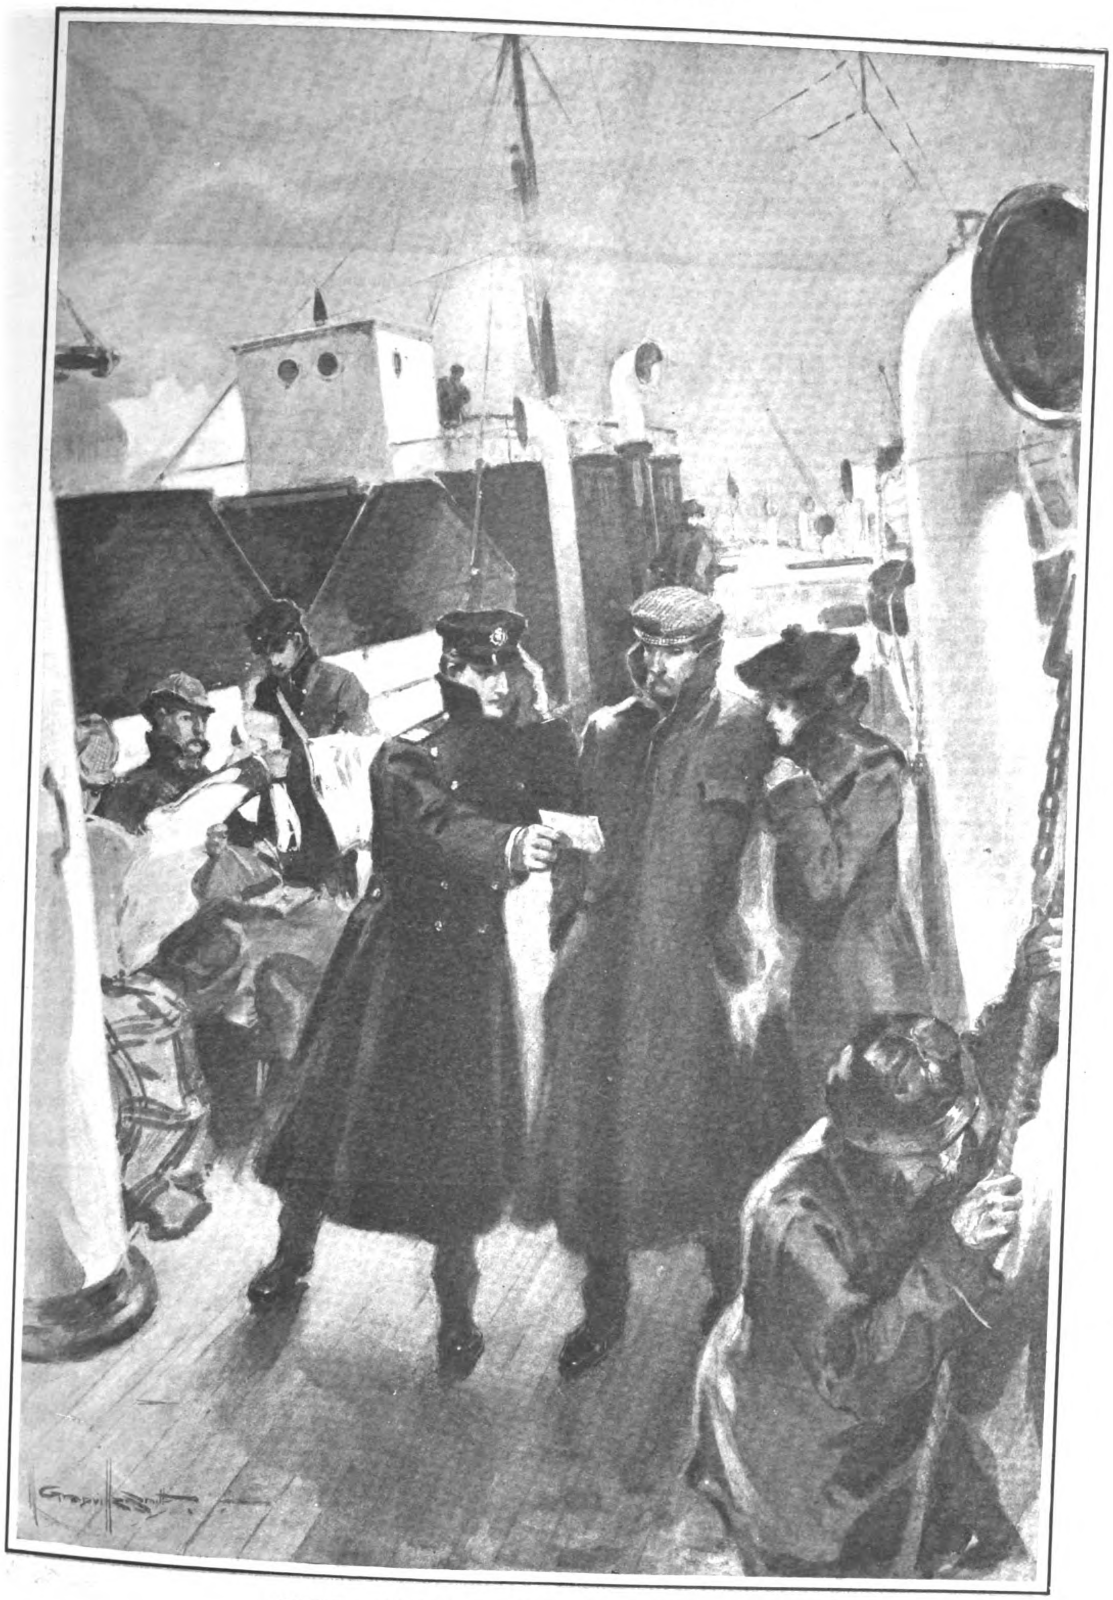


THERE is no part of our Federal machinery which has attracted more favorable European criticism than the Supreme Court. It is not only the greatest judicial body in the world in point of function, but it is as eminent in the purity of its personnel. Partisanship has not corrupted it. Suspicion has seldom entered its chambers. It has kept its dignity amid the irreverence of democracy, which is not permitted to touch it with its own electoral hands, and this despite some decisions dictated seemingly by political exigencies. It is the oracle whose deliverances keep the executive and the legislative within the guidance of the Constitution, which is to our people what a patron divinity was to some ancient States.

Its constitutional function cannot alone account for its peculiar prominence; it is the confidence on the part of the people in its integrity. If it were to lose this it would soon fail to exercise that restraint which is vital in our complex system of checks and balances. It is gratifying, therefore, that the new appointments to this bench have been such as to strengthen rather than to impair that confidence. President Roosevelt has been most diligent and successful in searching out men of both judicial ability and high personal integrity for all the vacancies in the Federal courts, and especially for those which have occurred by the retirement of Justices Gray and Shiras from the Supreme Bench. Not only has there been a toning up of the entire civil service in the purely executive departments, but the judiciary has likewise been strengthened by the judgment of the President in his appointments.

Oliver Wendell Holmes

Justice Holmes, who succeeded Justice Gray, came into the Court with what to the lay public was only a State or a provincial reputation, but his decisions as Chief Justice of the Supreme Court of Massachusetts had given him a wide fame among lawyers. The remark of an able Indiana judge that he had read every opinion of Justice Holmes and that they were the best opinions written, gives some intimation of the technical esteem in which he is held. And if one may infer his judicial qualifications from his personality and from his discussion of untechnical subjects, he is rather a fearless yet reverent pioneer than a tiller of ancestral farms. He is not disposed to accept without question the conventional values put upon things; like Justice Field, whom he succeeded in the State court, he is undoubtedly less interested in the embryology of the law as an object of abstract speculation or in the logical outcome of precedent than in making sure that every interest is represented before the court and in extending useful remedies. This disposition has perhaps invited the criticism of radicalism, of which he can hardly be guilty, for we must agree that the quality just mentioned constitutes a good fault in a judge. He is a man of heroic temper; severely wounded in the Civil War, he has nevertheless lived a strenuously active life, and kept ever a gallant exterior toward his work. He will bring not only a distinguished name to the roll of Supreme justices, but a personality of surpassing charm among men—this besides his long judicial experience and trained mind, which sit in a body that keeps the vigor of his younger years.



William R. Day

Justice Day, of Ohio, who is to succeed Justice Shiras of Pennsylvania, has come through a varied public service to this seat. And he comes, too, with a temperament far different from that of Justice Holmes, yet with as great promise of usefulness. His experience in the State Department during the Spanish War, and his conspicuous and responsible part in the peace negotiations, have given him a peculiar preparation for dealing with the questions which have grown out of that war and the terms of peace which he concluded. He has, to express an opinion again from lay impressions, rather more respect for what has been, and is possessed of a keen and experienced understanding of present economic and political relationships, with a practical though not a pioneering mind. His public career, at any rate that portion of it which brought him into the notice of the world and into distinction as a diplomat, had its beginning in what may have appeared to be a fortuity—President McKinley's friendship for him—but this seeming fortuity had such support in the unusual ability of the man, that it can hardly be believed now that there was any element of chance in it. Before he was called to Washington by President McKinley as Assistant Secretary of State, he had come to local and even State distinction as a lawyer. President Harrison appointed him to the Federal bench of the Northern District of Ohio, but this appointment he was obliged to decline on account of health. He later sacrificed much when he went to Washington to take the nominally subordinate position where he was able to give the President and the country most needed service; but he made no boast of sacrifice, and unostentatiously took on himself the burden of the conduct of the department without the honors. His subsequent service in his higher offices the country remembers. He went quietly back to his law practice, after his short, brilliant diplomatic experience, but was soon appointed to succeed Judge Taft on the United States Circuit Bench, from which he is now promoted to the Supreme Court. And it is virtually as the successor of Judge Taft that he enters this higher court, the former's continuance in the Philippines being demanded by all the interests that are represented there.

Governor Taft will yet come to a seat in this body, it is universally hoped, though he has earned a distinction which even this honor cannot augment. Meanwhile it is a source of much gratification that the service of Judge Day should find its recognition in his appointment to the place of highest honor in his profession. It is a cause for deeper gratification that he comes to this position with substantial attainments and eminent fitness for its duties.

The Court will unquestionably be strengthened by what these new justices will bring to it.

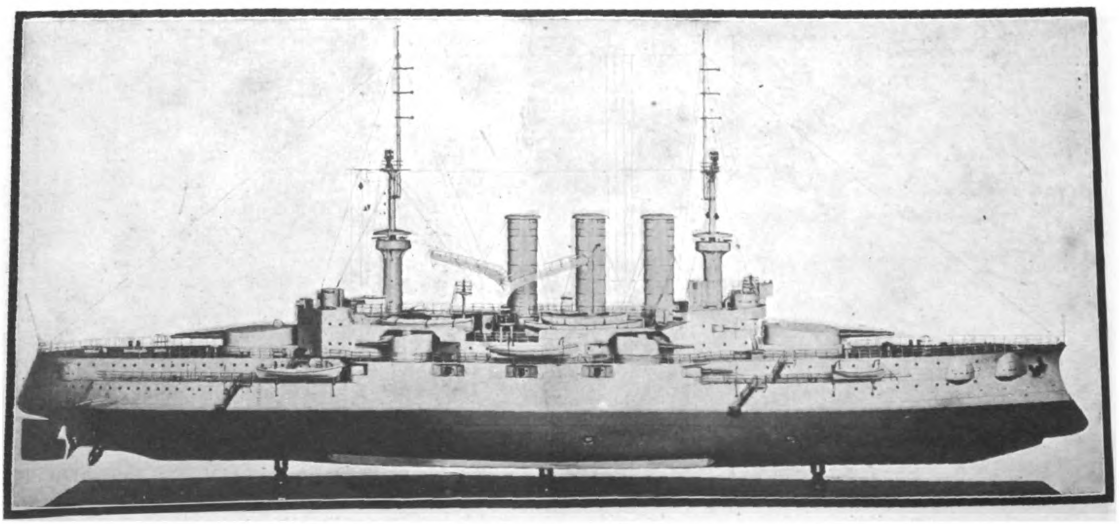
Germany's first Step as a World Naval Power of the Future—The Launching of the "Braunschweig"

THE FUTURE OF GERMANY'S NAVY

WITH the acquirement of large colonial possessions by Germany has come the development of the imperial navy on so large and significant scale that most of the other naval powers of the world are watching its growth with suspicion and some of them with apprehension. As a naval power Germany now ranks with Italy. The order now runs: Great Britain, France, Russia, Italy or Germany, the United States, and so on. In a year or two Germany will rank next to Russia.

In his determination to have a great navy, Emperor William has been unyielding, and in 1900 a naval programme which cannot be interfered with, except to enlarge its scope, was adopted by the Reichstag. This naval programme was most elaborate and thorough. No definite plan like it has been adopted as yet by any other nation.

This naval plan of 1900 was practically a doubling of the plan adopted in 1898. It provides for a certain amount of ship construction, entirely in German yards, chiefly by private plants, from year to year, and the gradual substitution of new vessels for those that have grown out of date. The imperial navy is to be developed along three lines. The first is strictly for home defence. The next is for purposes of attack near home. The third is for service in foreign waters near her colonial possessions. The home fleet eventually is to consist of thirty-four battle-ships of the first class, eight large and twenty-four small cruisers, with a reserve of four battle-ships and three large and four small cruisers. In the home squadron there are to be eight battle-ships and two cruisers always in commission, and the others of the fleet are to be pat in commission in the summer for manœuvres.



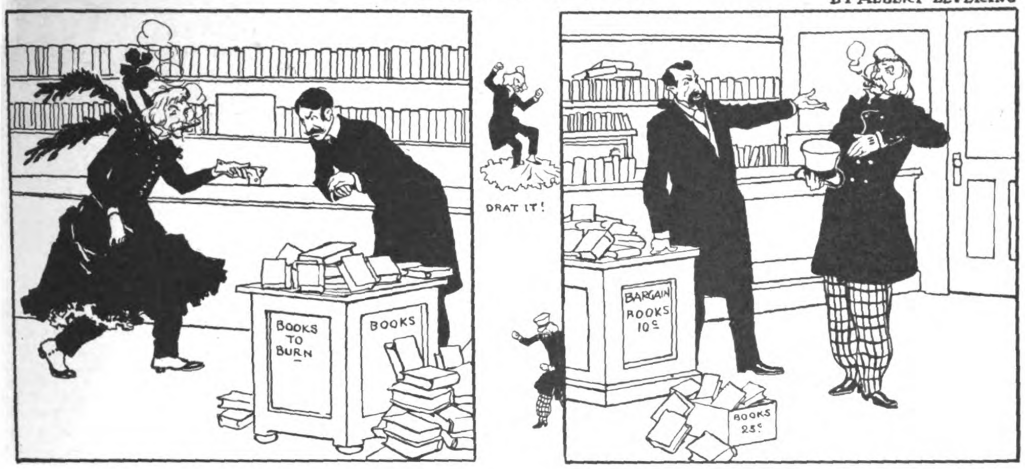
The life of a battle-ship is computed by the German naval authorities to be twenty-five years and that of a cruiser twenty years. By 1920 Germany will have certain war-ships for which substitutes will have been built, but which will not be entirely useless. This means that she will have no less than fifty-five battle-ships, seventeen of which will still be of considerable use, although not up to the requirements that will be in vogue then. She will also have about the same number of fighting-cruisers.

The total cost of building these vessels from 1900 to 1916 will be something like $365,000,000. In addition, about $65,000,000 will be spent on dock-yards, and the current expenditure for maintaining the navy will be increased from $18,000,000 a year in 1900 to $37,000,000 in 1917. In 1900 Germany had 1285 officers and 21,528 men in her navy. By 1917 there will be 3000 officers and 56,000 men in the navy. This rise of Germany as a naval power is all the more significant when one remembers that it was not until 1881 that she had her first naval review, and that it was not until 1895, upon the opening of the Kiel Canal, that the imperial navy was first displayed before the fleets of other naval powers.

The Emperor makes all the ordinances regulating the administration of the navy, and is practically supreme. He has a "Marine Cabinet" to carry on the business details of the establishment and an "Admiral Staff" to advise, like the general staff of the army, what the navy is to do. He has flag officers to command the home naval stations at Wilhelmshaven on the North Sea and at Kiel on the Baltic. Another flag officer commands the home squadron, and another has charge of the cruising squadron, while another inspects the training establishments. In a general way, service in the navy is compulsory and along the same lines as service in the army. There are also land forces belonging to the navy, chiefly artillery. In another decade the navy will be a most imposing establishment.

Germany has twenty-two battle-ships in service where the United States has ten. She is building eight to our ten. She has four armored cruisers where we have two, but she is building only three where we are building nine. In protected cruisers she has nineteen to our fourteen, and is building three to our six. In unprotected cruisers she has twenty to our six. In coast defenders she has eleven to our fifteen—ours are of the monitor type—and is building no more, while we are constructing four. She has something like one hundred and forty torpedo-boats to our thirty-two, but these vessels are already out of date, and neither country is building any more. She has thirty torpedo-destroyers to our twenty. We have eight submarines to none for Germany. Altogether she has about two hundred and seventy-five war-ships to our one hundred and forty, but inasmuch as she has over one hundred more torpedo-boats than we have—vessels that are useless—the present disparagement between the navies of the two countries is not so great as the total figures would indicate.

One of the latest of the German battle-ships has just been launched. It represents the new type. It is not as large as the more recent of American battle-ships, but is compact and of the bulldog order. Its name is the *Braunschweig*. It is 398.62 feet long, 73.80 feet wide, 25.10 feet draught. It displaces 13,200 tons, as against about 16,000 tons of the newer English and American battle-ships. It has a speed of eighteen knots an hour, which is about the average required of the largest vessels of this class. The new battle-ship carries 660 officers and men.



Model of the "Braunschweig," Germany's new Type of Battle-ship

THE MAN WHO CORRUPTED EDDYVILLE

BEING SOME ACCOUNT OF THE TROUBLES WHICH BESET MARK TWAIN DURING HIS QUEST FOR MRS. EDDYS' BOOK

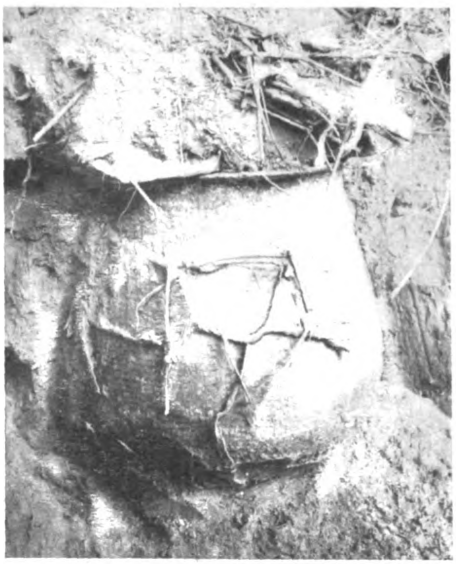
BY ALBERT LEVERING

"I allow you'll sell me a copy of Mrs. Eddy's book for my boy Tom Sawyer, now,—won't ye?"
Dealer. "Sorry; any other book in the store, Mister Twain."

(As Mr. Bixby.) 'Will you-all sell a copy of Mrs. Eddy's book to a retired Mississippi River pilot, who wants to read it to his great-grandmother?'"
"Sorry; but as I'm a scientist, there's the door, Mister Twain."

(As "Arkansaw.") "I'm only a rough Forty-niner, but I want a copy of Mrs. Eddy's book. Do I get it?"
Dealer. "You don't! Get out! I'm a scientist, Mister Twain."

(As a Yaeger.) "Vot ies dot book vot I vant? Oh, ja! Mutter Eddy's book. Can I?—yes? Hilee! hilo!"
Dealer. "You think you're funny; but as I'm a scientist, good-day, Mister Twain."



(As Huck Finn.) "I don't want no pie, ma'am; I just want a sample copy of your beautiful book."
Mrs. Eddy. "Go 'way from here, Mark Twain, or I'll give you a taste of this rollin'-pin."

Mark. "Oh no, this isn't Hadleyville. It's simply the United States, care of the Mundane Sphere."

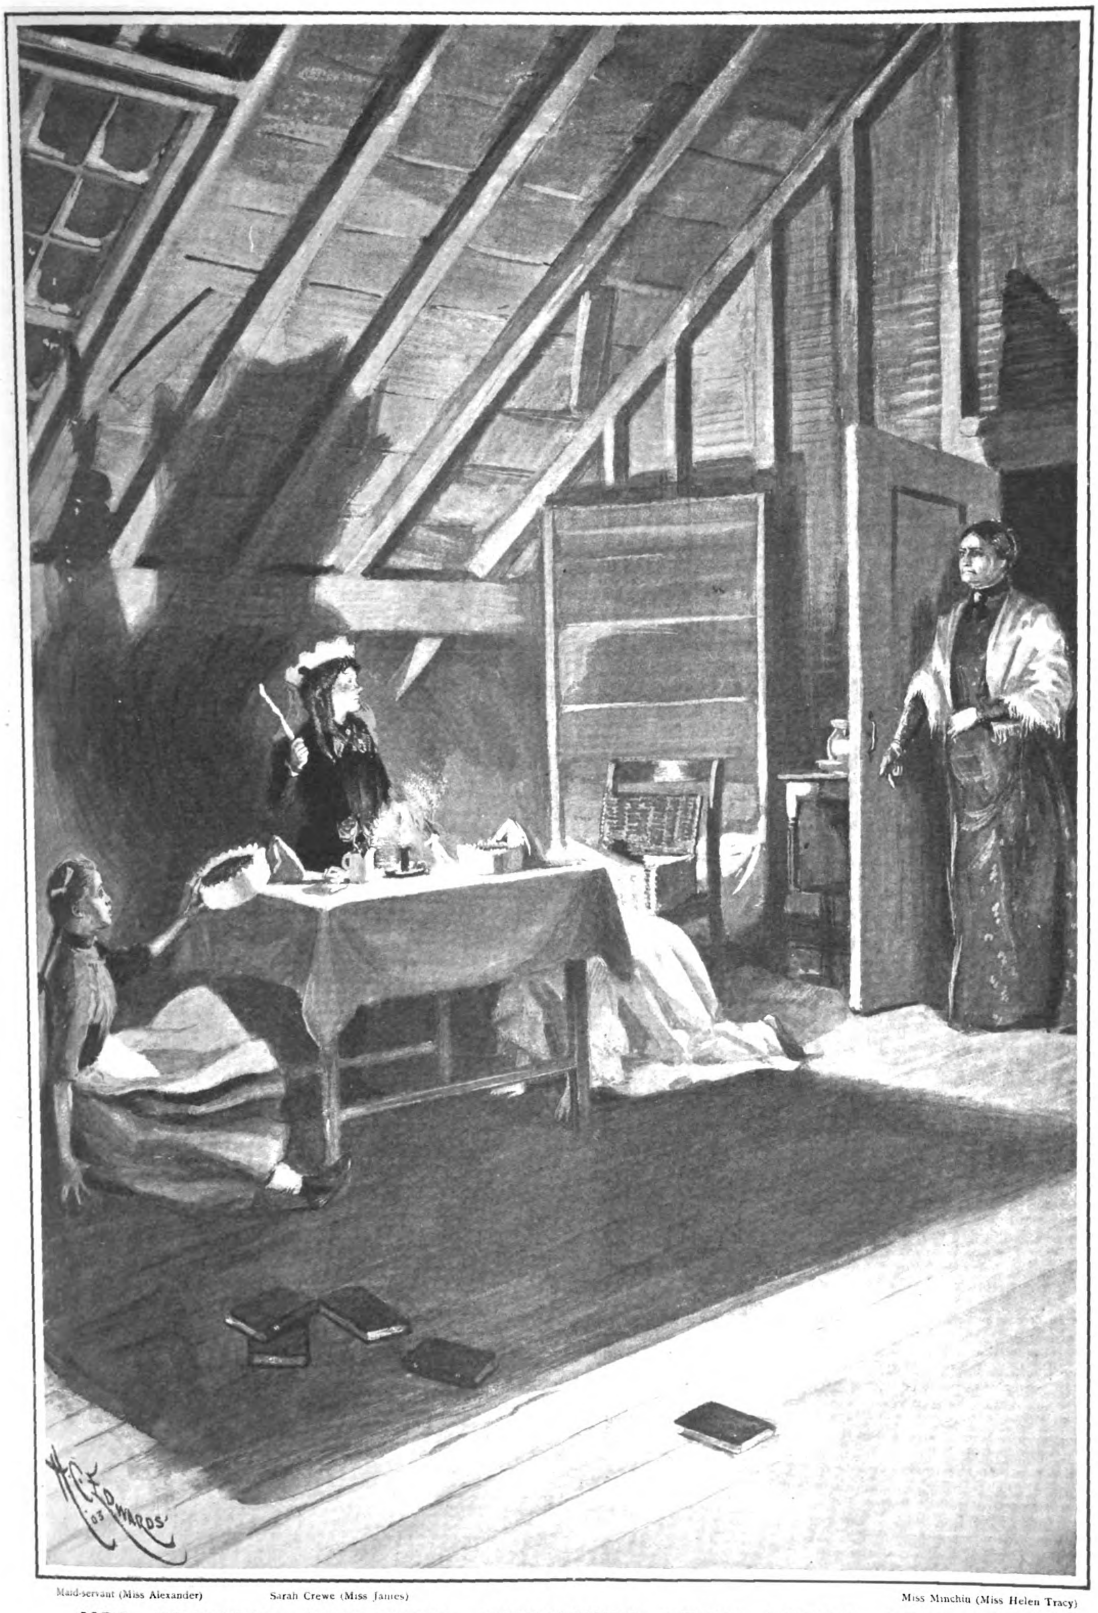
A NEW PEOPLE DISCOVERED

THE last of a number of expeditions sent out from the American Museum of Natural History to the Western lands of America for the purpose of exploring the homes of the cliff-dwellers has just returned. Up to this time it has been considered that the Old World paleolithic men of the Seine River caves of France, of the Thames River caves of England, and so on held undisputed rights to the greatest antiquity. Sir Boyd Dawkins found that the Eskimo Inuits to-day were using the same reindeer-bone hunting instruments and domestic implements, and hence were descendants of paleolithic men who had migrated in glacial times. Haeckel, in *The Lost Link*, makes paleolithic men contemporary with the reindeer of France in the glacial age, 270,000 years ago. He dates *Pithecanthropus Erectus*, "too high for an ape, too low for a man," the predecessor of paleolithic man, 600,000 years ago. Paleolithic men had for weapons arrow-points, spear-points, and other primitive devices. Much greater, then, is the antiquity of the American cave-dwellers just discovered, who possessed no weapons of that type, who lived before arrow-points were invented, and who fought with a throwing-stick. Priority is claimed for this most recently unearthed American. He was a finer man than the brutal paleolith, even if he must ultimately be classed with him. He possessed an æstheticism wholly unknown to the primitive Europeans. He dressed better than his contemporaries and many of his successors. His burial robe was more superb than that of any prehistoric or historic savage. His art of making mummies shows him abreast with ancient Egypt, even if his process was different. The cave-dweller was no architect, and built no houses for his habitations. Living in glacial times, he naturally sought for his home the most secluded, warmest caves, having a convenient water-supply.



A remarkable Burial-urn of the newly discovered Cave-dwellers

It has required eight years to get enough of the remains of the American cave-dwellers together to demonstrate the actual existence of paleolithic men on this continent. In 1894, Mr. Richard Wetherill, of Mancos, Colorado, conceived the idea that the cliff-dwellers of the southwestern cañons might have buried treasures under their stone castles. So, selecting a prosperous-looking cliff-dwelling in Grand Gulch, Utah, he dug under it. Very soon he found he was excavating in an ancient cave which had been filled up with ashes and débris by the cliff-dwellers as a foundation for their stone house. At the bottom of the cave he uncovered a basket about four feet in diameter. Under the basket was a robe of rabbit skin, and under the robe a mummy, seated. Understanding the dryness of the atmosphere and its preservative qualities, the aborigines had left the body in its natural condition. Investigations were at once instituted by an expedition sent out on behalf of the American Museum. The remains and culture since found in the Grand Gulch and south to Cañon de Chelle, Arizona, are believed to be ample for the purpose of establishing an American cave-dweller as old as those of the Old World, or even older. Some remains of the cave-dwellers have been found under the cliff-dwellings. The skeletons and culture of the two races do not even remotely resemble each other. The shapes of their skulls differ, that of the cliff-dweller being noticeably flat, while that of the cave-dweller is normal, narrow, and elongate. The cliff-dweller had for weapons the bow, arrow, and arrow-points, like those of the early savages. The cave-dweller lived ages before such things were used; his weapon was the throwing-stick. The only thing known to resemble it in any way is the atlatl, which the early Spaniards found in use about Chichuahua, Mexico. In more modern times the weapon that resembles it most closely is the boomerang of the Australian bushmen and the rabbit-stick of the Hopi Indians of California. Enough material is at hand to show that the cave-dwellers date unquestionably from glacial times.

A Cliff Dwelling, underneath which the Cave-dwellers built their Homes

A NEW THEORY REGARDING THE CANALS ON MARS

As our next-door planetary neighbor, Mars has long been regarded with peculiar interest, while its apparent close physical kinship to the Earth has served to whet the curiosity and to stimulate the imagination. At the very favorable opposition of 1877, however, made doubly memorable by Hall's discovery of the tiny Martian satellites, a new source of wonder and speculation appeared. Mars is never very strongly marked, but dim bluish-green areas, popularly supposed to be seas, were quite familiar to astronomers when Schiaparelli at Milan noted the appearance of long, thin, straight or slightly curved lines cutting from the "seas" into and through the faint reddish areas supposed to be continents. At the next opposition, two years later, he detected more of them, and saw them more plainly. By this time popular interest was thoroughly aroused, and when at subsequent oppositions Schiaparelli's *canali* had grown into a complex net-work, hypothesis was rampant. The strange regularity of the lines, following great circles of the planet and often many hundreds of miles long, inevitably suggested design, and design connoted Martian peoples possessed of a frenzy for applied hydraulics that would have done credit to Laputa. But when a little later the Italian observer announced that he had seen many of the canals doubled throughout their entire lengths, the voice of the scoffer began to be raised, and all sorts of suggestions, varying from atmospheric refraction to alcoholic diplopia, were made to account for the phenomenon. A single unsupported observer might be allowed one private collection of canals, but two formed a tax on credulity. However, at the opposition of 1886, a few other astronomers detected the canals, some single, some double, in the places which Schiaparelli had assigned to them. Since then still others have seen them and multiplied them, have noted changes in their appearance with the progress of the Martian seasons, and dark enlarged areas at their numerous crossings, but their nature has grown more, rather than less, mysterious. In fact, there are some very queer things about the canals. They have been observed, after all, by very few astronomers, and at few places. They have sometimes been detected at quite unfavorable times, and with telescopes of absurdly small capabilities, while some of the giant lenses have steadily been turned on them in vain. They do not appear as a completed net-work, but flicker into visibility one or a few at a time, often to vanish in a few seconds. As a whole, however, different observers have consistently located the same set of canals. Now, within a few months, some English astronomers have advanced the thesis that the whole affair is a complex optical illusion, not as before suggested, quite without cause, but with a basis definite enough to cause different eyes to see the same things. They have found that if one sketches a map of Mars, after Schiaparelli, rather lightly, omitting the canals, one will see, if the sketch is viewed in a dim light, spurious canals occupying the places of the canals omitted. In other words, the contour of the dark areas on the planet defines the places where the eye and the imagination will unite to place canals. The trial, as they made it, succeeds with many observers, but it is very easy to make the experiment in a form that will show the principle to almost any one. Draw lightly a three-inch circle, and then shade with a pencil the upper and lower parts of the drawing, leaving an irregular equatorial belt half or three-quarters of an inch wide. Let the shading form irregular points and notches along the edges of the belt, and pin up the sketch in a dim light. Then stand off ten feet or so, and look at it with the closest attention. Presently dark lines will be seen crossing the belt from points to points, not all visible simultaneously, but flickering into sight, now hazy, now seemingly sharp. And the essential parts of the same pattern, located by the contour of the dark areas, will be seen by different observers. Put a dark spot in the belt, and lines will radiate from it to the neighboring points. If you look at a map of Mars you will note that at least the prominent canals spring from just such dark salients. Now the mere fact that the eye will supply such apparently impossible details does not demonstrate that the Martian canals are thus phantasmal, but it does throw the burden of proving their reality upon the few who have been able to detect such appearances upon the face of the planet. Mars is known to present seasonal changes of light and shade, and a little experimenting with our sketch will show that changes of light and shade vary the lines seen, so that even the variability of the "canals" can be simulated. The experiment may not carry conviction of illusion, but it is quite enough to hold any man for the grand jury on the charge of seeing things that do not exist.

An Aspect of Mars, after Lowell

It should be clearly understood that the reality of the Martian canals has often been questioned, but the persistence with which several keen observers have seen substantially the same set of canals has in recent years tended to quiet the sceptics. Negative evidence adduced by those who have not themselves been able to see the canals is open to criticism, particularly since previous hypotheses have not properly accounted for the concurrence of different observers in seeing the same things.

This lack is supplied by the connection now shown between the real dark shadings and the lines by which the eye instinctively connects them. Given the same shadings, and the same canals will follow except in so far as one eye may interpolate lines on smaller provocation than another. When the normal shadings change, as they certainly do with the Martian seasons, the canals will also tend to change, and more or less of them will be seen. An interesting bit of evidence along this line is furnished by the observations of Dawes, a most accurate English astronomer, who studied Mars nearly forty years ago. He failed to find canals, but did discover what now appears to be a transitional stage of the phenomenon in extensions of the salient points of the dark areas.

A careful study of the test diagram here shown will disclose certain stages of illumination in which the dark points will seem to be extended without meeting. The doubling of the canals is not quite so easy to explain, but there is rather good astronomical evidence that doubling most frequently appears when the "canals" are at the very limit of visibility, and that it should be regarded as an illusion rather than as a reality, whatever the canals themselves may be. Something of the sort occasionally appears in the inspection of a sketch like that shown, particularly if the eye is a bit tired, but the observation is not an easy one. It is curious to note that linear markings have sometimes been made out on the planet Venus, but in this case even the observers have turned to sceptics, and ultimately have repudiated them as unreal. Of course there is a chance that the Martian canals are in part real and in part illusory, but the facts here presented strongly tend to discredit anything like such an artificial net-work as has been often claimed. However this may turn out, one should not be too hasty in condemning the astronomers who have studied the "canals."

Origin of Spurious Canals

No one who has not worked in an observatory can fully realize how difficult and elusive are the finer markings of Mars even under rather favorable conditions. And illusory observations are by no means a novelty in astronomy. Vulcan, the supposed intra-Mercurial planet, is a case in point. The great Leverrier believed in it even up to the end of his life, and the observations which apparently confirmed his mathematical theory have remained unexplained, though unconfirmed. There is a chance that some day, in a clear mountain atmosphere, photographs of Mars good enough to settle the question of the canals may be obtained. Until then the matter must remain in some doubt, but it is evident that unsupported ocular observations are open to very grave doubt even when often repeated, for in this instance the eye certainly plays queer tricks on the brain, and cannot be too confidently trusted.

COMMENT

MINISTER BOWEN has good reason to believe, he says, that the pending controversy between the three allied powers and Venezuela will be settled soon and satisfactorily. This after repeated conferences with Sir Michael Herbert, Signor Mayor des Planches, and the temporary representative of Germany, all of whom have been sending and receiving cipher cablegrams enough to spur Marconi to new efforts. Minister Bowen has, so far, said nothing definite either as to the amounts which Venezuela, through him, will offer to each of the three powers, or as to the guarantees—presumably the customs—which he is empowered to put in their hands. These are matters over which a good deal of close bargaining has doubtless taken place. A cause of future strife may lie in the attitude of France, which claims the right to be paid before the belligerent powers, as she had already come to terms with President Castro, and has decidedly favored him during the struggle with the allies. But it is doubtful if the allies will admit the claim of France. They will naturally claim that the spoils belong to the victors, and they may be able to make good their claim. The tremendous international excitement over the Fort San Carlos bombardment has largely disappeared, and the reaction therefrom may lead Germany to be more reasonable in her demands, though this is far from certain. The statement that England showed her disapprobation by holding aloof from the bombardment of Fort San Carlos is, of course, nonsense. When the blockade, which Premier Balfour himself admitted to be a state of war, was first decided on, England agreed to patrol the sea eastward from Caracas to the mouth of the Orinoco, doubtless because British Guiana lies in that direction, while Germany was to take the region westward from Caracas to the Colombian frontier. Hence England could not by any possibility take part in the move towards Maracaibo. That move was made, say the Germans, because munitions of war were being smuggled into Venezuela from Colombia, through Maracaibo, thus rendering the whole blockade useless unless Maracaibo also could be blocked. This the *Panther* attempted to do, and, as Germany alleges, in so doing was fired on by the fort of San Carlos. If this be so, then Germany acted fully within her rights, according to the principles of international law.

A publication of dates further shows that it was not Germany at all, but England, which first hatched the scheme of coercing President Castro and Venezuela. This plan, which dates from the early summer, was duly submitted to our State Department, which fully acquiesced in the contention of England that force might be used to collect bad debts in South America. Then Germany came in, claiming that she also wished to collect certain debts, and asked that the same principles might be admitted in her case. Finally came the proposal for joint action, which was made before the visit of Kaiser Wilhelm to King Edward at Sandringham. That England should now seek to lay the blame of the whole transaction on Germany, merely because the event has showed that the methods England originally proposed are distasteful to the people of the United States, is, to say the least of it, a not very loyal or creditable proceeding, and it will certainly be remembered should England seek Germany's aid in the Far East. Having entered into this alliance, England should at least be loyal to her ally.

The canal treaty with Colombia was negotiated under many difficulties, and the task was accomplished in a manner of which both the President and Secretary Hay may well be proud. Starting out with the firm determination to secure the Panama route, because both the Walker Commission and Congress had expressed their preference for it, the Executive was met with obstacles at every step. Colombia had also concluded that the United States would not go to Nicaragua, and that therefore we were at her mercy. She raised her demands exorbitantly, and her minister made the mistake of stopping negotiations, because he did not like the manner in which Admiral Casey interpreted the treaty of 1846, when he refused to permit even the government troops, during the recent rebellion, to interfere with the traffic of the Panama Railroad. Fortunately this gentleman was recalled, and Dr. Herran, an intelligent man who has lived long in Washington, was left in charge of the business. Colombia really had not a leg to stand on, and if we had been as ugly as a European potentate might and would have been, she would have been forced to her knees. She induced Congress to abandon Nicaragua by consenting, informally, that the French company might sell out to us, and by giving us to understand that she would make reasonable terms with us. Secretary Hay finally induced her to see that this country would not be imposed upon, while President Roosevelt stood behind him, backed him up in his patient endeavors, and occasionally permitted it to be understood by the Latin-Americans dealing in canal franchises that this was a big country, with which it was not wise to trifle. The two worked together perfectly, the result is satisfactory, the better route has been obtained, and it has not been necessary to punish the little republic for her double-dealing. On the contrary, she seems pleased to have made the trade at last.

Although a treaty providing for the settlement of the Alaska boundary question has been signed by Secretary Hay and the British ambassador, it is by no means certain that the agreement will be ratified by our Federal Senate or prove satisfactory to Canada. Even if the treaty should be sanctioned on both sides of the border, it seems likely to be abortive. The commission for which it provides consists of three jurists on each side, but there is to be no umpire to cast a

deciding vote. That is to say, the validity of our own contention will have to be conceded by one of the British jurists, or else the soundness of Canada's claim will have to be acknowledged by an American member of the tribunal. The latter alternative has hitherto been deemed so incredible that the American members of the Joint High Commission which met in Washington three years ago advocated a method of adjustment similar to that which is now proposed, which at the time, however, did not meet with approval on the part of Lord Herschell or of the Canadian members of that body. Of course the Alaska boundary question turns on the construction of the treaty of 1825 between Great Britain and Russia, which undertook to delimit Alaska from British Columbia. American students of the matter are, so far as we have observed, unanimous in believing both that the treaty of 1825 can only bear the construction uniformly put upon it by our State Department and that until very recently—that is to say, until gold was discovered in and near Alaska—the Canadian government has acquiesced in that construction. It is, of course, barely possible that one of the representatives of Great Britain on the proposed tribunal may be open to conviction; but we doubt it, in view of the prevailing current of feeling and opinion at Ottawa, and in view of the desire felt in England to conciliate Canada. Apparently, the existing *modus vivendi* is to be maintained pending the investigation to be made before the mixed commission. So far as Canada is concerned, she would probably be glad to see the *modus vivendi* indefinitely prolonged.

The impending trouble between Brazil and Bolivia will probably break out before the Venezuela incident is well settled. The Acre question is, of course, the cause of the dispute. The Brazilian War Office is concentrating troops in the Amazonas district, and two more divisions have just been sent north. Fourteen steamers of the National Navigation Company were chartered for the expedition, and equal zeal is being shown in other directions. When it is remembered that the Acre expedition, composed largely of American, English, and German citizens, is already in the interior, it is easy to see how rapidly we may pass from a concussion of the troops to intervention by the powers; and as Bolivia has no coast to blockade, and as a blockade of the immense coast-line of Brazil is so difficult as to be almost impossible, the situation is grave in the extreme. President Pando of Bolivia is in the Acre territory in person, and has conferred with Brazil's representatives on the spot. It is said that Brazil is trying to procure the Acre district for herself, in exchange for certain other regions which Bolivia has long coveted. This would probably put an end to the Acre concession, to which Brazil has been opposed from the first.

At last the programme of China's one fighting general, the famous Tung Fu-Siang, is revealed, and it shows that as a statesman he is not less able than as a soldier. His plan takes into consideration two most important forces: the deep loyalty of the vast mass of Chinese to the present Manchu dynasty, and the particular hostility which masses of Chinamen feel towards the present Emperor as being the cause of their dire misfortunes and humiliations at the hands of the foreign devils. General Tung Fu-Siang has recognized both these truths, and, acting on his knowledge, has proclaimed as Emperor, not himself, but the son of the redoubtable Prince Tuan, the same boy who, it will be remembered, was at one time declared heir-apparent by the Dowager Empress and the present Emperor. It is evident that Prince Tuan and General Tung Fu-Siang are actively co-operating, and it cannot be denied that they make a most formidable combination. Yüng Lu and other high Chinese officials have cast their lot in with the young pretender. This youth, Pu Chu by name, a prince of the old Manchu line, has now been proclaimed Emperor, with the title of Tung Hsu, at Tung-yuneing, the chief settlement of the Ala-shan Mongols, and the palace at Si-ngan-fu is being prepared to receive him. This is the palace to which the Dowager Empress fled from Peking, and has historic associations which will appeal with great strength to scores of millions of Chinamen. Also, it is strongly situated among mountains, and is so far from the sea that an expedition thither would be a very formidable affair indeed, infinitely more so than the march to Peking. Tung Fu-Siang has a well-drilled and well-armed body of ten thousand troops, mostly hardy Mongols, such as recruited the armies of Genghis Khan and Timur-Leng, and he may shortly be expected to hold the two provinces of Shen-si and Kan-su absolutely in his power. At the same time, we are told that the rebels in Kwang-si are rapidly gaining ground, and it is quite possible that they may come to co-operate with the young pretender, since we well know the courage and sagacity of both Yung Lu and Tung Fu-Siang. The formidable element in this matter is that it is not a Chinese but a Mongol movement—the Chinese being a peaceful agricultural race, without the power of coherence or collective action, while the Mongols are hardy nomads and fighters, who have again and again given rulers to Asia, and for centuries held a large part of Europe under their dominion.

It is a recurring, but nevertheless quite curious, spectacle which Count von Bülow, the Imperial Chancellor, presents in the Reichstag when he defends his chief, the Kaiser, against the criticism of the Liberal opposition. The veteran Radical leader Eugene Richter, for about the twentieth time, stated in that body that "the country and the crown itself were harmed by the too frequent utterances of Emperor William without consulting his ministers." In this case, as in all previous ones, Bülow made an attempt to shield his imperial master by offering his own expansive and immaculate bosom as a target for arrows of criticism. An offer which was declined, with thanks. This is a curious spectacle, we say, because the constitution of the empire distinctly recognizes the right of criticising (within reasonable bounds) the Kaiser as a public personage—*i. e.*, so far as his public acts and utterances are concerned. And yet, whenever any one of the nation's representatives in the Reichstag makes an attempt to fulfil what may be at the time a really important duty to his constituents, namely, to criticise some of the Kaiser's most recent and reckless public statements, he is hauled up short by both the Chancellor and his government myrmidons, as well as by the presiding officer of the Reichstag itself,—belonging, of course, to the reactionary majority there. The latter will interrupt the daring speaker, and calmly inform him that he is encroaching on the *Brauch des Hauses* (custom of the house) in naming or finding fault with the doings of the sovereign. And the speaker as invariably subsides. Thus, under the unconstitutional practice which has grown up under the domination of a time-serving and reactionary majority, the much-needed check on imperial whims and extravagant statements is prevented even in the only place in the empire where such criticism might be made without fear of jail and the state's attorney. And as for outside the Reichstag, it is too well known to require comment that the slightest word in criticism of the Kaiser leads to indictment and to a subsequent sentence by subservient judges, for *lèse-majesté*, of from six months to three years in jail. The bosom of Count Bülow, as a vicarious target for those who do not quite agree with the Kaiser from time to time, is, under the circumstances, wide of the mark.

It is understood that the anti-trust bill framed by Mr. Littlefield, chairman of the subcommittee of the House Committee on the Judiciary meets with the approval of the President and the Attorney-General. As it is similar in many respects to the bill introduced by Mr. Elkins in the Senate after many consultations with his Republican colleagues, we presume that it represents the broad lines on which the Fifty-seventh Congress may be persuaded to attempt to regulate and control the trusts. Mr. Littlefield's project is not so drastic as were the bills introduced by Chairman Jenkins of the House Judiciary Committee, which bills we have formerly discussed at length. For instance, a refusal or an omission to comply with the provisions intended to assure publicity or to prevent rebates and monopolies is no longer punishable by imprisonment, but only by a fine, which in no case is to exceed five thousand dollars. It may be thought that such a fine would exercise no deterrent influence upon a large corporation, but Mr. Littlefield does not confine himself to that instrument of coercion, so far as the arrangements for publicity are concerned. Any corporation failing to comply with the provisions for publicity may be restrained, on the suit of the United States, from engaging in inter-State

commerce until such return is made. Whether such restraint should be sought is to be determined by the Attorney-General.

We could hardly exaggerate the magnitude of the power thus vested in that official. The Littlefield bill, however, gives the Attorney-General no such power in the event of a corporation's failing to comply with the provisions against rebates and monopolies. All the Attorney-General can do in such cases is to institute proceedings in equity through United States District-Attorneys to prevent and restrain the forbidden acts. The United States Circuit Courts are clothed with authority to avert the violation of the provisions against rebates or monopolies, either by interlocutory orders or by permanent decrees, but the authority does not extend to the complete arrest of a corporation's inter-State commerce. Lest he should be taxed with insincerity in refraining to take such stringent measures against rebates and monopolies as he takes for the assurance of publicity, Mr. Littlefield has introduced two provisions, which, if they are allowed to remain in the bill, will give a great deal of trouble to corporations desirous of evading the law. For example, one section is to the effect that no person shall be excused from testifying and producing books or documents before the United States Courts or the Inter-State Commerce Commission, on the ground that the evidence, documentary or other, required of him may tend to criminate him or subject him to a penalty. On the other hand, no person shall be subjected to a penalty on account of any matter concerning which he may testify or produce evidence before the said courts or inter-State commission. The second proof of sincerity is contained in the eleventh section, which enacts that the right to enforce the provisions against rebates and monopolies shall not be confined to the Attorney-General and District-Attorneys of the United States, but may be exercised by any person or corporation injured in business or property by reason of anything forbidden or declared to be unlawful by the proposed act. Not only may such injured person sue without respect to the amount in controversy, but he shall recover threefold the damages sustained, and the cost of suit, including a reasonable attorney's fee. We need not point out that this provision opens the door wide to the levying of blackmail.

On Wednesday, January 21, Senator Hoar and Senator Spooner condemned the practice which is said to have grown up in the Senate of stating what was alleged to be the opinion of the President of the United States concerning measures pending in one or the other House of Congress. Senator Hoar said that if the President wished to commend any particular measure he could do so by a message, which the Constitution authorized him to send. On the other hand, if he disapproved of a measure passed by both Houses of Congress, he was authorized by the Constitution to signify his disapproval by a veto. Those were the only two ways, Senator Hoar thought, in which the President had any constitutional right to make his views known. He held that to announce the President's opinion in either House while a bill was under discussion was contrary to the privileges of Congress, and he seemed to imagine that he had sustained his position when he pointed out that the British House of Commons and House of Lords resented the announcement that a particular measure was or was not favored by the Crown. As a matter of fact, there is not, and has not been since the reign of Anne, any analogy between a sovereign of Great Britain and the President of the United States as regards the relation of the Executive to legislation. In the first place, the President possesses the veto power, which the British sovereign has lost through failure to use it for almost two centuries. In the second place, a British prime minister not only initiates legislation, but exercises a continual and avowed control of it. Now the President of the United States is practically his own prime minister. He alone is responsible to Congress for the acts of his administration; with the possible exception of the Secretary of the Treasury, the members of his cabinet are mere clerks. In the third place, the President is by no means limited by the Constitution to the expression of his wishes by a written message.

The Constitution merely says that he shall from time to time give to Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient. The information and recommendation may be given orally as well as in writing. There is nothing in the Federal organic law to prevent him from stating by word of mouth to both or either of the Houses or to any members of them what measures he thinks should be adopted. We know from *Macleay's Diary* that such was the course at first pursued by President Washington, and there is reason to believe that had he been less diffident, and had he possessed a greater flow of language, he would have persisted in the course. Which would Senator Hoar prefer: that Mr. Roosevelt should imitate Washington, and appear in the Senate Chamber for the purpose of telling the Senators collectively what he wanted them to do; or that Mr. Roosevelt should privately indicate his hopes and opinions to certain leading Senators? In the negotiation of treaties and in the matter of appointments to high Federal offices the Constitution makes it the duty of the President to take the advice of the Senate. Would Mr. Hoar have the President come to the Senate Chamber for that purpose? Is it not better that he should adhere to the long-established custom of consulting in private certain representatives of the predominant party in the Senate? We add that, if a President had made up his mind to veto a bill in case it should be enacted in a particular form, it would be his plain duty to avow his intention, and not by concealing it to suffer Congress to waste its time in fruitless debate. In the matter of the appointment of the anthracite-coal strike commission, we have had occasion to express regret that Mr. Roosevelt did not keep more strictly within his constitutional functions. As regards, on the other hand, his private conferences with Senators and Representatives in reference to pending legislation, we have no doubt that he is pursuing a constitutional course.

Some light has been thrown on the Indianola post-office affair by the debate in the Federal Senate. It can no longer be alleged that in removing the post-office from that town the President was punishing the innocent as well as the guilty. Those who were inclined to disapprove of the step are estopped from using that argument by the declaration made by Mr. McLaurin, one of the Senators from Mississippi, that it was the whole town, and not a brutal, lawless majority, that demanded the resignation of Mrs. Cox, the colored postmistress. He asserted that every white citizen in Indianola, except a man named Weeks, who had gone over to the Republican party in the hope of getting office, had attended the mass meeting called for the purpose of requesting Mrs. Cox to resign. The request was based, not upon the score of any personal objection to Mrs. Cox, or to her husband, considered as negroes, but upon the broad ground that the white people of Indianola did not want any negro, however highly esteemed, to handle their letters. Mr. McLaurin maintained that, in making this request, the white inhabitants of the place simply exercised the right of petition. It should be borne in mind that no threat of violence was made at this meeting, but that Mrs. Cox, upon hearing that a committee had been appointed to circulate a petition, voluntarily resigned. In thus resigning, she was moved, according to her husband, not by fear, but by unwillingness to hold office against the wishes of her neighbors. There is no doubt that this local incident contains the germ of a national issue.

The question is, Shall the military power of the United States be used to force a colored official upon a community against the unanimous protest of its white inhabitants? If this question be answered in the affirmative, we may have to face a renewal of the civil war. We doubt the expediency of raising such an issue. We regret to add that there is a trace of vindictiveness and provocation in the course pursued by the Post Office Department which has compelled the citizens of Indianola to obtain their mail at a post-office thirty miles away instead of at another only four miles distant. Conceding, for the sake of argument, that the inhabitants of Indianola had defied Federal authority—which is not clear, since no threat of violence was made, and Mrs. Cox seems to have resigned her office voluntarily—we doubt the constitutionality of the measure taken by Mr. Roosevelt. He could, unquestionably, have appointed another negro to the post-office at Indianola, and upheld him with the judicial and military powers of the Federal government. But where does

he get the right to deprive an American community of postal facilities the cost of which it helps to defray? We sincerely hope that the real, though unavowed, motive of the attempt to discipline the citizens of Indianola is not, instead of being a somewhat belated resolve to enforce rigorously the privileges granted to colored persons by the reconstruction amendments of the Constitution, a bid for the colored vote in certain Northern States where it holds the balance of power. Does Mr. Roosevelt imagine himself to be a truer friend of the colored race than Mr. Booker T. Washington, who has repeatedly advised his brethren to forego office-holding or office-seeking in that section of the country which resents even an approach to negro domination?

We have no desire to anticipate the verdict of a jury, but it seems to be admitted by such reputable and fair-minded newspapers as the Charleston *News and Courier* and the Savannah *News* that James H. Tillman, ex-Lieutenant-Governor of South Carolina, was guilty of deliberate murder when he shot N. G. Gonzales, the editor of a Columbia newspaper. It has long been known that no adequate punishment for the murder of a negro by a white man need be looked for in South Carolina. That is a state of things sufficiently shameful, but it now remains to be seen whether even white men have any rights that members of the political clique headed by Senator Tillman are bound to respect. It is, in truth, not only the man-slayer James H. Tillman but the State of South Carolina which will be on trial at the bar of public opinion. We find it hard to believe that a jury can be found to acquit Tillman if the evidence of deliberate murder be as clear and overwhelming as it is said to be by those who are in a position to learn the truth. We know of nothing more calculated than such a defiance of justice to stop all emigration and arrest all inflow of capital into South Carolina, and to subject that State to moral and social ostracism. Has not the State already disgraced herself enough by sending a loud-mouthed and offensive demagogue to the Federal Senate? It is not by countenancing such men as Senator Tillman and his man-slaying brother that the Southern States can hope to regain that preponderant position in the councils of the national Democracy which they once occupied, and which on some grounds many conservative members of the party in the Northern States would like to see them reassume. We wish we could look forward with confidence to the outcome of Tillman's trial, but this we can hardly do, in view of the admission made by the Charleston *News and Courier* that an acquittal may be expected.

The New York *World* asks the press of the United States to contribute towards the prosecution of the murderer of N. G. Gonzales, the editor of the Columbia *State*. There is virtue in the request, for Tillman's cowardly and brutal deed was not only a violation of the law of South Carolina, but an assault upon the freedom of the press. Gonzales was killed for his faithful discharge of a public duty. His murderer took his life because he had fearlessly discussed public questions, exposed public corruption, and denounced public criminals. In this discharge of duty, in this exercise of a right guaranteed to every editor by the laws of the country, Gonzales had probably brought Tillman's political career to an end. For doing this, he was killed. The immediate offence is against the law and peace of the State of South Carolina, and we entertain no doubt that the commonwealth will be true to her best traditions in the ability and thoroughness with which the Attorney-General will prosecute Tillman. But the latter has openly boasted that he will be defended by "the best legal talent that the State of South Carolina has ever produced." In view of the strenuous struggle which he has avowed that he will make in order that he may vindicate the right of politicians to kill their critics of the press, it is well that as complete and ample preparation be made for the prosecution. The press owes it to itself to vindicate its ancient liberties, to express its detestation of the crime, and to defend its privilege and right, which, in this country, is as old as the government. This is not a suggestion to intrude upon the State. The State should welcome the aid of all who have been wronged by this crime, and should give to the press this opportunity to express itself most effectively touching the assault upon its rights. At any rate, a proper respect for themselves and for their office demands that the editors of the country meet the editor of the *World* and let it be understood, in this most practical way, that they are jealous of the right which is guaranteed to them by the Constitution, and that they will not be deterred from the exercise of it for the public good.

We look forward with interest to the publication of the Year-Book of the Carnegie Institution, which will show to what extent and in what way the founder's purpose has been carried out. It will be remembered that Mr. Carnegie gave to this institution $10,000,000 in five-per-cent. bonds of the United States Steel Corporation. That is to say, he provided an annual income of $500,000, to be expended, not on the construction and maintenance of new and unnecessary buildings, or on the salaries of placemen and disbursing agents, but for the direct encouragement of men already engaged in scientific research at existing institutions, or in connection with their professional labors. In other words, this munificent grant was not to be frittered away on bricks and mortar, or on the maintenance of sinecures. This was an admirable feature of the founder's plan, and we sincerely trust that there will be no departure from it. We learn that the grants thus far made by the institution amount in the aggregate to $200,000, and that no larger sum will be allotted by the trustees during the year 1903. We do not yet know what has been done, or is to be done, with the remaining three-fifths of the institution's annual income. We are told that the sum awarded to any individual investigator will not, as a rule, exceed one thousand dollars a year. A grant of $4000, however, has been made to the Marine Biological Laboratory at Woods Holl, Massachusetts. We are glad to see that the funds of this institution are not to be devoted to the assistance of students who are trying to obtain university degrees, nor to the payment of mere mechanical helpers in the work of scientific instruction. We repeat that all this money is to go to the encouragement, not of tyros, but of experts, that is to say, of men who have proved themselves capable of prosecuting independent and valuable researches. It is also satisfactory to learn that no limitation as to nationality has been prescribed by the directors of the institution. One of the beneficiaries is the Japanese scientist Dr. Hideyo Noguchi, whose investigations of the effects of certain poisons have attracted so much attention all over the world. As yet, the directors of the Carnegie Institution have given no indication of an intention to follow the course pursued by Nobel, the Swedish inventor, and to offer very large prizes for memorable achievements in one or another field of scientific inquiry. The importance of a fund applicable to the encouragement of men who have proved themselves experts in investigating is keenly appreciated by British scientists, and they will be rejoiced to learn that Mr. Carnegie has decided to endow with $5,000,000 a trust for scientific research at Edinburgh, the income to be distributed on lines similar to those adopted by the directors of the Carnegie Institution at Washington. We may add that this, with other donations made since the beginning of the new year, brings up the aggregate of the great ironmaster's benefactions to nearly $79,000,000.

Dr. George Parkin, of Toronto, who represents the Rhodes scholarships trustees, is working systematically to get the best advice he can in the matter of assigning the American scholarships. On January 23 he met in Boston some of the college presidents and school principals of northern New England and got their views; on January 24, in Cambridge, he met another company of educators, from southern New England, and talked with them. It will be remembered that under Mr. Rhodes's will there are to be two scholars from each American State and Territory. Dr. Parkin said the plan was to select one of them in the spring of 1904 to go to Oxford in that year, and another in 1905, but none in 1906. In 1907 the group first chosen would have finished their three years' course, and another squad would be selected to fill their places. The candidates, Dr. Parkin said, must be acceptable to Oxford, and must pay rather more attention to social requirements than students always do in American universities. The inference from that is that if a thrifty American had undertaken to live at Oxford on five hundred dollars a year and save the rest of his fifteen-hundred-dollar

income, Mr. Rhodes's purpose would be felt to be thwarted, and Oxford would disapprove.

The southern New England educators who met Dr. Parkin agreed with their Northern brethren in recommending that candidates should not be younger than nineteen, nor older than twenty-three; that they should be eligible from the end of the sophomore year up to two years from graduation; that examinations should be conducted from Oxford; that only candidates qualified to read for an Oxford honor degree should be accepted; that candidates should be nominated by the American colleges, and that "in the States in which there are several colleges nominations shall be made in rotation according to seniority by those institutions which, in the judgment of the trustees of the Rhodes bequest, give courses of studies that qualify students to matriculate at the University of Oxford." These recommendations do not settle anything, but they are the result of much deliberation and discussion, and probably indicate how the problem will be worked out. Educators in New York, Philadelphia, Atlanta, Kansas City, Chicago, Minneapolis, Spokane, Denver, and San Francisco will be asked for their opinions, and then Dr. Parkin will report to the trustees in London before going to New Zealand and Australia to make his arrangements there. A good deal has been said, and much can and will be said, about the defects of Oxford as a place of education for American youth, but there is no sort of doubt that there will be a brisk demand for all the Rhodes scholarships that are available in this country. Three years at Oxford on a generous income is a prospect that appeals strenuously to the imagination of youth. It won't be a question with our young men whether it is the best educational opportunity theoretically possible, but whether it is the most attractive opportunity practically available. It is unquestionably attractive. The Rhodes scheme will surely work, and its workings and their eventual result promise to be of remarkable interest.

Observing that President Hopkins of Williams holds to the old-fashioned college course of four years, the Boston *Transcript* remarks that "perhaps the President of Williams is not worried with the sight of two thousand lazy undergraduates dawdling away four years on work that they could do in two. . . . That's where the shoe pinches in our great urban universities." It is a vulgar error, which the *Transcript* should have escaped, to suppose that the majority of the students in any good college, great or small, do any great amount of dawdling. Some students dawdle, and a good many are not so strenuous in study as they might be; but the proportion of hard students in our colleges is surprisingly large, and it is at least as large in the big colleges as in the small ones. The reason why the "urban universities" are more solicitous for the shortened course is not that they are full of loafers, but that they have so many hard students who are pressed for time, and that they have great professional schools, whose interests, and the interests of students in them, constantly appeal for consideration. It is not for the lazy lads that courses are being crowded into fewer years, but for the hard workers.

The New York *Times*, on the authority of the Philadelphia *Medical Journal*, rebukes the WEEKLY for saying of Mrs. Eddy, the Christian Scientist: "Somehow, she has got hold of some important truths that the regular doctors have missed." The *Journal* says there is nothing new in Christian Science, and the *Times* agrees with it. Maybe they are right; the WEEKLY is not prepared to assert the contrary. But how would it do to suggest that the Christian Scientists seem to have devised a fairly effective apparatus for using this knowledge which perhaps the regular doctors have not missed. Most intelligent physicians recognize the great value of mental influence on many diseases, but they usually lack effective means to bring it to bear. The Christian Scientists seem to have a fairly effective method, though it is probably true that they often apply it in unfit cases. The hope of a good many thoughtful persons who have opposed attempts to squelch Christian Science and similar developments by law, has been that toleration and observation of them would presently yield valuable knowledge which would be useful to mankind. Inasmuch as it is always pleasant to be cock-sure of anything, the *Times* is to be envied for the certainty of its conviction that Christian Science is a thoroughly pestilent contrivance, without any reasonable claim to countenance or toleration. It rails at it at every chance, with a vigor of malediction which must do its own spirit good, however it affects, or fails to affect, the enemy. Perhaps its superior and enviable conclusiveness of opinion on this subject, as contrasted with the halting attitude of other contemporaries, is due to a moderate conception of the possible powers of the human spirit. One who considers that the spirit of man is a mighty potentiality, which ought to work wonders, and could if it knew how, looks curiously at wonders it is asserted to have worked and considers whether some of them may not be genuine. But the observer who is sure that man's spirit is a mere incident of digestion and respiration finds it easier to assure himself that the unaccountable does not happen, and that all wonders are bogus. Man's spirit ought to do some of the stunts and attain some of the physical results that the Christian Scientists claim that they accomplish. What daunts the curious but unconverted observer is his doubt that the Scientists really know the nature, scope, and limitations of the force they seem to deal with, or are competent to judge when it will suit the use they put it to, and when it will not.

It is with mixed feelings that lawyers regard the recent decision of the Supreme Court of the United States on the subject of divorce. The tribunal affirmed a decision of the Massachusetts Supreme Court which set aside a South Dakota divorce, in pursuance of a Massachusetts statute providing that if a person residing in Massachusetts should go to another State for the purpose of securing a divorce the Massachusetts courts should not recognize its validity. There is no dispute about the facts. One Andrews went from Massachusetts to South Dakota and remained there for six months, the length of time required by the South Dakota law to constitute a legal residence. That is to say, the State of South Dakota, in the exercise of its authority, chose to declare that a six months' residence should be conclusive proof of the *animus remanendi*, and that, consequently, such a resident was qualified to avail himself of a State law concerning divorce, without being subjected to the imputation of perpetrating a fraud upon the commonwealth. How can the decision of the United States Supreme Court be reconciled with the provision of the Federal Constitution that full faith and credit shall be given in each State to the public acts, records, and judicial proceedings of every other State? The United States Supreme Court holds, as did the Supreme Court of Massachusetts, that Andrews had no right to avail himself of the South Dakota divorce law because he did not go to that State and reside there with the *animus remanendi*. Is not the very point at issue whether a State has the power to define by statute what length of residence shall constitute unimpeachable proof of an *animus remanendi*? Does not such a statute deserve as much faith and credit on the part of another State as would any other legislative act passed in South Dakota? If, on any ground whatever, one State has a right to criticise, condemn, and disregard an act duly passed by the Legislature of another State, what becomes of the constitutional provision to which we have referred? Of course, lawyers who practise before the United States Supreme Court are reluctant to give public expression to their opinions concerning any decision of that tribunal. Some of them do not hesitate, however, to confess in private that they are puzzled to account for the confirmation of the arrogant position taken with regard to South Dakota by the Massachusetts Supreme Court.

It is seldom that a more important decision has been rendered by a New York tribunal than that which was handed down on January 20 by the Appellate Division of the Supreme Court of that State concerning the constitutionality of the franchise tax law. It may be remembered that Mr. Roosevelt when Governor insisted not only upon the passage of this law, but also, against the wishes of the framer of the measure, upon delegating the levying of the tax to a State board instead of the local tax commissioners. Now the court holds that the bill, as originally framed, was constitutional, but condemns as unconstitutional the provision inserted by Mr. Roosevelt for the assessment of franchises by a State

board. Should the decision be confirmed by the Court of Appeals—Governor Odell has requested his Attorney-General to expedite the consideration of the case by that tribunal—the city of New York will have to pay back a great many millions of dollars already collected under the act. The franchise-enjoying corporations will gain nothing in the end, however, unless the law is repealed, because the assessments made by local tax commissioners would in all likelihood greatly exceed those that were made by the State board. We presume that, in any event, Governor Odell will persist in his effort to secure a repeal of the franchise law, and to substitute a provision for a tax upon the gross earnings of corporations enjoying franchise privileges. The fact may be recalled that some of the corporations possessing franchises in New York city protested that, even with the assessments made by the State board, the tax imposed upon them by the Roosevelt act was utterly beyond their power to pay. Governor Odell, for his part, is probably too shrewd to kill the goose that lays the golden eggs.

The causes of the coal famine by which the larger cities on or near our Atlantic coast have been afflicted are less obscure than they were last week, but it is to be hoped that they will be made the subject of a searching inquiry at the hands of the Pennsylvania Legislature. It is certain that the Reading Company is striving to make the largest delivery of anthracite in its power, and that it has faithfully kept its promise to keep down the retail price of all the output from its own mines to $6 75 per ton. All those consumers, on the other hand, who are obliged to rely on anthracite mined by individual operators have had to pay very much higher prices. It now turns out that the supply of anthracite would be ample if the normal consumers of that combustible were not now subjected to competition on the part of manufacturers who ordinarily use bituminous coal. It is the relative dearth of bituminous coal in the seaboard cities which is now at the root of the trouble. Who is to blame for this dearth? The bituminous operators assert that they could produce from two to four times as much coal as they now do if the Pennsylvania railway lines would haul it. The railway officials, on their part, say that they have neither cars nor locomotives enough to haul any more coal than they now do. They are suffering, they say, from a general freight congestion, and cannot be expected to devote the whole of their rolling-stock to the transportation of bituminous coal. Whether this explanation is well founded is just one of the questions upon which light might be cast by a legislative inquiry. One thing seems certain, namely, that bituminous coal, usually worth in seaboard cities three dollars or four dollars per ton, retail, is *not* now selling at seven dollars to nine dollars a ton because there is a demand for it on the part of householders, who would prefer anthracite. On the contrary, it is manufacturers who, unable to obtain their normal supplies of bituminous coal, are now buying the small sizes of anthracite formerly used in private houses. The responsibility for the present inordinate prices of fuel seems to lie between the bituminous operators and the Pennsylvania railway.

If experience shall confirm the reports made by experts of international reputation concerning the richness of a new gold-bearing district in Alaska, we are more likely to experience a glut than a scarcity of the yellow metal for some time to come. The more confidence is attached to the reports because the public has not been invited to take part in the exploitation of the placer-mines to which we refer, as it is said that they have been purchased by an Anglo-American syndicate, in which the Rothschilds are represented. If it be true that over a very extensive area the gravel yields on an average two dollars in gold to the cubic yard, there is nothing extravagant in the estimate that something like an annual output of fifty million dollars may be expected for ten years to come. As the cost of extracting the gold from the gravel is computed at only sixty cents per cubic yard, the proportion of profit should be large. Nor is this the only quarter from which large additions to the annual flow of gold from the Klondike and the South-African Rand may be looked for. Extensive deposits of gold are known to exist in Mexico, and it is only a question of time when the mining energies of that country, hitherto concentrated upon silver, will be devoted to an exhaustive search for the yellow metal. The more the world's stock of gold is increased, the more desperate, of course, appear the prospects of bimetalism.

One of the popular novels of the hour has to do with wheat-speculation in Chicago. Some of its readers are doubtless observing, with more than usual interest, the reports of the newspapers about the current labors of Mr. J. O. Armour, in the Chicago wheat-pit. Mr. Armour was credited last week with owning twenty million bushels of May wheat, and was agitating the traders considerably by his operations. The Chicago wheat-pit is a great institution, which in the late Frank Norris's hands rendered considerable services to literature. As a means of abating the ennui of life in Chicago it seems to be without a rival. As the late Mr. Prentice of Kentucky said of something else, it opens every morning to welcome aleatory investigators with bloody hands to hospitable graves. Why Mr. Armour should be so busy in the pit does not appear. Maybe he is bored; maybe he is merely attending to his business which is large, and ramifies into grain. Let us hope the hospitalities of the pit are agreeable to him. His father enjoyed them from time to time, yet lived to die, solvent and much respected, in his own bed.

Remarking that English political satirists run more easily into verse than ours do, the *Evening Post* observes that "the number of metrical skits in *Punch* is quite unparalleled in this country." Perhaps that is because the cost of living is higher in this country. The devising of metrical skits of merit is slow work, there is no skit-makers' union, and the rate of remuneration does not commend the industry to our laboring class.

Dr. Andrew S. Draper, formerly Superintendent of Public Instruction in this State, now president of the University of Illinois, told the Twentieth Century Club, in Boston, recently what he thought and felt about coeducation. His discourse was one of a series of University Lectures. He told about the gradual accumulation of women's rights. Our foremothers had none; their descendants have as many as men have, and they include, in his opinion, not necessarily the suffrage, but all the education there is in the market. He found the education of women to be a natural and inevitable result of democracy, and coeducation to be its natural sequence. He had coeducation under constant observation, and liked it thoroughly. It worked well, and there was no reaction against it worth mentioning. The great State universities of the West were committed to it, and have no idea of changing their habits. Stanford University, because of some views expressed by Senator Stanford, had decided to limit the number of its women students to 500. Some universities, situated in or near great cities (like the Northwestern, near Chicago), had found themselves in danger of being overrun by women students, and had had to take thought about keeping the number of men and women students about equal. This had happened because in great cities more girls than boys found time to go to college. But in the main, Dr. Draper found that coeducation had passed far beyond the experimental stage, and is an established success. He found no fault with small colleges that excluded girls, nor with women's colleges that excluded men, but he held that "if the great universities have equipments which the women's colleges cannot rival, and if their teaching staffs are the very climax of the work of the great universities since the beginning of universities, and if women are to be denied the advantages of this, wholly or in part, it is taking away a substantial right which is theirs under all the theories of our government, and which all the interests of our democracy loudly demand that they shall have."

Mr. John S. Sargent, a sketch of whom appears in our series this week, has just come over from England to carry out a commission of painting a portrait of the President, and to superintend the placing of some of his mural decorations in the Boston Public Library. Mr. Sargent lives abroad, and has spent most of his life there. With Edwin A. Abbey he has had the highest recognition that can be given in England and on the continent. We still claim him, however, for America, and it is a matter of hearty congratulation that we have here a large part of his work. At forty-seven his best work is still undone.

The Panama Canal Treaty

We assume that the canal treaty signed on Thursday, January 22, by Mr. John Hay, Secretary of State, and Dr. Tomas Herran, Colombian Chargé d'Affaires, will be ratified by the Senate of the United States and by the Colombian Congress. The assumption is based upon the grounds, first, that few Senators will desire, by opposing the treaty, to expose themselves to the suspicion that they are acting in the interests of certain transcontinental railways which are accused of wishing to prevent the construction of any trans-isthmian waterway whatever; secondly, that the Colombian Congress will obey the chiefs of the *de facto* government now in power at Bogota, and that these persons, whatever counter-influence may be exerted by the representatives of certain foreign powers, will be unwilling to forego the handling of ten million dollars in gold, the bonus which is to be paid immediately on the exchange of the ratifications of the treaty. Taking for granted, then, as we have said, that the compact will in due course be ratified, it is worth while to examine carefully certain features of the published text of this important document. We observe, first, that while Colombia does not renounce its sovereignty over any part of the isthmus, it grants to the United States the use and control of a zone of territory for a term of one hundred years, the lease being renewable for periods of similar duration at the sole option of the United States. This is, practically, a lease in perpetuity. The zone is to be five kilometres wide on each side of the main canal, the measurement to be made from the centre line. But this does not represent the whole of the territory transferred. Colombia grants zones of similar width surrounding all necessary auxiliary canals, provided the distance of these from the main canal does not exceed fifteen miles. The grant further covers three marine miles from mean low-water mark at each terminus of the canal.

The use and occupation of certain small islands in the Bay of Panama are also conceded. On the other hand, the grant does not include the cities of Panama and Colon, except so far as lands and other property therein are now owned and occupied by the French Canal Company or the Panama Railroad Company. These cities and their accessory lands will continue to be neutral territory, the neutrality of which will continue to be guaranteed by the United States, as provided by our treaty of 1846 with New Granada. We note, next, that Colombia authorizes us to construct at each terminus of the proposed canal a port provided with light-houses and other aids to navigation, which port shall be free to the vessels of all nations. The canal, also, when constructed, shall be neutral in perpetuity, and open to all nations on the terms stipulated in the Hay-Pauncefote treaty entered into by the governments of the United States and Great Britain on November 18, 1901.

Both in Europe and in Latin America particular attention will be given to the fourth article of the treaty, which practically constitutes a self-denying ordinance. In this article our government takes occasion once more and explicitly to define its attitude toward the Latin-American republics, and it expressly disavows any intention of using the rights and privileges granted by the treaty to oust Colombia from her sovereignty over any part of the isthmus. The United States disclaim any wish to increase their territory at the expense of Colombia or of any of the Central or South-American commonwealths, but reaffirm their desire to strengthen the power of their sister republics, and to promote and maintain their prosperity and independence.

But, it may be asked, how can a clash of jurisdiction be averted between the reserved sovereignty of Colombia and the right of the United States to police the canal zone. The precautions taken to that end reflect credit on the sagacity as well as the good intentions of the framers of the treaty. The Colombian tribunals are to have exclusive jurisdiction within the canal zone over all controversies between citizens of Colombia, or between such citizens and the citizens of any foreign nation other than the United States. On the other hand, tribunals established by the United States shall have exclusive jurisdiction within the canal zone over all controversies between citizens of the United States, or between citizens of the United States and citizens of any foreign nation other than the Republic of Colombia; and of all controversies relating to the construction, maintenance, and operation of the canal, railway, and accessory works. In the third place, all controversies between citizens of the United States and citizens of Colombia, or between citizens of nations other than Colombia or the United States, are to be decided by joint judicial tribunals composed of jurists appointed by the governments of the United States and Colombia in a manner hereafter to be agreed upon. These joint judicial tribunals are also to have jurisdiction of all admiralty cases, and of all crimes, felonies, and misdemeanors committed within the canal zone, no matter to what country the accused person may belong. The more closely these arrangements are studied, the more reasonable and equitable they appear. Viewed collectively, they seem to constitute the next best system to the assertion of exclusive jurisdiction in all civil and criminal actions on the part of the United States, which assertion would be plainly incompatible with the sovereignty reserved to Colombia.

We would point out, lastly, that the sixth article and the twentieth article of the treaty are inter-related, and, taken together, embody concessions of great moment to the United States. By the sixth article Colombia binds herself not to cede or lease to any foreign government for naval or coaling stations any of its islands or harbors within or adjacent to the Bay of Panama, nor on the Atlantic coast of Colombia between the Atrato River and the western boundary of the Department of Panama. In the same article our government pledges itself to give Colombia material support in order to prevent the forcible occupation of said islands and ports. The effect of this article obviously is to frustrate any hope of securing a foothold near the canal that may have been entertained by Germany or by any other European power. But, it may be said, this sixth article only binds Colombia as to future acts. Is it not possible that already, by secret treaties, she may have made cessions or entered into agreements incompatible with the interests of the United States? The inquiry is pertinent, inasmuch as it is known that last year the Bogota government entered into secret treaties with Chile, giving that country rights on the Isthmus of Panama, which, as constructors and operators of the canal, we could not for a moment tolerate. It was a knowledge of this fact which caused our State Department to insist upon the insertion in the treaty of the twentieth article. This article, the vital importance of which we have indicated, sets forth that if any existing treaty between Colombia and any third power contains any terms incompatible with those of the present convention, Colombia agrees to cancel or modify such treaty, for which purpose it will give the requisite notification to the said third power within four months from the date of the present convention; and whether or not such existing treaty with a third power contains any clause permitting modification or annulment, Colombia agrees to annul it, or modify it in such a way that it shall in no wise conflict with the stipulations of the Panama Convention. This means that Colombia will disregard the secret compact with Chile, and will rely on the United States to protect her, should an attempt be made by Chile to enforce the concessions embodied in the secret treaty.

From whatever point of view the canal treaty is considered, it must be pronounced a triumph of American diplomacy. For obvious reasons we should have preferred to acquire absolute sovereignty over the canal zone, but since this was unobtainable, Mr. Hay has made the best of the situation.

The German Emperor and the United States

At the hour when we write there is a report, which we hope will prove well founded, that Germany has consented to raise the blockade of Venezuela, the Berlin Foreign Office having accepted Mr. Bowen's proposal to guarantee the payment of the debts due from the Caracas government by placing the Venezuelan custom-houses in the hands of a receiver acceptable to the foreign creditors. That Mr. Bowen was prepared to make such a proposal was well known in Europe as well as in the United States before Fort San Carlos was bombarded by three German war-vessels. The question arises, What did the German government expect to gain by that high-handed proceeding? and the question raises the wider inquiry, What is the real attitude of the German Emperor toward the United States? We call the proceeding high-handed because, even if we admit the truth of the assertion made by the Berlin Foreign Office, but firmly denied at Caracas,—the assertion, namely, that Fort San Carlos fired the blank shot to warn the German gunboat *Panther* not to enter the inland lake of Maracaibo,—it was plainly inexpedient for the gunboat to seize the pretext for retaliation, and, in conjunction with two other war-vessels, to bombard the fort and destroy an adjacent town, if the German Emperor truly desired to promote a speedy and pacific settlement of the controversy pending between himself and President Castro. Such a tactless exhibition of vindictiveness and brutality, even if technically warranted, was calculated to exasperate the Venezuelans, who are a high-spirited people, and to provoke them to withdraw the overtures which Mr. Bowen, their representative, had been empowered to make. If Emperor William, foreseeing that he could not decently resist the pressure of his British and Italian allies, who were disposed to regard Mr. Bowen's proposals as satisfactory, secretly wished to goad the Venezuelans into a withdrawal of those proposals, he could have hit upon no better device than the savage bombardment of the fort and village of San Carlos. Equally likely to infuriate President Castro and cause him to refuse any sort of concession, was the aid said to have been furnished covertly by Germans to General Matos, the head of the insurrection against Castro's authority. It is difficult, indeed, to explain the course pursued by the German Admiral in Venezuelan waters, except upon the hypothesis that what Emperor William desired was, not an early peace, but a prolonged war, which would have given him an excuse for doing the very thing that he disclaimed a wish to do, namely, for landing troops on the Venezuelan mainland, occupying Caracas, and retaining it, or some other

coign of vantage, for an indefinite period. He may have believed that he could do these things with impunity, so far as the United States were concerned, because, in his agreements with the British and Italian allies, he had procured the insertion of a clause binding them not to withdraw from the joint demonstration without his consent.

We are unable to account for the Fort San Carlos affair except by imputing to the Berlin government an inclination to prevent a quick and peaceful settlement of the Venezuelan controversy. This conclusion leads us to inquire whether this incident and other recent acts of Emperor William's indicate an honest desire to gain the friendship of the United States, or, rather, an astute design to break up the amicable relations which, for some years, have existed between this country and Great Britain. It must be admitted that, even if the Emperor's professions of good-will were sincere, they were unskilfully conceived, for they have made but a faint impression on American public opinion. Ineffectual, for instance, was his publication of the despatch sent by Dr. von Holleben to the Berlin Foreign Office, in which it was pointed out that Lord Pauncefote countenanced the attempt of the Austrian minister to obtain a concerted and earnest protest against our intervention on behalf of Cuba. The divulgation of the despatch was ineffectual, because nobody cared whether Lord Pauncefote personally was or was not opposed to our war with Spain, the only point of consequence being that Mr. A. J. Balfour, then controlling the British government, repudiated the proposed protest. Equally futile was the visit of Prince Henry of Prussia to this country. With the exception of a few hundred snobs in New York and Washington, the American people are utterly indifferent to titles, royal or other, unless their possessors are men of exceptional ability, and we presume that no claim to intellectual distinction would be put forward for Prince Henry. It is doubtless hard for Emperor William, who is haunted with visions of the past, to comprehend that we Americans do not care a farthing about crowns, sceptres, quarterings, and other mediæval trappings of royalty; yet such, we can assure him, is the fact. Even more foolish, if the Emperor's purpose was to arouse gratitude and sympathy, was the gift of a statue of Frederick the Great. There is absolutely no reason why the American people should wish to possess a statue of Frederick the Great, except upon the ground that he was a famous warrior, and that ground would justify the Italians in sending us a statue of Julius Cæsar. As Mr. Moncure D. Conway has conclusively shown, the alleged presentation of a sword by Frederick the Great to Washington is a myth without an atom of foundation. As for Frederick's recognizing the independence of the Thirteen Colonies, he steadily refused to do it until their independence had been acknowledged by Great Britain herself, when, of course, his recognition was superfluous. We could understand the gift, however, if the Emperor's secret wish was to impress upon American minds the striking contrast presented in one particular between the conduct of Frederick the Great and that of George III.; for the former refused a passage through his territories to the Hessian and other German mercenaries whom George III. had hired for the purpose of helping to extinguish American liberties.

Now let us see what may have been the Emperor's motive in securing England's cooperation in the demonstration against Venezuela. It is inconceivable that a man of intelligence should have expected to secure the good-will of the American people by an armed coercion of the Caracas government. He must have foreseen that, in spite of his smooth protestations, we should forthwith recognize the fact that his move against Venezuela was pregnant with dangers to the Monroe doctrine. It might, at all events, impel us to assume financial responsibilities for the Latin-American republics which our government has never contemplated. On the other hand, the co-operation of Great Britain would render it impossible for us to assume toward Germany the minatory attitude which we assumed toward France when we informed Napoleon III. that the presence of French troops in Mexico was regarded by us with disapproval. Especially was this true inasmuch as Emperor William had secured from the British Foreign Office a singular agreement that England would never withdraw from the combination with Germany except with the latter's consent. Under the circumstances, he could lose nothing by his Venezuelan policy except the good-will of the American people, which, in all likelihood, he had already come to regard as unattainable. Not only was no direct loss to be feared, but he might even hope for an indirect gain, through the disgust and indignation excited in the United States by the proof of England's willingness to safeguard Germany against any interference on our part with the browbeating of Venezuela. If he could succeed in breaking up the league of hearts which had seemed to be in process of formation between England and the United States, he would achieve a memorable stroke of statecraft from the German point of view; for England, no longer able to count upon food supplies from the United States in war time, would be henceforth unable to pursue an independent policy in Europe and the Far East.

Our conclusion is that Emperor William has ceased to retain, if he ever entertained, any hope of gaining American friendship, and that, in persuading England to take part with him in the coercion of the Caracas government, his motive was to isolate and weaken her, and make her henceforth dependent on himself by arousing against her the resentment of the United States.

Mr. Richard Olney's Candidacy

THERE have been of late many signs of a concerted movement to put forward Mr. Richard Olney, who was Secretary of State in the second Cleveland administration, as a candidate for the Democratic nomination for the Presidency in 1904. The movement is opposed by Mr. George Fred. Williams, who has posed as the representative of Bryanism in the old Bay State. His opposition could not prevent Mr. Olney from securing the Massachusetts delegation if the latter's candidacy were looked upon with favor by Mr. Josiah Quincy and other masters of the Democratic local machine. Notwithstanding Mr. Williams's unfriendly attitude, the nomination of Mr. Olney is advocated by such a large proportion of the Bryan newspapers in the West that Mr. Bryan's countenance of the course pursued by them is generally taken for granted. It is not difficult to see why Mr. Bryan should prefer Mr. Olney to any other candidate thus far suggested. It is true that Mr. Olney is just as firmly opposed to the free coinage of silver at the ratio of sixteen to one as he was in 1896, but Mr. Bryan is well aware that nobody who is known to desire the subversion of the gold standard can obtain the Democratic nomination next year. Being thus constrained to choose among the opponents of free silver, Mr. Bryan naturally selects the man who gave most earnest support to the last Democratic nominee for the office of Chief Magistrate. It is possible that Mr. Cleveland, Senator Gorman, and Judge Parker voted for Mr. Bryan in 1900, if not also in 1896; but not one of them made any resolute and public effort in his behalf.

It will be remembered, on the other hand, that Mr. Olney, on September 7, 1900, published in the New York *World* a letter in which he assigned many reasons for supporting Mr. Bryan, notwithstanding the latter's persistent adherence to the silver heresy, which, in Mr. Olney's opinion, had ceased to be a matter of any practical moment. This letter, which is now being reproduced in many parts of the country, undoubtedly embodied a powerful appeal to that large section of the American people which regarded with profound dissatisfaction, if not dismay, the attitude of the Republican party toward the tariff, the trusts, and the Philippines. The question of the retention of the Philippines, like that of free silver, may be regarded as a dead issue; but events have brought the tariff and the trusts more than ever into the foreground of public interest and public discussion. The position taken by Mr. Olney with regard to these paramount and urgent problems is substantially identical with that occupied by Mr. Bryan himself, and would naturally commend itself, not only to the latter, but also to the masses of the Democratic party. There is, indeed, no reason to suppose that Mr. Olney would go a jot further than would Mr. Cleveland in opposition to a high protective tariff, or in an attempt to control the trusts, so far as such control could be effected by constitutional means. Mr. Bryan, however, seems to be personally unfriendly to Mr. Cleveland, and he has repeatedly intimated in his *Commoner* that he would resist to the utmost the renomination of the ex-President. Perhaps he foresees also that he could not hope for any recognition on the part of Mr. Cleveland, should the latter be re-elected President, whereas it is by no means improbable that Mr. Olney would invite him to become a member of the cabinet. If Mr. Bryan prefers Mr. Olney to Judge Parker also, it is doubtless because he assumes that the latter, if elected, would be influenced by certain New York Democrats whom the editor of the *Commoner* regards with peculiar and not undeserved dislike.

After all, however, Mr. Bryan's wishes are not of very much importance, because it is no longer probable that his followers will constitute a third of the next Democratic National Convention, and because, in no event, would he be able to bolt and accept a Populist nomination, since the Populist party has practically ceased to exist, having shrunk in ten years from upwards of a million to about twenty thousand votes. Mr. Bryan and his friends will have to support the Democratic nominee, whoever he is, unless they repudiate the duty about which they had so much to say in 1896 and 1900,—namely, the duty of submitting to the choice of the party's representatives. We may, then, for the sake of argument, disregard Mr. Bryan's personal preference, as the convention will be likely to do, and confine ourselves, as the convention will confine itself, to the question of availability. From this point of view Mr. Olney is scarcely satisfactory. He would not have the faintest chance of carrying his native State. He might possibly win Rhode Island, but we could have no assurance that he would gain Connecticut, whereas we know that Mr. Cleveland has repeatedly carried the last-named State. He would be much less likely than Mr. Cleveland to capture New Jersey, because local pride would greatly assist his former chief. There is no reason to suppose that he would run better in New York than would Mr. Cleveland, because the latter has

twice carried that State against the wishes of Tammany Hall, and in 1904 he could count upon the cordial support of that organization. Either of the two candidates named would no doubt sweep all of the Southern States, with the possible exceptions of Maryland and West Virginia. As regards the pivotal States of the Middle and Far West, however, it must be owned that Mr. Cleveland would have the immense advantage of being well known to the voters. Indeed, he is probably better known to the mass of the electorate than is any other citizen of the United States. Mr. Olney is, by comparison, a stranger. In tens of thousands of constituencies it would be needful for stump-speakers to explain who he is. That is a handicap which the Democratic party in a desperate crisis of its fortunes can hardly afford to undergo. The same objection may, of course, be made to the candidacy of Judge Parker, who had scarcely been heard of outside of his own State, until last autumn, when his name was mentioned for the Governorship of New York. We may say for Judge Parker, however, what we cannot say for Mr. Olney, that he is generally believed to be capable of carrying his native State.

The crucial question is, however, what Democrat is able not only to carry New York, but also Connecticut, New Jersey, Indiana, and Illinois, inasmuch as the electoral votes of at least all of those States will probably be indispensable. Now there is only one Democrat alive who has ever carried those five States, and that man is Grover Cleveland. Mr. Bryan did not carry one of them. It is, we admit, conceivable that Mr. Olney, with Mr. Bryan's active assistance, might secure in those five States some votes that would be withheld from his former chief, but, on the other hand, Mr. Cleveland, through the influence of his robust personality and the *éclat* of his previous triumphs, would seem more likely to attract votes from the Republican party. If the next Presidential election were to turn on the vote of New York alone, it might be expedient to select Judge Parker, instead of the ex-President, because the latter, like every other strong man, has made some enemies. But, as we have said, at least four other States must be gained by the Democratic nominee if he is to prove successful, and it is by no means certain that a man comparatively unknown, like Judge Parker, would prove competent for such a task.

It is, perhaps, just as well that Mr. Olney's candidacy should have been seriously mooted at this time, for we cannot begin too early to canvass his qualifications and those of his competitors, in view of the tremendous importance of the next campaign to the Democratic party and to the country.

The Unreality of Realty

If we could put that faith in the accuracy of the reporters which we are never quite able to put, we should be much more interested in some putative utterances of an eminent fellow-citizen than we now are. He was recently speaking to a company of clergymen, and he is said to have said that some of their calling were accusably suffering their minds to be abused by the notion that certain men were becoming too rich, and that all wealth ought to be "dumped into a common pot." But, he is said to have said, he would tell such clergymen that individual ownership was the inspiration of the world's progress, and that the great danger in all debate of the labor question was some such blow at the rights of property as the notion that labor ought to rule. Very likely, however, he did not say this, but only something like it, with such provisions and reservations, that his true position is not fully given by this bold black-and-white sketch of it. He probably thinks, as most other Christians think, that the teachings of One who never, while on earth, individually owned so much as a place where to lay His head, are the principles underlying whatever is good and great in our civilization. Very probably, as to the clergyman whose perversion he is said to have regretted, he would be among the first to excuse them, on the ground that their labors among the poor, with the constant sight of perennial and ineradicable misery, were peculiarly liable to mislead and bewilder them, and that if they sometimes dreamt of having all things in common, as the only state in which some people could have anything, they would be readily amenable to reason, and on reflection would see that it would never do. Whichever side of this extremely dangerous question we take, we all like to speak conditionally.

Property can no more be defended without question of its sanctions than it can be attacked without grave misgiving. In the first place, there appears to be, in certain lights, no such thing as private ownership of real property. This, in a civilized state, belongs to the state, which leases it on certain terms to the citizen. He pays rent in the form of taxes, and if he fails to pay them, the state will dispossess him, just as he in turn may dispossess the tenant to whom he sublets his property, if the tenant does not pay him the hire of it. Even when he pays his rent to the state promptly, the state may decide to dispossess him, if it finds that the property can be more advantageously used otherwise, just as he may dispossess his tenant when he wishes to rebuild or improve the premises. There is no appeal in either case, and this is the prime evidence of the unreality of realty. It seems to be not at all the inviolable thing it has been imagined: it is a convenient economical fiction, and when it becomes inconvenient, the truth about it is made to appear by the sovereign and sole owner of property, the state.

There are other reasons why we should not revere it when it is entrusted to private hands. Not only are the sources of private ownership sometimes atrocious and infamous, foul with fraud, and stained with cruelty and oppression, but sometimes its use and end are equally abominable. Property has a curious faculty of injuring property. A man owning a house may build over his back lot, so as to shut the light and air from his neighbor's house, and injure his neighbor's property to the amount of thousands of dollars, but the neighbor cannot help himself. There is nothing very admirable in this, and it is difficult to see how it tends to progress. Twenty-five or thirty years ago a line of travel was carried through New York city upon terms that were for a while disastrous to the abutting properties, and the owners of them could make themselves good only by costly suits at law, with chances that they could not make themselves good at all. In fact, we are so constantly seeing the disastrous effect of property upon property that many wise men think twice before acquiring the conditional ownership of it that the state allows. At this very moment we are having an extraordinary illustration of the ruthless nature of property in the misbehavior of the sky-scraper at the corner of Broadway and Twenty-third Street, which has become known by common consent as the Flat-iron. This malign structure, in a line of conduct strictly consonant with its physical hideousness, is believed by the owner of a clothing establishment on the corner below to have deflected the innocent winds of heaven with such force against the front of his store that his plate-glass windows have been twice blown in and his goods soaked and ruined by the rain. He is said to be about to bring suit against the owners of the Flat-iron, with what hopes of success we will not invade the province of justice so far as to say. But we may confidently predict that he will not succeed in reforming the Flat-iron, either partly or altogether. Its owners, instead of recognizing themselves as the ministers and evangels of progress, will simply hold their own, and invite the clothier to look about for another location if he does not like having his windows blown in by their Flat-iron; and they will have the sympathies of the community with them, for if there is anything more established than another in private property it is its right to spoil other private property. This has survived with it from pagan into Christian times, and it will probably endure as long as private property itself. But we can all agree that though this works certain hardships, it does not form a ground for operating its abolition. The trouble with private ownership is not that it is not sacred, but that it has not been converted, as so many of the heathen gods have been. No doubt this can still be managed, and we think that if there are really any clergymen who are looking askance upon it in the supposed interest of poverty, they will do better to try if they cannot do something to bring it a little more into line with the social advance which it has done so much to promote.

Old Music and New

Mr. Arnold Dolmetsch, the musical antiquarian, has lately come here from England to expound to a benighted and unregenerate people the virtues of old music and the archaic instruments for which it was written. Mr. Dolmetsch, if we understand him aright, bewails the development of musical art away from the naïve ideals of that elder day of its being which he loves, toward a greater and more complex intensity—the transmutation of an art that was merely decorative and accessory into an art that has become primarily a medium of emotional expression. He appears to believe that modern music, in attaining its unparalleled capacity for intense emotional utterance, has made a reckless and unjustifiable sacrifice of simplicity, reticence, and repose. Evidently Mr. Dolmetsch totally and most unaccountably misconceives the significance of the musical development which he deplores. The essential mission of music is, in the last analysis, precisely identical with that of any of the other articulate arts: to be, as an incomparable critic has required of poetry, "a criticism of life." Failing that, music is but the emptiest of vanities—at best a beautiful embroidery upon life, never its potent voice and instrument. We wonder if Mr. Dolmetsch knows the exquisite music which Mr. Charles Martin Loeffler has derived from that tremulously ecstatic fantasy of Verlaine's—"Avant que tu ne t'en ailles," performed here recently by the Boston Symphony Orchestra; or the tremendous "Also Sprach Zarathustra" of Richard Strauss, or that bewilderingly brilliant *jeu d'esprit* of the Munich master, "Till Eulenspiegel,"—both of which also we have lately heard. We allege these products of musical modernity as immediate examples because each of them embodies, with peculiarly vivid eloquence, some intense and valid experience of subjective reality—each is "steeped in the colors of human life." And it is precisely that indispensable quality which, for all its reposeful loveliness, the older music lacks.

Europe and the Monroe Doctrine

By Sydney Brooks

LONDON, *January 21, 1903.*

GERMAN denunciations of the Monroe doctrine still continue. I do not suppose that is a fact which greatly excites Americans, but it should greatly interest them. Indeed, looking at the Venezuelan affair in retrospect one sees that all its real significance was bound up in its connection with the Monroe doctrine, and that its course was followed with such absorbing attention by Europe simply for the light it might throw on the workings of the "golden rule" of American policy. The egregious Castro and his debts were entirely lost sight of after the first day or two's excitement, and from first to last it was the bearing of the Monroe doctrine on the situation that really held the interest of Europe. True, the Anglo-German alliance sprung a subsidiary issue. That was a development which doubtless startled America, but I may safely say that it startled England more. There has been nothing in English history of the past thirty years, except possibly at the time of Gladstone's failure to relieve Gordon, that would begin to compare with the storm of unanimous condemnation that broke over Lord Lansdowne's head. Even now in the political clubs, on the street, in society, and in the press you will find men angrily canvassing the reasons that led the Foreign Secretary into his unpardonable blunder. It was so gratuitous, so utterly opposed to British interests and policy, so flagrantly contemptuous of the clear wishes of the nation, that Englishmen are still catching at the most extravagant theories to explain its why and wherefore. Some put it down to the King's philo-Germanism; others to sheer stupidity; others again to the easy-goingness, the unwillingness to say No, that are the mark of modern British statesmanship. All three explanations are probably right, but to them should be added a fourth—one that I touched on in a previous letter—the extreme "aloofness" of the governing class in England. It is really quite possible to think that Lord Lansdowne was totally unaware of the intensity of anti-Germanism that obtains throughout the country. Any "man in the street" could have told him, but then a minister of Lord Lansdowne's position never comes across the "man in the street," and if he has not Palmerston's or McKinley's instinct for knowing without being told what the masses of his countrymen are saying and thinking, what will please and what displease them, then he is peculiarly liable to run full-tilt against the unanimous opinion of the country unawares. That was what happened to Lord Lansdowne. He simply did not *know;* and when the knowledge burst on him, when he found every articulate voice in England busily damning him and his precious alliance, it almost paralyzed him with astonishment. "The most surprised man in the British Empire" was the description a friend gave of him at the moment of awakening.

The only comfort England got out of the whole wretched entanglement was in seeing how completely Americans grasped the situation and how far they were from identifying Lord Lansdowne with England. To find themselves under any circumstances in alliance with Germany came upon Englishmen as a profound humiliation; but to find that alliance directed, not, of course, against America, but against a state in which America felt a peculiar political interest, absolutely infuriated them. That is no exaggeration. Nothing in my recollection, not even the blunderings of the War Office in the early stages of the Boer war, so roused and disgusted this country. To be put in the position of seeming to side with Germany in a matter that came, or might come, within the scope of the Monroe doctrine, was resented by all parties and all sections with unmistakable warmth. There is, indeed, nothing that Englishmen are more set on than the maintenance of cordial and sympathetic relations with the United States. This is as true of official as of private England, of Englishmen as a nation, and of Englishmen as individuals. When Mr. Chamberlain declared, as he did in 1900, that his foreign policy was to maintain friendly relations with all foreign powers, "and, if possible, something more than friendly relations with the United States," he was only uttering a wish that lies very near the heart of all Englishmen. In strict accuracy there should be excepted from this statement the editor of the *Saturday Review*. I mention that because certain American journals still quote the *Saturday Review*, as though it were an organ of some importance. No one in England thinks of it in that way; it has dropped clean out of the estimation of the intelligent reading public, and is quoted nowadays, when it is quoted at all, only to show how far a paper may depart from its old and honorable standards. With this exception what I have just stated holds good—England is pro-American to the core. Moreover, on the specific question of the Monroe doctrine her attitude is just what the United States would have it to be. That the doctrine confirms the South-American states in their well-known peculiarities and encourages them indirectly to "dare" Europe is unquestionable. To that extent England finds it an annoyance. But, as against this, it is a factor in preserving the *status quo* over the two Americas; and British policy is based on the principle of preserving the *status quo* wherever possible. Moreover, the Monroe doctrine prevents, or at least makes extremely hazardous, anything in the nature of a European scramble for South America. It renders it, practically speaking, certain that South America will not be treated as Africa and China have been treated. At the same time it is a guarantee that all present holdings on the continent, the British included, will not be interfered with. It thus makes not only for peace, but for security, and so paves the way for that stability which is the foundation of all commerce. England may not, for instance, be wholly satisfied with Venezuela as a neighbor, but she prefers her, commercially and politically, to Germany. The Monroe doctrine forbids the possibility of Germany or any other European power becoming a British neighbor in South America. For these reasons it is largely in line with English interests. Great Britain does not want any more territory in either half of the hemisphere, nor does she want to see any European power carving out a "sphere of influence" for itself between Cape Horn and the Gulf of Panama. Taking Mr. Roosevelt's definition of it just as it stands—"The Monroe doctrine is a declaration that there must be no territorial aggrandizement by any non-American power at the expense of any American power on American soil"—England finds in it absolutely nothing to object to, but, on the contrary, everything to endorse.

On the broad issue, England and America think alike. There is even a school of publicists in this country that would gladly see the British government openly and formally "recognize" the doctrine, and declare their intention, if necessary, to join with America in enforcing it. In all its essentials it has already been "recognized"; the general principle that underlies it is fully and sincerely subscribed to; but beyond that England is hardly prepared to go. Before she could make the Monroe doctrine a cardinal point of British policy it would be necessary to define its scope with some stringency, and that is precisely what Americans are most shrewdly unwilling to do. Moreover, England, after all, is not nearly so interested in South America as is the United States. It would not, for instance, be worth her while to fight in order to prevent a European occupation of part of Patagonia, while Americans presumably would feel impelled to take up arms at once. No calculation can make the English stake in South America, whether sentimental or political, equal to the American, and it would therefore be needlessly quixotic, especially in view of her immense responsibilities elsewhere, for Great Britain to divide with the United States the burden of defending the Monroe doctrine against the world. Englishmen believe, anyway, that the United States is perfectly competent to undertake its defence herself, and that when Congress realizes that the Monroe doctrine, reduced to its essence, means ships and guns and men and plenty of them, there will be no question of its being seriously challenged. Meanwhile, England for her own part accepts the doctrine without reserve, but she is not prepared to help in enforcing it on others. In both cases her policy is determined by the plainest dictates of self-interest. Of course should it appear that America was unable in any given crisis to maintain the doctrine by her own power, the case would be wholly altered, and England might, and probably would, find herself compelled to become its active upholder.

One need hardly point out how vitally different must be the attitude towards this question of such a country as Germany—a country necessarily dissatisfied with the *status quo* in the Americas because she is excluded from it, a country that has not, as England has, an empire that will receive her surplus population, a country that possesses no naval station in South-American waters, and believes that to carve out exclusive reserves for her traders is the only way to ensure commercial prosperity. It is in no sense accusing Germany of "harboring designs" against the Monroe doctrine to insist that, situated as she is, her attitude towards the general question cannot but widely differ from Great Britain's. And that it does differ may be easily seen by comparing the files of the Berlin and London papers for the last two months. The usual complaints run through the German tirades—that the United States will neither take South America for herself nor let any one else take it; that she accepts no responsibility whatever for the outrages, disorders, and financial freakishness of her protégés; that it is not their behavior to Europe, but Europe's behavior to them she claims the right to supervise; and that were any European power to set up a similar irresponsible suzerainty over even the most worthless part of Africa it would be instantaneously challenged. All this we have heard before, but the Venezuelan affair raised one novel and specific point which is not without interest. When does the Monroe doctrine become applicable? For instance, if the allies had occupied La Guayra or Caracas, how long would the United States have left them in unmolested possession? Until their claims were satisfied? That might have taken years, and Germany judges, no doubt correctly, that American opinion would hardly restrain itself so long. What, then, is the time limit? When does a temporary and permissible occupation shade off into a permanent and forbidden one? At what point is Washington prepared to declare that a power legitimately engaged in bringing a South-American state to book, has gone far enough and must call a halt?

The Book of Months

By E. F. Benson

JUNE

THE early planted sweet peas are in flower; so too are the nasturtiums. It was Margery's plan always to sow seeds very early in the year; indeed, she was supposed to have been seen sowing in a snow-storm. Then she used to cover the earth up with matting if it was very cold and uncover it for any glint of sun. Her gardening was of the most unorthodox order: she would pull up seedlings to see how their roots were getting on, disturb sown earth to see what was occurring below; if a plant looked sickly she took it up and shook it and replanted it again with a warning; but everything answered with her, and it was she who taught us to sow sweet peas in March, so that you got the first flowers early in June.

The year after the events of this May, I remember, she made a long row of sweet peas running right up from the house to the end of the garden. The garden was not a large one, any more than was the house, for she and Dick were not rich, and the whole row was not a hundred feet long. But there was a pleasant piece of lawn, with a thicket of lilac and syringa at one end, and at each side of the path she had placed old petroleum-barrels sawn in half for flower-tubs. These she and I had painted green, and in the process had painted ourselves too, and everything tasted and smelt of green paint for a week afterwards. In them she planted nasturtiums and lovelies-bleeding. Both sweet peas and nasturtiums were in flower early one June, just as mine are flowering now. She always loved sweet peas; they gave her "a feeling," she said. Therefore they grow there in a certain place.

Dick and she had been married in the September of the same year when they were engaged; in October the Boer war began, and Dick's regiment was among the first to go out, and she and I went down to Southampton to see the *Maplemore* off. It was a bleak gray day, with an angry fretful wind, which raised little ripples on the water, and as soon as raised cut their heads off. There was a good deal of delay, and she didn't sail for two hours after the advertised time, and we all three said openly to each other that we wished she would be quick. But when the time came, I think that Margery would have given her life for half an hour more had she known.

Then in December came the week which no one can think of now without a shudder, when Stormberg was succeeded by Magersfontein, and Magersfontein by Colenso. But these wintry days passed, and the scars they left in many homes began to heal, and the year and the tide turned.

I saw Margery many times that spring, and I went to stay with her for two days on May the 24th—for the 25th was the anniversary of her engagement to Dick, and she had long ago settled it that we should spend it together. The 24th had been a very hot day, close and sultry, and by a curious coincidence late that night the storm which had for several hours flickered and grumbled in the west came very quickly closer, and burst over us in appalling riot. Sleep was out of the question, and about two in the morning, I got up and sat at the window watching it, thinking very intently how, just a year ago, Dick and I had sat together through it, until the ivory calmness of the moon and the dove-colored dawn had succeeded the tumult. Step by step I went through the talk we had had together, while overhead the violence of the storm abated and passed into the distance again. Now, whether I actually went to sleep or not, I do not know, though, in any case, I was unconscious of having done so, but suddenly I heard Dick's voice—so I thought—close to me. "And whatever happens, Jack," he said.

Then, whether I had been asleep or not, I was awake now and alone. Outside a moon rose high and clear amid the swarming stars, and in the east the sky was dove-colored with the approaching dawn.

The next day we spent very quietly; there was no one there but Margery's mother and myself, and we hardly went beyond the garden. For Margery's time, you will understand, had nearly come, and in a week or two she would be the mother of Dick's child. After tea that afternoon we had a long talk together, for her mother had gone out on some household business, and she spoke to me of that which was coming to her with all the simplicity of her nature, all the triumph and glory of her loving heart.

"I want you to come down again as soon as possible after it," she said, "because it seems so inevitable that you must be here to take part in this great joy of Dick's and mine. You see, Jack, I can't remember a single joy or sorrow of my life into which you and Dick were not bound up, as it were—and this the greatest of all—do come as soon as mother writes to you."

The dusk began to fall in layers over the sky, and the evening breeze got up and tossed the incense of the flower's even-song over the garden. Then, as night closed in, the smell of syringa and lilac fell asleep, and the sweet peas closed, and the benediction of the stars shone from the heights of heaven. Then Margery rose from her chair and held out both hands to me.

"Oh, my dear," she said, "every day I thank God for giving me you as my friend and Dick's. For years I have done that, even when I was a child, and now that I am a woman, and the crown of womanhood is coming to me, I tell you this, and I ask you to continue to be the friend of all of us. I thank you, Jack. I bless you with my whole heart."

She bent down and once again she kissed me.

My God, how content I was at that moment! For at that moment the foe which I had been fighting all the year, whose sword was jealousy of Dick, whose spear was bitterness of heart, whose armor was the human longing and the crying of the flesh for this woman, dropped dead. No longer would I have had anything different, all was utterly good, and she whom I loved stood over me in the gathering silence of the night, and under her feet lay that devilish enemy, whom her goodness and sweetness had slain.

We dined with great gayety and foolishness, and dinner was succeeded by absurd games, in which the two members of the alliance of laughter did wonders for the cause. Then Margery and her mother went up stairs, and I strolled into the garden again, to smoke for half an hour before going to bed, with this reaction of laughter rather strong upon me, and feeling, in spite of what had happened before dinner, vaguely disquieted and depressed, and my mind went back and dwelt with curious insistence on the hallucination of Dick's voice the night before. Then, even while I was pondering over the strangeness of it and telling myself that I must have been asleep, I suddenly heard the clang of the gate leading from the road to the front door on the other side of the house, followed by the crunching of gravel, and, after a moment, the sound of the front-door bell. At that a sudden nameless fear leaped into my heart, and before the bell sounded again I was at the front door. It was a telegraph-boy with a War Office telegram addressed to Margery. I took it from him, closed the door quietly, and stood there with it in my hand, struck motionless and incapable of thought.

Then upstairs I heard a door open, and the next moment my name was called by Margery, her voice half strangled and struggling for utterance.

"Jack, Jack, what is it?" she asked. "What is it—what is it?"

Next moment I saw her leaning over the banister of the landing above, her hair down and with a dressing-gown on. And she saw what I held in my hand.

"Will you bring it up to me, please, Jack?—or open it," she said, faintly, and I heard the banisters creak as she leaned on them and clutched them. Then her mother hurried out of her room and put her arm round her.

I can hear the tearing of that envelope now, the rustle of the unfolding sheet. The few words it contained for a moment meant nothing. Then they became coherent.

"Is it about Dick?" whispered Margery. "Is he wounded? Tell me quick."

I looked up, and do not remember whether I said anything or not. But she knew, and in the dim light of the turned-down lamp in the hall I saw her rise to her full height, with arms outstretched, then sway, and fall back into her mother's arms.

The telegram fluttered to the ground, and I ran up stairs. Together we lifted her up and carried her into her room and laid her on the bed.

"Dick is killed?" whispered her mother to me, and I nodded. Then, at her request, I left them, and ran to wake one of the servants.

"Don't go to bed," she said, as I left the room. "You may be wanted. Sit up till I see you. Have your bicycle ready."

The drawing-room through which I had come a moment before to answer the bell looked out through French windows onto the garden, and here I sat waiting for her mother. As yet the news to me was inconceivable; it seemed merely impossible that it should be so. Something would happen; another telegraph-boy would come, or, which seemed more likely, I would wake to find that I was not here and the time was not now. Perhaps the place would be Bracebridge; perhaps the time would be a year ago. Yet how could that be? For she had spoken to me of Dick and of Dick's child. There was nothing in the world so real as those moments, and in this dumb dazed mood I went once into the hall to see if my bicycle was there; for if these things were a dream, surely I should find some incongruity, and perhaps that which should have been a bicycle might be Dick. But the bicycle stood there, with its lantern already lit as I had left it.

Then came quick steps descending the stairs, and I went out into the hall.

"Please go into the town at once, Jack, and bring Dr. Carleton. Make him come out at once; if he is not in, bring somebody."

"What—what—oh, tell me something," I said.

"Her child will be born sooner than we expected," said she. "Oh, be quick!"

The road was empty of passengers and very dark; once a man, a policeman, I think, shouted something after me; once the shadow of a dog raced me for a while, snarling and snapping. Otherwise all I know of that four miles is a round space of illumination on the road, cast by my lamp, I seemingly motionless, while to right and left trees and houses went noiselessly by, and a wind blew steadily, in spite of the turns of the road, from the direction in which I was speeding. Then the traffic of the town began, and I had the sense to go somewhat more slowly.

for fear of being taken up, and so delayed. Then, crossing the high street, I came to the square red-brick house.

For an interminable time, so it seemed to me, I waited on the door-step, and then the door was opened by an impassive manservant. Dr. Carleton was at dinner. There was a party, but as soon as he came out the message would be delivered, and I remember saying that I would go into the dining-room myself unless I could see him at once. Then, after another interminable delay, Dr. Carleton, whom I knew slightly, came out.

"Come at once," I said. "Mrs. Arlington."

"Not the confinement?" he said, frowning.

"She has just had news of Dick's death," said I, "and her mother told me that—that the baby might be born sooner than they expected. Oh, man, don't argue!"

"How did you come?" said he.

"Bicycle; it's outside."

He turned to his servant.

"Tell them to put the pony in at once," he said, "and bring it round. And"—he looked at me sharply a moment—"bring some brandy."

I suppose I made some gesture of impatience, for he laid his hand on my arm with a quieting force.

"Now, be sensible," he said. "I am going to get what I may require, and shall go off on your bicycle. You will follow in the cart, and until it is ready you will sit down here and drink a wineglassful of brandy. Neat, mind. I order it."

He nodded at me, pointing to a chair, and I stumbled towards it, conscious for the first time of an overpowering exhaustion. My blood beat through my temples very thin, far away, but with frightful rapidity, and something rang in my ears like the whistle of a distant train. Then I became conscious that the butler had put a glass of brandy into my hand, and I drank it.

"The cart will be here in ten minutes, sir," he said.

"But Dr. Carleton?" I asked.

"Rode off a couple of minutes ago, sir. I should sit still, sir, if I was you!"

It can hardly have been an hour from the time the telegram first came to when the cart, with me inside it, again drew up at Margery's house. Against the porch leaned my bicycle, the lamp still burning, and lights, I saw, were burning in her bedroom. Directly over the door, standing on a chair inside the hall, was Dr. Carleton's hat and a small black bag; on the floor close by was the pink sheet of the telegram which I must have dropped when I ran up stairs. Even then I remember clinging in some desperate dazed fashion to the hope that it was all a dream, and that the telegram would prove to be some trivial absurdity, and I picked it up and read it again.

Then I sat down and waited.

From time to time there was some muffled sound of footsteps and movement about, then silence again, then more steps. Then I heard a door open above, and a droning voice, which I knew to be Margery's, speaking in level, meaningless tones. Then the doctor's voice said, sharply:

"Yes, it is in my bag. Bring it all up stairs if you don't understand."

With the bag in my hand I met the servant hurrying down stairs, sobbing in a helpless manner. She took the bag from me without a word, and went up again. And, step by step, after I had heard the door shut, I moved to the top of the stairs and sat there. Below, the clock in the hall beat out metallic minutes, and once the hour—twelve only—struck. Through the fanlight above the front door I could see the lamps of the doctor's dog-cart. Three or four times they moved away, and after a minute or so returned again to the same spot. At intervals that terrible droning voice came from Margery's room.

How long these things lasted I cannot say, but it must have been less than two hours, for I heard the hall clock strike once only. Then the droning voice ceased altogether, and in its place came short incisive sentences in a man's voice, the purpose of which, of course, I could not hear. Then came the cry of a child, and I knew that in the midst of death we are in life.

Then, as if I had been drawn by cords, I crept nearer and nearer to the door of the room, and the crying of the child still sounded—the cry of Dick's child. And Dick? Oh, Dick, if your brave blithe spirit, in the paradise of God, now free of its habitation of flesh, keeps watch, as it surely must, over those it loves—come here—come here where there is so sore a need of you and your comforting. Speak to her through that frail tabernacle of time and space. Comfort the soul you love if the laws of your world permit it. Come!

Later in that long night Dr. Carleton told me all he could tell. The child had been born, and it lived. There was no reason why it should not live, for it was quite healthy, though it had been born before its time. About Margery, he could not say. She had not rallied satisfactorily. She had been perfectly conscious for a time after the birth of the child, but with her consciousness had returned the knowledge of her husband's death, and she had relapsed again into a semi-comatose state. He preferred to wait, visiting her from time to time, till he could feel more happy about her.

Twice before the dawn broke I tried to go to bed, and as many times I crept down stairs again to where Dr. Carleton sat in the drawing-room, his genial florid face looking more anxious and troubled each time he returned from a visit upstairs. Then, just as morning broke in thin red lines on the horizon, I heard his voice call to me, and I went up stairs. He beckoned me to come in. Margery was lying in bed, propped up on pillows, and her eyes were closed. I sat by the bedside and waited. They had taken the baby away, and only her mother knelt there, with her eyes fixed on Margery's face. Suddenly she raised her head a little, opened her eyes, and saw me.

"Thank you," she said. "Thank you for being here, Jack. Dick is waiting for us. Yes, Dick!"

She raised herself a little more, and seemed to struggle for breath.

"Is it morning?" she said. "Let in the morning!"

And even as I pulled the curtains aside and raised the blinds there dawned on her the everlasting day.

To be Continued.

Correspondence

A GERMAN VIEW OF THE CARIBBEAN SITUATION.

WIESBADEN, *January 15, 1903.*

To the Editor of Harper's Weekly:

SIR,—Your glorious articles on Caribbean seas are well noticed in Germany. "We do not want to fight, but, by Jingo, if we do, we have got the men, we have got the ships, we have got the money too" (1878). Your new article most probably is written by Dewey! If a man deserves the hatred of Germans, it is Dewey; we have not forgotten the behavior of small, very small, Dewey off Manila!

The Monroe doctrine is all stuff and nonsense. Just look at *Neue Preussische Y Zeitung*. Do take Mexico, at least the northern part of it! Brush it up, that semi-Indian government! But do not quarrel with dear old Germany! Do not forget your immense surplus of imports to Germany! Just look at *Kolnische* and *Neue Preussische X Zeitung!* What do you earn from those beggar Spaniards, who squatted three hundred years ago, in Venezuela, Colombia, Mexico, and whom you affect to protect? Does Cuba like the Yankees? And Filipinos? How is Mr. Brownell, the murderer? Will he not go back to the Filipinos?

Marines, soldiers, and rough riders were roaring, Revenge for the *Maine!* And afterwards it was found out to be all stuff and nonsense; not the poor beggar Spaniards destroyed the *Maine;* a treacherous, neglectful subaltern on board the Yankee ship did it! Just let the Germans have Curaçao; poor little Dutchmen, with their fleet of 0 0 0, cannot defend it any more. Do not forget that one-third U. S. A. citizens are of German descent! Do not forget that the troublesome, quarrelling elements in the southern parts of U. S. A. were always Spaniards, or at least semi-Indians of Latin blood! If you want to regenerate the Spanish beastly element according to the Yankee type, you must come from the Mexican side! Just look at the railway business still to be done in Mexico. Yours truly,

W. L. BECKER.

WESTERN LAND RESERVATIONS

TACOMA, WASHINGTON, *January 24, 1903.*

To the Editor of Harper's Weekly:

SIR,—One of the members of Congress from our State has just introduced a bill into the national House to divide the Calville reservation and open it up to settlement.

The country has recently endured several of these performances, and I have hoped that for the sake of decency and honor of the nation, justice and honesty to the Indian, and our duty to coming generations, these steals (to be plain) should cease.

Time was (two generations ago) that the donation claim system was quite proper and desirable, and it started an immigration of settlers to an unattractive region. Then, a generation ago, came the homestead and pre-emption laws that made it easy to acquire a quarter or half section of land.

The pre-emption has passed, but with us still are the homestead, timber-claim, stone-claim, and timber-culture, as well as mineral-claim laws, and the result is that the West has been pretty thoroughly exploited under nearly all of them.

Under a humane administration the Indians have been located on reservations that are usually the best land that could be found, and by solemn treaty was guaranteed to them for their benefit for all time to come.

The white man has come to their borders—and, by-the-way, they are not all so "white"—and lusted after the land. Disreputable tactics have been resorted to, to arouse the hostility of the Indians, and furnish an excuse to the officials to "open" the reservation.

Let us call a halt. There is no more need of offering land almost free to induce white settlers. Speculators are the beneficiaries.

The land soon jumps to from $2 50 to $50 and $100 an acre, and gangs flit from one to another just to "work" them.

Let the government keep the reservations intact, and keep on civilizing and educating the Indians into good citizens, establish experiment stations thereon, and let them be self-sustaining, and in two generations more the government will have a valuable asset on hand, and the white man can pay the full worth for the land when he gets it, which he should do. I am, sir,

Very truly yours,

W. C. BELL.

As to Repainted Gérômes, and Others

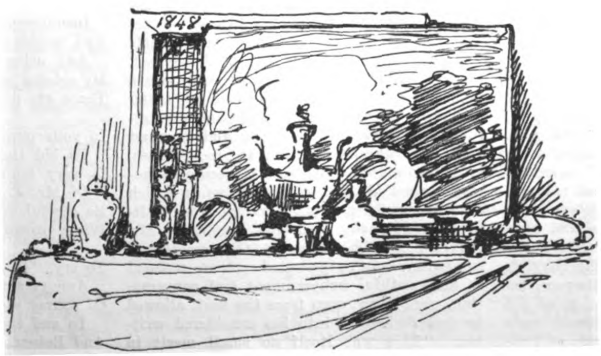
IS discouraging to note how foreigners persist in underestimating us. One hundred and twenty-six years, more or less, have slipped away since we became THE United States. During all that century and a quarter we have had to contend against a sort of belittling most revolting to our sensitive feelings. We *are*, of course, the greatest people on earth—ours is the greatest country, obviously. We are the richest, smartest, shrewdest, etc., etc., in existence, until it comes to a picture deal, or the swapping of greenbacks for bric-à-brac, "antiques," or objects of "Bigotry and Virtue." Still, here is M. Gérôme, saying that "half" the pictures in this country are either "forgeries or copies." You see?—he cuts down the figures (after the fashion of those jealous foreigners) to a paltry fifty per cent. — which is absurd — when eighty or ninety is nearer the truth. As usual, M. Gérôme fails to give us our due. We are, in this matter, as in all others, the *greatest* set of "marks" that ever delighted the venders of every kind of Art "Fake."

Just why a man who is as sharp as a needle on 'Change, or who requires all sorts of guarantees when he buys a twopenny mine, should pay out a fortune for an ugly picture which almost any painter can tell at a glance is a fraud, remains one of those mysteries of human nature which it is not the function of this paper to clear up. Explanations have been offered, *are* offered perpetually, but they do not explain. The really wonderful part of it all is this: a painter, almost any painter of fair education and good training, can certainly detect a fraud much more surely than the class of persons called "experts," whose knowledge is so objective and superficial that it permits them to be deceived in a painting by what Whistler called, so delightfully, "the stain on the back." That is just the point. Unable, as a matter of fact, to judge the real merits of a work of art, the "experts" are reduced to determining its age and character from the quality of canvas, the worm-holes, whatever is *not* the particular thing under discussion. Mr. White tells us, in his description of the "Cardiff Giant," how the only *sculptor* who saw the figure pronounced it to be exactly what it was, "a badly executed stone statue," after looking at it for only a few moments. He refused to say more or anything else about the fraud, in spite of the scientific "experts" and the divines who saw in Hull's swindle ancient inscriptions and petrified confirmation of Biblical verity.

Unless the painful truth is that our billionaires *desire* to be deceived—which I cannot believe—or become hypnotic victims of the dealers, a simple course is open to them for self-protection. All they have to do is to consult any artist of the first order, from whom they can get about the best advice obtainable, and that, too, without paying a fee—such is the remarkable state of practice amongst the painters and sculptors of merit at the present time.

Of the "copies and forgeries" themselves there is this much one can say without incurring the risk of suits for libel: if they are purchased in France or Italy—in Europe, generally speaking — the purchaser can always *demand* a guarantee that the work of art is what it purports to be. Most likely the vender will refuse to give such a guarantee; in which case the buyer takes the object at his own risk, and proves himself a most ordinary sort of ass—that sort which believes it can judge in matters of art and archæology because it made a lucky hit in Wall Street, and that money *is* brains and education too.

A "Maker of Old Pictures"



It is pathetic to see a "Magnate" adding to his collection (at enormous cost) a "Madonna and Child, by St. Luke," almost entirely *repainted*, so that nothing genuine is left but the back of the panel, by which, of course, the "experts" have discovered it! I number among my acquaintances a "maker of old frames"—that is the way in which he describes himself, very simply. I have never found a "maker of old pictures" who was willing to avow his gentle calling; but I do *know* one, and his work has deceived, if not the elect, at least the self-elected—the "experts" and their victims, the billionaires.

As to copies of old pictures there can be no possible objection to them, as *copies*. Any one who has seen the extraordinary work of Lehnbach in the Schack Gallery, Munich, may form some idea of how good, how close to the original, a masterly copy can be. A good copy of a good picture is certainly preferable to any bad original. But to pay, even in ignorance (because, in this case, ignorance is avoidable) the value of a good original for an indifferent copy is not only immoral, but very nearly criminal—as accessory after the fact to a vulgar swindle.

One evening, after dinner in a large house, an artist and a French gentleman, something of a connoisseur, were walking together from the smoking-room to join the ladies. When passing through the wide hall (hung with "Van Dykes," "Rubenses," "Rembrandts"—whoever you please) the Frenchman remarked: "How clever of our host to decorate his walls with these pictures, which go so well with the hangings. And I suppose he does not have to pay more than a hundred or two hundred dollars apiece for them?" "Say 'thousands,' and make the figures from three to ten, and you will come nearer," replied the artist. "But, my dear sir, all these are manufactured (fabriqués)," said the Frenchman, in astonishment. "Yes! *I* know that, and so do you; but who is to tell our host?" "Ah!—it is true. He would not wish to believe."

This is a true story, told to illustrate the attitude of those who *know* towards those who buy. The former are willing enough to give Mr. Punch's advice to persons about to commit matrimony ("Don't"), but not to *offer* it. And so it happens that the richer sort of men and women run around buying, at absurd prices, imitation "antiques," bogus "Old Masters," rubbish of all kinds, simply because they haven't the sense to ask and *take* the advice of those who, for the reason that they are the *makers* of things artistic, are better able than others to judge of the real and sentimental value of pictures, statues, etc., etc., etc. We would have less painful revelations in our public museums, from time to time; less horrible stuff to refuse as bequests; and less of that ready-made taste which is furnished so often by picture-dealers along with the canvases "marked 1830 or 1848," as M. Gérôme describes them.

The case of the alleged alteration of one of M. Gérôme's own paintings is a matter of ethics rather than of art. It has been stated that some one has altered that artist's famous "Promenade de Louis XIV.," by painting in a brilliant sunlight where M. Gérôme had placed a setting sun and a rising moon. As to the statement made by a critic in the daily press, who says that M. Gérôme has probably forgotten just how he did paint the picture in question, read the artist's own statement in his article on "True and False Gods in Art" in the February HARPER'S.

"One night some years ago," he writes, "I was invited to dinner at Versailles. The rendezvous was at the Trianon. An admirable twilight, all of green and rose-colored golds, made of the garden of Versailles an enchanted fairyland. The moon was rising over the palace. I started to dream of the great century of Louis XIV. I made of this little souvenir my 'Promenade de Louis XIV.' Had I not arrived late, had I not been invited to dine at Versailles—who knows? — perhaps I should never have painted this tableau."

M. Gérôme has obviously not forgotten.

Books and Bookmen

THE influence of Mr. Howells upon literary aspiration in this country has always been sane, true, steady in its directing impulse. He set a high standard for the American novel in his early years in *A Modern Instance, The Rise of Silas Lapham, A Hazard of New Fortunes;* he bowed his head to the wave of pseudo-historical romance which sprang out of the belligerent patriotic emotions of a few years ago, and last year, when the wave had spent its force, he took up his pen where he had laid it down, and gave us *The Kentons*, a novel presenting a true and striking likeness of a phase of American life and character, worthy to follow in the noble line of his works of fiction. The insistence of this ideal has had its effect upon our young writers of fiction, with the result that in different parts of the country one can almost hear the noise of pens writing of the stir of a teeming life that clamors for picturesque presentment. For behind expression there is always the quickening impulse: and it is the indubitable existence of this impulse, seeking manifestation in forms of art and literature under present conditions, which is the most significant and the most promising feature of the vitality of our artistic aims and aspirations as a nation. If Frank Norris had lived to bring his growing powers to fruition, and to capture in fiction that note which he sounded in a posthumous article, "A Neglected Epic," he might have occupied a foremost place among the younger rising novelists of this class. It is too soon to say just who is most worthy to succeed him, but we should be inclined to look for his successor in the Middle West. One of the most remarkable and original novels of last year was Elizabeth Higgins's *Out of the West*, perhaps the most remarkable by a new writer. Interest will be centred on her next book, which ought to go far to define the place she is likely to take in American fiction. Mr. William R. Lighton is also a young author whose work will be worth watching. Like *Out of the West*, his novel, *The Ultimate Moment*, which has just started in HARPER'S BAZAR, and will run through the year, is a story of Nebraska. More than any of the younger men and women now writing whom we know, Mr. Lighton in his work and personality shows the capacity to understand and grasp the heroic, the elemental, the picturesque epic of the West—"the last great epic event in the history of civilization"—which is now engaging his attention in his next work of fiction. One turns to him in hope that a novelist of undoubted powers has come to the rescue of what the late Frank Norris called the great figure of our neglected epic, the Hector of our ignored *Iliad;* of all the world-types, the one distinctive to us—peculiar, particular, and unique, in the conquest of the wilderness beyond the Mississippi.

Two years ago Mr. Elmore Elliott Peake added his name to the list of rising young American novelists with his successful first novel, *The Darlingtons*. His second novel, *The Pride of Tellfair*, has just been published, and is also a story of a small town in the Middle West, but with a difference. Ashboro was a thriving industrial railroad town; Tellfair still retains the village characteristics, in spite of telephone and electric lights, which suggest the gradual succumbing to city life. Through the lawyer's rear windows you may catch glimpses, between clusters of elms and maples, of the rolling prairie of northern Illinois, only a short half-mile away. *The Pride of Tellfair* is alive with the tingling qualities of bracing aggressiveness, shrewd sense, native sincerity, and dry, racy humor which attracted readers to *The Darlingtons*, and won for the author a quick and ready recognition. The breath of the prairie blows through his pages, and gives one a feeling of elation and buoyancy in reading them. Mr. Peake has enjoyed writing his story immensely, and the pleasure he has put into it is contagious. Apart from the love interest of the novel, there are many entertaining incidents of rural comedy, such as the scene at the death-bed of old Billy Manderson, who shocked his pious friends by insisting on having "There was an old man who had a wooden leg" sung to him, instead of a hymn.

Hampstead is not only rich in literary associations of the past, but is still the dwelling-place of many of the most eminent literary men in London, so that it is little wonder that Hampstead should be able to produce, annually, a suburban magazine of an unusually readable character. To the *Hampstead Annual*, just published under the editorship of Messrs. Greville Matheson and Sydney C. Mayle, Mr. Sidney Colvin contributes an article in which he recalls the days when he and Robert Louis Stevenson lodged together in Hampstead. Stevenson was in his twenty-fourth year—it was in 1874—in the full glow of his brilliant and unquiet youth. Mr. Colvin relates how his fellow-lodger once absented himself a whole night, and presented himself in the morning, "wearing a tattered-sleeved waistcoat and wan from a night's walking, followed by a couple of hours' slumber in an outhouse. He had spent the night on pad through the southern slums and suburbs of London, trying to arouse the suspicions of one policeman after another, till he should succeed in getting taken up as a rogue and vagabond, and thereby gain proof for his fixed belief that justice, at least in the hands of its subordinate officers, had one scale for the ragged and another for the respectable. But one and all saw through him, and refused to take him seriously as a member of the criminal classes." But, generally, at Hampstead Stevenson's ways were regular, and his apparel relatively neat and normal: he even had a black frock-coat and a tall hat, which he had once worn at a wedding. "I can see him now," says Mr. Colvin, "as he walked with me in that unaccustomed garb down the Quadrant and along Piccadilly to the Royal Academy. True, he had his hat in his hand because it chafed him. Also, being fresh from an enthusiastic study of the prosody of Milton, he kept declaiming, as he walked, with rapturous comments and in a ringing Scotch accent, the lines and cadences which chiefly haunted him."

Stevenson's days then were spent always at some vehement extreme of feeling or another. Much of his talk was in superlatives of corresponding vehemence. During ill-health, had he a day or an hour of respite, he would gleefully proclaim himself "a balmy being and a bird of Paradise." Did anything in life or literature please him, it was for the moment inimitably and incomparably the most splendid and wonderful thing in the whole world, and he must absolutely have you think so, too—unless, indeed, you chose to direct his sense of humor against his own exaggerations, in which case he would generally receive your criticism with ready assenting laughter. Mr. Colvin points out, however, that emotional, emphatic, and exaggerated colors, natural to his youthful temperament and conversation, were never, even from the first, allowed to find their way into his considered writing. "This was itself no small merit in an age when so many prose-writers of genius, and those the most attractive and impressive to youth, as Carlyle, Macaulay, Ruskin, Dickens, had been given, each after his manner, to shouting; masters of strained rhetorical emphasis, of grotesque or gorgeous exaggeration; dealers in declamatory eloquence, the purple patch and the insistent phrase, the vehement and contentious assertion. Stevenson, had he let himself go, might easily have become a shouter too. . . . He had at command a score of different words for as many shades and niceties of feeling or vision or idea, where many even of good writers would have had only one general and inclusive word for all: and he was never satisfied until he had found the exact phrase to express and match the finest shades of his meaning."

To the same *Annual*, Mr. H. B. Wheatley communicates a paper in which he quotes hitherto unpublished annotations by Coleridge on a copy of *Robinson Crusoe*. Here Coleridge displays the same keen insight into the psychology of Defoe's work that he showed in his analysis of Shakespeare. "One excellence of Defoe," he says at the end of the volume, "is his sacrifice of the lesser interest to the greater, because more universal. Had he (as without any improbability he might have done) given his *Robinson Crusoe* any of the turn for natural history which forms so striking and delightful a feature in the equally uneducated Dampier—had he made him find out qualities and uses in the before (to him) unknown plants of the island—discover a substitute for hops, for instance, or describe birds, etc.—many delightful pages and incidents might have enriched the book: but then Crusoe would cease to be the universal representative, the person for whom every reader could substitute himself." The philosopher in Coleridge speaks in another note he has on the margin of the novel. "When once the mind," he says, "despite of the remonstrating conscience, has abandoned its free power to a haunting impulse or idea, then whatever tends to give depth and vividness to this idea or infinite imagination, increases its despotism, and in the same proportion renders the reason and free will ineffectual. Now, fearful calamities, sufferings, horrors, and hair-breadth escapes will have this effect far more than even sensual pleasure and prosperous incidents. Hence the evil consequences of sin in such cases, instead of retracting and deterring the sinner, goad him on to his destruction. This is the moral of Shakespeare's 'Macbeth.'"

The Little White Bird Hunters

A man complained to a West London magistrate that certain people were in the habit of stopping his baby's perambulator in Kensington Gardens against his wishes, to look at his baby. The magistrate sent an officer to warn the offenders.

YE ladies whom I often see
  Incontinently rushing
And bending over infants wee
  And using phrases gushing,
My solemn warning pray you mark—
There are policemen in the park!

In your pursuits a danger lurks:
  To bid the nursemaid tarry
Is very wrong, despite the works
  Of Mr. J. M. Barrie.
Be careful even how you talk
When prowling in the "Baby's Walk."

To cry, "Oh, bless it! What a dear!"
  Annoys a nurse extremely,
Of course she screams, but help is near
  To end such pranks unseemly:
And Robert, starting from the trees,
Exclaims: "Now, then! Move on there, please!"

Finance

THE speculative deadlock remains unbroken at this writing. It often happens in the securities markets that the uplifting and the depressing forces balance each other so evenly as to result in a state of almost perfect equilibrium, which, translated into Stock Exchange English, means dull markets. Such prevails at the moment. Transactions have been on a light scale, and fluctuations in prices have been insignificant. The study of conditions from day to day elicits nothing of importance. Yet, as it is only transitory conditions which the average professional "trader" permits himself to study, and as it is only professional traders who are doing any stock speculating just now, the market logically fails to reflect any definite tendency. Sentiment is mixed, as the Stock Exchange phrase has it. There are those who believe that the next decided movement of prices will be upward, while others hold that the price direction will be down. But neither party has convictions strong enough to be recorded by the tape in unmistakable language. If prices do not rise, it is noteworthy that they do not decline; or vice versa, according to the individual point of view. That is the sum and substance of the contentions of the inveterate traders.

There is, after all, some justification for the absence of more forceful arguments. General conditions have undergone no such marked change as to render easy a forecast of the course of the market. Certain features of the situation are highly gratifying. Others, if not actually unfavorable, would seem to contain adverse possibilities. It was claimed vociferously that if it were not for the potential dynamite concealed in the Venezuela imbroglio, the market would have been "better." Nobody seriously regarded the possibility of war between Germany and the United States, but it was feared that the inexplicable behavior of the German war-ships off Venezuela might lead to an exchange of sharp "notes" between the American and the German governments, which would have been effective enough bear ammunition. But the situation cleared, and it was generally felt that the danger of strained relations had passed. Yet there was no improvement in the stock-market, clearly proving that it was not apprehension over possible Venezuelan complications which kept the market dull and depressed.

The public persists in attending to its own business affairs, and shows no disposition to gamble in stocks. This is always construed as a "bear" argument by the professionals, but it is a stubborn fact that if there is no outside buying of securities, neither is there any selling. Similarly, if the strong interests evince no desire to carry on an aggressive bull campaign, neither are they willing to see a bear movement inaugurated under their noses by the impatient traders. The apathy, however, is not confined to the speculators. The investor shows as great an unwillingness to increase his holdings, or, on the other hand, to part with what he has. Money has become distinctly easier. The Lake Shore a few weeks ago borrowed several millions at what practically meant a 5¼-per-cent. rate of interest. This week the Pennsylvania Railroad borrowed $35,000,000 for six months, with the privilege of renewing the loan, and paid 4½ per cent. But, if the rate is lower, it is to be admitted that indications point to fairly stiff money for many months to come. So obvious is this that the same financial authorities who two or three years ago so positively asserted that the United States was permanently on a 3½-per-cent. interest basis now tells us with equal positiveness that the investment basis is really 4½ per cent. Were this true, it would mean cheaper bonds, and, inevitably, lower prices for many railroad stocks now selling on a so-called investment basis, always recognizing, of course, that many stocks sell above investment prices because of certain speculative possibilities. If general business continues as good, as there is every reason to believe it will, it is difficult to see how a really important bear market is justified. On the other hand, now that the international credit situation has improved, the financial community is looking anxiously to see how the net earnings of the railroads will fare in the next few months. There is no question that the gross business will be enormous. Railroad earnings in November last showed increases in gross over November, 1901, but even greater increases in operating expenses, so that the net earnings fell below those of the same month the previous year. The advances in wages had much to do with it, and as some of the advances did not go into effect until December, the railway earnings of last month should afford some clue as to what we may look forward to. Net earnings determine values, as values govern prices.

HARPER'S WEEKLY for next week will be another issue—40 pages—of interestingness on subjects of Progress and on the vital topics of the hour treated in picture and text by the best artists and writers. Some of the features will be: on Washington, two page drawings of one of the most brilliant social functions of the year, the Army and Navy Reception; on our Colonies, Gen. Bell's Achievements in the Philippines, with brief outlook for the future; on the South, the Mardi Gras at New Orleans, full-page drawing; on Science, Power from Sunlight; on Travel, a Balloon Trip just made across the Irish Sea, with illustrations taken during the trip; on Society, the Draper Ball and the Russian Wedding in Washington; on Architecture, the proposed new passenger station in Chicago; on the Theatre, "Mr. Pickwick"; on Politics, a humorous page on the Venezuelan situation.

Etc., Etc.

Official Legal Notice

THE CITY OF NEW YORK,
DEPARTMENT OF TAXES AND ASSESSMENTS, MAIN OFFICE, BOROUGH OF MANHATTAN,
NO. 280 BROADWAY, STEWART BUILDING,

January 17, 1902.

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1902.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M., and 2 P. M., except on Saturday, when all applications must be made between 10 A. M. and 12 noon.

JAMES L. WELLS, President,
WILLIAM S. COGSWELL,
GEORGE J. GILLESPIE,
SAMUEL STRASBOURGER,
RUFUS L. SCOTT,
Commissioners of Taxes and Assessments.

A TALE OF GOLD — Listen!

IN CALIFORNIA

Owners of California gold mines divide $16,000,000.00 annually, but you can not buy an interest in those mines.

The stock is not for sale.

The men—and women—who own it bought it cheap when the mines were new. It is now making them rich.

You have the same opportunity.

The WIZARD MINE is now being opened, just as these mines were.

You can buy the stock cheap now; it will soon be worth too much to sell.

The WIZARD is in El Dorado County, California, right in the midst of these paying mines.

It is on the GREAT MOTHER LODE, which means rich quartz and lots of it.

Its owners have spent $35,000.00 in perfecting title, and now offer you the opportunity to help them develop the property and convert it at once into a dividend paying mine.

It is a plain, simple business proposition

For a few dollars you can become owner in a dividend paying gold mine for life, and help divide the $16,000,000.00 produced annually by California gold mines.

Our booklet, "A Tale of Gold," tells the whole story. Write for it now.

WIZARD GOLD MINING CO.
658 Holland Bldg., St. Louis

HARPER'S RECENT FICTION

The Adventures of M. d'Haricot

By J. STORER CLOUSTON

Illustrated by Levering. $1.50

A book of rollicking fun, with a Frenchman trying to be an Englishman as its inimitable hero. M. d'Haricot has a nimble wit and an unblushing assurance that never desert him in the embarrassing crises of his many adventures.

The Vultures

By HENRY SETON MERRIMAN

Author of "The Sowers," etc.

Illustrated. $1.50

A fine story of love and diplomatic intrigue. The "Vultures" are diplomatic agents who are sent by their governments to places where trouble brews, the whole atmosphere of the tale being saturated with Polish and Russian intrigue. You turn page after page in tense interest, and you are surprised when the story is finished.

The Reflections of Ambrosine

By ELINOR GLYN

Author of "The Visits of Elizabeth."

Colored Frontispiece. $1.50

The story of a woman of fascinating personality. Ambrosine's highly original and entertaining comments enliven every page in the book. Typical is her declaration that "No one can possibly imagine the unpleasantness of a honeymoon until they have tried it."

THE NEW YORK CHARITY BALL

The Charity Ball, which is given each year for the benefit of the Nursery and Child's Hospital, took place this week in the ballroom of the Waldorf. It is one of the few social functions in New York in which tickets of admission are sold, and which, while patronized by the leaders of society, may be attended also by the public. It is the most important public society event in America

New York a City Beautiful

See Double-page drawing in this issue

PROPHECY is not a discredited profession with the Municipal Art Society, whose members see the future New York as it ought to be, and as they depend upon the intelligence and public spirit of its residents to make it within the next generation. For a century, Manhattan has had a deformed growth. The twenty-five miles of subway to be opened next fall are only the beginning of work already assured or contemplated for the near future.

Apart from the subway and transportation facilities already planned, three new bridges and one tunnel to connect Manhattan with Brooklyn are under way, and others are in prospect, including a carriage and trolley bridge over the Hudson at Fifty-ninth Street. A railroad bridge across Wards and Randalls islands will link the Pennsylvania and Long Island railway systems with the New York, New Haven, and Hartford lines, and complete a through all-rail route from Boston to Washington and the Southwest.

A DRAMATIC COAST SCENE

All along the Atlantic coast from Florida to Maine the life-savers have been kept busy this winter looking after the dangerous derelicts which are discovered from time to time, and which are a constant menace to coastwise shipping. These derelicts are at once reported by the United States Signal Service, and war-ships are sent to blow them up or to tow them to port

Original from UNIVERSITY OF CALIFORNIA

(Continued from page 239.)

The new city maps provide for the extension of Sixth and Seventh avenues south through the net-work of streets in old Greenwich village to a wider and longer Varick Street that will intersect Broadway at Franklin. Then Christopher Street is to be widened and lengthened to lead from the terminus of the North River tunnel straight to Union Square, and Park Row is to be doubled in width from Centre Street to Chatham Square, and a great new avenue is planned to go from the Delancey Street end of the new East River bridge to Cooper Square, where the Bowery divides into Third and Fourth avenues. It is also proposed to construct, in addition, along the east and west sides, an elevated driveway and promenade overlooking the water, and connecting with new eight-hundred-foot piers and fireproof warehouses whose roofs shall be available for recreation. It also seems certain that when the new Blackwells Island and North River bridges make Fifty-ninth Street the great east-and-west artery of Manhattan, the width of Fifty-ninth Street will have to be doubled. The plans for Fifty-ninth Street also provide for an underground trolley road connecting the bridges.

Plenty of other enterprises are on hand for making New York a world metropolis in a better sense than the surveyor's chain and the census indicate. One of these projects, already under way, contemplates making City Hall Park for all time the centre of municipal life by the erection of a splendid group of city buildings at its northern side, the construction of an adequate and dignified terminal for the Brooklyn Bridge, the beautifying of the park itself, and the removal of all its buildings except the present City Hall and the Courthouse. At Battery Park, the Aquarium will be transformed into a thing of beauty from plans already undertaken by the Zoological Society, and a design has been made for carrying the Elevated road on a viaduct, properly ornamented, making it a fitting background for the proposed arch and lagoon that will suitably mark the historic beginning of New York and the entrance to the world's greatest thoroughfare. It is also planned to erect a memorial arch, stairway, and landing-stage at the Seventy-second Street end of Riverside Drive, which would provide a fitting place for naval demonstrations and the reception of important guests.

A permanent world's fair in which would be preserved a concrete history of the industrial achievements of the nations is already planned, and would appropriately adorn the world's greatest city. These and a hundred other noble enterprises are no longer visions. They will be the portion of the New-Yorker only a few years from now.

Our New Russian Ambassador

THE change in our diplomatic representation at St. Petersburg, as pictured in the WEEKLY of last week, whereby Mr. Robert McCormick is accredited as ambassador of the United States to his Majesty the Emperor, vice Mr. Charlemagne Tower, who has been transferred to Berlin, entails upon the new incumbent at the Russian court a number of picturesque ceremonials necessary for his complete installation in his official position, which, under our former system of representation, were not required, for nowhere does the ambassadorial rank carry with it greater dignity and consideration, and at no court is the distinction between it and that of minister plenipotentiary more marked.

The etiquette prescribed at the court of the Tsar for the reception of diplomatic representatives of each grade is minutely specified in every detail and most carefully observed.

Formerly our ministers to Russia, on their

Walter Baker & Co. Ltd.

Established 1780 **DORCHESTER, MASS.**

ABOUT 75% OF THE MEN

in mercantile and professional life owe something of their success to personal appearance. The leisure class owes still more to the same cause. The few genuine geniuses succeed in spite of it. Personal appearance is largely a matter of dress. Dress is largely a matter of the Cravat. This was understood by some as far back as the days of Beau Brummel, but it is only the later section of the present generation of men who have fully grasped it. The well-groomed man of today, even when he must economize on other articles of apparel, buys ten Cravats where his daddy bought one.

There is a 36-page text-book called "THE CRAVAT." It tells of the What, Where, When, and How of a Man's Cravat—Its Names and Shapes, Its Tying, Its Care, Its Selection, Its Various Forms for Special Occasions and Functions, Its Color Scheme, Its Adjuncts, Pins, Fasteners, Etc., Its Don'ts, in fact,

All About A Man's Cravat.

It is profusely and sumptuously illustrated by one of the foremost artists of America. The first edition cost the publishers over $15,000, but you can have a copy for the asking, by sending this Adv't with your address and 6 cents in stamps to the Publisher, James R. Keiser, 122-124 Fifth Avenue, New York. If you prefer a bound copy, de Luxe edition, send 15 cents in stamps.

THE last word as regards comfort in motor-cars has apparently been said in the case of the machine whose photograph is reproduced on this page. The owner of the car, Mr. H. P. Whitney, is as keen a devotee to sport as his father. He has been rated for some time with the best polo-players of the country, and has lately been won over by the fascinations of the motor. He already owns two or three machines, one of them a light racer of forty horse-power. His latest purchase was built for him on special lines, and is the only car of the kind which has yet appeared in this country. The engine is from the Mercedes factory, developing over forty-five horse-power, yet when in action the noise of the exhaust is practically imperceptible. The body has almost the appearance of a Pullman car; the seats are in three rows; access to those in the middle is had by a passage-way between them, not shown in the illustration. On account of the extraordinary size of the car, it was found necessary to have the driving-wheels considerably larger in diameter than the front wheels, in order to produce greater power and easier riding for the passengers. The glass, which is placed in front of the middle section, together with the handsomlike arrangement of the rear seat, makes an enclosure which fully protects the occupants in the most disagreeable weather. The top covering is large and solid enough to carry a sufficient amount of luggage for the whole party. This motor-car is an indication of the transportation methods of the future, much as has been already outlined by Mr. H. G. Wells, who expects to see the present railroads replaced by broad ways over which will flash huge machines carrying loads of people and goods of all kinds.

It has been reported that a car has been built in Germany which has gone so far as to dispense with the usual fixed seats, and has substituted therefor revolving chairs, as in an American parlor-car. The motor-house has yet to appear, but it is quite practicable: there is nothing to prevent the designing and constructing of a vehicle which will not only carry its occupants swiftly over the roads, but will house them comfortably at night, and have ample equipment for heating, lighting, and cooking. Many attractive "cruises" could be arranged, especially in France, where the wide smooth roads extend in all directions. In such a district as Normandy, where the roads are good, the country picturesque, but the inns vile, a land-yacht would be most desirable for headquarters.

Now that Fournier and Winton have made final arrangements to meet on the track, an interesting series of races should result. July 25 is the date set for the first race, which will be held on the Empire track at Yonkers; the second race will be in Glenville, Ohio; the prize is to be a silver cup valued at one thousand dollars; besides this, there is to be no remuneration of any sort either for expenses or as winning money. This race has also aroused interest among motor enthusiasts, and many other meetings are likely to be arranged. Oldfield, H. S. Harkness, Ford, and Mooers are likely to challenge the winner of the Fournier-Winton event. A new method of handicapping is proposed for use on the track: it will be based on the proportionate cylinder area, gearing, piston stroke, and weight, and is expected to prove a close and fair basis for all machines.

The report of the Supervisors' Highway Convention in the matter of road improvement was very favorably received by Governor Odell. He told the committee that he considered good roads as a necessary part of the canal improvement of the State, and that, while the canal has for its object the building up of the commerce of New York, good roads are of quite as vital importance in the local distribution of freight and goods. Governor Odell has submitted to the Legislature several propositions to reduce the deficiency. These propositions will, if granted, be sufficient to meet requirements for improving the roads now under consideration. A recommendation has been made to the Legislature that should there be any constitutional amendment looking to a longer period for payment of bonds that they should also include those issued for the building of good roads. The Good Roads Committee is hopeful that these favorable measures will be approved by the House.

The tremendous sales made at the Automobile Show seem to indicate a more widely spread interest in the machines than has yet been shown. It has gradually been recognized that many of the motors have passed well beyond the experimental stage, that there is less danger of the uncomfortable experience of the engine unaccountably stopping, and having to be adjusted while surrounded by an amused "get-a-horse" crowd. The strenuous competition of the numerous makers of cars has resulted in a multiplicity of moderate-priced cars, many of which are distinguished by their simple method of control and quietness in running. The very high-powered motors, however, seem to find ready purchasers. A noticeable machine is the "Empire State Express," brought over by Fournier for Mr. W. R. Hearst. It is a sixty horse-power Mors of the usual tonneau style, and can be stripped for racing. It is reported that the Cannstadt factory is building a racing-machine of 100 horse-power for Mr. S. Osgood Pell. It is to weigh less than a ton, and by its throttle-control can be run at any speed from five miles an hour up to the full racing limit.

Mr. Harry Payne Whitney's new Touring-Car

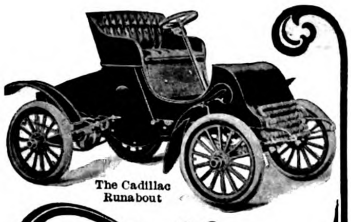
arrival at the capital, having been received by the Minister of Foreign Affairs and communicated to him their credentials, were received by the Emperor, as are all others of this rank, on his presentation by an official, in audience at which certain functionaries of the court were present. He went to the palace for this purpose in his own carriage, and unattended except by the personnel of his legation.

The ceremonial in the case of an ambassador, on the contrary, is as follows:

Having notified the Minister of Foreign Affairs and the Grand Master of Ceremonies of the Court of his arrival and paid the customary visits of ceremony to them both, he receives notice of the time when he will be received in audience by the Emperor.

At the appointed time he is waited on by a master of ceremonies, bearing his wand and attended by two aides, all in full uniform. By them he is escorted to the imperial state coach, which has been sent to bring him to the palace.

The cortège is headed by a coach drawn by four horses with postilions, coachman, and footmen. Next comes that of the ambassador, drawn by six pure white horses, also with the same liveried servants, but with four footmen on the board behind, and followed by a troop of liveried outriders on horseback. Then follow the coaches containing the secretaries and attachés of the embassy, each drawn by four horses.



The scarlet hammer-cloths of the coaches and the liveries of the servants, all trimmed with rows upon rows of gold braid, ornamented with the imperial eagle in black, the splendid white horses and the rich coaches, make the cavalcade a brilliant pageant.

The etiquette precludes any one but the ambassador riding on the back seat in his coach. The master of ceremonies must take his place facing him, as must any secretary the ambassador may desire to have ride with him.

On arriving at the Winter Palace the carriages enter the court-yard and draw up at the state entrance, through which none but the imperial family, ambassadors, and those accompanying them may have access, and descending from his coach and preceded by two fourriers, or avant-couriers, the ambassador enters the palace, and with his suite passes through the marble colonnade of the entrance hall to the magnificent grand staircase, at the top of which he is met by the Grand Marshal of the Court, who, in full uniform blazing with orders and bearing his staff of office, conducts him through the vast and splendid halls of the state apartments, between lines of soldiers at present arms, to the antechamber of the malachite room in which the audience takes place. In this antechamber are assembled the Grand Chargés of the Court, high functionaries in heavily embroidered uniforms, their breasts covered with the decorations earned by long service, who receive the ambassador with grave ceremony.

Presently the arrival of the Emperor in the malachite room is announced, and the ambassador is escorted to its door by the Grand Marshal and the Grand Master of Ceremonies. The Grand Chamberlain of the Palace stands at the door, which he causes to be opened by two enormous black Nubians in Oriental dress for the ambassador's entrance. The door is immediately closed behind him, all others remaining outside, for none may be present at the first audience of an ambassador with the sovereign.

After all this parade and stately ceremony, the ambassador finds himself in the presence of a kind-eyed gentleman in the plain undress uniform of a colonel, for, with power to raise any subject to the highest military or civil rank, Nicholas II. has never assumed any higher for himself. With pleasant, unassuming manners, the Emperor enters into easy conversation, in which he

The Cadillac Runabout

The
Cadillac
The Automobile that Solves the Problem

Until the Cadillac was made, all automobile construction was more or less experimental. This machine is made on a new system developed from the experiences of all previous makers: the faults and weaknesses of the old methods have been avoided and a new ideal of motor travel developed that gives a perfect vehicle for comfort, speed, absolute safety, greatest durability, simplicity of operation, wide radius of travel, and reliability under all conditions of roads. You should not buy before examining this wonderful new machine. Price f. o. b. at factory, $750.

The new tonneau attachment, at an extra cost of $100, gives practically two motor vehicles in one, with a seating capacity of two or four, as required—a very graceful effect in either use. Write for illustrated booklet M.

exhibits perfect familiarity with all the current topics of the day, not alone in Europe, but in America as well. After some brief interchange of compliments, his Majesty makes the move to conduct his guest to the adjoining room, where he presents him to the Empress. She invites him to a seat near her, and all enjoy a few minutes' chat, at the conclusion of which the ambassador is at liberty to present his suite.

The return of the ambassador to his lodging-place is conducted with similar formality.

When the Emperor is in residence at either of his summer palaces at Tsarskoë-Selo or Peterhof, as was the case when Ambassador McCormick presented his credentials to the Tsar on January 12 last, a special train takes the ambassador to whichever place may have been designated, and the state coaches are taken at the railroad station, where the imperial waiting-room, furnished with every luxury, is thrown open. Under these circumstances, a collation is furnished at the palace.

Having been presented to their Majesties, he next requests audience with the Empress Mother and with the numerous grand dukes and duchesses, who each receive him in turn, and requests on behalf of his wife her presentation to both the Empresses. Between these ceremonies he calls upon his colleagues of the diplomatic corps.

As soon as his residence can be put in order for his occupancy, he commences, with the assistance of the Department of Ceremonies, the preparations for his ambassadorial reception. For this purpose carefully revised lists of all the members of the court must be printed. All who have the right of entrance at the imperial court must be included in these lists, according to their rank, and invitations addressed to them, giving them their full and exact titles.

On the evening appointed for this official reception the great house of our ambassador, fronting the Neva, which has been taken charge of for the occasion by the court officials, will be a blaze of light and magnificence. Liveried footmen will line the marble grand staircase on each side, and as each high functionary enters in full uniform and orders, his name will be passed along from mouth to mouth of the attendants until he reaches the door of the apartment in which the ambassador and ambassadress are receiving. Here the arriving guests are presented in turn by a master of ceremonies.

Attendance at this reception is counted as a visit which courtesy requires to be returned in person, and the list numbers some thousand or more names.

Abram Stevens Hewitt

PROBABLY the best epigram descriptive of the greatness of Abram S. Hewitt was uttered by Lord Charles Beresford, Vice-Admiral of the British navy, on the day of his recent arrival in this country, when it was supposed that Mr. Hewitt could live only a few hours. He said that Mr. Hewitt had a "national mind."

Emphatically Mr. Hewitt was a man of the nation. That overworked phrase, a typical American, fitted his personality and his public career perfectly. He was of the stuff of which Americans are especially proud.

He was born in a log cabin in 1822; he worked his way through college; he became a professor of mathematics in Columbia College; he was admitted to the bar; he distinguished himself as one of the foremost manufacturers of the country; he became Mayor of the country's largest city; he served more than ten years in Congress, and probably did more to save the country from revolution in 1876 over the disputed Presidential election than any other man; he

Digitized by Google

managed the Democratic national campaign in that year; he took part in all good movements to improve conditions of life in New York; he was the head of the well-known Cooper Union; he worked for public rather than for party advancement, and his ambition was to be known as a statesman.

Mr. Hewitt was a statesman in the sense that all of his public acts were aimed solely to benefit the state. He was never a strict party man. He was too great to become a party leader. A lifelong Democrat, he supported McKinley twice, and recently declared that he was no longer a Democrat, but neither was he a Republican. Singularly effective and pleasing as a public speaker, a luminous writer, he came to have the position of a sage in the community. He was fearless in his utterances, and never courted popularity. He had a poetic sentiment in his make-up, and he was fitted for the work of a scholar. Indeed, he never did give up his classical and mathematical studies. His mental processes were quick, and he reached his conclusions often by intuition rather than by reasoning.

Mr. Hewitt was fortunate in the friendships of his youth. Peter Cooper took him up, sent him to Europe with his son Edward, afterwards Mayor of New York, as a tutor, and then established him in business with his son in the steel trade in Trenton, New Jersey. Mr. Hewitt married Mr. Cooper's daughter, and their business alliance became all the closer. In a few years the firm assumed a commanding position. Mr. Hewitt mastered the intricacies of the steel trade. From 1873 to 1879 the firm lost $100,000 a year. It kept accumulating stock. When the tide of dull times turned it made $1,000,000 by being able to take quick advantage of the market. He never had any labor troubles with his employees.

Mr. Hewitt affiliated, politically, many years with Tammany Hall. He spent $4000 in trying to clear Richard Croker of the charge of murder. Mr. Croker supported him in his first race for Congress in 1874. Later, when Mayor, he made Croker Fire Commissioner. He broke with Tammany Hall while Mayor, and after that opposed it vigorously. For twelve years he remained in Congress. He was one of the twenty-seven Democrats who refused to vote against the repeal of the Specie Resumption Act. His most notable work there was his advocacy of the Electoral Commission in 1876. He persuaded Mr. Tilden, his close friend, to accept it. Mr. Tilden lost the Presidency, but the country was spared from a possible revolution.

Mr. Hewitt's canvass for Mayor in 1886 attracted widespread interest. He had for opponents Henry George, Labor man, and Theodore Roosevelt, Republican. The vote was: Hewitt, 90,552; George, 68,110; Roosevelt, 60,435. Two years later Tammany defeated him for Mayor. His incumbency of the office of Mayor was marked by a high sense of duty. He would not take orders, and defeat at the next election was his punishment.

Mr. Hewitt, in 1901, was the recipient of a medal from the Chamber of Commerce of New York, bearing this inscription:

"By his genius benefactor of the city and conservator of the commonwealth."

He declared that it would be his "most precious possession."

In later years he became a citizen of New Jersey. He never ceased to speak boldly on current questions, and his voice was one of those the public heeded. One of his utterances was against the coal miners in the great anthracite strike. He leaves three sons and three daughters. To the community he leaves the priceless memory of a well-spent life and of unceasing devotion to the public good. He was a great American.

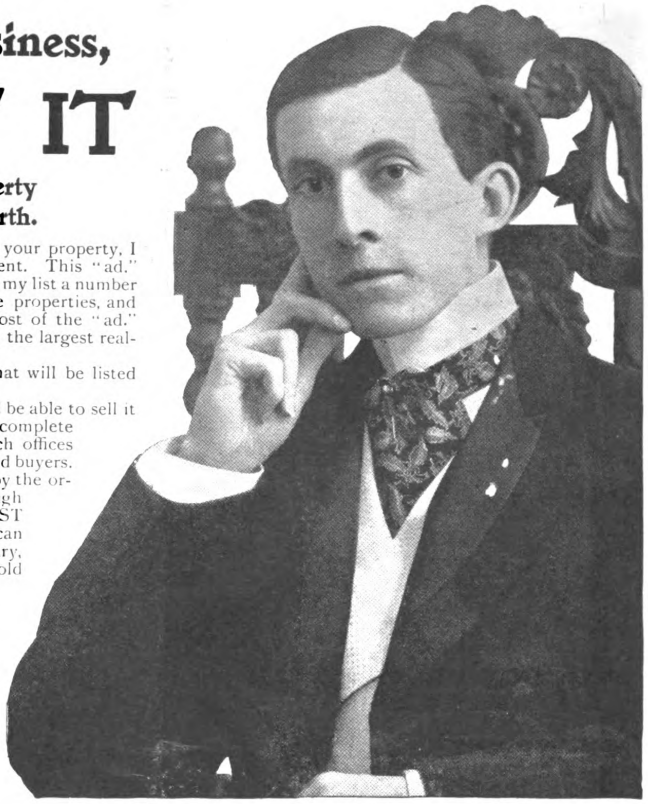
IF YOU WANT CASH

FOR YOUR

Farm, Home, or Business,

I CAN GET IT



No matter where your property is located or what it is worth.

If I did not have the ability and facilities to sell your property, I certainly could not afford to pay for this advertisement. This "ad." (like all of my other "ads.") is practically sure to place on my list a number of new properties, and I am just as sure to sell these properties, and make enough money in commissions to pay for the cost of the "ad." and make a good profit besides. That is why I have the largest real-estate business in the world to-day.

Why not put your property among the number that will be listed and sold as a result of this "ad."?

I will not only be able to sell it—sometime—but will be able to sell it quickly. I am a specialist in quick sales. I have the most complete and up-to-date equipment in the world. I have branch offices throughout the country and a field force of 2,500 men to find buyers.

I do not handle any of the side lines usually carried by the ordinary real-estate agent. I do not make any money through renting, conveyancing, mortgages, insurance, etc. I MUST SELL real estate—and lots of it—or go out of business. I can assure you I am not going out of business. On the contrary, I expect to find, at the close of the year 1903, that I have sold twice as many properties as I did in 1902, but it will first be necessary for me to "list" more properties. I want to list YOURS and SELL it. It doesn't matter whether you have a farm, a home without any land, or a business; it doesn't matter what it is worth or where it is located. If you will fill out the blank letter of inquiry below and mail it to me to-day, I will tell you how and why I can quickly convert your property into cash, and will give you my complete plan (free) and terms for handling it. The information I will give you will be of great value to you even if you should decide not to sell. You had better write to-day before you forget it.

If you want to buy any kind of a Farm, Home, or Business, in any part of the country, tell me your requirements. I will guarantee to fill them promptly and satisfactorily.

The BALL CHECK

JUST A TWIST OF THE WRIST

A simple little device which fits any mantle burner; is instantly adjusted by a slight twist to the right or left.

THE BALL CHECK

will fit the burner you are now using, and you can easily put it on yourself, without tools. It replaces the usual long mixing-tube with a Bunsen burner only an inch and a half long. Makes any burner as good as new, obtaining as high as 200 candle-power from one burner. By checking, spreading the gas supply, the Ball Check secures brighter light with less gas.

THE BALL CHECK and Bunsen tube to fit your old mantle burner, 25 cents.

Ball Check, Bunsen tube, burner, and Ball Check mantle, 75c. At any good store, or of us, postage prepaid.

JOHN HAY AND THE NEW TREATY

THE signing by Secretary-of-State Hay and Sir Michael Herbert of the treaty submitting to arbitration the long-drawn-out Alaska boundary dispute, following with such startling, almost sensational, quickness the treaty signed by Mr. Hay with the Colombian government granting the right of way for the construction of the Panama Canal, calls renewed attention to the remarkable achievements of the present Secretary of State. It is neither exaggeration nor eulogy to say that since the foundation of the government there has been no occupant of the State Department who has faced so many great problems or who has been so uniformly successful in dealing with them.

During the five years that Mr. Hay has been Secretary of State there has been scarcely a day that the State Department has not had to grapple with a question of first magnitude, questions vital to the interests of the United States, and affecting in only a lesser degree all the rest of the world. Had they occurred a few years previously they would have aroused the country from one end to the other; now they are regarded as almost a matter of course, and although they attract attention, they are discussed quietly. Nothing, perhaps, better illustrates the commanding position of the United States in *Weltpolitik*, and that recognition by the American people, than the unconcern, indifference almost, with which they know of the influence exercised by this government in the political concerns of the world. A summary of the subjects that have demanded the attention of the State Department since Mr. John Hay entered it shows how wide are the interests of the United States and how great the demands made upon the American minister for foreign affairs.

Mr. Hay assumed charge of the department after the close of the Spanish war, and when the terms of peace were to be arranged. Then followed all the numerous and intricate questions arising out of the new order of things, and the effacement of Spain as a power in the Western Hemisphere. While some of the loose threads were being securely bound together there came the outbreak in China, and the lamentable spectacle was presented of all the world losing its head, with the sole exception of the American government. Space will not admit of going into details, but those who are familiar with the diplomacy at the time when the legations were threatened by the Boxers, and the even more critical time after the allies had entered Peking, know that Mr. Hay, among all the First Ministers of the world, stood alone in demanding justice for the Chinese, and that punishment be tempered by mercy. He refused to yield to the savage demands made by Germany for unlimited punishment, and succeeded in bringing such pressure to bear upon the allies that a milder course was adopted. When the plenipotentiaries of the powers met in conference to agree on the terms of the indemnity, the American representatives, acting under Mr. Hay's instructions, accepted an indemnity sufficient only to cover the actual loss of American citizens, and protested strenuously against imposing such a fine on China as would have virtually reduced her to beggary. The abrogation of the Clayton-Bulwer treaty; the dissolution of the Samoa condominium; the negotiations to conclude a treaty with Colombia for the construction of the Panama Canal, negotiations so exasperating that they might well have made a less pertinacious man abandon them as hopeless; the efforts to bring about a settlement of the Alaska boundary dispute, that for more than thirty years has been a cause of friction between the United States and Great Britain, and more than once threatened consequences of the gravest nature; the successful negotiation of the reciprocity treaty with Newfoundland, which one of Mr. Hay's predecessors attempted, but found impossible; the conclusion of several other reciprocity treaties; and now, at the time of writing, the delicate situation developed by the attempt on the part of Germany and Great Britain to collect an indemnity from Venezuela—are the things that have chiefly occupied Mr. Hay's attention since he became a member of the cabinet.

The secret of Mr. Hay's success as a diplomatist, the reason why he has been able to achieve more during his administration of the State Department than any of his predecessors, may be summed up in one word—character. Most men who have played a great part in the world's affairs have been bilateral: the majority of them have not considered it unethical, or opposed to their code of honor, to be absolutely truthful, honest, and just in their private relations, and more or less unmindful of these obligations in the interests of their country. John Hay, Secretary of State, and John Hay, private citizen, are one and the same man. Mr. Hay as the foreign minister of the United States would no more think of obtaining an undue or unfair advantage than he would do an unworthy thing in his private capacity. He could not if he would. His trend of thought, his past life, his nature, no less than his principles, would revolt against such a suggestion. In negotiating with foreign powers he has, of course, and properly, endeavored to obtain for the United States those things that he regarded as essential for its welfare or safety or in pursuance of its well-established policy, but he has never sought to drive a hard bargain or to avail himself of the necessities of his opponent, or to be influenced by petty considerations.

THE ARMY AND NAVY RECEPTION AT THE WHITE HOUSE

The President's annual reception to his officers is this year unusually interesting because of the newly renovated White House, and because all the officers appeared for the first time in their new uniforms. The scene represented by Mr. de Thulstrup in the East Room was most brilliant and effective

OUR COLONY PROBLEM

FOR three years preceding the assignment of General J. Franklin Bell, United States Army, to command the Third Separate Brigade in the Philippines, the insurgents had been masters of the situation. The territory included in this brigade was a large one—embracing part of Rizal (Manila) Province, all of Cavite, Laguna, and Batangas provinces, part of Tayabas Province, the islands of Mindoro, Romblon, Marinduque, and other smaller islands. A great deal of this territory is covered by high mountains and mountain ranges, dense undergrowth, swamps, etc., which render field operations exceedingly difficult, and give the insurgents the greatest possible advantage. They were armed mostly with Mauser and Remington rifles, each command being re-enforced by a company of bolomen.

They had eluded pursuit by disbanding when too hard pressed, to assemble again at some other point; they always planned to attack a much smaller force than their own, and they would not stand in a fair fight. They terrorized all native towns, requiring contributions of money and supplies. Agents were appointed in each town to receive these. A breach of trust on the part of one of these natives caused his instant death. This was the situation in the Third Brigade when General Bell assumed command, December 1, 1901. An order was issued closing the ports in Batangas and Laguna provinces, and directing all natives to assemble in the regular settled towns by January 1, 1902; every settled town was garrisoned by soldiers. A radius of one to three miles outside of the town proper was given in which to settle, but for convenience and better sanitary measures the camps were generally located on the grounds best adapted for the purpose within the area.

General J. Franklin Bell

Many were the picturesque sights during the month of December as the peaceful families from the hills moved into the towns. Lines of bull-carts, native ponies and cattle, each carrying their share, some carrying natives with their bright, many-colored garments, and some household effects, wended their way from hill to hamlet. The moving of a native house and native family, such as are found in the hills, is no great engineering feat. The pieces of bamboo forming the sides of the house, and the braces for the top, are untied, and placed on a bull-cart. This can be done in two or three hours by the men, while the women and children pack the family effects, which, as a rule, can be done in much less time, as they can be carried on the backs of one or two native ponies. The chickens are carried in bamboo crates, while the hogs are tied by the feet and placed on bull-carts to repose until the destination is reached.

Reconcentration camps were established in Batangas and Laguna provinces only. The former has a population of about 313,000, and the latter about 177,000. In Batangas Province twenty reconcentration camps were formed, and twenty-five in Laguna Province. The former has an area of about 1153 square miles, twenty-two pueblos, and five hundred and twenty barrios, and the latter six hundred and eighty-four square miles, twenty-eight pueblos, and four hundred and ninety-five barrios.

Those camps sprang up with surprising rapidity. An officer stationed in the town was designated to supervise each camp, and it was his duty to see that the camps were erected in an orderly and systematic manner. A medical officer was assigned to look after the sick and sanitary measures, and the commanding officer himself saw to it that all the reconcentrados had proper food and supplies. A hospital specially for natives, under army supervision, was established for each camp. Many of these towns surpassed in neatness and appearance the permanent towns to which they were annexed. Such of the men as could work were given employment on the roads, or in the supply department as stevedores and cargadores.

Ever since the surrender of the last insurgents rice and supplies have been imported by the shipload by the military authorities, and sent by wagon and pack-trains to the towns and barrios for use of the natives, so that they may have sufficient food until their first crops are harvested. At the present time nearly all the presidentes have reported that no more rice will be needed, which means that the natives have recovered a basis of self-support. This great work has been accomplished by General Bell, and almost entirely by him. He planned and controlled each separate expedition.

He has been in these islands about four years and a half—longer than any other officer or soldier. Although he has for several months had an order from the War Department assigning him to the command of the General Staff College at Fort Leavenworth, Kansas, with instructions to proceed there at his convenience, he remains here in order that he may personally see that everything possible is done for the future welfare of his past enemies. Through an agent of the Agricultural Department he is showing them the use of American farm implements, and experimental farms are being established under his supervision.

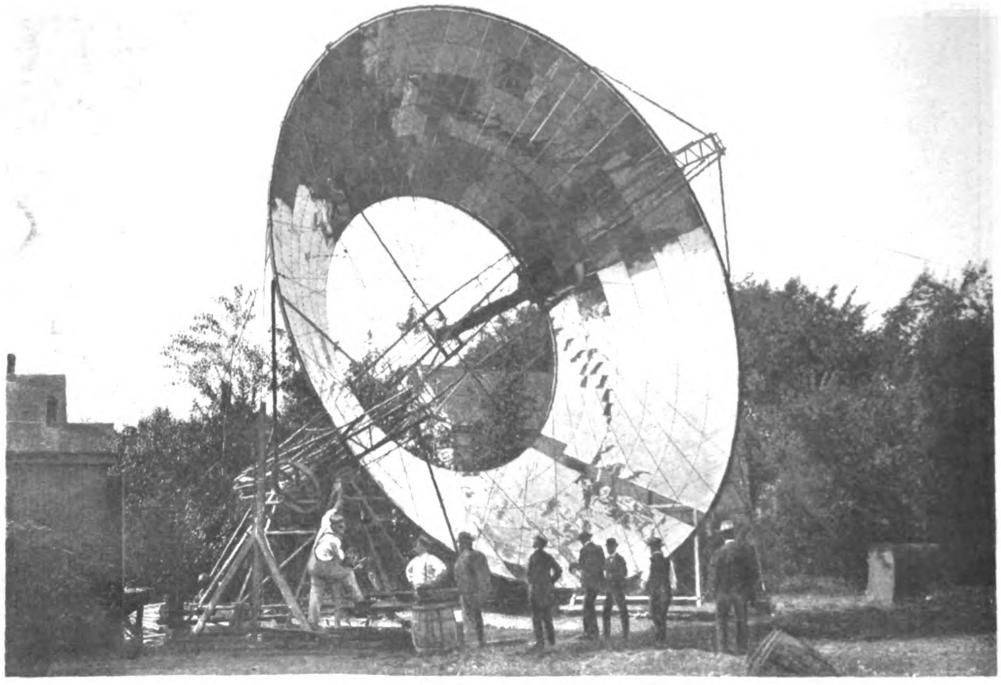
THE DAY BEFORE LENT IN NEW ORLEANS



The Mardi Gras Festival, held every year in New Orleans, is of exceptional interest not only from its picturesque side, but because in any part of our hurried, busy life such a festival—a return to the customs of old mediaeval days—is possible. In the above drawing Mr. McCarter has fully caught the curious, old-world spirit which characterizes these modern festivals in the South and West

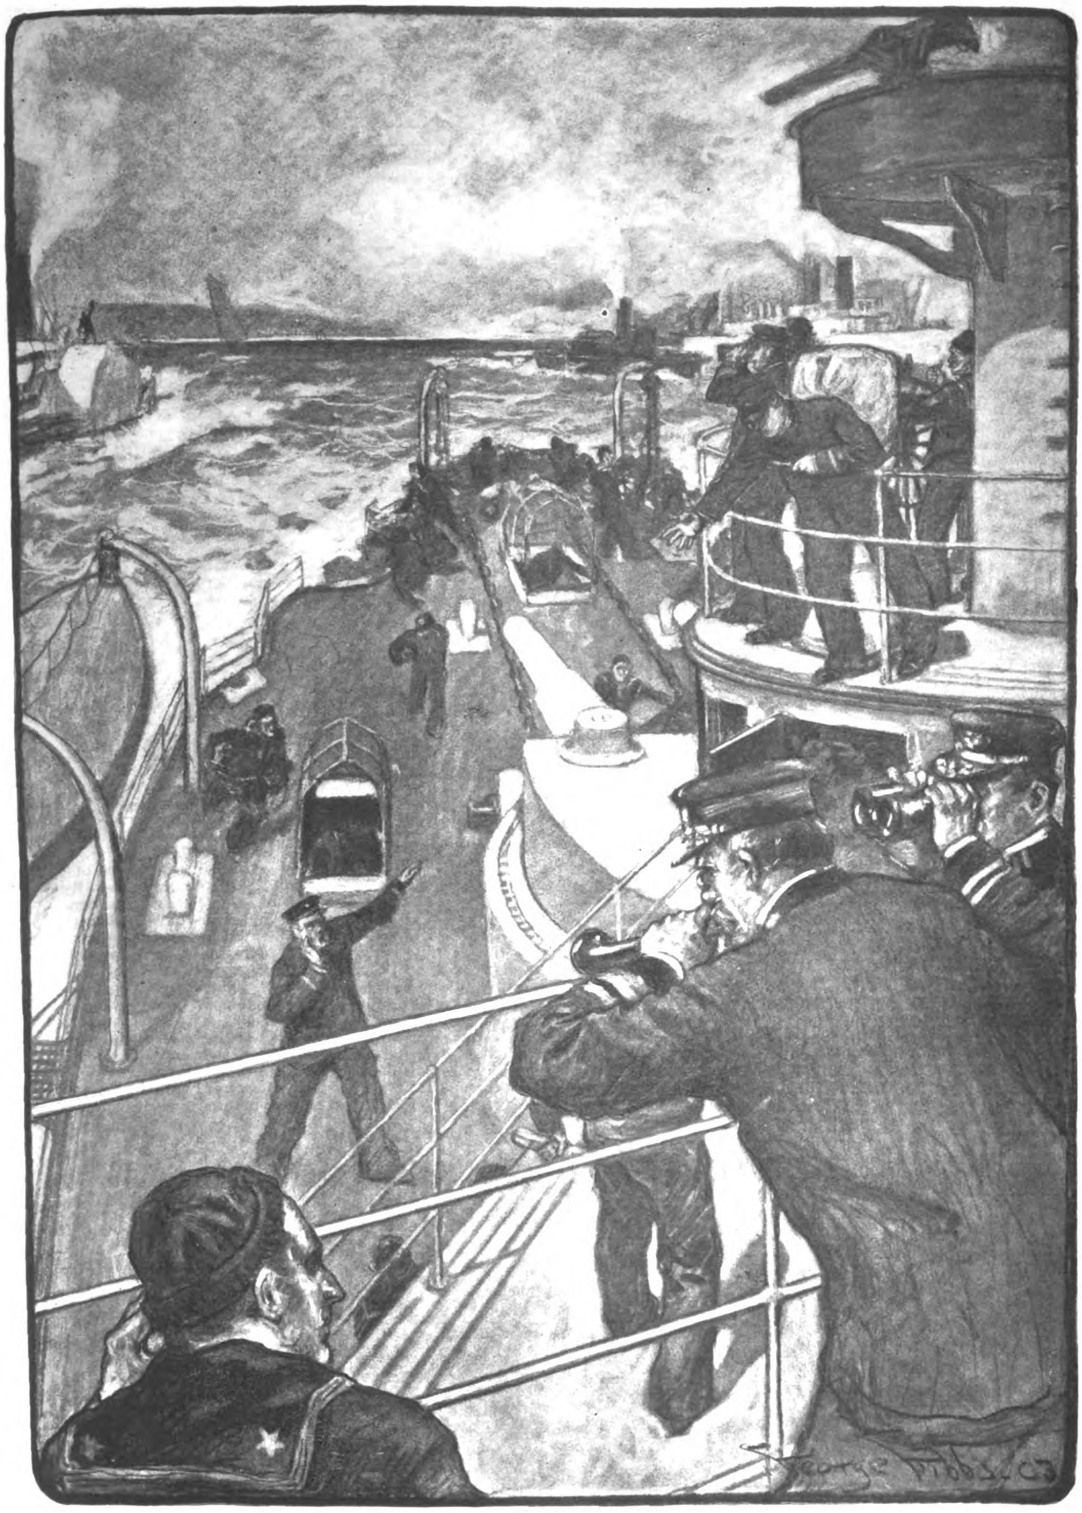
POWER FROM SUNLIGHT

IT has been a favorite pastime for the dreary gentlemen who juggle with statistics solemnly to calculate the date on which we shall all freeze to death from exhaustion of the coal-supply. The events of the present winter have thrown a new and lurid light on their vaticinations, for many a home has been fireless and many a factory has closed its doors through a mere temporary diminution of the coal output of a single State. It is a bad business at the best, and quite enough to set people on a serious quest for means of relief. The sun since the dawn of history has been worshipped and apostrophized as the source of life and light, but there are few even now who realize how near and potent its aid really is. The energy with which it daily floods the earth is so great as almost to defy the grasp of the intellect. For a conservative and moderate estimate it is equivalent to about 10,000 horse-power per acre of the terrestrial surface exposed to it. If this store of energy could be gathered over even a few square miles it would suffice to drive every wheel that turns from Eastport to San Diego. But the problem of gathering it has been a formidable one. All sorts of devices have been suggested, from burning-glasses heating boilers to strange electrical devices planned by wild-eyed wizards with companies to promote. Out of this chaos of hypothesis, however, has gradually been evolved something very like a substantial reality, so that at the present time it is within bounds to say that a reasonable proportion of the solar energy can be turned to the uses of man by means either already existing or fairly near at hand. The first man to take serious account of the matter from a modern engineering standpoint was John Ericsson, a genius who deserved better of the world than the world knew. Thirty years ago he devised and constructed several solar engines arranged to receive the sun's heat from huge reflectors and to utilize it for power either in a steam-engine or in that wonderfully ingenious hot-air machine of which he was the inventor. This was the first great step, and it is now in a fair way to be followed up. The fundamental thing in any plan for employing solar energy is so to concentrate it that it can be gathered up and put to work. This is best accomplished by huge reflectors in the form of concave mirrors, poised so as to follow the sun in its diurnal path, and to concentrate its rays on some device at the focus capable of transforming the energy into available power. The cut herewith shown gives an excellent idea of such an apparatus. It is from a photograph of a ten horse-power solar motor as set up for testing near Boston prior to its shipment to Arizona for pumping purposes. The great concave mirror is thirty-six feet in diameter, and contains 1000 square feet of mirror surface in its reflecting zone. It is balanced on a north-and-south axis tilted upwards to match the latitude of the place and the sun's declination. The sectors at the extremities of this axis allow the inclination to be changed every day or two to follow the changing declination of the sun. The whole mirror is turned about the axis by heavy clock-work, so as to follow the sun from hour to hour. This motion is not continuous, but takes place minute by minute, the gearing being locked in the intervals to resist better the effect of wind. In the centre of the mirror stands the boiler, a coil of blackened copper tubing, for a steam-engine is the active power. With good sunlight, the steam is brought to 200 pounds per square inch pressure in about an hour from starting, is superheated, and delivered to the engine, which yields one horse-power for each 100 square feet of mirror surface. The mirror itself is built up of flat thin glass plates silvered on the back, and held in position on the light steel frame-work by bolts and soft washers.



The whole affair can be put together with a screw-driver and a monkey-wrench. Where sunlight is fully available as it is in the Southwest, in Algiers, and in Egypt, and in many another region, such a machine can to-day furnish power for eight hours per day at a cost that will discount windmills, and will compare favorably in many localities with the cost of power obtained from fuel. Obviously, the weak point of this or any solar-heat engine is that it can be worked only a part of the day, and here is where electrical resources may be drawn upon to complete our scheme of dynamic salvation. Passing by the various devices of electrical jugglery which have from time to time been proposed, there are several well understood and reasonable methods of saving the day electrically. Perhaps the most obvious one is to utilize the solar engines to drive dynamos, the current from which could be taken up in storage batteries to be used when wanted. This process would involve the waste of perhaps a quarter of the power, but would allow the remainder to be used at any time, and, what is of greater importance, would permit many engines to furnish combined power. As single-mirror systems tend to become unwieldy in the larger sizes, joint storage has much to recommend it. Still another device which has been proposed is to replace the boiler by a huge thermo-battery generating current directly. If two bars of different metals, such as iron and German silver, are joined at one end of each, and this junction is kept hot while the other ends remain cool, an electric current will be generated in the system. A large number of such pairs can be joined in series, and used even for electric lighting and power. Thermo-batteries as developed thus far are considerably less efficient than a combination of engine and dynamo, but they are simple and very steady in their action.

New Solar Motor erected near Boston

A similar concentrator for light and heat is necessary in all plans, electric and otherwise, for getting power from the sun

"SECURING FOR SEA"—FIRST TRIP OF THE NEW "MAINE"

The new battle-ship which bears the name of the historic "Maine," sunk in Havana harbor, has just made her preliminary trip to sea. Mr. George Gibbs, in this drawing, has caught the moment when, with anchor aboard, the great ship started for the first time away from her moorings

BY BALLOON OVER THE IRISH SEA

THE Irish Sea being mainly bounded by neighboring coast lines, offers obvious and special facilities for aeronautical experiments. It chanced that certain important trials suggested themselves to the writer, which earned the approval of the British admiralty, and for these experiments this stretch of sea appeared particularly well suited.

It had long been pointed out that objects lying beneath water, the surface of which is in any measure disturbed, are better seen at a height above the water than they are at or near the water's edge; and it appeared a question of vital interest whether in modern navigation and modern warfare a balloon floating at a moderate height might not afford the most valuable point of observation for determining the position of sunken wrecks or reefs, or for detecting the yet more dreaded submarine. A balloon employed for such purpose should have ready means of communicating with vessels in its vicinity, and should be provided with an efficient signalling apparatus.

At the outset an incidental problem was presented: How might it be possible to effect an escape by sky from a seaport town under circumstances of blockade and siege when every advantage might be taken of existing capabilities? In time of actual warfare and siege it might be supposed that for safety the ascent should take place from the centre of a town, shielded from view by lofty buildings, and near the largest gas-mains by which the process of filling could be carried out with the greatest expedition when the right opportunity arrived. These conditions were fulfilled by starting from the public square in Douglas, Isle of Man.

As the balloon rose into the air, upper currents bore it away to the left of our anticipated direction. The Isle of Man lay mapped out below, sharply etched in by its rocky coast-line, streaked here and there with its romantic glens and water-courses, and dotted over by bald or cloud-capped mountain peaks. Our long trail rope, already free, struck on the summit of Snæfell — the loftiest peak in the island—and from this point our course again changed, veering somewhat to the eastward, and thus carrying us due above Ramsay, and so out to sea, having on our left the extreme point of Ayr, which we passed at a height of 4000 feet.

The Start

We were now well out over the sea. The man-of-war *Ronard*, which was accompanying us, looked like a mere speck far below. It seemed incredible that we could come into communication, but bringing my "collapsing drum" into action, I signalled "whistle," and in a short interval a double blast on the ship's hooter reached us faintly. The shoals in the sea gave us the opportunity of testing vision from aloft. And one all-important conclusion which we had been commissioned to seek was answered at once and definitely, viz., the penetration of vision beneath the surface of water was increased beyond all comparison from our present standpoint, and the value of such an observing station as ours was put beyond question.

At a mile and a half high an airy storm-tossed ocean of fleecy billows lay around, with deep, dark hollows and crests flung high as heaven, while through wide openings loomed all that could be seen of earth. The broad sea, bluer now, and seen as never before, figured and fretted curiously by conflict of wind and water, gave to us no indication of visible undulation, though streaks of cream showed here and there where waves were really breaking, while from the depth rose a strange soft musical murmur which filled the air. But all that was tangible seemed irrevocably remote.

The island disappeared finally from sight when about ten miles in our wake, and then, looking ahead, we scanned with eager curiosity a dark belt of lowering cloud which hung heavily across the sky-line and barred our view. Somewhere beyond and behind that cloudbank must lie our goal, and this, if the balloon held its present course, should be Scotland, and probably some point in the Solway Firth, distant yet some thirty miles, across the hidden sea.

We subsequently learned that our friends on the *Ronard* still kept us in view, but only fitfully, as we glided from cloud to cloud. They also still continued to see the working of our signals, and, following in our course, succeeded in making such good speed that two hours later, when they anchored in Kirkcudbright Bay, they saw the last of the balloon safely inland and disappearing over the far Scotch mountains.

We landed in the Glen of Glenessdin, fourteen miles from Dumfries, and upwards of eighty miles from our starting-point, concluding a rare and historical sky voyage.

COMMENT

CONGRESS showed a laudable recognition of the dangers to which, as recent events have admonished us, we may be exposed by a steadfast assertion of the Monroe doctrine, when it exhibited a willingness to appropriate the money needed to put our harbor fortifications in a state of efficiency. We have no doubt, either, that the programme of gradual naval expansion will receive an equally prompt and cordial approval. But who that refuses to shut his eyes to the clouds on the horizon would venture to assert that we may not need a number of additional war-vessels in the interval between the close of the Fifty-seventh Congress and the assembling of its successor? Why should not the present Congress, before adjourning *sine die,* do what its predecessor did in 1898—*i. e.,* place at the disposal of the President a large sum of money to be used, if in his judgment necessary, for the purchase of battle-ships and armored cruisers which are now the property of foreign powers, but which are known to be for sale. Chile has in commission a battle-ship and an armored cruiser which she would willingly dispose of, and she has two battle-ships which are in course of construction in British yards. Much the same thing may be said of Argentina. Both of these countries have mutually bound themselves to sell the ships which they ordered in Great Britain. There is a rumor that Germany is already negotiating for these vessels. We are quite as likely to need them as she is. Chile has offered to sell her ships to us, but if we neglect the offer we cannot blame her for selling them to Germany. Why should not the President be empowered to buy them, if the turn of events in the next few weeks or months should make their purchase advisable? The mere fact that Congress had placed a great sum of money—say from thirty to fifty million dollars—at the disposal of the President for the purpose named, would be apt to exercise a pacifying influence on events in the Caribbean, and would convince the people of Great Britain that, if they really want to avoid trouble, they might do well to put pressure on their government without delay. What we want is a dozen or fifteen ironclads, or the power of getting them—at the present moment. Not five years hence, or even next year, but *now.* Again we say that we have no right to rest content until our navy is equal at least in size and efficiency to that of the German Empire.

It has been raining ambassadors on our hospitable shores, and it rather looks as if every new ambassador brought a new complication to the affair of Venezuela. Baron Speck von Sternburg has been presenting bouquets with both hands to the nation, its head, its gifted citizens, its sweet women, and Heaven only knows what besides. We are filing all these testimonials for the day of despondency, when we may be inclined to think too humbly of ourselves. But, spite of all these sweet things, the good baron brings pretty hard terms for Venezuela, or rather for her advocate, Minister Bowen. In bygone days, little folk used to get gray powders skilfully hid in jam. May not the jam be represented by those flowery things Baron Speck has been handing us so effusively? As for the gray powders, their composition seems clear enough. Venezuela is being asked to pay two sets of creditors, and to pay both first, if not sooner. Neither set seems the least inclined to take a back seat, and so there we are. M. Jusserand, who has, with a Frenchman's art, managed to insinuate how much he loves us, without laying it on with a trowel, *à la* Sternburg, stands for the other party which makes claims against President Castro's government. He reminds us that France also had a little bill to collect; that she took along no battle-ships—nothing but sweet words; and that these were effective, so that Venezuela promised to pay France what was due, and hypothecated the customs to the extent of thirteen per cent. of the total receipts. This was before the Goth and the Hun came on the scene. To the said Goth and Hun, Minister Bowen made his proposal that thirty per cent. of the customs should be hypothecated, and that all creditors should be paid at the same time. The Goth and Hun will have nothing to do with any such arrangement. They say it has always been their practice to take everything in sight for themselves, and they can see no good reason for diverging from this practice in the present case. And so the matter stands. Meanwhile, the blockade of the Venezuelan coast seems effective only against the government, while the revolutionists apparently continue to receive arms and ammunition very much as before. And Caracas seems on the point of starvation. Several days ago, the bakers announced that their supplies were quite exhausted, and the condition at the present moment must be one of great and growing misery. Seemingly nothing but a decisive success of the Matos party can possibly solve the enigma, by at once opening sources of supply for the capital, and bringing into power an administration which can be trusted to carry out its undertakings.

The claim of the allies that they should be regarded as preferred creditors of Venezuela is new in international law. We have sufficiently discussed the merits of this particular case elsewhere, and especially in the last issue of the WEEKLY. We recur to the matter merely to note the character of the claim from a legal point of view. Germany, England, and Italy asserted their right to a preference over all other claimants because they were diligent in the employment of force. France had a prior lien on the customs of the debtor country, having been promised thirteen per cent. of those revenues, until its claim was paid. The allies were not content to take an equal chance with France, but insisted on the postponement of all claims to their own. The case was analogous to a proceeding in involuntary bankruptcy: One diligent creditor had filed a lien; three others had sued out writs and the sheriff had taken possession; still others had taken no step. The creditors who put the sheriff in motion and who had

taken possession forced the debtor into bankruptcy. When this had been accomplished, the debtor's assets had to be distributed equitably. This is the rule in international law, just as it is in bankruptcy or insolvency. The creditor who employs force is entitled to his debt, if he can get it. He must be content for the moment with what the creditor possesses. He can have all, unless the creditor confesses ruin and asks for a distribution of his assets among all his creditors. In that case, the distribution must be fairly made, and only those can be preferred whose superior equity is definitely recognized by law. International law recognizes no superior equity. Germany, England, and Italy merely brought matters to a head, and if their claim of preference should be allowed, it would be tantamount to a deliberate declaration, by international law, in favor of war and against peaceful methods for collecting international debts.

At the hour when we write there seems to be no reason to believe that the ratification of the Panama Canal treaty will be materially delayed by Senator Morgan's objection that the credentials of Colombia's representative, Dr. Herran, are of doubtful authenticity, inasmuch as his principal, Dr. Marroquin, is himself a usurper, and has no lawful title to exercise executive authority at Bogota. It is perfectly true that there has been no general election in Colombia since 1898, and that the President chosen that year, Señor Sanclemente, was deposed and imprisoned by a *coup d'état* headed by Vice-President Marroquin, and has since died in prison. We have no desire to dispute Senator Morgan's assertion that the administration now installed at Bogota is a *de facto* rather than a *de jure* government. Not on that account can the Senate refuse to acknowledge the competence of the government headed by Dr. Marroquin to conclude treaties binding on Colombia. That competence has been acknowledged by our Executive in the exercise of the discretion committed to it by the Constitution. Moreover, this discretion has been exercised wisely and consistently. No self-respecting Latin-American commonwealth would brook the arrogation by our State Department of a right to determine which of two rival claimants of power in that commonwealth had the better title. Moreover, if we had begun by refusing to recognize any government in a Latin-American republic until we were convinced that it possessed a *de jure* title, we should have had to forego diplomatic relations with every one of the South and Central American states.

From the outset our State Department has proceeded on the only reasonable and practicable principle, namely, that the *de facto* government must be recognized. We scarcely need point out that by the recognition of a *de facto* government we are estopped from denying its right to make treaties. It is, in truth, a well-settled rule of international law that contracts entered into by a recognized *de facto* government are binding upon its successor. No matter what may happen at Bogota hereafter, no well-informed Colombian is likely to dispute the validity of the canal treaty, and if he did, his protest would not have an atom of foundation in international law. While we take for granted, however, that no attention will be paid by the Senate to the objection based on the *de facto* character of the Marroquin government, we would not be supposed to deny that some of the amendments proposed by Senator Morgan might have improved the treaty, could they have been incorporated in it before the signing of the document. Of course the treaty is not perfect, but it is doubtful whether a better one could have been obtained under the circumstances. If amendments are insisted on now, they will have to be referred to Bogota, and nobody could say when the resultant negotiations would terminate. It would certainly be impossible for any treaty to be ratified at this session of Congress, and even if the desired changes should be eventually accepted by the Colombian Executive, it would be needful for Mr. Roosevelt to convoke the Senate in special session to secure a ratification of the amended treaty.

There seems to be a good deal of misconception about the agreement between the United States and Great Britain with reference to the Alaska boundary. We have not consented to refer the boundary to arbitration. This is what the Canadian members of the Joint High Commission which met in Washington in 1899 desired us to do. We refused, and still persist in our refusal. The word "arbitral" was applied to the intended tribunal in the rough draft of the agreement, but was erased before the document was signed. All that Secretary Hay has done is to agree to submit our legal title, under the Anglo-Russian treaty of 1825, to the boundary claimed by us, to a commission of six members, three of whom shall be American and three British jurists. This commission has no power to bind either of the parties. Its exclusive function is to inquire and report. There is but very little doubt, however, that if a majority of the commission should report in favor of our title, the report would be accepted by Great Britain, and embodied in a treaty, no matter how distasteful the result might be to Canada. If all three of the British commissioners were to be Canadians, there is reason to fear that no report would obtain the assent of a majority, and that consequently this attempt to fix the Alaska boundary would prove abortive. It is understood, however, that while Canada will be represented on the commission, at least one of its members will be an English jurist, to whom the counsel for the United States might appeal with a certain amount of confidence. Our own belief is that if any majority report is made, it will be in favor of the United States. Should the commissioners be evenly divided, the inquiry will have come to nothing, and we shall continue to retain the territory which we claim under the treaty of 1825.

That great little man, or perhaps we should say that little great man, Hon. Israel J. Tarte, has registered a vow to return to the political arena, to the confusion and undoing of his enemies. We told the story of Mr. Tarte very fully at the time, and need not now do more than remind our readers of its main incidents. While Sir Wilfrid Laurier was abroad, trying to arrange direct treaties with France and Italy, and also effectively blocking the imperial militarism of Mr. Secretary Chamberlain, the Hon. Israel J. Tarte bethought himself of how pleasant it would be to wake some morning and find himself famous. So he devised a cunning plan and conceived a new policy. He stood for "Canada for the Canadians," and wanted to build tariff walls and encourage home industries. And he made many and vigorous orations, in a certain sense committing his party to his new protectionist policy. When Sir Wilfrid came marching home from the Colonial Conferences, he heard about these goings-on, and was naturally put out. He summoned Hon. Israel Tarte, and there took place between them a sort of interview which is connected in the minds of young Americans with a visit to the wood-shed in the company of papa and a barrel-stave. After the interview, by one of those curious coincidences which sometimes take place, there happened to be a vacancy in the Laurier cabinet, and in the very department formerly presided over by Mr. Tarte. Then came prophecies of what Mr. Tarte was going to do, chiefly from those stanch Conservative organs that go for Sir Wilfrid and his Liberals at every opportunity. Mr. Tarte was going to found a new party, or come over to the Conservatives, or upset the Liberals, or at least let off some kind of political fireworks that would be worth going miles to see. And Mr. Tarte himself talked reflectively of the time when he himself would form cabinets, and how he should form them. And then came a lull, a hush and a silence, which have been going on ever since. Nothing at all happened, and Mr. Tarte lay low. Now he says the time has come when we shall see what we shall see. The Canadian House of Commons meets in a few weeks, and Mr. Tarte will be there. While awaiting developments, we cannot make up our minds whether Mr. Tarte is a little great man or only a great little man. Just at present, it looks like the latter.

It is a matter of vital interest to the American people that the House of Representatives shall so deal with the confessed perjurer Philip Doblin as to enforce respect for oaths on witnesses who may be hereafter summoned to testify before its committees. An example must be made of this man, otherwise investigations ordered by the House will be henceforth regarded with derision. There is a rumor, for which we hope there is no foundation, that the Committee on Naval Affairs, while absolving ex-Representative Quigg, originally accused by Doblin of an attempt to bribe, and Representative Lessler, subsequently charged by the same Doblin with subornation of perjury, will refrain in its report from proposing that Doblin shall be prosecuted for oath-breaking. For such a sur-

prising course the committee could have no motive except a discreditable wish to stifle inquiry, and divert attention from the relations of one or more of its members to the Holland Submarine Boat Company. The public odium to which a proceeding of this kind will expose the Naval Committee will be shared by the whole House, if it sanctions the attempt to smother the Doblin affair, and thus encourages perjurers to defy its authority. It ought to be distinctly understood that, if the House fails to require the prosecution of Doblin, every future application of its investigation machinery will be recognized as a farce.

It is no longer Quigg and Lessler, but the Naval Committee and the House of Representatives itself, that are on trial at the bar of public opinion. No question of foreign or economic policy affects more directly or more deeply the interests of the whole community than the question whether perjury may be committed with impunity before the committees to which the delegates of the people in the House of Representatives have intrusted their inquisitorial powers. What a mockery would be the insertion of penalties for perjury in the proceedings authorized by inter-State commerce bills and anti-trust bills, if that offence is suffered to go unpunished in the committee rooms of the House! We lately pointed out that, since the Crédit Mobilier scandal, the lower branch of the Federal Legislature had escaped disgrace through any public proof of corruption. How long would its reputation survive a deliberate refusal to bring this man Doblin to account for his cynical contempt of oaths? He told a member of the committee that he did not know that swearing to a lie was punishable. It is high time that he and others should be enlightened on the point. It will be interesting to note whether opposition to a rigorous prosecution of Doblin comes mainly from Republican or Democratic members of the House.

In his determination to secure the admission of Arizona and New Mexico, as well as Oklahoma, to Statehood, the senior Senator from Pennsylvania is evincing an ingenuity, as well as a persistency, worthy of a better cause. In the guise of an amendment he succeeded in tacking his Statehood bill on the Sundry Civil Appropriation bill, and in getting it sent to a committee which he controlled. Not satisfied with this device for compelling the consideration of his measure by the Senate, he subsequently prevailed upon the Senate Committee on Agriculture to attach the Statehood bill as a rider to the Agricultural Appropriation bill. Of course, when the Agricultural Appropriation bill or Sundry Civil bill, thus amended, comes before the Senate, one of Mr. Quay's opponents may request the President of the Senate to rule whether the amendment is relevant. It is by no means certain that Senator Frye, the presiding officer, will rule against Quay in the matter. It is true that no State has ever yet been admitted to the Union by virtue of a mere rider to an appropriation bill. Other measures, however, of very great importance have been enacted in this way, such as the Spooner bill conferring a species of civil government on the Philippines, and the Platt bill requiring certain concessions from Cuba as a condition precedent to our recognition of her independence. Both of these measures were tacked on to an army appropriation bill. Oklahoma herself, for which Statehood is now demanded, was originally thrown open to settlement by means of an amendment attached to the Indian Appropriation bill. Even if Mr. Quay's amendments are pronounced relevant by Mr. Frye, they may be talked to death by his opponents. But suppose he should manage to tack a similar amendment to each of the appropriation bills, will his opponents, in their desire to avert the admission of Arizona and New Mexico into the Union, allow all the appropriation bills to fail, and thus compel the President to convoke the Fifty-eighth Congress early in March? If it were certain that Mr. Roosevelt would veto the measure, it might be expedient to let Senator Quay pass his Statehood bill forthwith, and thus clear the field for indispensable legislation. We imagine that Mr. Roosevelt would sooner accept that responsibility than see himself constrained to convoke the Fifty-eighth Congress in extra session.

The Democratic members of the House of Representatives have an opportunity greatly to advance the interests of their party. A comparison of the Fowler and Padgett currency bills does not indicate that either party has reached sound conclusions as to the kind of currency the country is entitled. Each scheme is faulty, and contains provisions which will defeat the declared object of its promoters. It is a great gain, however, that we have the two parties competing in the effort to provide the country with an elastic, and sound, bank-note currency. This alone is an enormous advance over the conditions which prevailed in the Presidential campaigns of 1896 and 1900. Then we had a crude debate over the 16-to-1 idea, a debate unworthy of the country and the age. Strange to say, the President seems now to be dragging his party back towards bimetallism, while the party which made the silver dollar its fetich is insisting on a bank-note currency which shall be able to respond to the demands of business. When Bryan was at the front, bank-notes rivalled gold in the ill-esteem of the Democrats. Financial questions are working out in the right direction, and it may be that the excesses of the Republican leaders in economic questions will result in forcing the Democrats to take a conservative attitude there also. This much is certain, the only road to a Democratic victory is that age-old highway of civil and individual liberty, which leads away from socialism and from all forms of paternalism. If the Democratic party will get back into that highway, the nation will have cause for great rejoicing.

We are glad to see that the proposal to increase the pay of the Federal judiciary is almost certain to be adopted at the present session of Congress, though the precise amount of the increase may have to be determined in conference between the Senate and the House of Representatives. The very lowest figures that would present any show of equity are $13,000 for the chief justice, and $12,500 for each of the associate justices. That these figures are too low is evident when they are compared with the salary ($17,500) received by each of the many judges of the New York Supreme Court in the judicial districts comprised within New York city. We observe that the expediency of giving the judges of State courts a remuneration more commensurable with their services is recognized in Pennsylvania, and we hope that a measure to that effect will quickly be enacted at Harrisburg.

Since we last adverted to the subject a bill has been introduced in the House of Representatives which proposes to give the President $100,000 instead of $50,000 a year. Such a law, of course, would not be applicable to Mr. Roosevelt during his present term of office, but it would benefit the President elected in 1904. We need not recapitulate the grounds on which we have pronounced the present salary of our Chief Magistrate unreasonably small, when it is compared with the dignity and importance of the office, with the unparalleled resources of the United States, and with the sums paid in much poorer countries for minor services. The Governor-General of Canada, who is a mere figurehead, gets $50,000 a year, while President Loubet, whose function, compared with Mr. Roosevelt's, is that of a dummy—the ministers under the French system doing all the work and wielding nearly all the power—receives $250,000 a year, besides the use of the palaces of the Elysée and Fontainebleau, which are kept up at the expense of the state. The laborer is worthy of his hire, and if the salaries of Mr. Roosevelt and M. Loubet were to be proportioned to the work and responsibility imposed, the former's pay should be at least ten times as great as that of the latter. The proposal made in the House of Representatives to double the President's salary may be criticised, if criticised at all, on the score of excessive moderation.

The disgraceful riot, on January 31, which resulted from the strike of street-car employees at Waterbury, Connecticut, failed to stir the Mayor of Waterbury to ask for outside help, but had its effect upon the sheriff of the county. At the solicitation of merchants and other leading citizens the sheriff called upon the Governor for troops, and sixteen companies of the State troops being promptly sent, restored order for the time being, though there were further outbreaks on Monday. It is not the strikers, we are told, who have made the trouble, but the "sympathizers." The sympathizers were certainly out in force on Saturday night. The newspapers have told of a mob of six thousand of them who wrecked cars and stoned and insulted non-union employees to their hearts' con-

tent, with very little interference from anybody. Saturday-night sympathy of that sort can doubtless be excited in a town where the police are inefficient, over any strike that is popular, and very damaging it must be in the long-run to the interests of the strikers. There is apt to be an unusual degree of sincere popular sympathy for street-car employees, who work in the sight of the public, with whose efficiency the public comfort is directly concerned, whose hours of labor are long, and whose pay, as a rule, seems pretty small, but when it takes such a form as it has taken at Waterbury, it engrosses public attention to the neglect of the strike issues. Whatever the merits of the case of the Waterbury strikers may be, the issue there at this writing is whether the peace is to be kept or not. To win a strike by lawful means may be a public benefit; to win a strike by violence is always a public injury. No State can afford to let rioters prevail, and Governor Chamberlain of Connecticut seems to know it.

At a recent conference between Mayor Low, Comptroller Grout, and the representatives of the Rapid Transit Commission, the last named was informed that the city of New York before the end of the current year would be in a position to authorize the expenditure of thirty million to forty million dollars on the construction of new tunnels. Chief-Engineer Parsons was thereupon directed to draw plans for tapping with tunnels every large outlying residential section of the city not already touched by routes begun or contracted for. One of these tunnels is to run from the Post-office in Manhattan borough to a point near Borough Hall in Brooklyn; another under Lexington Avenue from Forty-second Street to the Bronx, and probably as far north as Mount Vernon; and a third through Jerome Avenue to the neighborhood of Woodlawn Cemetery. There is not a word to be said against any of these tunnels, but why, among all these outlying residential sections of New York city, is Staten Island alone to be neglected? There is no section of the city wherein homes are obtainable at so low a price by working-men and men of moderate means. It is, moreover, the only outlying section of the city which cannot be reached by surface railways. As a matter of simple justice to the citizens of Richmond borough, who in foggy weather are now cut off altogether from their places of business in Manhattan, and as a matter of duty to the working-men of Manhattan borough, who would like to own homes of their own, if they could afford to buy them, a tunnel under the Narrows from Bay Ridge to Staten Island is comparatively more important and more urgently called for than a tunnel to Woodlawn Cemetery or the Bronx. Those who wish to visit either of the sections last named can choose between steam-cars and trolley-cars. Those who wish to go to their homes on Staten Island have no alternative but to take a ferry-boat. A tunnel under the Narrows would be neither a difficult nor a costly undertaking, and could be quickly constructed. There is no reason that will bear the light of day why a tunnel to Brooklyn should not be supplemented with a tunnel from Bay Ridge to Staten Island. The two subways ought to be prosecuted simultaneously. Why should workmen in Manhattan borough have to pay from three to five times as much for homes in the borough of the Bronx as they would have to pay for homes in the borough of Richmond? That is a question for Mayor Low and the Rapid Transit Commission to answer.

There is nothing surprising in the announcement that a bituminous trust has been formed which will control a very large fraction of the output of soft coal. No one doubts that the principle of combination, which has been applied in so many fields of manufacture, is applicable also to the products of mines of every kind. What has been disputed, and in truth denied, is the applicability of the principle to the products of agriculture. Experience has shown, however, that one agricultural product, to wit, sugar, is susceptible of control by a combination of capitalists, and it is equally certain that for some years the sale of almost all the coffee, and of almost all the tea, consumed in the United States has been regulated, if not monopolized, by a few persons. It is also well known that the combination headed by Mr. John B. Duke has at its disposal the greater part of the tobacco crop in the United States and Cuba, as well as in some other countries. In view of these indisputable facts, who shall say that it will prove impossible to control the raising and marketing of cereals and of animal products? Why is a wheat trust, or a corn trust, or a cotton trust, more impracticable than a tobacco trust? The number of wheat-growers, or corn-growers, or cotton-growers may be greater than the number of tobacco-growers. But the fact erects no insuperable obstacle. It simply means that a larger amount of capital and a more complicated organization on the part of capitalists and their agents would be needed for the acquirement of control. There is no reason to suppose that the monopolization of agricultural products will stop short at sugar and tobacco. Wheat, and corn, and cotton, and every other necessary of life are sure to fall under the operation of the same principle if it be true that the aggregation of capital is, by reason of the economies effected, an irresistible economic law, which, indeed, can be checked artificially by restrictive legislation, but only when such legislation is imperatively demanded by public opinion. Should the American people find that the prices of grain, meat, and cotton were, on an average, lower throughout a given year than they had been when those commodities were driven up and down by individual competitors—there is no doubt that the normal price of petroleum is much lower than it was before it was controlled by the Standard Oil Company—they are unlikely to be much influenced by the clamor of demagogues, who impute to all trusts indiscriminately a programme of plunder and oppression, the effects of which are nowhere visible.

It is with sincere satisfaction that we chronicle the determination of the Pennsylvania Railroad Company to suspend its twenty-hour special express train to Chicago, in order to relieve the freight congestion which has impeded the transportation of soft coal to the seaboard. We have formerly pointed out that the anthracite famine which for a time prevailed was attributed by experts, not so much to a scarcity of that combustible, as to a shortage of bituminous coal, which compelled manufacturers who have hitherto used the latter fuel to seek hard coal as a substitute. The dearth of soft coal at the seaboard was ascribed, as we pointed out, not to any deficiency of output from the bituminous mines, but to the lack of transportation facilities on the Pennsylvania Railway and its branches. To the credit of Mr. A. J. Cassatt, the president of that great corporation, he recognized that the reputation of his company for efficiency was in danger, and he decided to apply a heroic remedy by abandoning for a season the special Chicago flier, which has required an outlay of half a million dollars, and by which a public service has been well performed. To assure the safety of this train, however, innumerable freight-cars had to be side-tracked and held back for hours throughout long sections of the road. There is no doubt that the freight congestion on the Pennsylvania lines will be relieved to a considerable extent by the suppression of this single train, but other express trains will be renounced if such a step seems needful to facilitate transportation. From the moment that bituminous coal reaches the Atlantic coast in its normal volume, the last disturbing element in the fuel-market will disappear.

A good many meetings are being held, and a good many speeches made, on the subject of modern trades-unionism. With the exception of President Eliot, all the speakers agree in commending the unions. This is to say that the speakers, wellnigh universally, especially politicians, are afraid of the unions and afraid to tell the truth to the men who compose them. This is the more to be regretted, because if the unions are not to hear the truth now, they are not likely to hear it at all. The flatterers of the unions are their worst enemies. Those who could tell the truth might serve the unions by securing reorganization on lines which would make for permanency, whereas, if present conditions are persevered in unions are doomed. This century and this country will not long tolerate tyranny of any kind. Organizations that foster it must go. The union which says that a private citizen shall not work on his own house; that a workman who is not a member of the union shall not work at all; that the union is above the State and its law, and that the union workman who does his duty as a citizen in the militia shall be deprived of his livelihood; that employees shall administer the discipline of an establishment; that the efficient workman shall earn no more than the inefficient—all organizations which take this ground will soon fall to pieces, and the right of collective bar-

gaining will, for a time at least, be lost. It is incumbent on those who talk to working-men to make it clear to them that industry and society will not put them in command. The sooner they learn this truth the longer they will live. They should study the methods by which the United States Steel Corporation became a non-union concern, and learn by example.

There is trouble in the American Red Cross. The first overt evidence of it was the transmission to the Speaker of the House of a memorial, signed by General John M. Wilson, first vice-president of the organization, and twenty-two members of the executive committee for last year, protesting against the control of the Red Cross by its president, Miss Clara Barton, and against the methods which she is charged with using to gain the power she has acquired. The signers of the memorial included former-Secretary-of-State John W. Foster, former-Secretary-of-the-Navy Herbert, former-Surgeon-General Van Reypen, and Mrs. Cowles, the President's sister. The memorial contained an address to the President, charging that last October Miss Barton got proxies from the members of the Red Cross to make "some slight changes" in the by-laws, and made changes which place the control of the policy and finances of the organization in the hands of a single person. It protested against this action as unwise, even when the person in control—the president—is Miss Barton. The by-laws contain a provision making the President and his cabinet a board of consultation and advice, but on receiving the address of the protesting committee-members, the President wrote, through his secretary, to Miss Barton, declining to serve. The treasurer of the society, Mr. Flather, about the same time found that the pressure of his private business compelled him to resign. Miss Barton has replied at some length to the President, saying that all Presidents since President Arthur's time had served on the Red Cross Board, but yielding respectfully to his wishes. But Miss Barton in this letter says nothing about the changes in the by-laws. Miss Barton is seventy-three years old. Her distinguished services in connection with the Red Cross work entitle her to the most considerate treatment. It is much to be regretted that she and her late associates have fallen out, and the public will hope that they may reach a satisfactory adjustment of their differences. Apparently she has shown somewhat too comprehensive a belief in the advantage of centralized authority, and apparently also she means to stand by her guns. Her friends say that her position has been misrepresented, and say also that a committee of five, of which Mr. Richard Olney is a member, is preparing a plan for the future of the Red Cross which will be satisfactory to Miss Barton.

If we can believe the newspapers, Governor Orman of Colorado has made the first appointment of an American to be the holder of a Rhodes scholarship. His appointee is Mr. E. H. Lehman, a Colorado man who graduated last year at Yale with unusual distinction. Mr. Lehman applied to Governor Orman for the appointment, and his Yale credentials won him the prize over two hundred other applicants. The selection seems to be excellent, but it does not appear where the Governor of Colorado got authority to make it. Dr. Parkin, the representative of the Rhodes trustees, is travelling through the country taking counsel with the authorities of the various colleges about the best method of selecting Rhodes scholars, and, so far, everything indicates that the scholars are to be nominated by committees from the colleges. It has not been suggested that Governors, or other political officers, should be concerned in this labor. Has not Governor Orman misapprehended his obligations? And is he not, besides, a year ahead of time?

An interesting issue of the strike of eighty employees of the Utica Fire Alarm Telegraph Company last September is the announcement made on January 29 that some of the late strikers had got control of the company and proposed to manage it to suit themselves. The strikers were discharged at the time of the strike, and their places were filled. Now they propose to turn out the new men; all of which seems to accord with law, order, and business principles. Another interesting case is reported from Rochester, where the platers in a manufacturing concern struck. They were invited to start in business for themselves, and were promised the plating work of the firm that had employed them. They did so. Business turned out to be good. They made money, and at last accounts the men who wanted an eight-hour day while working for some one else, were working thirteen hours a day for their own account.

The Tarsney law which empowered the Treasury Department to invite architects to submit competitive designs for public buildings has worked so well that its working is to be extended. Heretofore, only the larger and more important buildings have been affected by it, but it is reported from Washington that the intention now is to get plans for the smaller buildings also from architects in private practice. The system is excellent. It gives the country better architecture, and relieves the office of the Supervising Architect of the Treasury of much work which ought never to have come to it.

It is gratifying to know that the protest lodged by some officers of the Woman's Christian Temperance Union against the presence of Watts' picture, "Love and Life," in the White House, has not the sympathy of so influential a member of the organization as Lady Henry Somerset. She is the president of the union's international organization, and, though without authority in the American W. C. T. U., her opinions carry weight with its members. She is used to the habits of the great world, and knows something about art. As president of the World's W. C. T. U., she says: "I feel it should be made clear that the objections raised by a few women are not held by the majority of the great temperance society, which realizes that that wonderful allegorical picture has in it nothing but tender, beautiful teaching, with the purity of treatment and intention which marks all that great master's works."

A new device for the avoidance of accidents on railroads is reported by our consul at Berlin. It is a German invention, and is being tested on one of the government railroads near Frankfort. A light third rail is laid midway between the other rails, and is connected by a shoe with an electrical apparatus carried by engines. By this means danger signals can be given by electric bell and red light in the cab of the engine, and electrical brakes can be set by the same signal that gives the alarm. The apparatus also keeps the engineer in telephonic communication with stations and with trains ahead of him, and when he is pulled up he can learn what is the matter and what is expected of him.

The inventive turn and flexibility of the typical American are well illustrated in Peter Cooper Hewitt, whose portrait appears in our series this week. Just as his famous grandfather was associated with the beginnings of steam locomotion in this country, and his not less distinguished father was one of the creators of our iron and steel industry, this young man has concentrated his faculties on the development of the latest ideas in electricity. The Hewitt mercury-vapor lamp, shown first publicly at Columbia University about two years ago, is the cheapest light we have, and has already gone into commercial use here and abroad. The Hewitt static converter, a transformer of alternating into direct current, or *vice versa*, for a wide variety of uses, is the smallest, lightest, and most efficient apparatus of the kind. The technical papers have just described one in operation at Madison Square Tower, where some four pounds of material transform current that required previously seven or eight hundred pounds, as in the Manhattan Elevated and kindred plants. More than this, the same appliance lends itself admirably to the perfection of wireless telegraph methods, and opens the way to other electrical improvements of most radical character. That a young educated millionaire should be a *dilettante* scientist would not be surprising, but to see this keen, alert man at close grips with the most progressive of the arts, and supplying it with the latest ideas and materials, shows him a worthy inheritor of great traditions and lofty ideals. He is now forty-two.

New Phase of the Venezuela Affair

To appreciate the latest aspect of the Venezuela imbroglio, caused by the demand of the allies that their claims shall receive a preference over those of other creditors, it is needful to recall the progress toward a settlement which had been previously effected. In response to a suggestion made by our State Department, Great Britain, Germany, and Italy agreed to refer their claims to arbitration, but coupled their agreement with a request that Mr. Roosevelt should act as arbitrator. This request the President declined, and proposed as a substitute the international tribunal established at The Hague. After some deliberation, the allied powers consented to accept the substitute, provided the Caracas government would give satisfactory guarantees that the sums awarded by the Hague tribunal would be paid. The demand for guarantees was met by Mr. Bowen, the Venezuelan plentipotentiary, with an offer to set aside thirty per cent. of the customs duties collected at La Guayra and Puerto Cabello for the payment of the claims of the allied powers.

As the offer was accompanied by a promise that the collection of duties should be made by officials acceptable to the allies, who should also have the right to be represented by auditors at the ports named, it was favorably received by the plenipotentiaries of Great Britain, Germany, and Italy, who, however, insisted that their claims must take precedence of those of other creditor powers that had taken no part in the blockade. That is to say, the thirty per cent. was to constitute a first charge on the customs revenue derivable from La Guayra and Puerto Cabello. Against such a preference France protested, on the ground that, by virtue of a treaty concluded in 1867, whereby her own claims against Venezuela had been pacifically adjusted, she was entitled to collect thirteen per cent. of the revenues accruing from certain custom-houses. It is true that eighteen years afterwards France renounced this right by a convention, on condition that the interest of the debt liquidated by the previous treaty should be punctually paid. As for some time no payments have been made, she contends that her treaty right has revived, and she proposes to enforce it. Upon being made acquainted with the position taken by France, the allied powers declined to accept Mr. Bowen's proposal, on the plea that, if the thirteen per cent. required by France was to be deducted from the thirty per cent. offered, they would themselves receive but seventeen per cent. collectively.

We should not like to assert that the plea was put forward in bad faith, but Mr. Bowen has pointed out that it has not an atom of foundation, since the whole of the thirty per cent. was to go to the three blockading powers, until their claims were satisfied. That is to say, provided Venezuela should be willing to acknowledge the revival of the French treaty right, as she probably would be, that power would be authorized to collect thirteen additional per cent., making forty-three per cent. in all that would be deducted from the net revenue of the two custom-houses named. It should here be mentioned that our own government, also, has claims against Venezuela, which have been acknowledged by treaty, but for the payment of which no definite provision has yet been made. Our government, however, has refrained from embarrassing President Castro at this time by exacting an immediate settlement of its own claims.

In view of the statement made by Mr. Bowen that the thirteen per cent. of customs revenue due to France is not to be deducted from the thirty per cent. conceded to the allies, there seems to be no ground for the persistent refusal to accept the Venezuelan proposal. Whatever course may be pursued, however, by the allied powers, with reference to this particular matter, they have, by their demand for a preference, raised a question of obvious interest to all civilized nations. Is our government, or any other government that professes to desire the maintenance of international peace, prepared to accept the principle that creditor powers that enforce their claims by war are to have a preference over other creditor powers that have proceeded to an adjustment by pacific negotiations? Would not the adoption of such a principle put a premium on war, and subject peace to discount? Would not the promulgation of such a doctrine prove that the governments making it were guilty of gross insincerity when they took part in the peace conference at The Hague and established an international tribunal as a substitute for the arbitrament of the sword?

Let us look for a moment at the practical consequences of such a doctrine. Let us suppose that France were now exercising the right given to her by the treaty of 1867 to collect, through her own agents, thirteen per cent. of the customs duties at La Guayra and Puerto Cabello. Let us suppose that a similar power of self-payment had been conceded to the United States, and were now exercised, so far as our claims, already recognized by Venezuela, were concerned. Would not the percentage which France and the United States had been authorized thus to collect constitute a first charge on the customs revenues? Could it be displaced from that favorable position because other creditor powers saw fit to exact the payment of their claims by force? Is it not clear that such a pretension would inevitably lead to grave international complications? And, suppose the payment of the alleged claims of the powers that resorted to force should exhaust the whole of the customs revenue collected in Venezuelan seaports. Would France and the United States deserve to be deprived of any payment at all, on the ground that they had chosen to adjust their claims in a pacific and friendly, instead of a high-handed and brutal, way? The more closely we examine the new principle propounded by the British and German Foreign Offices, the more iniquitous it appears.

Who is responsible for the enunciation of the monstrous doctrine that claims enforced by war must take precedence of claims previously adjusted by pacific negotiations? According to the belief current in Washington, the discredit attaching to the formulation of that principle must fall upon Lord Lansdowne, the British Minister for Foreign Affairs, and not upon Chancellor von Bülow, although, under the iron-clad agreement between England and Germany, the last-named official found himself constrained to acquiesce in the extraordinary position assumed by his ally. If this belief be well founded, those Americans who have imagined that England in this Venezuelan business was playing the part of a friend to the United States have been dwelling in a fool's paradise. The sooner the whole truth about the matter is made known to the American people the better. We are entitled to learn, if it be a fact that Lord Lansdowne not only prevented the prompt acceptance of Mr. Bowen's proposal, but announced a doctrine the effect of which will be to discourage all future attempts to settle disputes with Latin-American republics by pacific means. If Lord Lansdowne has really been guilty of these acts, we do not see upon what ground it is possible to exculpate him, except by taxing him with gross stupidity. We shall see how long those Englishmen who profess to be our well-wishers will permit a man, either incompetent or wrong-headed, to remain at the head of the Foreign Office.

We may here mention another report, made on good authority, the report, namely, that the plan to coerce Venezuela by war was devised, not by the German, but by the British government. We have looked for a contradiction of this report on the part of British ministers, but what we have obtained is a qualified admission of its truth. Thus Mr. Austen Chamberlain, the British Postmaster-General, speaking at Birmingham on January 31, said that, after the British government had decided to seek satisfaction for Venezuelan outrages, and to demand guarantees against their repetition, it had been approached by Germany and requested to co-operate with that country. Courtesy, the speaker said, made it impossible for the British government to decline. Are we expected to believe that, if the British government was the first to decide to coerce Venezuela by war, no official intimation of its intention was given to Germany? What an extraordinary coincidence that Germany should have adopted independently a coercive programme, and should have suddenly proposed co-operation to Great Britain, in complete ignorance of the fact that the British Foreign Office had already formed an identical resolve!

As to the courtesy of which Mr. Austen Chamberlain speaks, was it not as much due to the United States as to Germany? Does Mr. Chamberlain mean to insinuate that our State Department was informed of England's intention to make war on Venezuela, and approved of the plan beforehand? The insinuation has been made by the American correspondent of a London newspaper, but the American people will be very slow to believe it.

The Democratic Party and Its New Attitude

We are not surprised at the extraordinary effect produced throughout the country by Mr. Thomas F. Ryan's article in the February number of the *North American Review* on "The Political Opportunity of the South." The author, who is a Southerner by birth, recognizes what we have often pointed out, to wit, the commanding position which events have enabled the Southern States to take in the next national convention of the Democratic party. At the last general election, the Republicans carried every Northern State but one, Rhode Island. Not only did the Democracy lose its old strongholds in the East and Middle West—that is to say, New York, Connecticut, New Jersey, and Indiana, but Mr. W. J. Bryan and the wing of the party which he has hitherto controlled lost every trans-Mississippi State in which they were formerly predominant. As the only section of the country which has remained faithful to the Democracy, the South is invested with a moral ascendency in Democratic councils which it can assert if it will, and which, once asserted, cannot be reasonably contested. It can, if it chooses to use the power conferred on it by events, frame a programme for 1904 which, without forfeiting the allegiance of any of Mr. Bryan's followers, will recall to the Democratic standard all of those who forsook it in 1896 and 1900. It will possess not only the moral, but also the material, power to frame and enforce such a programme, for, with the co-operation of the Democratic delegates

from the Eastern and Middle States, a co-operation which is assured, it would need but seventy-three additional votes to constitute two-thirds of the next Democratic national convention, which two-thirds would enable it to designate the candidate, as well as shape the platform.

Such being the South's opportunity, how ought it to be used? Mr. Ryan indicates four cardinal policies, every one of which will commend itself to Democrats, and upon more than one of which the spokesmen of the Southern Democracy in Congress have already acted. First among the policies proposed is a moderate tariff for revenue, which shall not prejudice domestic industries. Here we may point out that the free-trader no longer exists in the South. He is an extinct species. What the South wants is tariff revision, carried out by friends of the people as a whole; a revision that shall assure protection to infant industries, but shall withhold it from the giant industries that can not only stand alone, but invade foreign countries. The great body of American consumers thoroughly understand that the one sincere, trenchant and infallible way of dealing with dangerous trusts, and of averting monopolies in the necessaries of life, is to place such necessaries on the free list. This Congress has already done in the case of anthracite coal; it may have to do the same thing to-morrow with bituminous coal, and the day may not be distant when it will have to pursue a similar course with regard to meat. But, while the necessaries of life must be safeguarded against monopoly, it is not, and it should not be, the purpose of Southern Democrats to strike down any of the American industries which for their growth and well-being require the fostering hand of protection. That is precisely the discrimination which, as we understand Mr. Ryan, he has in view.

As to Mr. Ryan's second plank, moderation in expenditures, that has always been the policy of the Democratic party, and, moreover, it has been carried out whenever that party has been in power. We need not marshal facts and figures familiar to all well-informed citizens, which demonstrate that extravagance in Federal expenditure is characteristic of Republican administration. We pass to the third plank suggested by Mr. Ryan, to wit, a sound currency. That the Southern Democrats have repudiated the preposterous demand for the free coinage of silver at the ratio of 16 to 1 was definitely established the other day in the House of Representatives, when they co-operated with a Republican minority in rejecting a proposal that the government should undertake to maintain a certain parity between the value of silver and that of gold in the Philippines. No, said the Southern Democrats. In the Philippines, as in the United States, silver must find its level in the open market. So distinct and decisive is the present attitude of Southern Democrats with regard to the silver heresy. It is further to be noted that the bill introduced by Representative Padgett of Tennessee, permitting national banks to issue credit currency notes, is deemed by many currency reformers a sounder measure than the Fowler bill. The Padgett bill permits national banks, having a bond-secured circulation equal to 50 per cent. of their capital, to issue 50 per cent. additional of credit currency notes. The first 20 per cent. of these issues are taxed 1 per cent.; the next 15 per cent., 3 per cent.; and the last 15 per cent., 5 per cent. per annum. The guaranty fund in the Padgett bill is 5 per cent. of the note issues, and the tax on circulation is to be added to it as an additional safeguard for the notes of insolvent banks. When the proceeds of this tax on circulation equal $5,000,000, the tax on the first two issues is to be cut into halves, reducing it to ½ and 1½ per cent. per annum, respectively. It is by no means impossible that this bill may be passed in the House by a combination of Democratic and Republican votes.

The fourth plank which Mr. Ryan would insert in the next Democratic platform is a demand for the restriction of the Federal government to its constitutional functions; it should embody, he thinks, an announcement of persistent opposition to the further extension of the power of the Federal government over the acts and industries of the people of the States. We could scarcely expect such a plank to meet with approbation on the part of ex-Governor Hill, who caused a State convention of New York to advocate the seizure of the anthracite mines of Pennsylvania by the Federal government, under color of an alleged right of eminent domain. We know of no other Democrat, however, who would not approve of Mr. Ryan's plank. He says truly that to guard the rights of the States and of the people under the Constitution has been the historic mission of the Democratic party, and is more than ever its duty to-day. He points out that, when Mr. Roosevelt assumed to interfere between employers and employed in the matter of the anthracite-coal strike, he was guilty of an evasion of the Constitution which was a step toward an invasion of it. Mr. Roosevelt did not profess to think that his course in that affair was warranted by the Constitution. He acknowledged that he could find no warrant for it in that instrument. That being admitted, must he not further confess that he was guilty of violating the Tenth Amendment to our Federal organic law, which expressly provides that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people. With that amendment before our eyes, can we deny that Mr. Roosevelt not merely evaded, but distinctly violated, the Constitution when he interfered between employers and employed?

It is true, as Mr. Ryan says, that all of the policies commended by him to Southern Democrats, and through them to the next Democratic national convention, are based at bottom on the familiar and vital Democratic principle that there shall be the least possible interference by the State with private rights, and that the citizen shall be free under equal laws to seek and welcome opportunity whenever and wherever it may be found. The policies which he has outlined are each and every one of them in harmony with the interests of the South; in harmony with the fundamental teachings of the fathers of Democracy; in harmony with the true interests of the nation, and with the maintenance of its progress in the paths marked out by the founders of the republic.

Mr. Roosevelt and McKinley

It is well known that Mr. Roosevelt was the principal orator at a banquet given on January 27, at Canton, Ohio, to commemorate the birthday of the late President McKinley. We do not purpose here to comment on the address that he delivered, beyond noting that it has been widely read and generally admired. Our intent is rather at this time to invite attention to the fact, unparalleled in the history of Vice-Presidents who have become Presidents by accident, the fact, namely, that not only was Mr. Roosevelt the principal speaker on the occasion, but that his appearance in that rôle struck everybody present and the community at large not as incongruous, but as eminently proper. This, manifestly, would not be the case had Mr. Roosevelt quarrelled, as most Vice-Presidents under similar circumstances have quarrelled, with either the measures or the friends of his predecessor. If Mr. Roosevelt is recognized as the fitting person to deliver an oration commemorative of President McKinley, it is because he has considered it his duty to respect the personal attachments, fulfil the honorable promises, and carry out the political plans of the statesman whom he has succeeded.

This would be a unique performance on the part of a Vice-President promoted by a catastrophe to the office of Chief Magistrate, if we could except the case of Millard Fillmore, which is not a thorough-going exception. It is well known that John Tyler reversed the policy of President Harrison and of the Whig party with reference to the United States banks; that the only member of his predecessor's cabinet whom he retained for any considerable time was Daniel Webster; and that when Webster, in his turn, resigned, the post of Secretary of State was given to the great nullifier, John C. Calhoun, the most outspoken and deadly enemy of the party by which Tyler had been made Vice-President. The result, of course, was the relegation of Tyler to the obscurity from which he never should have been suffered to emerge, both of the great national conventions treating him in 1844 with the contempt that he deserved. When Fillmore became President in July, 1849, through the death of Zachary Taylor, no such flagrant divorce took place between the new President and the leaders of the Whig party. So far as the personal distinction of its members was concerned, the new cabinet, adorned by the names of Daniel Webster and John J. Crittenden, was ostensibly stronger than that which it replaced, but it soon became evident that Fillmore, the representative of a Free State, would lean much more decidedly toward the pro-slavery element of the Whig party than did Taylor, though the latter was a slave-holder. The result was that Fillmore, through the opposition of Northern States, was beaten in the Whig National Convention of 1852, though four years later he got his reward, such as it was, being nominated for the Presidency in 1856 by the pro-Southern majority in the national convention of the Know-Nothing party, a nomination subsequently ratified by a convention representing the remnant of the Whigs.

As for Andrew Johnson, it is needless to recall that, although he retained Seward in the Department of State, he quarrelled with Lincoln's Secretary of War, Stanton, and provoked the rancorous hostility of the Republican leaders in Congress, who, but for the unexpected loss of a vote in the Senate, would have impeached him successfully.

The fate of Johnson and of Tyler was a portentous lesson to Vice-Presidents. It was but imperfectly turned to account by Arthur, however, who had scarcely succeeded Garfield when he reversed the policy of the State Department with regard to the war between Peru and Chile, and virtually drove out of the cabinet James G. Blaine, who had a far stronger hold on the respect and sympathy of the Republican party than his nominal superior possessed. The result was that, although Arthur managed, by the use of patronage, to control the negro and carpet-bagger delegates from the former Confederate States, he was ignominiously beaten by Blaine in the Republican National Convention of 1884. Arthur's experience showed how full of pitfalls and illusions is the Presidency when occupied by one unauthorized by the popular vote to assume an independent rôle. In the bitter conflict that then existed between Stalwarts and

Half-breeds in the State of New York, it is possible that Arthur might have failed in the wariest efforts to conciliate the friends of his predecessor. By attempting to defy them he made the miscarriage of his hopes inevitable.

We have no doubt that Mr. Roosevelt was entirely sincere when, immediately upon his accession to the Presidency, he requested all the members of the McKinley cabinet to retain their posts throughout his term of office. We are equally convinced that he sincerely approved of the measures which had been earnestly advocated by the deceased President, among which reciprocity, not only with Cuba, but with other foreign countries, was conspicuous. It is, at the same time, obvious that a far-sighted comprehension of expediency would have impelled the new President in precisely the same direction, for which he had a genuine inclination. It would have been fatal to Mr. Roosevelt to alienate the friends or repudiate the measures of his predecessor. It is true that he had been Governor of New York, and in that capacity might be supposed to have acquired a good deal of personal and political influence. As a matter of fact, however, the leaders of his party in his own State distrusted and disliked him; they were determined not to give him a nomination for the Governorship, and they had notoriously labored to thrust upon him the Vice-Presidency, in the hope that he would thus be shelved. With the exception of the Governorship, which he gained by less than 18,000 votes, against some 250,000 given in the same State to McKinley a twelvemonth before, he had never been elected to any political office. Two appointive offices, indeed, he had held, but they were minor ones, those, namely, of Police Commissioner in the city of New York, and of Assistant-Secretary of the Navy. In a word, he was unknown and untested by the great majority of the Republican leaders, while upon the few with whom he had been brought into close relations he can hardly be said to have made a favorable impression.

Under the circumstances, it would have been an act of political suicide for Mr. Roosevelt to follow in Tyler's, in Johnson's, or even in Fillmore's or Arthur's footsteps. The one safe course for him to take was that, fortunately, which his convictions and his sympathies disposed him to pursue. He heartily supported McKinley's measures and cordially welcomed McKinley's friends, nor could anybody for a moment question the sincerity of his conduct, for he is plainly incapable of duplicity and simulation. The innate straightforwardness and bluntness of the man disarm suspicion. The result is that he is universally acclaimed as the true heir of McKinley's purposes and McKinley's friendships. He can look around him and say with truth that, among those who were nearest and dearest to his predecessor, he now has many a partisan, and not a single enemy. It is from this point of view that we are justified in regarding Mr. Roosevelt's experience in the Presidency as unique.

The King's Blunder

As we had anticipated, the alliance between England and Germany is the result of King Edward's political activity. The revelation of the King's actual participation in the government has naturally aroused the astonishment of the world, and has greatly offended many Englishmen. Indeed, it may be taken as one of the signs of a general reactionary movement throughout the world, of a revival for a time of executive power as a dominant influence, a fact that was settled against crowned heads for good and all in the closing years of the eighteenth century. The most important consequence of this movement in England is the alliance which Edward has made with William of Germany, his nephew. It is a disagreeable alliance in more senses than one. It is disagreeable to the American people, who do not want to see Great Britain take a hand in the Emperor's effort either to weaken the Monroe doctrine, or to bring himself under it as an exception to our general rule. It has called forth a good deal of criticism in England of the King and his action, and of Mr. Balfour's weakness in permitting him to do what the premier alone has the power to do. So far as the doctrine itself is concerned, the affair is likely to turn out to its advantage. Since the allies have agreed to Mr. Bowen's terms, it seems to be established that we are now pledged to prevent the use of force against a Latin-American state after it has proposed or accepted arbitration. To this both England and Germany have assented.

So far as the relations between this country and England are concerned, they have not been helped by the King's action. It is, however, with the King himself and with Mr. Balfour, the premier, that the question of most immediate interest arises. The King has travelled outside of his sphere, and the prime minister has delegated to the crown his own functions. He has forgotten, for the moment, that he is the real executive of the empire, and that, to quote Mr. Bagehot, constitutional royalty is "a disguise. It enables our real rulers to change without heedless people knowing it." It is also interesting to note another change of the times, and this is shown in the indifference of the House of Commons to the self-abnegation of Mr. Balfour, to his trifling with his own high office by permitting the King to be the real executive for the moment. Mr. Disraeli did not escape so easily in 1868 when he was suspected of giving to the Queen the choice of a course about to be taken, instead of having definitely recommended it. He was accused of hiding behind royalty in determining upon his policy for the completion of parliamentary reform, after his notable defeat by Mr. Gladstone on the disestablishment and disendowment of the Irish Church. Mr. Balfour, however, is not to escape criticism, and, what is of more importance to him and his party, he has aroused a sentiment which will probably affect the elections. Doubtless, the issue drawn between the parties on the King's intrusion into government would be of marvellous help to the Liberals, and, if fought valiantly, might bring them back into power. Mr. Balfour—we accept the English theory of the minister's responsibility, and therefore speak of the King's act as the premier's—has offended against the fundamental constitutional theory which is thus laid down by Mr. Leonard Courtney: "Beyond the personal preferences involved in the appointments to certain offices, the influence of the sovereign may be felt in the conduct of questions of larger policy. The experience of long years and the intimacy that has been possible with personages of the highest authority abroad may bring elements of weight into consultation, especially in respect to foreign policy, with the result that the suggestion of the sovereign may influence the judgment of the minister, and the advice of the latter may receive a different shape and direction from that which it would otherwise have assumed. The influence of the crown must not, however, be permitted to obscure in any degree the responsibility of the minister who ultimately tenders the advice upon which action is taken." Mr. Balfour has permitted the King to act on his own initiative, whereas the King has no right to act except on the advice of Mr. Balfour. It is Mr. Balfour, not Edward VII., who is responsible for governing the British Empire.

"To state the matter shortly," says Mr. Bagehot, in his vigorous and breezy comments on the monarchy, "the sovereign has, under a constitutional monarchy such as ours, three rights—the right to be consulted, the right to encourage, the right to warn, and a king of great sense and sagacity will want no others." Now that Edward VII. has gone beyond the limits thus laid down by one of the most accomplished, and certainly the most entertaining, of all writers on the English constitution, he will be very likely to learn that he has striven after too much for his own happiness. He has forced upon his country an alliance which is distasteful to it, which is even criticised by the conservative friends of the real government. He has taken advantage of the indifference of the premier to arrange a family affair, which, in a moment, threatens seriously to set back all the efforts of English statesmen to win the friendship of this country.

We do not for a moment imagine that the immediate effect of the alliance upon this country will be long enduring. We are too practical to be permanently influenced by a blunder, and too intelligent not to comprehend the difference between an advisory monarch and a responsible and powerful prime minister. The time may come when we shall need a European friend, and then we shall inevitably turn to England. By that time the King will have learned his lesson better, will have learned to follow the illustrious example of his mother, will have learned why Mr. Bagehot could say: "If we look at history, we shall find that it is only during the period of the present reign [Victoria's] that in England the duties of a constitutional sovereign have ever been well performed. . . . We must not reckon," he continued, "in constitutional monarchy any more than in despotic monarchy on the permanence in the descendants of the peculiar genius which founded the race. As far as experience goes, there is no reason to expect an hereditary series of useful limited monarchs."

There is a wealth of meaning in these last words for Edward VII. He can be useful by following the example of his mother, by lending to his ministers his experience, and the advice of his sagacity. He is a very intelligent and tactful man, and is not likely to make the same mistake twice; indeed, if he repeats this German blunder, the Commons will see to it that he has to deal with a premier of sterner stuff than Mr. Balfour. The occupant of the throne once signed all military commissions. The task was drudgery, but it was said to have been invented to keep royalty out of mischief. A cynical statesman is reported to have defended it on the ground "that you *may* have a fool for a sovereign, and then it would be desirable he should have plenty of occupation in which he can do no harm." Edward VII. is far from being a fool, but ministers may come to the conclusion that the old occupation be revived for him, if he goes on making alliances that threaten their majority at home and their friendships abroad.

There are some manners and customs that belong to human nature, and will always be found everywhere. It is said of this or that custom that it is Greek, Roman, or barbarous; for my part, I say that it is human, and that men contrive and invent it wherever the need for it arises.—*Joubert.*

Work

At Buffalo, the other day, President Eliot of Harvard reiterated an opinion that he had expressed before about work. "I believe," he said, "that long hours and hard work are best for every man. Work is the foundation of civilization, and work makes nations, as it does individuals. No man can work too hard or hours too long if his health will permit." Sentiments like these, expressed by Dr. Eliot before, had given offence to labor unions, and had brought down a good deal of violent criticism. He stuck to his expressed opinions, notwithstanding. What he said, as quoted above, with the reservation that he included, is sound doctrine, and ought not to conflict with the opinions of other sound thinkers, and probably would not so much irritate the trades-unions, which are all the time working for shorter hours of labor, if it were more fully expounded. He did himself expound his position more fully in a talk to Boston newsboys on February 1. His companion-speakers on that occasion were Mr. William J. Bryan and Mr. Samuel Gompers. He told the boys that the main satisfaction of life, after the affections of home, is in accomplishment, doing something, achieving something, and that there was more satisfaction in doing a thing than even in having done it. The work to be avoided was that which required the worker to do the same thing over and over again; the work to be desired was such as involved judgment, chance, and variety. He thought coalmining the more satisfactory as an occupation because the miner could not tell whether his blast would bring down half a ton or four or five tons of coal. He said the limit of health and strength was the limit of work, and if we exceed that we impaired our power to labor in future, and so deprived ourselves of joy and satisfaction.

Now all this is sound doctrine. The only way to have fun that is worth having, and have it pretty continuously, in this life, is to work for it. It is, of course, important to work at the right sort of a job, and to work on satisfactory terms. Men are right in fighting against overwork. They are right in fighting against long hours of dull, monotonous, stupefying labor at small wages, and against too long stretches of work that is exhausting. But to fight against work as an evil in itself is not sensible. To bind capable men with rules that hinder them from working hard while they are at it, and limit them to hours of labor too short for their energies, is revolting. Rules that make able workmen lazy are a ruinous mistake. The theory that the less work a man can give for the money the better for the man is also a mistake. The theory that the more money a man can get for his work the better for him is quite different. That theory, according to our human standards, is pretty sound. To work on that theory inclines a man to bestir himself, but work on the other theory (of the least work possible for the money) leads to the vice called "sodgering," to laziness, and a dwindling capacity for exertion.

Dr. Eliot's ideas of work are all right. They ought to be, for they are the result of half a century of pretty strenuous experiment. To one of his sons, whose health in early life was not good, he wrote that he must take courage, for there was much in life for him, even though he should not be able to work more than five hours a day instead of twelve or fifteen hours. You can take a detached sentence from one of Dr. Eliot's speeches and apply it to something that it is not applicable to, and make it seem illiberal; but no speaker's words can stand that sort of use. He is right about work; it is the most indispensable, the most helpful, medicinal, and remunerative thing in this world. It may be overdone, it may be underpaid, it may be misdirected; but in itself it is the best thing going, for it makes all the other good things taste good, and without it they either taste bad or lose their taste altogether.

The Law and the Penalty

To such of the students of evil as wish to understand its nature rather than to practise it, there has been nothing more dismaying than the apparent uncertainty and even inability of the law in the case of many offenders against it. Not only the law which is supposed to be administered in what are drolly called the courts of justice is of this faltering and erring effect, but the law by which a man of bad conscience judges and punishes himself, when there is no statute made and provided for his misdemeanor, is equally inoperative. It has been noted by those who have much to do with criminals that remorse is apparently more the effect of temperament than of responsibility, and that those feel it most who need feel it least. The guilty man is said to be more concerned in getting off than in lamenting his misdeed; and this fact, if it is a fact, has been turned to account by the agnostic science of a period which seems now closed, in disestablishing the notion of a moral government of the universe. That science discarded the old idea of Come-uppings in the affairs of men, and left the strongest to survive, without regret, by whatever means he would. It concerned itself with the physical and intellectual evolution of the race, and allowed the individual to wander in darkness as to what would happen to him if he did wrong, even what would happen to him from himself, or from the god within him. But there are signs that this sort of science has had its day, and there is an obvious return to some of the former ideals, especially among the psychological inquirers. These find it their business not only to ascertain new facts, but to revise the conclusions of science in regard to the old ones. The Soul is once more having a chance, and Conscience is coming back to its own, at least in the interest of the spectator. Whether it will come back a chastened and instructed conscience, or the sick and crazy thing it too often was, a Bourbon that has learned nothing and forgotten nothing, remains to be seen. What is certain is that it is meeting the recognition as a moral force which has been largely denied it for a generation past, and that it is being studied with an intelligence freed from theological preoccupations to fresh activity.

We think the pertinence of these apparently casual observations will be felt by the reader who turns from them to a book of extraordinary fascination, if not extraordinary importance, by the late Dr. Benjamin Howard, once of the United States army, the inventor of the system for resuscitating those rescued from drowning in use the world over, and a man of rare and wide experiences. Among his experiences none was stranger than his six months' sojourn on the island of Sakhalin, off the coast of Japan, where Russia colonizes the criminals that most other countries put to death, the homicides, namely, of every kind and degree. During his stay he was the eagerly desired guest of the governor, who naturally, in a community of three or four thousand murderers and murderesses, knew how to enjoy the society of a man who had not shed blood, and welcomed him to all the secrets of his prison-house. These he has frankly and fully imparted in his book, "Prisoners of Russia," together with the observations of a man of science not trammelled by the tenets of agnosticism, if we may so suggest the nature of a bigotry once real enough. He was a man of religious convictions of a sane and scrupulous sort, and in his account of the shipwreck which ended his departure from Sakhalin there is record of a religious incident hardly less than startling in character. But the great value of the book is its testimony to the wisdom of the Russian government in its treatment of the blood-stained colonists of the island, who even when they kill one another cannot be capitally punished, unless knouting is worse than death. From Dr. Howard's description of the single case of knouting which he witnessed it might well seem so, but for the most part the murders among the assassins have to be visited with penalties tempered by a careful study of each case. A woman, for instance, who had killed her husband, had simply to be let alone, and was not even forbidden to marry again. The authorities, except for the military guard, were in fact at the mercy of the colonists, whom they treated with an enforced, when not with a voluntary, leniency in all their relations with them, such as would naturally be inspired by the reflection that on all those occasions when they could not be safeguarded by soldiers their lives were in the hands of their cooks, house-servants, gardeners, wood-cutters, and laborers of all sorts.

Yet the lot of the murderers of Sakhalin, as Mr. Howard saw it, was not a happy one, nor free from those penalties which the sense of guilt was once supposed to inflict. To his eye they were much like other men and women; they did not look the part, but presented the same aspect, varied by temperament and training, as people present everywhere. They did not seem better or worse than the human average, and they apparently did not always suffer in their minds because of what they had done. In their lonely hell they were as comfortable in body and spirit, while about their work, as the members of any other community; and yet they were not free from the consequences which, in an imaginable moral government of the universe, must follow sin. It was at night that their torment began, after the first sleep of physical exhaustion was broken, and they woke to the memory of their crimes. In the awful chapter on "The Remorse of Murderers," the author of this powerful book offers a picture of anguish and despair which takes the color from anything that the poets have imagined of human misery. In the ward where he passed the nights which he devoted to the study of them, he found the murderers all "light sleepers," and he witnessed the terrors with which they started from their dreams toward morning to take up the burden of consciousness which nothing but the exhausting toil of the day could lighten for them. He does not give the clinical notes he made of these facts, because they fill a volume, but only his conclusions from them, and he says nothing to raise the horror of the reader to whom he offers them. In his almost coldly dispassionate record, reduced as it is to a few general facts, science comes again to the support of religion, and teaches that within the soul of guilt, if not without it, there is the potentiality of suffering such as no pen or pencil has ever portrayed. It rehabilitates the old notion of remorse, and re-establishes the law in that dread sovereignty which cannot withdraw its own decrees.

Politics in England

By Sydney Brooks

LONDON, *January 21, 1903.*

PARLIAMENT reassembles on February 17, to find the political situation still in its transitional stage. The Boer war is over in every sense. There is no South-African issue any longer, either for electioneering or for Parliamentary purposes. True, a commission is sitting to inquire into the conduct of the war up to the occupation of Pretoria; but it meets behind closed doors, its evidence is taken in camera, and nobody gives it a serious thought. The man in the street and the man in politics are equally pleased to have the whole business put out of sight and forgotten. All parties are satisfied with the work of reconstruction; no one wishes to recall Lord Milner, who, I may add, will stay in South Africa until Lord Cromer's place is ready for him; everybody applauds the admirable use to which Mr. Chamberlain is turning his South-African tour. There is, in fact, even less difference of opinion among Englishmen on the main lines of South-African policy than among Americans in regard to the Philippines. Politics have again become domestic, and, so far as one can see, will remain so for the next few years.

People turn to them with fresh eagerness, now that the confusing influence of the Boer war is withdrawn. At the next election the government will be judged, not on its South-African record, but on its domestic policy—on its achievements in Ireland, on the corn tax, the Education bill, and so on; and the Liberals, for their part, are refurbishing their old armor and wondering whether "one man, one vote," and the disestablishment of the Welsh Church, and an attack on the House of Lords will prove a winning platform. It is a good time, then, to consider the strength and prospects of the parties and the issues for which they stand.

The question that is really the pivot of English politics is the one that Englishmen least like to discuss—the question of Ireland. Home rule, like free silver, is as dead as Queen Anne—except at election time. Then the Conservatives insist that it is still a leading plank in the Liberal platform, and the Liberals have neither the courage to throw it overboard nor enthusiasm enough to make it a battle-cry. American Democrats will understand and sympathize with their dilemma. They cannot bring themselves formally to repudiate a measure they have once inscribed on their banner, yet they know, and confess in private, if not in public, that so long as it remains there defeat at the polls and failure in Parliament are inevitable. The country as a whole is absolutely against home rule, and never expects to see a third Home Rule bill introduced. Yet official Liberalism, in the persons of Sir Henry Campbell-Bannerman, Sir William Harcourt, Earl Spencer, and Mr. John Morley, insists that the party is still tied to the issue that Mr. Gladstone raised. This is what Lord Rosebery disputes. He takes the ground (1) that Mr. Gladstone's bills of 1886 and 1893 are by universal assent dead and buried; (2) that the Irish leaders have definitely repudiated their old alliance with the Liberals; (3) that Ireland has been given a fuller share of local self-government than even England enjoys, and that time is needed to see how the experiment works; (4) that the Nationalists are now demanding not what Mr. Gladstone was willing to give them, but an *independent* Parliament in Dublin; and (5) that Mr. Redmond has just declared that the most important Irish problem of the day is not home rule, but the land question. For these reasons Lord Rosebery wipes home rule off his slate. He would be willing to inquire into and reform the system of Dublin Castle rule, and he seems to look forward to a time when the whole question may be taken in hand "with the concurrence and patriotism of both parties"—which is about as Utopian as Mr. Roosevelt's idea of "taking the tariff out of politics"—or else to a time when the growing congestion of Parliament makes devolution necessary and a larger measure of autonomy is devised, not only for Ireland, but for Scotland and Wales. At any rate, he is against home rule; nor will he consent to sit in any Liberal cabinet that is only able to keep itself in office by a deal with the Irish Nationalists.

Who stand behind him in this resolve? Mr. Asquith does, for one. So do Sir Henry Fowler, Mr. Haldane, and Sir Edward Grey—and these are the men to whom belongs the future of Liberalism. Their programme of sane imperialism and social reform is the only one that can make the Liberals an effective party once more. Their strength in Parliament is not nearly so great as the Campbell-Bannerman following; but in the country, among the rank and file of Liberals, I should judge it to be equal, if not greater. Rosebery agents are scouring the country quietly but efficiently, and the "Liberal League," which is their organization, is turning out excellent pamphlets by the thousand. Recruits come in daily, and there can be little question that Lord Rosebery's effort to educate his party, or at least to lift it out of the rut of Gladstonianism, will in the long-run prove successful. On most questions he and his followers work side by side with the Campbell-Bannermanites. Both sections, for instance, opposed the Education bill and the tax on corn. Where they differ is in their attitude towards home rule and towards the Empire. Most Liberals answer well enough to the description of "sane imperialists," but there exists among them a rabid minority of Little-Englanders, to whom Campbell-Bannerman has often capitulated, but with whom Lord Rosebery will hold no dealings whatever. The taint of pro-Boerism, of indifference to the Empire, and of unwillingness to accept and face its responsibilities, is what, above all else, he is trying to remove from the Liberal party.

Then there is the personal factor to be considered. Lord Rosebery is by all odds the most inspiriting and attractive figure in English politics. Campbell-Bannerman is a respectable, well-intentioned man, with about as much driving power and magnetism in him as in a mountain of putty. The country feels a sort of affection for him as for a man palpably trying to do his best in a very difficult situation, but it never thinks of him as a leader, and should a turn of the wheel put him in the Premiership, a good-humored, rather hopeless smile would run from Land's End to John o' Groat's. Nor are his immediate lieutenants the sort of men who win a following. Mr. Lloyd George may become a power in the future, but he is not one yet. Harcourt is a first-class fighting man, but his influence has long passed its zenith; Morley is too cold and austere, and Bryce too professional, for English taste. On the other hand, in Asquith, Grey, Fowler, and Haldane, who are Roseberyites to a man, the country has every confidence; and while Lord Rosebery himself is pretty widely suspected of a lack of firmness, all are captivated by him, admire his brilliant many-sidedness, and prize him as one of the most dazzling noblemen in English history. The personal factor, therefore, makes much more strongly for Lord Rosebery than against him, and if he could only take off his coat a little more vigorously and convince people that he is back again in politics for good, that he wants the leadership, and means, if possible, to get it, he might, at the next election, if not lead the Liberal party to victory, at least put it on a new footing. But with Lord Rosebery there is always the chance that he may grow bored or disgusted and throw up the sponge at the last moment; and this uncertainty makes it almost impossible to predict the future of English Liberalism with any confidence. Supposing, for instance, the Liberals were returned after the next election in such force that the addition of the Irish vote would give them a working majority. Campbell-Bannerman would at once make a deal with the Nationalists, secure their support by yielding to their demands for Irish legislation, just as Gladstone did, and so form a cabinet. Would Lord Rosebery, Mr. Asquith, Sir Edward Grey, and so on refuse to accept office in that cabinet? They say they would refuse—or, at least, they say so in private; and at present it is undoubtedly their determination. But office is sweet, and the futility of their position, should they stay outside, would be rather marked—and, on the whole, one may doubt.

The question, of course, is not one of immediate moment. The Unionists still command in the House of Commons a majority of 130 over the combined forces of the Liberals and the Irish Nationalists; and the House of Lords, as usual when the Conservatives are in office, is little more than a chamber for registering and ratifying, not for revising, the decisions of the government.

But this majority is far from representing the actual strength of Mr. Balfour's ministry in the country. It was from the first a factitious majority, won by appealing to the patriotism of the electorate on the ground that the Boer war was over and that the government which had conducted it deserved a new lease of power as its reward. That was in November, 1900, eighteen months before peace was really signed. Since then much has happened to weaken the government's position. The "swing of the pendulum," the reaction after the strain of the war, both tell against it. The Unionists have already had seven years of office; they will have had ten or twelve by the time the next general election arrives. After such a turn in power, the desire to "give the other fellows an inning" is always strongly felt. Moreover, the government has done little to make itself popular. Its two great measures so far are the Education bill and the corn tax, and both are condemned and resented by the bulk of public opinion. It has lamentably failed in Ireland, and it has repeatedly—the Buller episode, for instance, and the alliance with Germany—run full-tilt against the unanimous convictions of the country. There are not a few experienced prophets who already talk of the Education bill as Mr. Balfour's Moscow. The people, as I have said, dislike it, believe it, on the whole, to be a measure of retrogression and not of progress, and have a vague idea that it does more for the Church of England than for educational efficiency. There is likely to be more than a little trouble in its working. Not that the Dissenters will carry out their too-valorous threat of refusing to pay rates. That was mere electioneering, and not worth a moment's serious thought. But the Act makes vast changes in the mechanism of education; it throws fresh and most important, as well as most difficult, work upon the local bodies, and at the start, at any rate, a good deal of confusion and friction is inevitable. Out of all this the Opposition will be able to make a good platform case.

The Book of Months

By E. F. Benson

JULY

I HAVE told you about the May of three years ago, and the June of two years ago, because those two months are so dedicated in my mind to what happened then, that while the months are running, I cannot free myself from them, and live in the present year. Have you not certain such dates in your year, days on which you live not on the day that is passing, but on a certain day in some year long passed? There is a foolish proverb that says that those people are happy who have no history. In other words, it is better to be a cow than a man. I cannot see it. But if it will not bore you, and if, in fact, my May and June seem human to you, I will tell you quite shortly a little more of them. If, on the other hand, this does bore you, leave out a little that follows.

Believe me, death is not so terrible; what is terrible is the thought that it is so. But learn how false that thought is, and death will not terrify you; for what lies behind? God, and He who died for us. And, if I am wrong, if it is not so, nothing whatever seems to matter, and we can look on death as a flea-bite. But, believing as I do, that beyond death is God, when lives have ended, as those of Margery and Dick, so utterly without reproach, when two souls have been so splendidly human as they were, it seems that God must have been knowing what he was about when he allowed that bullet, blindly illogical as it may seem to us, to end her life as surely as it ended his. I can understand the existence of a life-long regret and bitterness, *if a thing had not been well done*, if a man died from obvious carelessness of any kind, or from weak persistence in a bad habit—then one might say "if it had been otherwise!" But he had done his duty, and his duty implied death. And his death—I only grasp dimly after what I believe to be true—implied hers. Does this seem to you a stoical inhuman view? Ah, believe me, it is not so. It would have been very easy for one who loved them both to take another point of view, and find life dull, objectless, without interest or merriment. But — but would that have been better? Would it have been better to have turned aside from all other things, saying, "I cannot," rather than to have steadfastly said, "I can," until—well, until one could? Some day I know, on that day when Slam's kitten stands between earth and heaven in the midst of the four pines, and Slam says, "Oh, isn't it nice?" there will meet me one who died on the African uplands, and one on whose grave the sweet peas are yearly odorous, and we shall know each other, and God will look on the greeting we give each other, well pleased. How that will be I cannot guess; I am only sure that it will be so. Atheists and dyspeptics (the two are much the same) may laugh; and if they enjoy their laugh, so much the better for them.

So I am living now at the outskirts of the town where Margery and Dick lived together for one month of their lives, and on this morning of the 1st of July, I know that May and June have ended, and go back to the ordinary little daily affairs I had been telling you about up till the end of April. Many great little things have happened, and the extraordinary conduct of the jackmanni, which the next-door cat once disinterred, seems to me to claim the first attention. It had been planted against a warm, southwesterly wall; it had been pampered like an only child; for yards round the soil had been enriched; its dead leaves were diligently picked off. I really did all I could to make it happy, but instead of being happy it sulked. It did not die—that would have been a regrettable incident, but, anyhow, a proper decisive line of conduct—but it sulked. It grew a little for a week, and put out several leaves; then it couldn't be bothered, and the leaves withered again. Then it sent out a long tendril across the gravel-path, instead of climbing up the stick that led to the house wall. I coaxed that tendril gently back, gave it an alternative route to the house wall, but nothing would please it. Finally, I tied it to the alternative route. So it died. I was willing to give the thing every facility for behaving itself, so I transplanted it to a different place, where it got less sun and more wind. Also, I tried watering it less. For a week it appreciated this enormously, and set about growing in earnest. Then one morning I suppose it got bored again, and began to wither slowly from the top downwards.

Now I could not spend my life in moving one absurd jackmanni from place to place, though I have no doubt that if I had done so, taken it to stay in the house, given it champagne one day, coffee the next, and perhaps some fruit or pudding on the third, it would have flourished. But I was tired of being kind, and towards the end of May I took it up for the third and last time, planted it on a north wall, where it never saw the sun and was starved by a thick growth of ivy. It was further shaded by an apple-tree, growing about a yard from it. Then for a month I carefully refrained from looking in its direction; it had no water, no attention, and was put in the most undesirable situation. To-day, I see it has leapt across to the apple-tree, up which it is diligently climbing, and a cluster of purple buds are showing among its green leaves. Certainly severity is needed when you deal with jackmanni.

To-day, on this 1st of July, a hot day, full of the odors of complete summer, I sat for an hour in the big wooden shelter that stands on my strip of lawn, and squared accounts. It happens to be my birthday, and I am thirty years old, no less, and as I added up profit and loss I was honestly puzzled how to make my affairs balance. For if one sits down by oneself, with no conceivable object in the world but to see how one stands, it is probable that one is moderately honest with oneself, for to be otherwise would be like cheating at patience, a form of villainy which has never in the least tempted me. With regard to the big item on one page, "*What good have you done?*" and on the other, "*What harm have you done?*" I am bound to say I did not much concern myself, for to add up, even for one's own information, on what rare occasions one has behaved decently, is a priggishness of which, so I humbly trust, I am incapable, while to add up all the harm one has done would require a great deal of time and would be productive of no good result whatever when it was added. For, short of being wicked, the next worst way of wasting time is to devote one's wits to thinking how wicked one has been. To repent in a horror of wickedness and a burning fire of contrition, is one thing; to sit down in cold blood and count missed opportunities is another. The one is on certain occasions, as when one passionately desires to break an evil habit, inevitable and salutary, but to sit at ease in hell is worse than sitting at ease in Zion.

No, it was not with the big items that I concerned myself. I wanted to see what cash I had in hand, rather than examine the main account, the bank-book of credit or deficit. Where was the small cash of thirty years to be found—and God in His mercy give me a big loan? Indeed, I do not wish to be profane, nor in intention am I. No doubt it would have been better to have felt an agony of contrition for all the bad things I had done and for all the good things I had left undone. Daily I have thoughts which for no sum mentionable would I reveal to any one whose respect I in the smallest degree desire to retain; daily and hourly I make some sort of brute of myself, not necessarily in deed, but anyhow in thought. Daily I say to myself, "If only there were not some sort of decency to be observed, social or moral, what an excellent time I could have. If only the Ten Commandments—hang them—did not awake some glimmer of reflection in this muddy pool of my soul. I should—" Any one may fill in the next according to their own shortcomings. In the same way, on the credit side, I believe I should be a better man if I lived on the bare necessities of life and gave the rest to deserving charities. I had no earthly business, for instance, to buy the charming table at which I am writing when that which I spent on it would have fed a starving family for months. Even the jackmanni, which has cost me a week's work, what with transplanting and catsprinting, would irrespective of this have given several meals to a penniless man, for it was big when I bought it. All this, in my meditation, I took for granted. I did not concern myself with radical changes in my nature; I did not repent of the table and the jackmanni, nor of the dinners I ordered, nor of the wine I have drunk, nor of the hours I have spent in mere amusement. In the main—it was not in the least an edifying performance. I accepted the general lines of myself as being what they were. What, in fact, I wanted to examine was not my nature, but my policy and to this effect.

Two great things have happened to me,—the one a great joy, the other a great sorrow. The great joy was when Margery thanked me with her dying breath, though Dick's name came after. The great sorrow was when she died. Had she lived, though I do not for a moment believe I should ever have been her husband, nor do I believe I should ever have asked her to be my wife, I should have had some sort of mission, some constant pursuit, namely, to see that she was as happy as it was in my power to make her. Had I been a telegraph-boy I should have done well if I had delivered my telegrams without loitering; had Margery lived I should have done well to have given my life for that. But she did not live, and I am too old to be a telegraph-boy. But I have had a great joy, and it is great because she did not know how hardly it was earned. And that, if for pity's sake we except a sort of suburban reputation as a writer, is my record. That is the sum earned and the credit already given in thirty years. It does not look at all promising when the addition comes.

Hesitatingly as I sat in the shelter, I put down another item to the sum earned, which is this: I still have a childlike pleasure in little things; I can play soldiers with absorbing zest; I can imagine that I am a white man in tropical forests who has to get through with tricks that presuppose an almost pitiable stupidity on the part of my enemies. I can devote twice as much energy to the flowering of a nasturtium as Mr. Pierpont Morgan thinks it necessary to give to the formation of a company with a capital of $30,000,000. That, with all deference to financiers, is an advantage. My nasturtium, in fact, implies as much energy as his colossal schemes, and it does not hurt anybody, except perhaps the nasturtium. Meantime, it unloads me of my force, and, considering what harm force can do, it is a great saving of suffering to expend it

harmlessly. If I was richer I would have a string quartet attached to this villa, and I would spend my force in devising programmes and reconciling the second fiddle and the viola. But I am not, and the string quartet have yet to be engaged. I know who I shall have, and I shall be much disappointed if they have made other engagements. For happiness consists not in getting a thing, but in hoping that one may get it. With satisfaction walks surfeit. But to keep your ambition steadily a little ahead of your possibilities is to be constantly eager. There is nothing in this world which, if I get, would make me happy. There are a million things in the world which the desire to get and the hope of getting make me happy. And it is this which a man sets out to seek when he falls in love, which is the best form of happiness desired in the world at large, and, thank God, the commonest. If man and woman knew *all* of the man and woman they sought would they be content? On the contrary, the world would be full of spinsters and bachelors. It is because man is not certain, because there are "silver lights and dark undreamed of" that man seeks woman, and woman man as the ultimate possible happiness. And for the same reason one plays silly games of croquet and bridge.

To want, to want! Do you know Blake's picture of the two little men setting up a ladder on a bare headland towards a crescent moon. "I want! I want!" is what the artist wrote beneath. The two little men wanted—they put a puny ladder up towards the moon. That is the genius of the man, for through all the bad drawing and faulty perspective the "I want! I want!" is clamorous. Others have attained. God help them.

Oh, I stretched out unsatisfied arms beyond the limits of the world. Whatever I get becomes in the getting of it dross. It is not dross really; it is the fault of my having got it, which makes it dross to me. It is mine; therefore it is no use. Let the Great Bear tumble down from heaven, and let me have these seven stars lying in my hand, what use is it when they are there? Cast them out, give them to a beggar, and make plans for Sirius. Of all the heartaches that of Alexander, when he sighed for new worlds to conquer, is the most human. Yet the typhoid conquered him by Tigris. And his ambition was that of all of us in our degree. The man who has bought an empire or won it, wishes for more empires, and the spinster who has seen her canary hatch out one egg and eat the other, says, "Oh, that there had been two young ones!" Vanity of vanities; all is vanity! And because this preacher is not wise, but knows what is the matter with himself and many others, he gives these lamentable reflections on his thirtieth birthday.

Pray, then, that you may continue to want, not that you may continue to get, for the getting in a manner comes of its own accord, and it is the ability to want that we must keep alive. We may feel quite certain that the world is big enough: there are plenty of things to want if only we have the power of wanting. For wanting means first this, the *capacity of growth;* to want no longer means that one is old, old not only in years (indeed, such an old age may come to an unbearded lad, in which case we laugh and say, "Look at that cynic of twenty"), but old in fibre, unelastic, set, rigid. Nor does it, I think, much matter what one wants—again I beg the patient reader to remember that I am not talking of the great spiritual need—as long as it is not harmful. But, for mercy sake, try to be keen about something.

At this point my reflection, to tell the truth, touched me somewhat on the raw, for what have I wanted every day for the last two years? That which I cannot get—Margery. And yet how shall I say that I cannot get her, when, if I knew all, I might know that these silent daily longings of mine have brought me perhaps a little nearer to that dear spirit, that without them I should have been a little more ill-tempered, a little nastier than I am. Anyhow, I want to want: for I do not yet acquiesce, I cannot yet believe that the world holds nothing for me but that. Here am I walking along this road of life. All down it I meet every day new faces, new people, new factors. One sees but a few yards ahead: then there is a corner, and round that corner will come others, wishing like myself for that which their soul needs. Oh, hurrying footsteps, coming ever nearer, is there not one among you all that will stop when you reach me and go no further in your quest? Is there not one which shall, while still a great way off, strike on my ear as distinct and utterly different from all others? One which I shall recognize, though I have never yet seen her to whom that step belongs. Among those miles of eager human eyes, shall not some day mine eyes seek other eyes, and find there that which has been predestined for me by God? O, Margery, my dear friend, should I find her, how you will welcome her, for her sake and for mine when we meet in the everlasting habitations!

Another train of birthday reflections led to this conclusion: "Give up the pursuit of anything which seems to you of doubtful gain!" For there are so many indisputably good and real pursuits in the world that it cannot possibly be worth while pursuing what may not be wholly good and may possibly be not wholly real. Here I have a certain small right to speak, for in the last year I have given up something which seemed to me of possibly doubtful gain, and I have found that it was a wise step. That which I have given up is singularly known as "The world." I once thought that it was a good thing to see hundreds of people, to multiply acquaintances, to be able to say "Charming party—was there, and ——, and ——," meaning people who really concerned me as little as I really concerned them, telling myself (even then I think I had some secret notion of conscience-solving), that to live in the babble and roar of the world was stimulating. So no doubt it is, but a stimulant is not necessarily healthy. Thus it seemed to me (one can only speak for oneself) to come under the head of "doubtful gain." But it is a quite certain gain to study the habits of the ill-content jackmanni—I am sorry for introducing that again, but I cannot get over it—it is a quite certain gain to read a good book, to try to learn the fugues and preludes—provided, of course, the incidental pain to others is not more than they should reasonably be asked to bear—to be in the open air, and, above all, to do your work, whatever it is. If you have none, get some. It hardly matters at all what it is, so long as it is harmless. But merely to go from dinner to dance is a doubtful gain: you would do better—at least I should—to talk to a friend for half an hour, and then if you wish for the crowd merely, as I often do, walk for ten minutes up and down Piccadilly. Now if that does not give you the food you want, you may be sure you will not find it anywhere else.

Another most fascinating hobby, though I expect it is extremely easy to give too much time to it, is the pursuit of health. Certainly it is more easy of accomplishment to most people than the pursuit of happiness, and the one to a very large extent implies the other. For the pursuers of happiness, for the most part, are Hedonists; they think, and herein err very greatly, that to multiply pleasures tends to make one happy. In point of fact, it does nothing of the kind, for pleasures are to some extent obtainable by most people, whereas happiness is almost completely a matter of temperament. And the happy temperament cannot possibly have anything to do with pleasures; no amount of pleasures will foster it at all, whereas if you have got the happy temperament, almost everything by that mysterious alchemy is turned into pleasures, even as a rose-tree turns that which its root-fibres suck from the earth into blossom. And certainly health is a great help to happiness, for to be well, really well, makes the mere living, as Browning says, a joy, and at times it seems enough to be alive. For which would you rather be, a bilious man with all the pleasures of the world at his disposal, or, well, with "the book of verses underneath the bough," and a thrush maybe singing of what should be above you?

Keenness of perception, in fact, I soberly believe to be the greatest cause of happiness (and so necessarily of pleasure, since happiness turns the most trivial incidents and sensations of the moment into pleasure) that is within our reach. And so inextricably is the mind and soul bound up with the body, that, apart from great spiritual enthusiasm or ecstasy, this keenness of perception can scarcely be reached except through a certain cleanly healthiness. In fact, it presupposes a temperament of almost divine serenity to enjoy a day on which one has influenza, whereas there is a sort of health which is probably within the reach of most people, in which from the heightened keenness of perception it brings with it, the smallest things are causes of joy or laughter.

This may sound a mere vain piece of optimism, but the truth of the matter is that that three-quarters of the world are not nearly so well as they can and should be. Almost everybody, in fact, is greedy and lazy, and laziness and greed are more certain progenitors of discontent than any other ancestors I can think of. To eat rather more than one wants, to drink rather more than one should, is to feel disinclined for one's work or one's pleasure. And to be disinclined for a thing means, with most of us, to miss the pleasure of the doing. But to be inclined for work or pleasure implies to find a nugget of happiness therein, for it is this alchemy of inclination which turns trivial incidents to gold, this keenness which turns the dross of mere achievement into happiness.

It is thus that the happy temperament may most readily be cultivated by those who have not naturally got it. Some have it, a royal birthright, worth more to its possessor than the piled crowns of the great powers, but by others it has to be cultivated. And to cultivate keenness of perception by means of health is the simplest and most practicable method. And the region in which ill health mainly resides is, to put it frankly, the liver, because, as a rule, we eat and drink too much, avoid air as if it was strychnine, and do not take enough exercise. Thus my prescription is worth trying—eat and drink less, open your windows more, and, if your work permits of it, be out-of-doors more. It may, of course, be easily possible that to do your work properly you have to sit in stuffy rooms, neglect your health somewhat. If so, let your health take care of itself by all means, and get through with your work. But short of that, let your health receive the attention it deserves. It is a very sound investment, and will yield you excellent returns.

To be Continued.

The Genius of Henry James

THE world is not so tardy as it used to be in paying tribute to literary genius. The thoroughness and general method of criticism nowadays enable people to recognize and assess at something like their true value the original thought and art of a writer while he is yet existent, and even to watch with understanding the progress of his work before it reaches its climax and finality. But there are still, and probably always will be, writers who have to wait many years for their due meed of recognition. These are the men of complex and highly individual nature, of uncommon psychological subtlety, of original creative faculty, of innovative manner and method. Of such is Henry James. He has now been before the public for over thirty-five years, and though his potent talent has long been recognized both in England and here, it is only of late that his powers have been adequately estimated and proclaimed. The first month of 1903 must have been one of great gratification to Mr. James, for in it he attained to something like an apotheosis. The *North American Review* departed from its traditions to open its pages to the first instalment of his new novel; Mr. W. D. Howells, the foremost of American men of letters, wrote in the same publication a fine appreciation of his qualities; the *Edinburgh Review* devoted a long article to a complete survey and analysis of his work; and the London *Saturday Review* paid him the compliment of discussing his literary delinquencies.

The *Edinburgh Review* article is a good example of English criticism at its best. It is thorough-going, honest, dispassionate, but sanely enthusiastic, luminous, penetrating, full of thought and distinction without heaviness. One's only regret in reading it is that, in accordance with the practice of the *Review*, it is not signed. One is curious to know who could have done such a fine piece of work.

Considering first the mere bulk of Mr. James's writings, the reviewer says:

> The amplitude of his work, the sheer space of shelf which his novels cover comes as a first surprise to the collector. One has somehow regarded him as the reverse of a prolific writer, and the pleasures conferred by his successive volumes have always seemed too far apart; yet there have been published for the English reader close upon a hundred novels and tales, and others still are beached unprofitably in the stagnant harborage of magazines. Such an output is clearly not that of a man who regards literature as an amusement, and it is very interesting to observe that Mr. James's fecundity has increased with every decade of his working life. . . . He has throughout adopted the part of the social recorder, and only for the briefest season has his attention been diverted from his own time. So close indeed has his attention been that the period of which he writes is most often that in which he is writing, an intimacy in association which gives his work a freshness of color like that of a canvas painted in the open air.
>
> Freshness of color would perhaps be by some critics considered the quality most conspicuously absent from his work, but by freshness we do not mean that false air of reality which is the result of superficial imitation, and may be produced so cheaply. The freshness of Mr. James is an effect of atmosphere, not of outline.

The reviewer divides Mr. James's literary career into three periods, the first nine years (in which America supplies the themes), the next fifteen years (in which the interest is mainly European), and the interval up to the present time (in which England is almost exclusively the scene of action).

Of the first period it is written: "In his earlier stories, which are mostly short, there are but few hints of the line along which his sympathies were to travel. . . . Except the *Pilgrim*, there is nothing in this nine years that would be seriously missed from the author's work; nothing, despite retouching, which produces its essential features."

The second period is characterized in the following manner: In this period "lies the greater part of the labor by which Mr. Henry James is popularly known, if, indeed, one may without suspicion of irony use such a description. It contains nine of his novels and some twenty-seven tales, and only in some of the slighter of these could the casual consumer of fiction pretend to discover any esoteric intention or other obstacle to the enjoyment of an easily exhausted mind. They have just that unreality which the public desires, the note of romance; sentiment and character are fitted with that consistency which gives the novel such an advantage over life; opinions are held with a clarity, and expressed with an accuracy which are of so great assistance in the development of character: and the dialogue has just that appositeness and cohesion which our ears are so accustomed not to hear. In short, they have all the qualities that should commend them to a public which is very ignorant and very incurious of life, and one would have expected for them a far greater success even than they commanded. The chief preventive to such a popularity is a delicate and exquisite style which, because it tried to achieve an actuality to which they were unaccustomed, the critics called artificial. Style in every country of the world warns off the 'stupid,' but it seems to possess a particular irritation for English and American readers. It is, to their appreciation, a sort of glittering and wholly unnecessary envelopment. Indeed, they consider style so distinct from creation, that one might imagine they supposed it to be applied when the work was finished, like varnish to a picture or 'frosting' to a Christmas card."

The third period was inaugurated in 1890 with the publication of *The Tragic Muse*. "The inauguration," says the reviewer, "will not be apparent to many, for the book is not a whit 'freer' than any of its predecessors; but it is strikingly nearer the ideal of 'an immense and exquisite correspondence with life.' There is a beautiful looseness, an inexpectancy in the handling. The story wavers, advances, retreats, and ceases in the very fashion of life itself. Its cohesion suffers naturally in consequence. It reads, indeed, in places like a very splendid first attempt. The author seems to be trying to write it in spite of his art, to be aiming at a simplicity, a closeness to life, which is being continually clouded by the charm of form and phrase which he is as yet unable wholly to transfuse with his new intention."

Concerning this same period the reviewer further remarks:

> He has in these stories of his later years at last come into possession. He had for long been driving in the wide rut of fiction where so many wheels go. He had done work of a quality which, however superior to that of his competitors, was still of their kind. It portrayed, to use a term which but imperfectly defines it, the outer drama of life, the expression in circumstance of character, the working out of temperament. But what he now depicted was the inner drama, the impression of circumstance on character, the working in of fate. He had at last "come into possession," and of a field completely his own. The intimacy of his new presentment, the delicate tracing of motive and impulse, and susceptibility to the involutions of the mind, make his old work seem almost superficial.

One of the most distinctive of Mr. James's later efforts is *The Awkward Age*. "The book," says our reviewer, "is confessedly a portrait gallery," and Mr. James brings to the filling of each frame the ultimate development of the art of vision.

How completely such vision is an art, an art acquired from the observations of laborious years, one realizes by studying its evolution. In his earlier work he draws directly from the life. He is particular as to clothes, gait, the carriage of a head; he gives the profile, the relief; the exterior as exterior. Gradually as he progresses the outside ceases in itself to interest him; it would be almost impossible to "dress" his figures, there is scarcely a hint of period; he renders the outside only so far as it is significant; the exterior as interior. Finally he almost abandons direct portraiture; rendering by a few lines enough, but only just enough, to keep the figure in its place, and providing everything needful for its realization from reflection only, that is from its effect upon the other characters in his canvas.

Surveying again, in his final pages, the whole of Mr. James's work, our writer says:

> It is so various, yet it is so uniform; it covers so wide a space of life, and yet so narrow a space of manners; it is so communicative, and yet it is so reticent; it deals with such tremendous issues, and yet seems always to make them small. Often only the intensity of one's admiration makes deprecation impossible: one's wonder at his method prevents a challenge of his mind. He has done so much, so amazingly much, and yet he makes one feel so acutely his omissions. He knows so intimately the human heart, he has unravelled such a complexity of human motive, yet he has only once painted in woman an overmastering passion, and his analyses of motive have taught us chiefly how much we do not know. He has shirked no segment of the social circle, he has painted the magnificence and the pathetic meagreness of existence, yet he has scarcely drawn across one of his pages the sense of its struggle, that endless groan of labor which is the ground bass of life.

How great Mr. James's achievement is, concludes the reviewer, one is profoundly conscious after traversing, for the purposes of a full study, the entire spread of his work without any sense of satiety or of iteration. "There is no more genuine proof of power, of originality, of imagination, than this unfading freshness, delicacy, and variety in remembered work, and against all that has been written of those qualities in these pages, one can but set a disinclination, perhaps a disability to handle the naked issues of emotion, and too frequent a tendency to immerse his drama in a saturated atmosphere of convention. That, however, is a defect of his qualities, a determination to contrive 'an immense correspondence with life,' and he has so completely succeeded as to have added a new conception of reality to the art of fiction. If he has dropped a line but rarely into the deep waters of life, his soundings have so added to our knowledge of its shallows that no student of existence can afford to ignore his charts. He has lived, as it were, in the chains with the 'lead' in his hands, intent on definite knowledge of the channels and shoals of the human heart, where so many another pilot has been content to steer by the mere appearance of the surface water. And to the pleasure he has given us by his sketches of the beauty and variety of that enchanting coast must be added gratitude for such a diversity of enlightenment on its perilous approaches as he alone, of those who have studied it, seems able to supply."

Books and Bookmen

MR. J. M. BARRIE is decidedly a writer of surprises. If *Tommy and Grizel* was more in the nature of a painful surprise, the author has certainly recouped himself in *The Little White Bird*. Again he has taken us to the Land of Make-Believe, and verified the saying of a famous French critic that genius is the power to be a boy again at will. Like *The Little Minister*, his latest tale begins to end well; and again he lets himself fall in love with and fondle and smile at his puppets. If we mistake not, the title originally announced was *Adventures in Kensington Gardens*, now the subtitle. Mr. Barrie has lived in Kensington for a number of years since taking up his residence in London, and the Gardens have been his favorite rendezvous for a silent pipe and a romp with Porthos while ruminating over the Little White Bird's strange adventures. Mr. Barrie never goes far afield for his subjects. Kensington Gardens with its little nursery governesses and perambulators; the Reform Club in Pall Mall, with its retired officers and inconsiderate waiters; Gloucester Road, where he lived until recently, with its little yards called gardens, so small that if you have the tree, your neighbor has the shade; the dear old Lowther Arcade in the Strand where they went for David's rocking-horse, now vanished; and Porthos, the magnificent St. Bernard which was the pet of the Barrie household for many years—nothing could be more familiar to the novelist, yet as it comes to us through the alembic of his imagination, nothing could be less commonplace. We speak of Porthos in the past, for when we saw him last spring he was reduced to a shadow of his former canine glory, and was not expected to last much longer. "Porthos" he was in actual life, and as Porthos Mr. Barrie has immortalized him in this fresh surprise of his genius.

Some attempts have been made to trace the germ of Mr. Barrie's play, "The Admirable Crichton," which is one of the season's stage successes in London. They have been unsuccessful for a simple reason, says Dr. Robertson Nicoll, an intimate friend of the author: Mr. Barrie's idea is his own. "But if I did not know this I could make perhaps a more plausible contribution to the problem than has yet appeared. In *Blackwood's Magazine* for August, 1883, Mrs. Oliphant had one of her fluent and pleasant papers on James Ferguson, the astronomer. Ferguson was a Banffshire boy, and pursued knowledge under great difficulties. However, one of the local lairds gave him a hand, and introduced him to his butler, Alexander Cantley. This butler was in every respect an extraordinary man. Ferguson says: 'Mr. Cantley, the butler, soon became my friend, and continued so to his death. He was the most extraordinary man that I ever was acquainted with, or, perhaps, shall ever see, for he was a complete master of arithmetic, a good mathematician, a master of music of every known instrument except the harp, understood Latin, French, and Greek, let blood extremely well, and could even prescribe as a physician upon any urgent occasion. He was what is generally termed self-taught, but I think he might with much greater propriety have been termed God Almighty's scholar.' Mrs. Oliphant goes on to say: 'Why should not a butler be an Admirable Crichton as well as a weaver or a shoemaker?'" Now the point of Mr. Barrie's play lies in his deft contrivance of a social situation whereby a great earl and his family are forced by the law of fitness to change places with their superbly deferential butler, who has all the commanding qualifications they lack, and who in consequence, by the natural process of sterilization and ascendency, gains an increasing mastery. The coincidence is certainly a most remarkable one.

There are many readers for whom the study of Dante never loses its zest. Ever since the writer in boyhood made the acquaintance of Rossetti's *Dante and His Circle* casually in a circulating library, he has been unable to resist the temptation of begging, borrowing, or buying every new book of Dante that he has encountered. One of the latest is Karl Federn's *Dante and His Time*, which aims to reproduce Dante's intellectual, social, and ecclesiastical environment in an historical sense so that the figure of the great poet may stand out illumined and interpreted not only by the forces of his age and country, but by the force of his own individual genius and personality reacting on his environment. While there is no attempt at original research, and nothing of note is added to our knowledge of the subject, the rearrangement of familiar facts and the stimulus of a fresh mind make it an inspiring and helpful work to the general reader who has made no deep study or original investigation of Dante and the times in which he lived. The standard work for English readers is, of course, John Addington Symonds's *Introduction to the Study of Dante*, which has gone through several editions since the book originally appeared as lectures in 1870. Symonds wrote the preface to the third edition in March, 1893, and within less than a month he died in Rome. It was the last of his writings, and thus, in a way, his literary career closed as it had opened two and twenty years previous with his work on Dante.

In the course of a lecture on "Dialect and Dialogue," delivered before the Society of Women Journalists in London recently, Mr. W. Pett Ridge remarked that there are certain circles in which the novelist is hardly accepted at his own valuation. A literary friend of his went to the country in order to take a house on a farm. He saw the farmer, and conducted the preliminary negotiations with perfect satisfaction to both sides. Presently he asked, "Would you like some references?" "No, no," said the farmer, genially. "You are a gentleman; I can see straightforwardness written across your face. Don't bother about the references. I expect you want to get back to your business in the City." The friend mentioned that he had no business in the City. "Oh, then," said the farmer, "I suppose you have business outside the City." "No," he replied, "I am an author." "What!" cried the farmer, "not an author that writes books?" Yes, he admitted that he had written books. A look of doubt crept over the honest farmer's face. "Well, well," he said, "to turn back to the business we were talking about. I think, after all, mister, I'll have to trouble you for a couple of them references."

Mr. Pett Ridge also told an amusing story about a servant Mrs. Jerome K. Jerome had engaged, and who was only with her a few days when she gave notice. Mrs. Jerome remonstrated, but the servant was set on going. "I want to know the real reason why you are going," said the mistress at last, her patience exhausted. "Well, ma'am, if you must know," replied the indignant damsel, with tilted nose, "I thought I had come into the house of a gentleman, and I find that master writes plays." Speaking of the infinite pains the writer ought to take in representing accurately the dialogue that goes on around us, he cited an example. He heard lately one servant explaining to another how she happened to get engaged. "Two proposals," she said, "arrived by the same post. I liked the one man as well as the other, and I didn't know which to choose." "How did you settle it?" asked her friend. "I accepted the man who had the sense to enclose a penny stamp for a reply." Good dialogue in novels, Mr. Pett Ridge claims, ought to be better than ordinary conversation. "I have never heard people talk as they do in Mr. Anthony Hope's novels, but I wish I had." Referring to the assistance which one often gets from the experience or observation of others, he said that he had received, the other day, a letter from an Islington man, who offered to collaborate with him in fiction. "My correspondent suggested that I would do better in literature if I had a little help. Two heads, he said, were better than one. He had spent twenty-five years in prison, and had accumulated knowledge which had possibly been denied to me. He thought that between us we might turn out a book really worth reading. When I wrote to decline his offer, he replied indignantly that I was completely mistaken about him. It was not true that his whole term of imprisonment had been served for one offence!"

Mr. Pett Ridge now shares honors with Mr. W. W. Jacobs as the foremost English humorist of the day. His novels have deserved a better fate and a wider popularity than have been meted out to them in this country. Indeed, the scant recognition of his work with the public is one of those baffling things that are a stumbling-block to the critics. We recall with pleasure the delights of *A Clever Wife*, *By Order of the Magistrate*, *Secretary to Bayne, M. P.*, *The Second Opportunity of Mr. Staplehurst*, and other entertaining stories by this comedian of low life in London.

When Nature showered her cornucopia of gifts upon Mr. Eden Phillpotts there was but one lacking to endow him with the attributes of a great novelist of the first rank. In *Lying Prophets*, *Children of the Mist*, *Sons of the Morning*, and now *The River*, the lyric voice of the poet, the epic strain of the master of prose, have held us as in a thrall, but that highest gift of the mind, the dramatic imagination, is denied him. There are few writers to-day who can rival these works in the language of beauty and the quality of singing prose. Perhaps in *Sons of the Morning* the author erred on the side of rhetorical emphasis and redundancy of phrase. But *The River* is reticent to severity; its beauty of color is chaste to continence. If there is splendor of imagery it is the splendor of setting suns and golden autumns; if there is riot of feeling it is the riot of spring and the turbulent waters. The apotheosis of nature in the River Dart is as complete as Hardy's Egdon Heath or Blackmore's Doone Valley. And, as in *The Return of the Native* and *Lorna Doone*, nature is co-ordinated to the spirit of man, and suggests the tragic possibilities of human fellowship and estrangement. The lonely, simple-natured, great fellow Nicholas Edgecombe, in his bewildered sense of outraged love and vague ordeal of sacrifice, gains tragic emphasis from his scene of action on nature's vast theatre set upon Dartmoor with its inscrutable and elemental silence. *The River* is a prose epic, rather than a novel—an epic of Dartmoor. The insistent magic and compelling majesty of its beauty invest it with a haunting recollection, which is one of the touchstones, if not the truest touchstone, of art.

Finance

After another week of dulness and of desultory price fluctuations, some slight improvement was noted in the securities markets. It cannot be said that there was anything resembling an outburst of speculative activity. The character of the trading did not change. It remained professional. But it was as though the conviction had become more widespread that the next decisive movement of stocks, barring unforeseen disaster, would be upward. There were no developments important enough to start the tide of values unmistakably in either direction. Such news as came to Wall Street calculated to affect one or another stock was followed by brief and not very important fluctuations, mere ripples which had little effect upon the market at large. The strong financial interests gave no evidence of a desire to abandon the passive attitude they have maintained toward the stock-market these many weeks, and the indifference of the outside public was as profound as ever. There remained the professional operators, who turned and veered from day to day, as is there wont, and in the end left the level of prices unaltered.

The change, if in point of fact there is any, lies in the growing belief that an extensive decline is more unlikely than a substantial rise. This is due to the fact that several doubtful features of the general situation are clearing up. Not the least important is the improvement in the international credit situation. It will be remembered that during the greater part of last year the enormous obligations of this country to Europe formed the one obstacle in the way of conservative observers of financial affairs to a comfortable frame of mind. This was produced primarily by the enormous borrowings abroad by financial syndicates, and intensified by the failure of the corn crop of 1901, which told so heavily on our export trade last year. Disturbing possibilities were discussed at great length, and many speeches of warning were delivered by some of our semi-public financiers, as it were. That we did not export gold was due to the extraordinary sagacity displayed by our bankers. Since the critical and speech-making period of last autumn, our indebtedness to Europe has been greatly reduced, until it is estimated to be to-day not more than a third of what it was three months ago, and as exports of agricultural products are made it will shrink further. That our position will not only improve, but be reversed before many months are over, seems altogether likely. At this writing sterling exchange has risen to within a fraction of the gold-exporting level, the congestion of railway traffic having curtailed foreign shipments of grain, and there is a possibility, though apparently not a probability, that some gold may go out.

The Street has waited for the December statements of railway earnings with much anxiety, since it was believed they would show uniform decreases in the net, resulting from increased costs of operations, but the statistics of the week have not been all of the same tenor. It must be admitted that such displays as, for example, that submitted by the Pennsylvania Railroad, are significant. Magnificent gross earnings, running largely in excess of the same month the previous year, but even greater operating expenses, and consequent decreases in the net earnings. Nobody fears any immediate reduction in the dividend rates of the railroad stocks, but there is none the less some anxiety to see if the actual or projected advances in rates will offset the higher running expenses which the roads have had to meet. But, it is obvious that they are doing an enormous business, which tells the story of the country's great volume of business.

Correspondence

"TO THE JEWS A STUMBLING-BLOCK."

January 30, 1903.

To the Editor of Harper's Weekly:

An encore for the sort of straight talk of last week's editorial, "To the Jews a Stumbling-block," etc. The kinks in the mind of the religious thinker, and of the man behind the subterfuge, are still with us; and perhaps ever must be, while the ethic of to-day feels that it must go back for authority to the words of Christ. The injunctions to wash each other's feet, to give one's possessions to the poor, are "explained" on the ground that "conditions" have changed. Another way of treating many utterances of Christ which do not fit very well into modern life is to declare that he was "laying down principles," or, again, he was speaking metaphorically or poetically or hyperbolically. (This last means almost the same as exaggerating.) Fitted out with these simple appliances, one can make the toughest sayings of Christ fit to-day's ethics or practices or speculations, much as the agent with one curiously moulded tool will drive nails, split wood, lift stove-covers, hot plates, mortgages — anything.

Will the gentle reader please tell us in what sense, whether poetic, metaphorical, distant, or Pickwickian, the injunction is to be obeyed to sell all we have and give to the poor, unless it be—the sense that we are not to do it? That is just it. The boy who does not come when his mother calls him is not disobedient, he merely takes his mother's command as metaphor, as a beautiful tone-poem; he thinks times have changed, or his mother is only laying down great principles. Well, if some commands of the Lord cannot be carried out, if the carrying of them into practice would put civilization back thousands of years, may we say that in some regards we have grown beyond the first Christian century, and must obey the firm deliverances of experience? An article like the one under consideration comes like a clear north wind over a fog-ridden sea; there have been several such on this subject recently in the Weekly. Perhaps the independent periodical has a great place waiting for it in the free discussions of such vital points, wherein it may cleave the way for the more conservative Pulpit.

READING FOR CHILDREN.

Erie, Pa., *January 29, 1903.*

To the Editor of Harper's Weekly:

Sir,—An editorial comment in the last issue of the Weekly brings up an interesting question which will admit of some discussion. I refer to the matter of reading for children and the suggestions of Mrs. McClintock.

It seems to me that an important consideration is overlooked, namely, that the child of five or six is at what might be called the myth-making period of life, when the childish imagination craves tales of big, big giants and bold, bad villains. Moreover, the chopping off of a head or the shedding of rivers of blood would mean nothing to the child, for such a thing had never been paralleled in his experience. Again, at that age the moral faculties are still slumbering, and they could receive no possible harm from such tales as "Bluebeard," "The Three Bears," etc. In fact, I am not sure but the parable of the Prodigal Son might not have more harmful effects, because the story is so realistic. Might not the child of any age reason that to spend one's patrimony is praiseworthy, since the son who does this is met with open arms, and feasted on fatted calves, while the virtuous son who stays at home presumably feeds upon the lean kind?

Again, I maintain that the boy of ten would entirely overlook the "gentle courtesy" of Robin Hood, and rather seek to imitate the deeds of said worthy outlaw, whose well-known practice was

> To beat and to bind,
> To rob and to reave.

Is not here a "moral squint"? Let us hope that Mrs. McClintock may not try her theories on any healthy, happy child, and deprive it of that boon—the fairy tale! Did she, I wonder, read the apocryphal tale that went the rounds of the newspapers some years ago, about the little German girl in New York who was never allowed to read a fairy tale; so she made up several, to the financial embarrassment of her father?

Might we not have something further in your columns on this subject?

Yours very truly,

Lucia E. Barney.

"BRUTALIZED EXPERIMENTERS."

New Brunswick, *January 28, 1903.*

To the Editor of Harper's Weekly:

Sir,—If it be true, in any degree, that such cruelties are practised by vivisectionists as has lately been stated, were it not better to risk an occasional failure by humane methods than to permit so brutalized a race of experimenters and students to develop? And are not the successes of Dr. Lorenz proof that desired ends can be reached, in various cases, without the use of the knife, once deemed indispensable?

I am, sir,

E. S. Phelps.

THE next issue of HARPER'S WEEKLY will contain, among other features, the last portrait of Washington, drawn from life. It was made by Dr. E. C. Dick, his physician, in 1799. It is published now for the first time.

Official Legal Notice

THE CITY OF NEW YORK
DEPARTMENT OF TAXES AND ASSESSMENTS, MAIN OFFICE BOROUGH OF MANHATTAN
NO. 280 BROADWAY, STEWART BUILDING

January 12, 1903.

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens, and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903.

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturdays, when all applications must be made between 10 A. M. and 12 noon.

JAMES L. WELLS, President,
WILLIAM S. COGSWELL,
GEORGE J. GILLESPIE,
SAMUEL STRASBOURGER,
RUFUS L. SCOTT,
Commissioners of Taxes and Assessments.

Mr. Winkle (Louis Payne) Sam Weller (Digby Bell)

Arabella (Louise Gunning) Mr. Pickwick (De Wolf Hopper) Polly (Marguerite Clark)

DE WOLF HOPPER'S PRESENTATION OF "MR. PICKWICK"

In this scene from "Mr. Pickwick," which is now playing at the Herald Square Theatre, Pickwick intervenes, "in a Pickwickian sense," to help the love affairs of Arabella Wardle and Polly. The three are sitting on a log in the forest, when Pickwick's endeavors to persuade the girls to become reconciled with Winkle and Sam Weller cause the log to roll over, with the unexpected result to Pickwick and Polly shown in the drawing

THE NEW PASSENGER STATION IN CHICAGO

The proposed Lake Shore Station in Chicago offers many new facilities for handling the great passenger traffic of the city. It will be a thirteen-story building, of which the first two floors will be devoted to waiting-rooms and so on for passengers. There will be direct communication with the elevated roads and with the surface cars The building will be situated in the heart of the city, and more than two hundred trains a day will enter and leave the station

Recent Gifts for Education

GENEROUS gifts to the cause of education have characterized the twentieth century. In the United States the number and variety of these outpourings of private wealth for one of the noblest public purposes have been phenomenal. The economic student of our history will find this quite as characteristic of this period of American civilization as is the organization of industrial corporations. There is more, perhaps, than coincidence in the relation between these two developments of the time.

In national significance the incorporation by Congress of the General Education Board, to enable it to receive and administer the great sums of money which have been put at its disposal by Mr. John D. Rockefeller and others, is easily first among these developments. The use to which the funds of the General Education Board are being put negatives eleemosynary suggestion. The school boards in various localities in the

TOUR TO CALIFORNIA

Under the Personally-Conducted System of the Pennsylvania Railroad.

The second Pennsylvania Railroad Personally-conducted Tour to California for the present season will leave New York and Philadelphia on the Golden Gate Special, February 19, going via Cincinnati, New Orleans, San Antonio, and El Paso to Los Angeles and San Diego. Three days will be spent in New Orleans, during the Mardi-Gras festivities. Should a sufficient number of passengers desire to travel under the care of a Tourist Agent and Chaperon, a delightful month's itinerary in California has been outlined; and a returning itinerary to leave San Francisco March 28, visiting Salt Lake City, Glenwood and Colorado Springs, and Denver, arriving in New York April 6. Rate, $275 from all points on the Pennsylvania Railroad east of Pittsburg, covering all expenses of railroad transportation, side trips in California, and berth and meals going on the special train. No hotel expenses in California are included. Tickets are good for return within nine months, but returning cover transportation only. For detailed itinerary apply to Ticket Agents, or address Geo. W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia, Pa.

(Continued from page 279.)

South, where the general standard of education is most in need of elevation, receive help in proportion as they and representative citizens help themselves. Such men as William H. Baldwin, Jr., who has become acquainted with the needs of the South by personal observation, manage the Board. More than a million dollars has already been put at the disposal of the Board. A million dollars was more than the aggregate of all the gifts to education in the United States in many entire decades. Many millions have been given in this way by Americans in the past two years, and are on record. Of many other generosities of this sort there has been and can be no public record. Many such gifts are made on the express condition of secrecy. "Some givers," writes President Hadley of Yale, "desire to remain wholly unknown, and even go so far as to wish that the amount of their gifts should be concealed. Others, especially when their gifts are of the nature of bequests, leave matters in such a shape that it is impossible to give a plain statistical account of the date at which they accrue. We prefer that the simple statement 'incomplete' should be appended to any statistics."

Cecil John Rhodes left by his will endowments for two hundred Rhodes scholarships in the twenty-one colleges of Oxford University, to be given to young men in the United States and in the British colonies. The value of each scholarship is $1500 a year for three years. The capital of which the United States will receive the benefit under Mr. Rhodes's will evidently mounts high into the millions of dollars. The first young American scholars will enter Oxford in the autumn of 1904. Two of the Rhodes scholarships have been appropriated to each State and Territory of the United States.

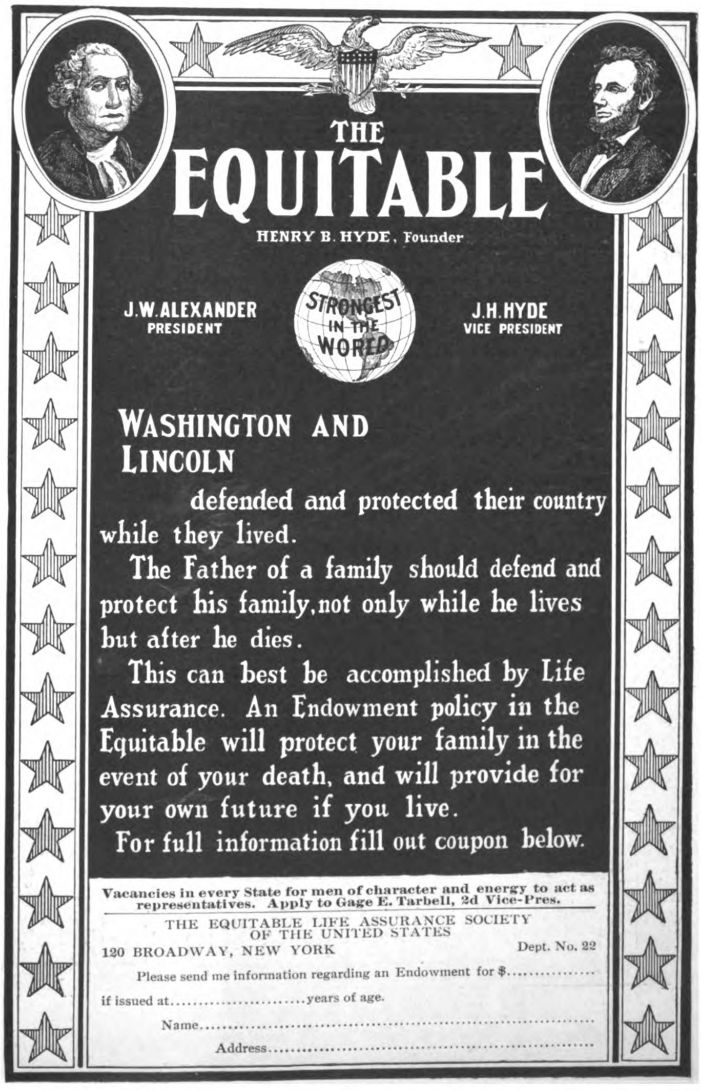
The Carnegie Institution at Washington has been endowed with millions by the same lavish ironmaster at whose nod sixty-five Carnegie libraries are being built in the city of New York alone, at a cost of $5,000,000. The educational air reeks of millions. All over Great Britain and the United States Carnegie millions are going into stone and brick structures which will house books and readers and some students. The Department of Palæontology of the Peabody Museum, and the Department of Experimental Psychology in Yale University, have just been named as the recipients of the first financial aid from the Carnegie Institution at Washington.

It was said not long since that Columbia University urgently needs $10,000,000 to round out its usefulness, for the present. Within the lifetime of men now living that much money would have bought all the universities and colleges in the country. President Woodrow Wilson observed casually in Chicago towards the end of the year that Princeton wants $12,500,000 to make it a great scientific institution, "and probably will get it." Nobody who studies the drift of the day and knows President Butler and President Wilson need have much doubt about Columbia and Princeton getting what they need in the way of money. Millions of money, at that. Even little Amherst—little in size, but great in many things which go to constitute a college, has received gifts of $272,000 in the past two years. When Henry Ward Beecher went to Amherst, seventy-two years ago, $272,000 was a bigger lump than ten millions is now. In the last eight years the University of Pennsylvania has received contributions, exclusive of tuition fees and income from investments, in the aggregate sum of $4,750,161 82. In addition to this amount, there has to be added not less than $1,000,000, to which extent the treasurer

(Continued on page 283.)

No train in America is more brilliantly lighted than the

Golden State Limited.



Electric lights are everywhere—in the roofs, on the sides of the cars, in the berths. This last feature is worthy of special note, for it not only enables one to undress in comfort, but also, in case one wishes, to read in bed. The berth lights are conveniently placed and can be turned on and off at pleasure.

The Golden State Limited leaves Chicago daily via the El Paso-Rock Island route. Less than three days to Los Angeles. Thro' cars to Santa Barbara and San Francisco. Compartment and standard sleepers; dining, library, and observation cars. Lowest altitudes of any line across the continent. Tickets and full information at any railroad ticket office, or by addressing

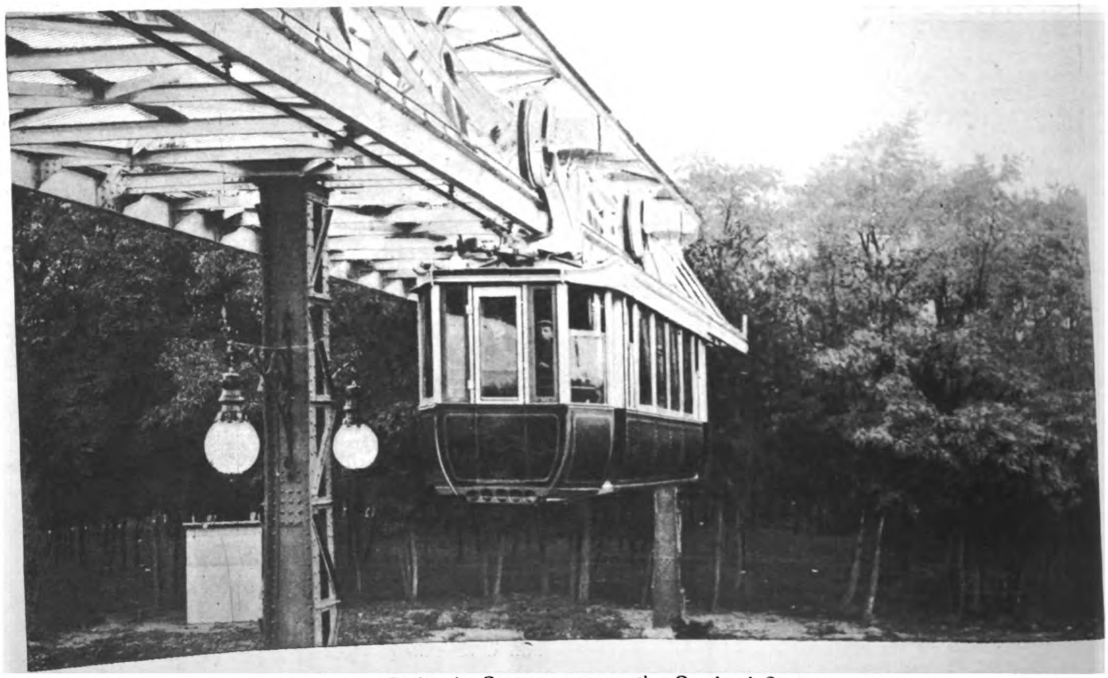
NEW ELECTRIC LOCOMOTIVES

ALTHOUGH the United States leads the world in most phases of railroad transportation, it has learned many things, especially in the matter of electric traction, from the Old World. The underground trolley was first put in successful operation in Buda-Pesth. Trackless trolleys have been in operation for some time experimentally in Germany and France, wagons with freight trailers being guided along certain roads from overhead wires. Automobiles, of course, have received their highest development in France. And now comes the newest development. It is none other than an attempt to abolish the locomotive from steam railroads by establishing automobile trains.

The experiment is to be made in France in June next. An automobile train is to be run from Paris to Dijon, and, if it is successful, will probably be continued to Lyons and Nice. The train is to run the distance from Paris to Dijon, about 191 miles, in three hours and ten minutes, or at the rate of 61½ miles an hour. Special carriages will be built for the train, the present carriages not being convertible to this use. The carriages will be of the size of those in use on the Paris-Lyons Railroad, and each will accommodate forty persons with their luggage. There will also be a lavatory and a refreshment bar in each carriage.

New Type of American Electric Locomotive



The abolition of the locomotive, whether steam or electric, is regarded as a momentous step in railroad transportation. The roadbed will be relieved of much weight, and it is expected that the trains may be made heavier on that account, allowing more accommodation for travellers. The first automobile trains are to be what are known as *trains de luxe*. The high speed that will be attained will be equal to the fastest train in the world, now running from Paris to Calais, and it is expected that passengers ultimately will be able to leave Lyons in the morning, spend the day in Paris, and return at night. The motor apparatus for one of these trains will require only one attendant.

It is commonly supposed that this country leads the world in railroad transportation, and it does in matters related to the comfort of the passengers. In the matter of safety European railroads are superior. In the matter of safety signals, only 25,000 miles of the 200,000 in use here are equipped with such appliances, while practically all of the railroads in Great Britain, and most of those on the Continent, have such appliances in operation. In England, the safety appliances are regulated by the board of trade under the presidency of Colonel York, who has made a life-long study of such matters. On the Continent, where the state owns most of the roads, the military requirements and precision employed in operating them are displayed to their best advantage in the use of various kinds of safety appliances.

The fastest long-distance train in the world runs from Paris to Calais, at the rate of 61½ miles an hour. On short distances trains have been run in this country at more than 100 miles an hour, but our fastest long-distance trains go at the rate of about 50 miles an hour. Germany has one feature in railroading that this country lacks. It is an ambulance train for use in time of accidents. The cars are stationed at certain points along the line, and when an accident occurs the physicians are summoned, and the train is rushed to the scene. There is an operating-room in each car, and a certain number of beds are ready for the wounded victims. The results are said to be most satisfactory in saving life.

The United States has long used the third rail in electric traction for elevated railroads, and, in Connecticut and Massachusetts, it has been put in service for surface systems with success. The New York Central and the Pennsylvania will use this system in their new terminal systems in New York city. The North Eastern Railway of England is said to have no less than thirty-five miles of electric traction on double tracks in operation, four miles of single track, and two miles of four tracks. Fast electric travel on rails has reached its highest speed in Germany, but largely on experimental lines.

With the successful operation of automobile trains, the steam locomotive would seem to be doomed, a momentous thing in travel.

Electric Engine in Germany run on the Overhead System

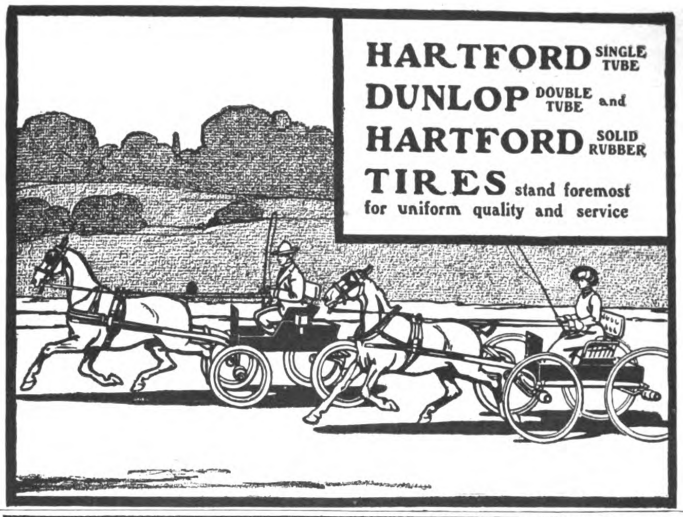
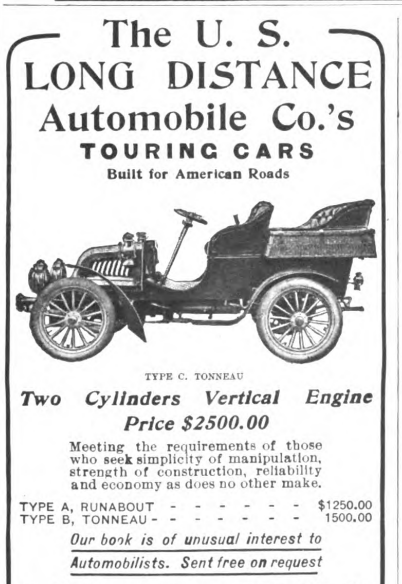
(Continued from page 281.)

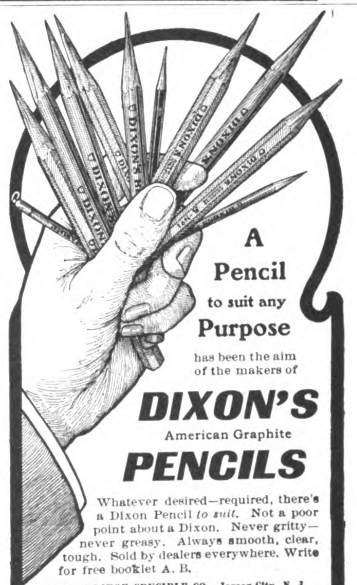


has in his safe-keeping subscriptions soon to be paid, or payable in annual instalments in the coming few years, and binding upon heirs, executors, and assigns.

President W. R. Harper, of the University of Chicago, said recently that Mr. John D. Rockefeller had just given another million dollars to that university, part of which would be used to establish a school of technology. Mr. Rockefeller's gifts to this institution now amount to $12,402,000.



The University of California has received about $900,000 in money gifts in the past two years. Mrs. Phœbe Hearst is erecting a mining building, which will cost a half-million dollars. The university has two hundred and fifty-two mining students, which exceeds the number of students in mining in any other university in the world. The Hearst Mining Building will have smelting-rooms for copper and lead, a mill for gold and silver, dry-crushing tower, forge-rooms, drafting-rooms, museum, studies for the instructors, and locker-rooms and shower-baths for students. Mrs. Hearst now gives to the university some $40,000 a year for the support of the Department of Anthropology. She maintains anthropological expeditions from the university, in Peru, in Egypt, and in various parts of Western America. An anthropological museum of most unusual interest and completeness is being gathered through her generosity.



Great institutions, like Yale and Harvard, whose alumni have been accumulating honors and riches all over the country for a hundred years and more, are in constant receipt of gifts of money, for specified purposes. It is not practicable to estimate the grand total of such sums for a given period, nor do these universities consider it desirable to do so. A single paragraph from the report of the treasurer of Yale University for the year ending July 31, 1901, shows, for example, that the permanent funds of the university had been increased in that year by $595,027 73, divided among the general university, library, Sheffield, academical, theological, medical, law, and art school funds, while an additional amount of $345,470 16 had been given in the same period for the bicentennial, law-school building and medical-school building funds. In the preceding year the estate of the late Cornelius Vanderbilt added $100,000 to the general fund, which received also $110,998 58 from other gifts. In that year also the Forest School was established by a gift of $150,000 from the Pinchot family. Gifts to income which do not appear in the movements of the permanent funds are constantly received at both Yale and Harvard. The Yale officials have just received a very large collection of Egyptian antiquities, representing Connecticut's share for the year 1902 in the Egypt Exploration Fund.

It is not only great schools and big sums which illustrate the tendency of the day in these matters. The news columns of the newspapers bear almost daily witness to what is becoming a national habit. The fund of $50,000 to endow a chair of Economics and Political Science at Washington and Lee University has recently been completed by the generosity of New York men of affairs. Mrs. S. P. Lees, of New York, left the same institution, a few weeks ago, a bequest of $30,000. Henry O. Havemeyer gave $20,000 towards a new heating-plant for Bryn Mawr College, and nobody would ever have known anything about it had not the coal famine come. The estate of A. C. Hutchinson, it is just announced, proves so much more satisfactory than had been anticipated that the Medical Department of Tulane University in New Orleans will profit from it to the extent of nearly a million dollars.

Your money back

If you are not satisfied

DO YOU SUPPOSE that a company with a capital of $500,000.00, paid in full, and the proud reputation of 36 years of continuous success, would make such an offer and not carry it out to the letter?

DO YOU SUPPOSE we would jeopardize our standing with the public and our chances of still greater success by failing to fulfil any promise we make?

DO YOU SUPPOSE we would make such an offer if we did not have the utmost confidence in the satisfying quality of our goods?

WE KNOW we can please you and save you money, for HAYNER WHISKEY goes direct from our distillery to you, with all its original richness and flavor, carrying a UNITED STATES REGISTERED DISTILLER'S GUARANTEE of PURITY and AGE and saving you the big profits of the dealers. That's why it's best for medicinal purposes. That's why it's preferred for other uses. That's why we are regularly supplying over a quarter of a million satisfied customers. That's why YOU should try it.

Direct from our distillery to YOU

Saves Dealers' Profits! Prevents Adulteration!

HAYNER WHISKEY

PURE SEVEN-YEAR-OLD RYE

4 FULL QUARTS $3.20 EXPRESS PREPAID

We will send you FOUR FULL QUARTS of HAYNER'S SEVEN-YEAR-OLD RYE for $3.20, and we will pay the express charges. When you receive the whiskey, try it and if you don't find it all right and as good as you ever drank or can buy from any body else at any price, then send it back at our expense and your $3.20 will be returned to you by next mail. How could an offer be fairer? We take all the risk and stand all the expense, if the goods do not please you. Won't you let us send you a trial order? We ship in a plain sealed case; no marks to show what's inside.

The Waxing Power of the Journalist

SOME one has defined journalism as "the art of disguising your ignorance in order to add to other people's." If so, the United States is growing more and more ignorant. Wendell Phillips said, in 1861, that "types are the fathers of democrats." If so, democracy in the United States is striking deeper and deeper root. The same gifted orator and reformer, defying a Boston audience hostile to him, once said, pointing to the representatives of the press before him: "Howl on. I speak to 30,000,000 here." How vastly greater now both population and circulation of the daily newspaper!

There has just come from the Census Bureau a bulletin showing the striking increase in circulation of the periodicals of this country during the decade 1890–1900—an increase certainly not slackened during the nearly two years which have passed since the census was taken.

In 1900 there were published 18,226 newspapers and periodicals of all kinds, an increase of 22.3 per cent. Of these, 2226 were dailies, 12,979 weeklies, and 1817 monthlies. Comparison with the census report of 1890 shows that there has been a marked falling off in the number of journals devoted to special aspects of knowledge—the percentage of decline varying from 42 per cent. in society and art journals to 7.1 per cent. in religious periodicals.

But while there has been this marked falling off in the number—if not in the total circulation—of journals devoted to special provinces of news and opinion, there has been, as might be expected, an equally striking gain in the number of and circulation of daily newspapers and monthly periodicals.

Thus, in 1890 there were 1610 dailies with a total circulation per issue of 8,387,188 copies. In 1900 there were 2226 dailies with a total circulation per issue of 15,102,156 copies. In 1890 there were 1734 monthly periodicals, with a circulation per issue of 19,624,038; in 1900 the number had risen to 1817 and the circulation to 39,519,897 copies per month. Multiply this by twelve and you have the circulation by the year; multiply this by five, the estimated number of persons who read a periodical, and you begin to have some conception of the place in the intellectual furnishing of the people which the monthly magazines of this country play. The late Rev. Dr. Richard S. Storrs, of Brooklyn, who in his day had few peers among American clergymen as a thinker and orator, said, in 1890, describing the Sources and Guarantees of National Progress, "Either one of several of our current magazines is a better exponent of the modern civilization than the Parthenon was of the Hellenic, or the Forum Romanum of that which ruled from the Tiber."

The common-school system graduates each year an ever-increasing number of intelligent, acquisitive readers. Applied science has made the process of printing and illustrating large editions possible. Better appreciation of the profit to business of advertising has stimulated income, which makes possible large outlay for attractive contributors, authors, and illustrators. Last, but not least, with the coming of rural delivery and better postal facilities, the area of swift distribution of the product of editor, contributor, and printer has been vastly increased.

The newspaper of to-day, to quote Professor H. S. Nash in his *Ethics and Revelation*, is "the symbol of the widened social responsibility of the race." "Wonderful to him that has eyes to see it rightly is the newspaper," is the word of Homer Wilbur, in Lowell's "The Pious Editor's Creed," which bit of satire has for its

prose appendix one of the finest appreciations of the place of journalism in life which have ever been written.

Years after writing this in the immortal Biglow Papers, when he was representing the United States at the Court of St. James's, Mr. Lowell addressed a company of journalists in London, and to them he said that he felt as if he were talking to the ear of Dionysius, at the other end of which the world was listening. He asked his attentive hearers—journalists—whether they were aware "to how great an extent" they "had supplanted the pulpit, to how great an extent you have supplanted even the deliberative assembly. You have assumed responsibilities, I should say, heavier than man ever assumed before. You wield an influence entirely without precedent hitherto in human history."

About the same time, 1883 (Mr. Lowell spoke in 1884), President Eliot of Harvard University was writing on "The Education of Clergymen," and in his article he pointed out the changed conditions under which the clergyman of that time did his work compared with the conditions of the colonial days. He said that formerly "the weekly sermons and prayer-meetings were almost the sole intellectual exercises in the last century, except for the very few who could afford the luxury of books. In our time, four days' labor of one man will pay for more reading-matter than an ordinary farmer's family will care to read in a year, namely, a local paper, a religious paper, a magazine, and some cheap editions of current books. The minister in the quietest village, as well as in the manufacturing town and great seaport, is in competition with this new teacher, the press, which, by the regular and frequent mails, delivers its lessons in every household."

In these two quotations from Mr. Lowell and President Eliot we see what the relative influence of press and pulpit seemed to be in the eighties. The most ardent advocate of the pulpit will scarcely claim that its power has increased as much relatively, during the two decades since these expert students of society passed judgment, as has the power of the press.

Nor is the journalist seen to be any less potent when we turn to the art of government and to the realm of statecraft. "If I could not be a king I would be a journalist," said King Humbert of Italy. The two most distinctive gatherings which Prince Henry of Prussia attended in this country were those of the captains of industry and of the journalists, and his deference to the power of the journalist was so obvious that it occasioned remark in Germany. "It is not too much to say," said Justice Simeon Baldwin, of the Connecticut Supreme Court, at a recent meeting of the National Bar Association, "that modern government could not exist without its support from journalism, and this less from the direct influence it exerts than from the publicity and close scrutiny of official action which it secures. Until a hundred years ago legislatures the world over sat with closed doors.

With such waxing power in shaping the thought and action of men it becomes imperative that the journalist should stand for the highest social ideals and for the greatest degree of independence of thought and action possible. And it is the testimony of those whose opportunity for observation has extended over the requisite number of years that never was the press of the country so untrammelled by partisan, sectarian, and racial prejudices as to-day. If both journalist and clergyman, speaking *ex cathedra* in sermon and editorial, speak with less authority than formerly, it is because the basis of authority is shifting from opinion to fact, and both readers and hearers are saying, with increasing emphasis: "Give us the data of life. We will form our own conclusions."

HARPERS BOOK NEWS

THE PRIDE OF TELLFAIR

Elmore Elliott Peake, by his new novel, "The Pride of Tellfair," published yesterday, bids fair to outdo the success which was attained by his first book, "The Darlingtons." The business, the pleasures, and the ambitions of a thriving lawyer form a background for a love story told in a way wholly novel. The life of a middle Western town is pictured with photographic fidelity, and the characters introduced are real, convincing, alive—the people one meets to-day in prosperous towns. The book entertains in every line.

THE MYSTERY OF SLEEP

A new edition of "The Mystery of Sleep" also made its appearance yesterday, so thoroughly revised and rewritten as to be practically a new book. Mr. John Bigelow, the author, has put into his work a lifetime of thought and experience; it is his theory that during sleep there is a return of the soul to its source, and that this, and not the mere physical regeneration of man, is the true, final function of sleep. Mr. Bigelow puts his views ably and earnestly, and with a logic that is convincing in its appeal.

THE NEW BOY AT DALE

Another new book published yesterday is "The New Boy at Dale," by Charles Edward Rich. This is a story for boys, dealing with the many adventures that befall the "new boy" at Dale school. The story is full of incident, and the spirit of adventure breathes through it all with strong appeal to the young reader. It is a healthy, clean story of the kind that boys love and with the right sort of ending.

A NOVEL OF MERIT

The Reflections of Ambrosine

By

ELINOR GLYN

Author of "The Visits of Elizabeth"

If Elinor Glyn charmed novel readers by her first work, she has certainly added to her popularity with this newly published story. The keenness of observation, the audacity of "The Visits of Elizabeth," are here, but, in addition to this, she has given us a strong love story and a novel of real dramatic power.

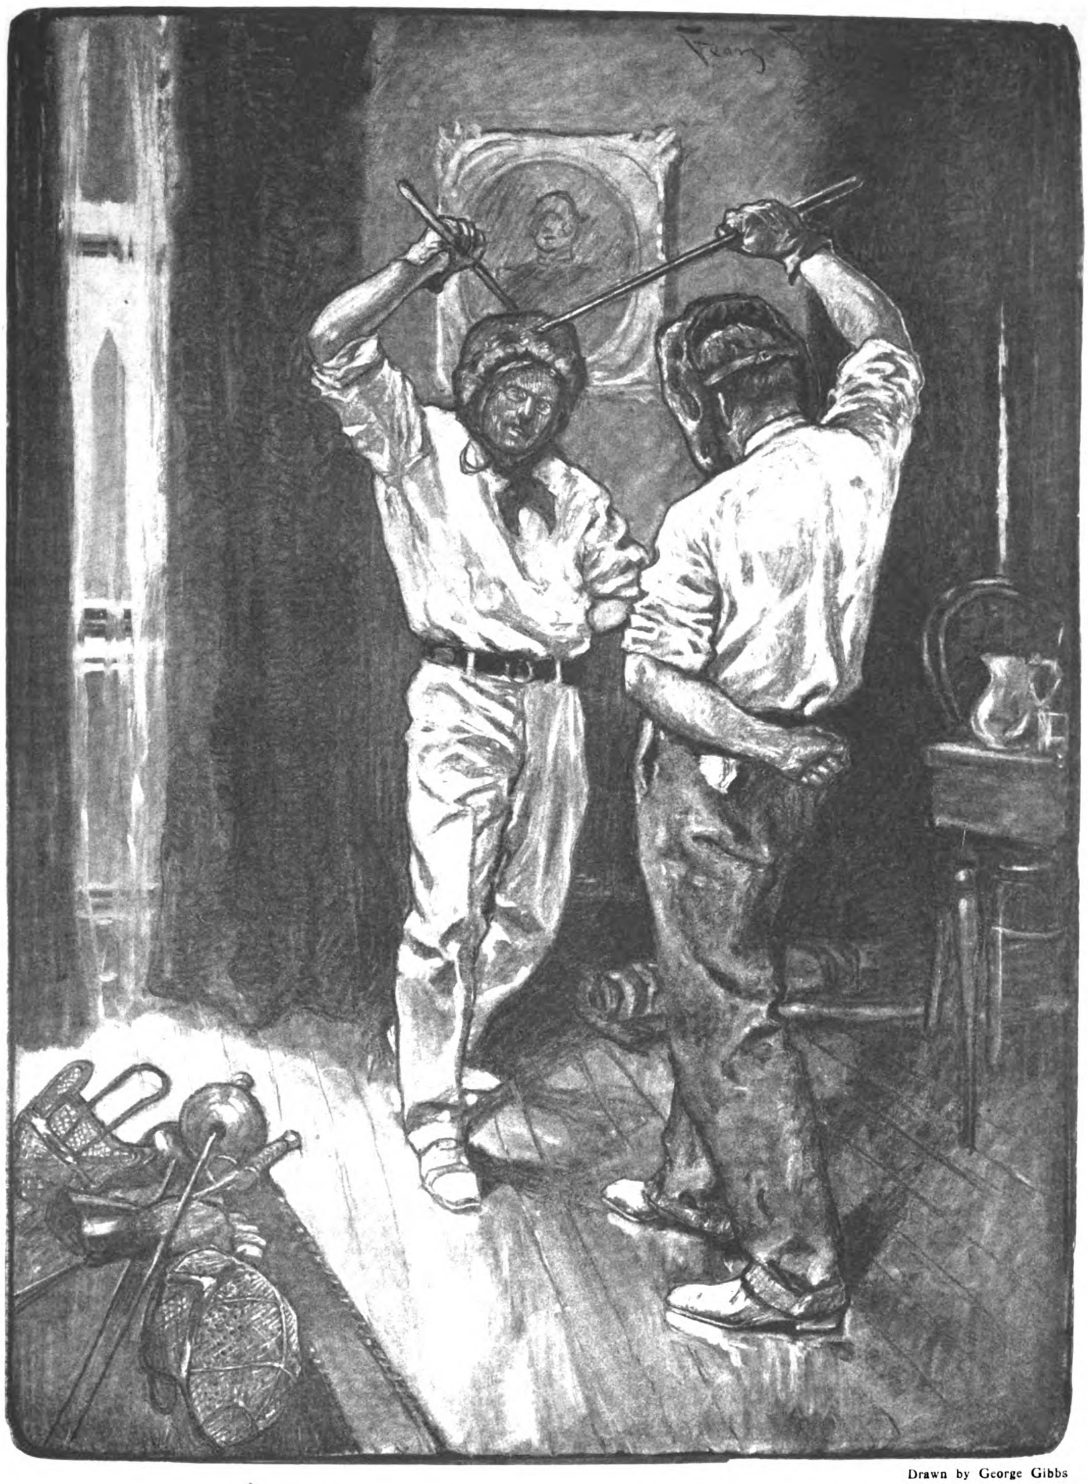
'ROUND-THE-WORLD TIME-TABLE

DIRECTOR NAGELMACKERS, a well-known railway official of Belgium, recently announced that within a year it would be possible to go around the world in forty days. This may be accomplished when the improvements in the Siberian railroad, which are being rushed by Russia, are completed, and a fast steamship service from Port Arthur or Vladivostok to Japan is in operation. The quickest available time at present is fifty-two days.

Herr Nagelmackers gave this schedule as one that might be made: Paris to Vladivostok, thirteen days; to Nagasaki, two days; to Yokohama, two days; to Vancouver, twelve days, to New York, four days; to Cherbourg, six days; to Paris, one-half day; total, thirty-nine and a half days. All this is predicated upon the theory that the traveller would have waiting for him at Vladivostok, Nagasaki, and New York the fastest steamships available.

The usual time from Moscow to the Pacific coast now is eighteen days, but it may be done more quickly. For example: Prince Komatsu, of Japan, by special arrangement with the Russian government, made the journey eastward on the railroad last year in thirteen and one-half days. This was equivalent to fifteen and one-half days from Paris. To reduce the time to thirteen days from Paris to the Pacific would seem to be entirely within bounds when the Siberian railroad improvements are finished. Four days is too small an allowance, with present accommodations, in which to reach Yokohama, the journey now occupying fully eight days. Twelve days to Vancouver is not unreasonable, and, indeed, it is probable that, with exceptional weather, it could be made in ten days. There is no immediate probability that the journey to New York from Vancouver could be made, except by special arrangement, in less than five days. The traveller would go by the Canadian Pacific to Moose Jaw, thence to St. Paul and Chicago, where a "flyer" could be taken for New York. From New York to Paris, six days and one-half is ample. To get from Port Arthur or Vladivostok to Yokohama in four days will be the greatest difficulty. With that arranged satisfactorily, and with steamships waiting, it would be possible for the traveller to keep within the forty days' schedule.



As the journey is made at present, one may start from Paris at 8.25 P.M., going by way of Berlin and Warsaw, and reach Moscow at 2.30 P.M. on the second day. Leaving Moscow at 9.35 P.M. the same night, if the departure from Paris is timed to catch the semi-weekly Siberian express, one reaches Irkoutsk eight days later. In Irkoutsk there is a wait of twenty-four hours, and then an eight days' trip to Port Arthur. Then one crosses the narrow channel to Che-fu, or one may take a steamer direct from Port Arthur. It is a five days' trip from there to Nagasaki, and four days more by steamer to Yokohama. Twelve days later one arrives in Vancouver, six days afterwards in New York, and in another six and a half, or say six, one reaches Paris—a total of fifty two or fifty two and one-half days. This is the shortest time in which it is possible to make the journey now, and that is conditional upon catching steamers at Port Arthur and Nagasaki without the slightest delay. It is altogether probable that, even with the closest figuring, there would be delays of from ten to twelve days in waiting for steamships, and therefore no one could really expect, except under extraordinary conditions, to make the journey in much less than sixty-five days.

Bird's-eye View of Shortest and most Direct Route around the World

It will probably be three years before the Siberian railroad is in a satisfactory condition. By that time the train equipment will be adequate to the demands made upon it, and the roadbed and bridges and tunnels will be all that could be expected. The railroad has already withstood the strain of transporting large military forces, and, as that is its chief object, it may be said, even now, to be a complete success. Then, if any traveller wishes to spend the money for special steamships and special trains, it will be entirely possible for him to go around the world in forty days or even a few hours less.

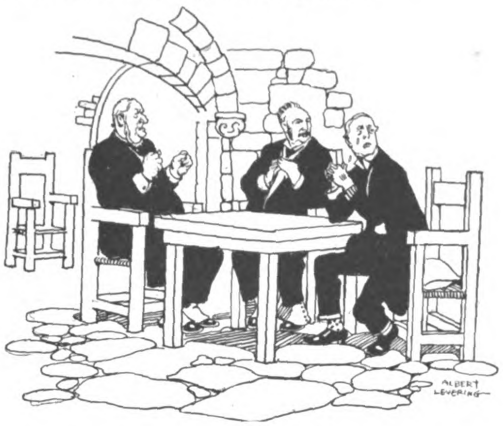
STIFFENING THE LIBERALS

SCENE.—*A vault in the House of Commons, lighted by electric bulbs. The* Earl of Rosebery, Sir Henry Campbell-Bannerman, *and* Sir William Harcourt *are seated round a small table.*

Rosebery (sighing deeply). Woe is me . . . woe is me . . !

Harcourt (irritably). Oh, Rosey, shut up!



Campbell-Bannerman. If we could only think of something. . . .

Rosebery (dolefully). The world is out of joint! . . .

Harcourt. Rosey, you are a bird of ill omen. Brace up!

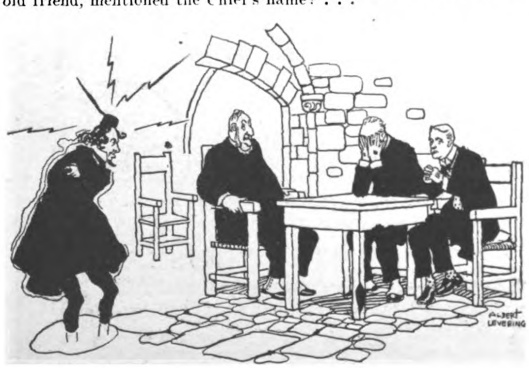
Rosebery (still more sadly). That's just it. If I only could.

Campbell-Bannerman (with an air of original discovery). If we could think of something, and stick to it. . . .

Harcourt. "Rosey, you are a bird of ill omen."

Harcourt. Why, you old owl, of course we can't. That's the devil. . . .

[*As* Sir William *pronounces the last word the shade of the late* Earl of Beaconsfield *begins to rise up slowly through the floor, in the traditional scarlet costume of Mephistopheles.*



Beaconsfield (with great suavity). Pardon my appearing thus abruptly, though not unsummoned. Sir William, I think it was, my dear old parliamentary confrère Sir William, who mentioned our Chief . . . and as the Chief was busy, he was good enough to send me. . . . Pray, command me. . . .

Campbell-Bannerman (aside, to Rosebery). Ah, uncommonly like . . . ah . . . the late Lord Beaconsfield. . . .

Rosebery (wringing his hands). Angels and ministers of grace defend us! . . .

Harcourt. Thought I couldn't be mistaken. . . . Why, of course it's Dizzy. Uncommonly glad to see you, Dizzy. Quite like old times, eh? . . . [*Shakes hands warmly with the apparition.*

Beaconsfield (offers his hand to Campbell-Bannerman, *who takes it in a doubtful way, then to* Rosebery, *who hesitates, shakes his head, and finally gives his hand with impulsive warmth).* So pleased to shake hands with so distinguished a company. . . . And perhaps—I only say perhaps—before we part I may be of use to you. May I be so indiscreet as to ask why my old friend, my dear old friend, mentioned the Chief's name? . . .

The shade of Beaconsfield rises slowly through the floor

Harcourt (looks at the others, then at Beaconsfield*).* In confidence, of course? . . . In strictest confidence? . . .

Beaconsfield (stiffly). Was I in the habit of betraying confidences? [*Then, abruptly.*] Oh, bother dignity! . . . Let's be practical. . . . The fact is, I'm sick and tired of the Balfour gang, and want to try and give you boys a helping hand. . . .

Rosebery (doubtfully). If we could only be sure. . . .

Campbell-Bannerman (interrupting). The trouble is we don't seem to be able to agree on anything. . . .

Beaconsfield (with a manner of hard, practical sense). The real trouble is this: Rosebery has brains without nerve. Harcourt has nerve without brains. Sir Henry has neither. *(General consternation).* . . .

Harcourt. Look here. If you'll promise not to tell that to Chamberlain. . . .

Beaconsfield. Did I not promise confidence? Did I not say I was sick of them? Unscrupulous, yet not strong. Smart, yet without foresight. Pig-headed, yet not resolute. . . . My heavens! . . .

Harcourt (meaningly). Ahem!

Beaconsfield. What? Oh, certainly . . . the expression was inapt. . . . But you know what I mean. If you want a real policy. . . .

All together. Oh, above all things! . . .

Beaconsfield (with hard intellectual force). Then note everything the others do, and do the exact opposite. Lansdowne has mixed

Beaconsfield. "Principles? Did I say principles?"

you up with Germany against Russia. . . . Very good. . . . Take the side of Russia against Germany. . . .

Harcourt (astonished). Why, Dizzy, and the Berlin Treaty? . . . Your principles? . . .

Beaconsfield (in the same hard style). Principles? Did I say principles? . . . You are thinking of Gladstone. . . . Politics is not an affair of principles; it is an affair of fact. Was I not always with the facts? Go in with Russia. The day of Russia is coming. Drop Germany like a hot potato. And drop this Clericalism of Balfour's. . . . Get the brain of the snub-nosed Saxon stirred up. . . . Compel your people to learn . . . . give South Africa to the Hollanders—they will have it in any case . . . . and if you give it now, they will be eternally grateful . . . . find some way of pacifying Ireland . . . borrow their brains, instead of driving them abroad. Do this, and you carry all before you. . . .

Rosebery (sighing deeply). It sounds wise, if we could only. . . .

Beaconsfield (sharply). I was never accounted a fool. . . . I can give you a policy, but can you follow it? You play your cards so badly. . . *(Suddenly illumined.)* Why, that is it! You lack the training. Let us get our hands in at the great American game. . . .

Rosebery. The what? . . .

Campbell-Bannerman. Forming trusts? . . .

Harcourt. Why, no! Poker!

Beaconsfield. Dear old Harcourt. He always understands! Yes, poker, of course. . . .

Rosebery. I'm afraid I don't know what poker is. . . .

Campbell-Bannerman. I always forget the hands. . . .

Beaconsfield. Precisely. I see you need the training. Well, it grows late, and I have—ah—an appointment. Meet me again to-morrow, and we shall begin.

[*Disappears slowly through the floor.*

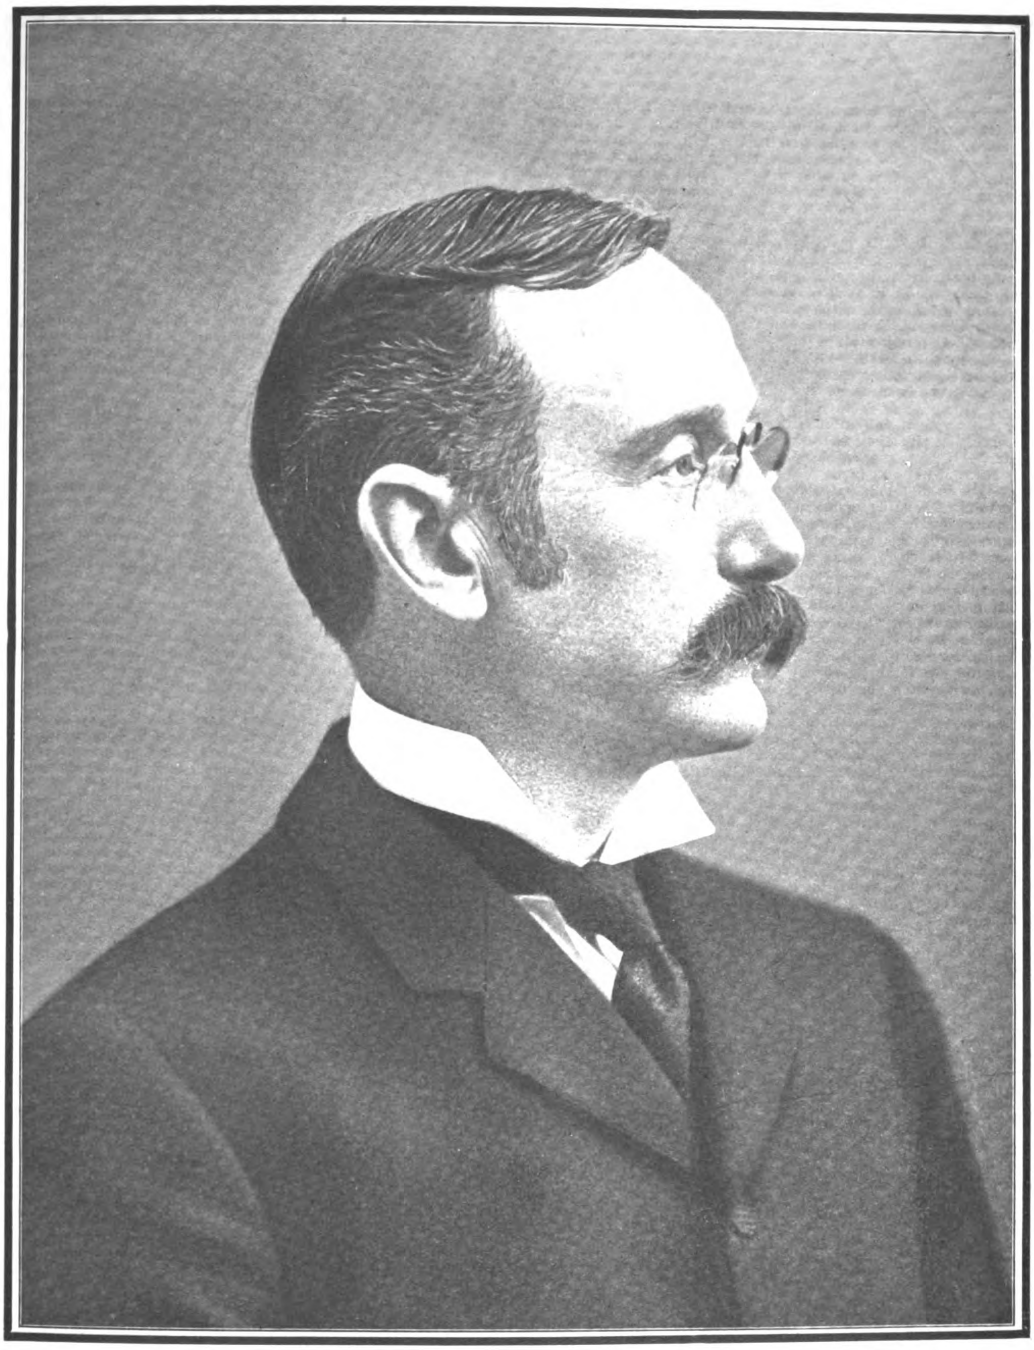
Inauguration of President Humphreys of Stevens Institute

WITH the inauguration of Alexander C. Humphreys, Stevens Institute of Technology enters upon a new era. The inaugural ceremonies were held in the Carnegie Laboratory of Engineering, at the Institute, and were followed by a dinner at Sherry's tendered to the President by the Alumni Association, at which representatives of leading universities and colleges and other prominent men were present. Among the inauguration speakers were President Charles F. Thwing, who spoke on behalf of the universities, and President Henry S. Pritchett, of the Massachusetts Institute of Technology, who spoke of the aims and achievements of schools of engineering. Mr. Andrew Carnegie paid a special tribute to the late President Morton, and contrasted the career of a financier with the "infinitely higher" one of an educator. The oath of office was administered by Chancellor Magie, following which the new president made an address outlining his future policy.

The increasing number of students at Stevens has necessitated some changes. While the original endowment, supplemented by the subsequent gifts of Dr. Morton and of the Stevens family, was ample for the number of students formerly accommodated, it is inadequate for the work that the Institute is now called upon to do. Mr. Carnegie's gift and endowment of a Laboratory of Engineering assisted much, but more and larger lecture rooms and laboratories are required. The Morton Chemical Laboratory will shortly be erected with funds subscribed by President Morton and the Alumni. Dormitories are to be built; funds for one have been subscribed, provided enough for the erection of two others shall be obtained. The removal of the Carnegie Laboratory apparatus from the main building set free the ground floor which is now being fitted up as a machine shop. The present machine shop will be converted into a much-needed auditorium.

At the dinner Professor Marburg announced that the University of Pennsylvania would shortly confer upon President Humphreys the degree of Doctor of Science. Among the speakers of the evening were the Hon. Franklin Murphy, Governor of New Jersey, Colonel E. A. Stevens, son of the founder, and the Right Rev. Frederick Burgess, Bishop of Long Island, and many prominent engineers and college representatives.

President Humphreys is a graduate of Stevens. While Superintendent of the Greenville Gaslight Company, of Bayonne, New Jersey, he was allowed to attend certain lectures and recitations at the Institute. His natural abilities and power for work were such that he graduated in four years, with great credit in the Class of 1881, which so impressed the faculty that they passed a special resolution expressing their esteem. He continued in the gas business after graduating, and was Superintendent of the United Gas Improvement Company, of Philadelphia, for ten years, in which position he did more than any other man to advance the practical and commercial state of the art. He finally established the firm of Humphreys & Glasgow, Gas Engineers, for the construction of water-gas apparatus in England, and for consultation business in America. In addition to this he has been successfully connected with many other enterprises. In accepting the presidency in response to the unanimous request of the Faculty, Board of Trustees and Alumni, Mr. Humphreys sacrificed much for the love of his Alma Mater and his interest in the development of young men.



Much has been done to improve the buildings and grounds at Stevens, one feature being the installation in the drawing-rooms of an electric-light system of special construction. A new and improved roster has been adopted, by which more time is allowed for athletics, and some improvements have been made in broadening the course.

The advent of a new President, with marked scientific and business ability and energy, who will carry out the ideas of his predecessor, and devote himself to the advancement of the Institute, is a source of much satisfaction to all who are interested in the best progress of technical education in this country.

Charles F. Thwing Chancellor MacCracken Henry S. Pritchett President Humphreys S. Bayard Tod Andrew Carnegie

American Wireless Telegraphy

IN the public mind, Signor Marconi and wireless telegraphy are pretty nearly one; he is all of it. And for this there is some reason. Marconi was the first in the field, the first to send a wireless message several miles, the first to reach a hundred miles, and the first to cross the sea. He has had the lead, and he has it now. And this, in the face of a perfect host of competitors, is a big achievement for a young man still under thirty. He deserves all the fame he has won.

Nevertheless, wireless telegraphy would probably be about where it is now, save perchance for crossing the Atlantic, if Marconi had never been, and it is not impossible he may yet be beaten at his own game. If he is, it will come about in this way:

The device which made wireless signalling possible was the very well-known coherer. This was not in the remotest sense Marconi's invention. He merely took it, all ready made, and modified it in a way to make it much more sensitive. On this, and some other details, he secured rather broad patents. The alternative to other aspiring inventors was to go round the coherer, so to speak, or give up.

They went round, and in so doing discovered other devices so much more sensitive than the coherer that the latter was left in the shade. It has now been abandoned, for all long distance work, and by Marconi himself.

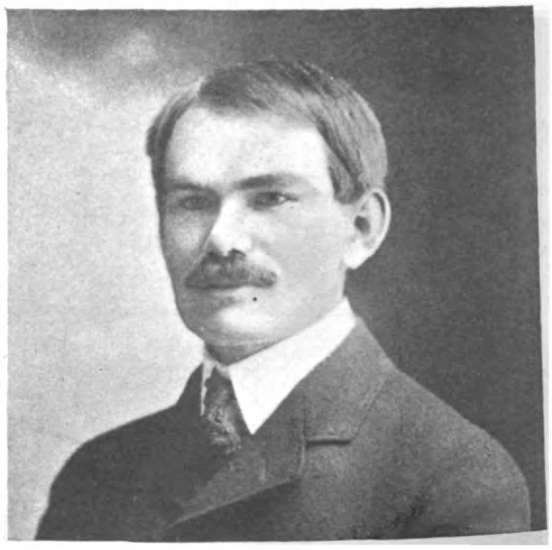
What is true of the coherer is more or less true of all the various details of sending and receiving. For example, in the beginning the electric waves were produced with a Rubenkorff coil. This is essentially a laboratory instrument, and produces waves of enormous "frequency," that is, a million or two oscillations per second. Such high frequencies are not needed, and are ineffective. The induction coil has now been generally replaced by an ordinary alternating dynamo, coupled with a step-up transformer to raise the generating current to the required tension. These are every-day machines that can be bought anywhere. Signor Marconi has followed this procedure in his transatlantic work.

Again, the old Morse "inker," coupled with the coherer, and employed to register the wireless messages, was a very clumsy affair, and has now been replaced by an ordinary Bell telephone. So with many other technical points, such as using large "capacities"—electrical reservoirs, so to speak, to store large quantities of electricity where they could be suddenly loosed; the employment of the closed "tuned" circuit, instead of the open circuit, as in the old way, and so on.

Now the especial point of the matter is that practically all these improvements are of American invention, and are covered by American patents. And two big companies are in the field which will test Signor Marconi's right to employ the new methods. Forced to do new things, American inventors have found better ways; while Marconi, with splendid courage, has been tackling the long-distance problem, and brilliantly bridging the Atlantic, they have gone ahead more quietly and worked out systems which seem more practicable from a commercial point of view. The first of the American systems to achieve a practical success was that originated by Dr. Lee de Forest. He had taken his degree at Yale on a study of the Hertz waves, as the electric waves are generally called, and so came to wireless with a solid equipment. He employs the ordinary alternating dynamo and transformer, and seems to have been the first to do so. For the rest, his system is based on a receiver, or responder, as he calls it, working on exactly the opposition principle to the old coherer. It is a decoherer, and altogether an amazing affair. A very weak current is made to flow round a circuit and through the responder. When the Hertzian waves arrive they break this current. In a telephone introduced in the circuit, you hear a buzz, or rather a hum. The break is due to the formation of little air bubbles between the loose contacts of the responder. These air bubbles are instantly absorbed,—so rapidly in fact, that a succession of waves can be made to break the current a thousand or more times a minute. With the de Forest system it is possible to send as fast as in ordinary telegraphy—that is, fifty or sixty words a minute. The messages are taken by an operator listening in a telephone, just as if it were ordinary Morse telegraphy.

It is all so simple that it reads like a fairy tale. But it took a deal of patience and hard work to achieve; and there were weary days when no one could be found to invest a dollar; hospital days, too, when the money did come, and an over-keen young man worked himself to a breakdown.

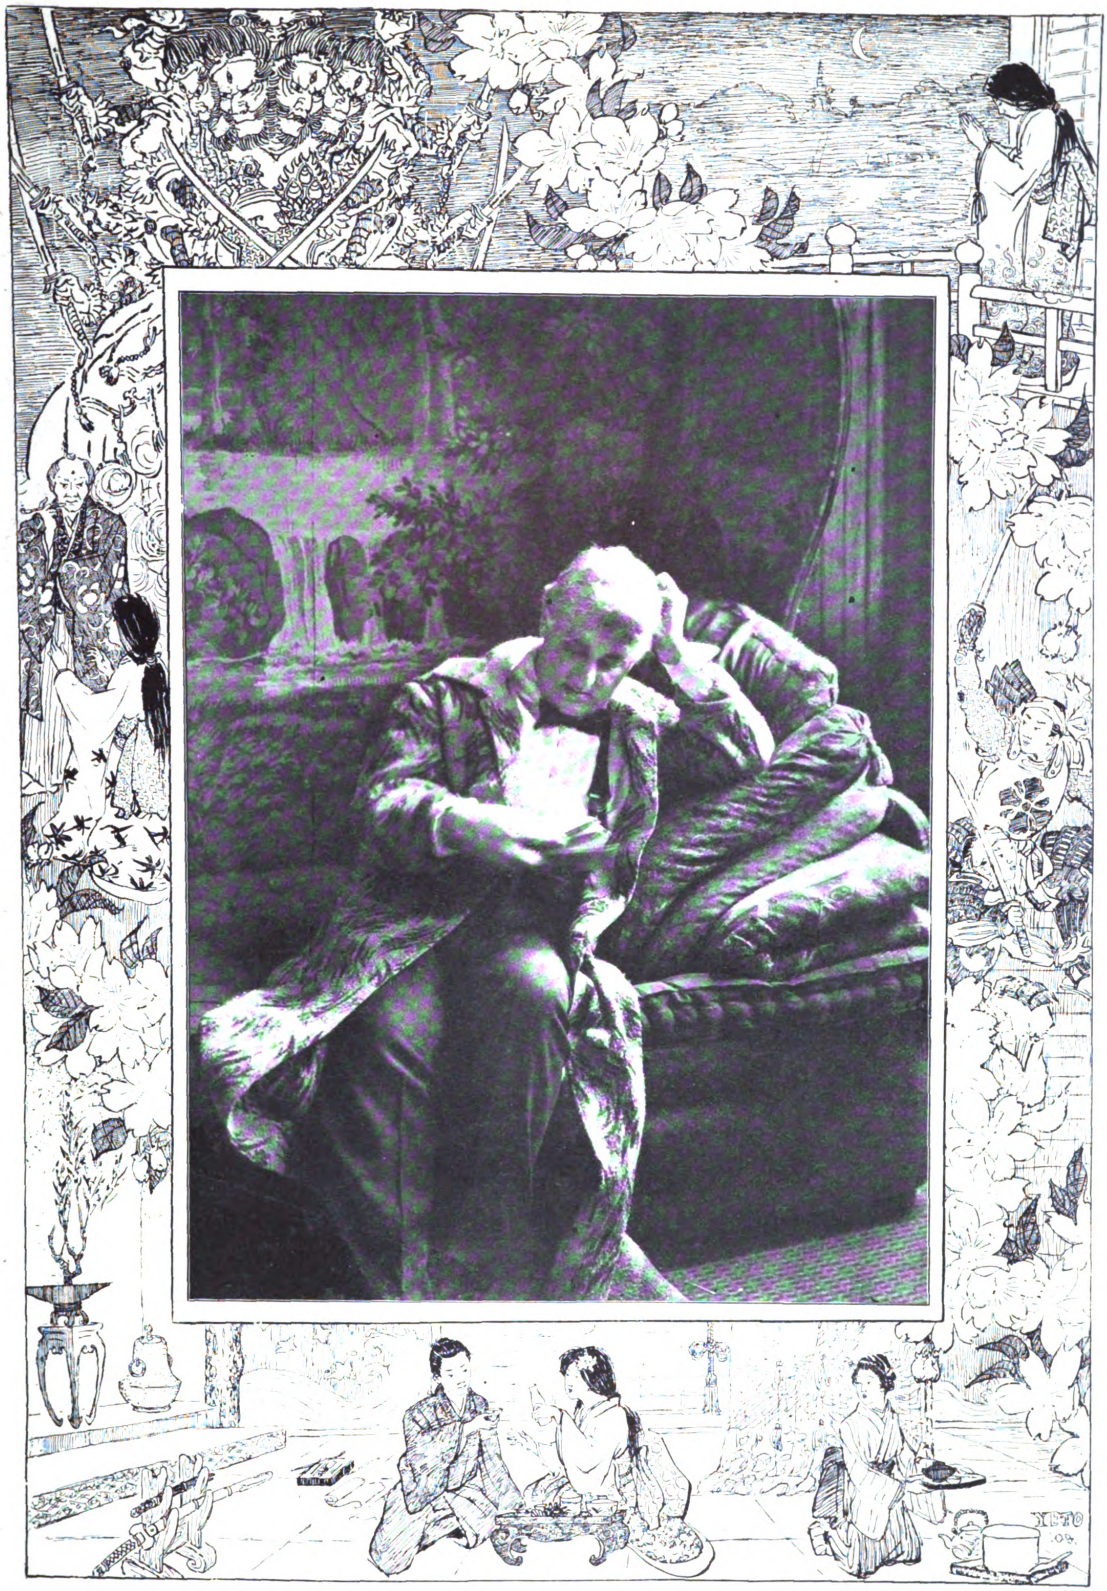
In recent competitive trials, the de Forest system appears to have won the government's favor, for both the War and Navy departments are equipping stations with its apparatus. It has been successfully employed between Washington and Annapolis—an overland test. Now it is making for the Pacific, and it may not be many months before we shall be in touch, by wireless, with our new possessions in the Philippines.



The second system of wholly American origin is that of Professor R. A. Fessenden, Professor of Electric Engineering in the Western University of Pennsylvania at Allegheny. These patents have only recently been taken out, although the first application dates from nearly four years ago. They cover a comprehensive plan, strikingly new in many details, and altogether the most up to date in the field.

Professor Fessenden's receiver is neither a coherer nor a decoherer. The electric waves are merely made to heat a marvellously thin wire, through which a very weak electric current constantly flows. The effect of this heating is to vary the current and operate a telephone. It is a good deal on the principle of Professor Langley's bolometer, the tiny machine which will register the heat of a candle a mile and a half away. The heating surface, however, is reduced to a bit of wire 1-5000 of an inch thick. It is invisibly small, and is enclosed in a vacuum and a metal shell.

Professor Fessenden calculates that this receiver is about 40,000 times as sensitive as the best types of the coherer. He has operated over fifty miles with a spark 1-32 of an inch across, where it required a flash 5½ inches long to actuate a coherer over the same distance. Probably with a device like this, Signor Marconi would have had no need for the tremendous outpour of energy which he used in signalling across the Atlantic.



Professor R. A. Fessenden

Dr. Lee de Forest

COMMENT

AT the hour when we write, it is still undetermined just how much of the controversy between the three allied powers and Venezuela will be referred to the Hague tribunal. It is settled, apparently, that each of the three protocols to be signed by Mr. Bowen, on the one hand, and by the representatives of Great Britain, Germany, and Italy separately, on the other, shall provide only for the payment of $27,500 in cash to each of the allies, and for a reference of the question of preferential treatment to the Hague Court of Arbitration. But how are the validity and amount of the claims put forward by each of the blockading powers to be determined? By negotiation with Mr. Bowen, or by a subsequent reference of these matters also to the Hague tribunal, or by a reference to arbitrators, to be agreed upon by the parties? As the claims include demands not only for pecuniary indemnities for grievances or wrongs, but also for the payment of ordinary debts, some of which are disputed at Caracas, it is improbable that any agreement can be reached between Mr. Bowen and the representatives of the three blockading powers. A reference either to arbitrators selected for this specific purpose, or to the permanent Court of Arbitration at The Hague, will, of course, involve a long delay in the adjudication on the claims.

There is no doubt that the submission of the initial question of preferential or separate treatment for the three blockading powers to the Hague tribunal is a triumph for Mr. Bowen and a rebuff for Sir Michael Herbert, the British plenipotentiary. It will be remembered that the latter originally demanded that thirty per cent. of the customs revenue of La Guayra and Puerto Cabello should be set aside for the three blockading powers jointly, and that this percentage should constitute a first charge on the revenue, other powers, like France, the claims of which had been recognized by treaty instead of being enforced by war, to take what they could get, after the allies had been provided for. Mr. Bowen declined to assent to this arrangement, on the ground, first, that it would put a premium on war as compared with pacific measures, and, secondly, that it would provide a pretext for the maintenance of an alliance between the blockading powers for a considerable period, which would cover, he thought, at least six years. He was entirely justified in adding that such a prolongation of the alliance would be viewed with surprise and regret on this side of the Atlantic. Unquestionably he employed undiplomatic language when he described the proposed arrangement as a "trick" devised in order to secure a continuance of the alliance, and he very properly withdrew the word. The position which he took, however, and which, fortunately, was made public, had a wholesome effect upon the British Foreign Office, which, whatever may have been its original intention, hastened to disavow any wish to prolong the alliance, and agreed that Venezuela's concession should be embodied in three separate protocols, instead of in a joint instrument. That is undoubtedly a great gain; for public opinion, both in Great Britain and in the United States, will compel the British Foreign Office to renounce the alliance with Germany and Italy as soon as the separate protocols are signed. Sir Michael Herbert, on his part, was not justified in insulting Mr. Bowen, the plenipotentiary of Venezuela, by going over his head and proposing that President Roosevelt should decide the question of preferential treatment. The President quickly made it known that he could be no party to the slight put upon a Latin-American republic, and that as Mr. Bowen had not concurred with the representatives of the blockading powers in requesting him to serve as arbitrator, he must decline to act. Under the circumstances there was nothing left for the British ambassador to do but to assent to Mr. Bowen's previous proposal that the question of preferential treatment should be referred to the Court of Arbitration at The Hague.

There is very little doubt in the minds of international lawyers as to the decision of that tribunal. That court was organized to promote peace and to minimize the incentives to war. It would prove false to the purpose for which it was created and would practically commit suicide were it to assert the principle that claims pressed by warlike measures shall take precedence of claims previously embodied in treaties, or voluntarily recognized by the debtor country in pursuance of pacific negotiations. On the contrary, the Hague tribunal will probably hold that claims which have been previously acknowledged by treaty, or in agreements reached by diplomacy, must take precedence of claims for the subsequent enforcement of which resort was made to war. Undoubtedly, by such a decision, the British and German Foreign Offices would be made a laughing-stock; but that, in the opinion of the British as well as the American public, is just what they deserve. We add that, since the divulgation of the Herbert-Bowen incident, the British ministerial press has ceased to lay at Germany's door the whole responsibility for protracting the negotiations, and for the bitterness of the feeling aroused in the United States by the blockade. We shall ultimately learn whether Great Britain or Germany is primarily accountable for the attempt to bully Venezuela, and to extort by war a preference over claims which had already been conceded by treaty or in response to pacific representations.

We have discussed elsewhere the measures to which the anti-trust legislation of the Fifty-seventh Congress seems likely to be confined. We have formerly pointed out that the capitalists connected with the United States Steel Corporation have favored the Nelson publicity amendment to the Department of Commerce bill, which has been adopted by the conferees. We suppose that no greater blunder was ever committed than that imputed to Mr. John D. Rockefeller, who, in the interest of the Standard Oil Company, is reported to have tried at the last moment to defeat the Nelson amend-

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

ment. On the evening of Friday, February 6, no fewer than six United States Senators are said to have received identical telegrams, signed "John D. Rockefeller," to the effect that the Nelson amendment should be defeated, and that "our" lawyer would be in Washington on the following morning. Whether these telegrams were really sent or not, the lawyer of the Standard Oil Company duly arrived, and saw two of the most influential Republican members of the Senate, but was sent back by them to New York on the first train out of Washington, in the hope of preventing his mission from being known. It further appeared that one of the House conferees had received from an important member of the House of Representatives an emasculated provision for publicity to be substituted for the Nelson amendment. It was also discovered that the emasculated provision had been framed by the attorneys for the Standard Oil Company, and placed by them in the hands of a representative supposed to have sufficient authority with the House conferees to induce them to insist upon it. The result of the discoveries was that the conferees on Saturday agreed unanimously to the Nelson amendment.

The exposure of the course pursued by the Standard Oil Company will naturally make it exceedingly dangerous for any member of the House of Representatives to oppose the adoption of the report of the committee of conference. Curiously enough, the friends of the Standard Oil Company in the House of Representatives have not only refrained from opposing the Littlefield anti-trust bill, but have favored the passage of that measure. Their motive would be obvious if it be true that Mr. Littlefield's divergence from the carefully framed language used by Attorney-General Knox in his draft of a provision intended to assure publicity would have the effect of making the bill, if passed, unconstitutional. It is reported on good authority that Attorney-General Knox, after reading the text of the Littlefield measure, has expressed grave doubt regarding his ability to sustain it before the United States courts.

It may be taken for granted that the President will not convoke the Senate in special session after the 4th of March, provided anti-trust legislation, regarded by him as sufficient to begin with, is enacted, and provided the Panama Canal treaty and the Cuban reciprocity treaty are ratified. There is no reason to suppose that the Senate would be called together in order to secure its ratification of the Alaska treaty, or of the Newfoundland reciprocity treaty. Both of the last-named conventions seem doomed. The objection made by the New England Senators to the Bond-Hay treaty seems to be regarded by their colleagues as decisive, the objection, namely, that the interests of New England fishermen would be sacrificed by a ratification of that agreement. As for the Alaska boundary treaty, the opposition to it is no longer confined to Northwestern Senators, but has extended to Senators from the Middle West. The opponents of the treaty point out that in the proposal made by the Joint High Commission in 1899 to refer the definition of the Alaska boundary to six jurists, three of whom were to be appointed by the President of the United States, and three by the Judicial Committee of the British Privy Council, there was a provision that Skagway, Dyea, and other settlements on tide-water, made under the authority of the United States, should be excluded from the operation of the decision, even if one should be rendered through the concurrence of an American jurist with the three British members of the tribunal. The American members of the Joint High Commission also refused in 1899 to consent to a delimitation of the boundary by six jurists, three from each nation, unless it should be expressly stipulated that where the word "coast" occurred in the treaty concluded between Russia and Great Britain in 1825, it should be understood that the coast of the continent was intended. Neither of these precautions has been taken in the treaty negotiated by Secretary Hay, and the result is that many Republican Senators from the West declined to sanction it.

It is still believed that the Cuban reciprocity treaty will be ratified, either before March 4, or subsequently in a special session of the Senate. Senator Burrows of Michigan and other friends of the beet-sugar interest who opposed the treaty a year ago are now inclined, it is said, to vote for it, provided it be amended by a provision that for five years the reduction of the Dingley duty on sugar, which is to be conceded to Cuba, shall not be granted to any other foreign country. The Louisiana Senators, however, will do their best to defeat the reciprocity agreement, and it is expected that they will have some supporters, but not enough to carry out their purpose. The ratification of the Panama Canal treaty has been delayed by Senator Morgan of Alabama, who insists that the interests of the United States require the document to be amended in several particulars. We have previously pointed out that, in international law, there is no ground for his objection that President Marroquin is a usurper, and that the present Bogota administration is only a *de facto* government. There is no doubt that a *de facto* government, once recognized by the United States, is qualified to negotiate with us a treaty which would be binding upon Colombia.

There is no reason to suppose that there is an atom of foundation for another assertion made by Mr. Morgan, that the representatives of our Navy Department on the isthmus bribed the Colombian insurgents to lay down their arms by a promise that they should receive $3,000,000 in gold. It is quite possible that the Bogota government made such a promise, and that this promise caused it to demand that the bonus to be paid in cash by the United States should be raised from $7,000,000 to $10,000,000. But what had or has our Navy Department or our State Department to do with agreements entered into between the Bogota government and the Colombian rebels? There is no doubt that Mr. Hay obtained from President Marroquin a hundred-year lease of a canal strip, with an option of renewal, just as cheaply as he could. Had he not consented to pay the $10,000,000 bonus which was ultimately demanded, the negotiations would have proved abortive.

A measure of great importance to business men and lawyers—and, indeed, to the whole community—is the bill which was signed by the President on February 5, and by which the bankruptcy law of 1898 was materially amended. We observe, in the first place, that by the new law preferred creditors of a person who soon afterwards becomes a bankrupt are not debarred from having other claims passed upon by a failure to surrender the amount received. In pursuance of a decision of the United States Supreme Court, a preferred creditor may now retain the amount paid, provided, of course, the payment was not fraudulent, while at the same time, as regards debts unpaid, he will share the rights of other creditors. Another important amendment provides that the appointment of a receiver for an insolvent corporation shall be deemed an act of bankruptcy, entitling the creditors to choose their own trustee. Among the objections to a discharge which are included in the new law is the giving of a false mercantile statement, or the proof that a voluntary bankrupt has sought to go through bankruptcy more than once in six years. The bill just enacted also adds to the list of debts from which a bankrupt cannot be relieved by a discharge in bankruptcy. Among these additions are debts to wife and children, and alimony; also any sum due under a judicial decision to a seduced woman or for the support of an illegitimate child. We note, finally, that the list of corporations permitted to go into voluntary bankruptcy will hereafter include mining corporations, and that the fees of referees and trustees are to be increased on an average by about fifty per cent. of the fees hitherto allowed by law.

The announcement made on February 5 by J. Edward Addicks to the twenty-one Union Republicans in the Delaware Legislature that he will not be a candidate at this time for either the short term or the long term in the United States Senate has placed the ten regular Republicans in a dilemma. The latter do not want to go into caucus with the Union Republicans because they would be outnumbered more than two to one, and two Addicks men would be made the candidates of the party. But on what plea can they refuse to co-operate with their fellow-Republicans, now that Addicks has withdrawn? Their first excuse was that the withdrawal was a trap, the plan of the Union Republicans being alleged to be that, after the two Addicks men had been

elected to the United States Senate, one of them would resign, so that Addicks himself might be appointed by the Governor to fill the vacancy. This pretext served only for a day or two, because Governor Hunn, who is universally respected, announced that under no circumstances would he appoint either Addicks or his chief antagonist in the ranks of the Regulars to fill a vacancy. After this announcement the Regulars fell back on the assertion that what they are opposed to is not merely Addicks himself, but Addicksism. This is a departure from the ground taken by the Regulars two years ago, when they professed that it was only Addicks to whom they objected. Should they now revert to their former plan, they may offer to vote for one Senator (not Addicks) to be named by the Union Republicans, on condition that the latter, in return, will select for the other Senatorship one of ten candidates to be designated by the Regular faction. For a time they seemed disposed to insist that, unless two Regulars should be sent to the Senate through the co-operation of the Union Republicans or of the Democrats, the State of Delaware should continue to be unrepresented in the Federal Senate.

Why, it may be asked, should not the ten Regular Republicans co-operate to send two Democrats of high character and approved ability to the Senate, or, at least, concede *one* of the Senators to the Democratic party? Do the Regular Republicans assume that they monopolize the political talents and the public virtue of Delaware? Time will show whether, in spite of their professions, they have had some other end in view besides the welfare of their State. We repeat that Addicks's withdrawal, coupled, as it is, with Governor Hunn's refusal to appoint him to a vacancy under any circumstances, has placed the so-called Regular Republicans in an awkward predicament. One thing is certain, viz., that if Delaware is not represented in the Fifty-eighth Congress by two Republican or two Democratic Senators, or by one Senator of each party, it will be the fault of the Regulars.

A far more extreme view of the impending danger in China than any yet expressed has just been uttered by Dr. Robert Coltman, Jr., who has long been connected with the Peking court as physician to Li Hung-Chang and several members of the royal family. Dr. Coltman reminds us that at the beginning of June, 1900, he cabled that a foreign war in China was inevitable, and we all know how swiftly his predictions were fulfilled. He tells us now, with the added weight of that ominous and successful prophecy to support him, that a foreign war in China is once more inevitable unless the powers determine to anticipate it by a rapid advance on Peking, and the immediate deposition of the Dowager Empress. This, he believes, will not be done; therefore his prophecy is one of war, certain, inevitable, and immediate. To feel the full force of his view we must follow the steps by which he has reached it. His closeness to the centre of power and to the Manchu court has given him an opportunity to follow the inner causes of things, and he tells us what he has seen. First, and most important, he asserts that the Dowager Empress is still absolute ruler, and that her hatred of foreigners is deep and intense. We can well believe that the armed intervention of the powers did little to diminish that hatred. In her policy the Empress is ably and enthusiastically seconded by the Chief Minister, Yung Lu—or Jung Lu, as Dr. Coltman calls him. And both are in perfect harmony with the great fighting general Tung Fu-Hsiang, and with the exiled Prince Tuan, now busy drilling hardy Mongolian troops on the northern border of the Middle Kingdom. In other words, Dr. Coltman tells us that to the triad of Tung Fu-Hsiang, Tuan, and Yung Lu, whose position we described in a recent issue, the Dowager Empress must be added as a fourth, and that the movement which we spoke of as being under the leadership of the triad is really being carried on under the shelter of the imperial throne. China, or rather the Manchu dynasty in China, has, in fact, determined once more to try conclusions with the foreign devils, and these most formidable personages are acting with a single mind and a single will.

We must frankly admit that the view of Dr. Coltman looks very like the truth. The Empress Dowager has no reason to love the foreign devils, while her connivance at the uprising of two years ago was pretty clearly shown, and very generally accepted and admitted. Therefore it is probable enough that she is once more working with Prince Tuan, Tung Fu-Hsiang, and Jung Lu for a new uprising. As we have said again and again, this anti-foreign crusade is not really a Chinese movement. It is a Manchu movement—a movement of the Manchurian family which conquered China in the seventeenth century, and has since held that vast land under a military despotism. For this reason Dr. Coltman suggests, as a sequel to his policy of dethroning the Empress, and, we presume, defeating Prince Tuan and Tung Fu-Hsiang, the establishment by the powers of a national Chinese dynasty. This seems to us mere doctrinary politics. When was a dynasty ever imposed on a nation by a foreign power? And where are we to get our Chinese dynasty? The cold truth is that, if there were at present in China a man capable of heading and founding such a dynasty, he would have founded it already. The Manchus are on the throne solely because for three hundred years no Chinaman has been strong enough to drive them out and take their place. The Chinese character seems to lack the quality of collective intellect and will which enables one man to control the work of a number of others; and this lack is apparent in the civil and military organization of the country alike. If that power be lacking, no foreign action can supply it. As well invade a country to engraft on its inhabitants an appreciation of American humor. We may therefore look to the other alternative, a second invasion of China and an apportionment among the powers. What vast potentialities of trouble this entails a moment's thought will show. And it is a proof of the solidarity of the race that the Venezuelan tangle will definitely affect the movement of destiny in China; for instance, the strong reaction against Germany which has been passing over England will greatly lessen the inclination of Germany to play England's game in the Chinese mêlée, and we may soon see the present Venezuelan allies at loggerheads as to the possession of the wealthy valley of the Yangtse-kiang. There is one sentence in the pronouncement of Dr. Coltman which we shall do well to hold in mind when the outbreak he predicts shall have taken place. Dr. Coltman tells us, in so many words, that the blackmail and general extortion practised by Catholic and Protestant converts upon their heathen neighbors for months after the arrival of the allied armies two years ago have sown seeds of bitter hatred that will reap a harvest of retaliation when the outbreak occurs. This is a side of the question we are too apt to overlook. We are too prone to assume that all the misdeeds are on the side of the heathen; to believe that the antagonism of China towards the foreigner is a piece of sheer perversity, a result of dense ignorance and original sin. It is wholesome for us to be told that he is as often sinned against as sinning.

Though Parliament does not meet for another week, the pressure of public opinion has compelled two Ministers to give voice to the views of the Balfour government. Through a singular coincidence, both apologists are interesting chiefly because they are distinguished sons of much more distinguished sires. Let us deal first with Austen Chamberlain, who is first the son of the Man of Birmingham, and secondly the English Postmaster-General. On this occasion Austen Chamberlain appeared as his father's representative, at a dinner in his father's city, and what he says, therefore, is more from his father than from himself. And what he says is this: that the policy of coercion against Venezuela was conceived, proposed, and put in force primarily by England, and was not in any sense due to the instigation or overt influence of Kaiser Wilhelm. This thoroughly bears out what we have said, and also drives home the fact that Secretary Chamberlain must bear his full share of the responsibility, even though his present tour in South Africa makes it appear that the responsibility rests on other shoulders. Austen Chamberlain, speaking for his Majesty's Ministers, and especially for his father, the Colonial Secretary, resents the imputation that England has been hoodwinked. He says, in so many words, that every detail was arranged beforehand, and that England was, from the outset, fully aware of her responsibility; and he naturally adds that it would be dishonorable for England to withdraw from the German alliance merely because that alliance has proved distasteful to the United States. Then the adroit youth tries to stand on two stools at once. Having made it quite clear that England initiated that

policy of bullying which has proved so offensive, and having further declared that England would stand in with Germany to the end, he then began to hand bouquets to this country, very much in the manner of the sweet-tongued Báron Speck von Sternburg. He declared that if England's present course jeopardized her good relations with the United States, he would regard this as a calamity to the civilized world, and added that there was no nation whose good opinion Great Britain valued so highly as that of the United States. He went on to say that he thought it incredible that the United States should take umbrage at the joint action of Germany and England, and in every way made it clear that Germany's action had his entire approval, and the entire approval of the Balfour cabinet, including his own worthy sire, the Colonial Secretary.

The British Parliament opens under auspices of gloom. Never in the history of the empire did questions of such gravity loom up together for solution; and hardly ever in that empire's history did there seem to be less of the power to face and solve great issues in the Council Chamber of the nation. The Venezuelan matter offers difficulties formidable enough, and it is clear that the government will be faced by a storm of angry questionings as to the Anglo-German alliance. The speeches of Austen Chamberlain and Viscount Cranborne showed that the Balfour cabinet already feels keenly the pressure of popular disapproval; but the matter goes far deeper than the critics of the government seem willing to admit. To break with Germany over Venezuela, as English public opinion seems to wish, would be to provoke the hostility of Germany in the Far East, and, in all probability, to drive Germany into an understanding with Russia and France as to the disposition of China, thus reviving the conditions which squeezed England's other anti-Russian ally, Japan, off the Asian mainland in 1896. Should Germany, France, and Russia act together in Asia, then England's influence in the Far East, already dimmed, would be finally doomed. And this consummation is hastened by every adverse criticism of the Anglo-German alliance, whether in or out of Parliament. With the recrudescence of the Chinese question, England ought to be doubly careful of offending Germany; yet a liberty of attack against the Anglo-German alliance is shown which is reckless in the last degree. Then there is the question of the Near East, about to be revived in Macedonia—a question on which England has so persistently taken the wrong side, as confessed even by Lord Salisbury himself. The recent protest against the passage of unarmed Russian torpedo-boats through the Dardanelles shows that the old bad spirit remains, precisely where it can do most harm, in the British Foreign Office. Any grave mistake, whether in the South-American question or in the much more serious questions of the Near and the Far East, will bring results to England which will be irremediable; and, unfortunately, the British cabinet seems to have a genius for mistakes.

From several English sources come suggestions that a happy solution of the matter would be the fall of the Balfour cabinet, and a reconstructed government under Secretary Chamberlain. These adherents of the Colonial Secretary seem to think that he had no part in the Venezuelan muddle, and Chamberlain's present visit to South Africa seems to hold him aloof from the South-American tangle. Yet the whole thing is as much his doing as it is Balfour's or Lansdowne's. In fact, the policy of armed bullying, undoubtedly initiated against Venezuela by England and not Germany, is the very essence of Chamberlain's creed and the true expression of his character. And we all remember how he heralded with joy the prospect of an Anglo-German alliance at the beginning of the South-African war,—and how Count von Bülow snubbed him for so doing. Armed violence is and has always been the English tradition; and it is not conscience, but apprehension of hostility in this country, which is finding expression in the protests resounding over England. England intervened in precisely the same way in Mexico, in the days of Maximilian, when there was no question of Germany. Also it is largely the influence of Chamberlain which keeps England at odds with Russia, and therefore drives her into alliances with Germany or Japan, avowedly to resist Russia's Asian policy. Nor can we hope that the Colonial Secretary will see more clearly in the Near East, where the Russian bugbear will frighten him once more into siding with the Turk, as Chamberlain's political prototype, Beaconsfield, sided in the last Russo-Turkish war. Finally, it is clear that Chamberlain's peace tour in South Africa is largely a failure. If one man more than another incarnated in himself the splendid genius of the Boers, and won for them the admiration of the whole world, that man is the great De Wet; and De Wet has just declared war against the policy of the Colonial Secretary. We know very well that with De Wet words are something more than empty air; and we may confidently expect that if he is driven into a new campaign of agitation, the whole of South Africa will ring with his words, as it has already rung with his deeds. Here also the outlook for British Ministers is full of gloom. The most dangerous symptom of all is that they fail to realize the grave menace of the situation, and are once more drifting vaguely, as they drifted in the South-African war and into the quarrel with Venezuela.

One of the anti-canal State Senators has introduced a bill in his branch of the New York State Legislature to strike out the section of the Constitution which forbids the sale of the State canals. The amendment has been introduced before. Senator Ambler's ostensible purpose in introducing it now is to clear the way for a possible sale of the Erie Canal to the Federal government. That plan is an old story, and it has a great deal to recommend it, provided the government could be induced to buy, but its use heretofore has been merely to stave off any serious attempt by the State to modernize its artificial waterway. There is another possible plan for making the antiquated Erie ditch a factor in contemporary life which is more rarely suggested and has been less discussed. The canal might be sold to a private corporation. The opponents of canal improvement declare that it is obsolete, and that no one would buy it, and that no private capitalist in his senses would dream of trying to put it into shape to compete with railroads. Still the possibility of such an attempt is talked about. The city of New York does not wish to see the old canal filled up, neither does Buffalo, and there are big towns on the Great Lakes which have an interest in the matter. There is private capital enough available to modernize the canal if sufficient inducement can be discovered, and it is argued that private capital would do the work a great deal cheaper than either State or nation could do it, and that the canal, as it is, is in such a wretched condition and so out of date in all its methods, that very little idea of its possibilities can be gathered from its present earning power.

Vermont decided by popular vote on February 4 to give itself enlarged discretion about the liquor traffic, and not to be a prohibition State any longer. In place of that drastic and ineffectual plan for subduing thirst it has accepted local option. Presently the towns and cities of the State will vote, each for itself, whether to grant liquor licenses or not. In the recent election most of the towns favored prohibition, which works pretty well in the more sparsely populated districts. They will doubtless vote "no license," and will be as well off as before. The cities voted for local option. In most cities, as every one except the prohibitionists knows, prohibitory laws are imperfectly enforced. The choice offered to the Vermont cities was no more than whether they should have liquor sold legally or illegally. They voted for a lawful traffic, and will doubtless decide to issue licenses. Believers in local option say that in Vermont the new plan will result in a smaller consumption of liquor than now, and in bettering the liquor consumed. The State has taken a forward step, which even Maine is likely soon to follow. Prohibition has been thoroughly tried in New England, and has been found wanting. The local-option system is a wiser method of restraint, and has the great merit of being enforceable.

Captain Hobson has resigned from the navy; the Secretary of the Navy has accepted his resignation with courteous reluctance, and the country will have to get along without his valuable services. The Captain is a good deal criticised for his action. He is a fluent speaker, and for four years has been conspicuously before the public. What he has had to say, about himself or anything else, has found ready admission to the newspapers, and it is likely that he has talked for publication somewhat too much. He is a man of sentiment and of enthusiasms, and such a man finds special

difficulties in appreciating the golden qualities of silence. He tried hard to be retired, on account of the condition of his eyes, but the naval retiring board, finding that he was as yet fit to perform his duties, did not feel authorized to retire him. It was then attempted to retire him by special act of Congress, but the bill was defeated. Mr. Hobson says its defeat was due to Congressman Bankhead of his own home district in Alabama, who saw in him a possible political rival. His reason for resigning is that his eyes, though still serviceable, are so much impaired that continuance at his work as naval constructor would probably result in the loss of his eyesight. If this opinion about his eyes is well founded, as appears, his resignation cannot justly be criticised. He is going to lecture, that being an occupation that does not strain the eyesight.

After all, American enterprise as exerted abroad is not yet all predatory. In spite of trade rivalries and imperialistic dreams, there are Americans in foreign lands who are working for the good of the countries where they are sojourning. If we ever get anything like a complete picture of what our soldiers did in the Philippines, there will be lights as well as shadows in it. It has pleased some good people in Boston to have a lecturer—Mr. Gibbs—tell the Twentieth Century Club that it was a common practice in the Philippines for American commanders, as soon as they got a section of country pacified, to open the schools, and detail soldiers to teach them, so that when Superintendent Atkinson got to the islands a start had already been made in teaching the Filipinos English. Not very much has ever been heard of this use of soldiers, but evidently there would have been no special trouble about recruiting school-teachers out of a regiment of American soldiers. Another instance of American altruism has demonstrated its persistence. There was a meeting in Boston the other day to raise sixty thousand dollars for buildings in Madrid for an American school for Spanish girls. This school was started twenty years ago by two American missionaries, and is said to be the only school in Spain for the higher education of girls. It has flourished, and seems to be growing in popularity, especially since the Spanish war. It is a Protestant school in a Catholic country, but its purpose seems to be not to convert Catholics to Protestantism, but to educate women. It seems an odd thing for even missionaries to do, to conduct a school in Spain for the education of Spanish girls, but this school at Madrid seems to be doing good.

The sale of books, manuscripts, and autographs, from the library of John G. Whittier, on February 6, in New York, yielded about ten thousand dollars. The purpose of the sale was to provide necessary funds for the care and permanent maintenance of the old Whittier Homestead, and the sum realized should go far towards making up the amount necessary. An autograph message of President Lincoln to Congress brought the highest price ($845). The sale was a small matter compared with the great art-auctions which New York has seen this winter, but because of its purpose it is gratifying that it should have gone so well. Some exceedingly interesting letters, books, and manuscripts were offered, and the watchful collectors of this opulent town let none of them pass unappreciated. New York's eminence as a market for all rare and curious wares that collectors covet has been wonderfully attested by the remarkable sales of this winter.

The two-hundred-and-fiftieth anniversary of the reception of a charter by the city of New York was regarded with mixed feelings by the descendants of those who controlled the town up to the great inflow of Irish and German immigrants in 1848. In the Borough of Manhattan, the native whites both of whose parents were born in the United States now constitute only 16.9 per cent. of the population. Even of the native whites born of native parents only about two-thirds were born in the State of New York. The largest contingent of outside natives came from the New England States, and, curiously enough, there were more immigrants coming to the city of New York from the Southern than from the Middle and Far Western States. Not only are the native-born children of native Americans vastly outnumbered by those who are foreign-born or the children of foreign immigrants, but the racial nature of the foreign element is materially changing. Instead of being almost exclusively Irish and German, as it was fifty, or even forty, years ago, the Irish-born are now fewer by nearly 21,000 than they were twelve years ago, and the Germans fewer by upwards of 5000. The increase of the foreign-born during the last decade has come almost entirely from Russia, Italy, and the Hapsburg dominions. As the birth-rate among the newcomers just mentioned is incomparably higher than that among the native-born who were children of native parents, it looks as if, fifty years hence, the native American element would dwindle to a very small fraction of the metropolitan population. They will doubtless continue, however, to possess a greatly disproportionate share of the city's wealth. As for the so-called Knickerbockers, they are likely to be nearly extinct by the end of another generation. Even now, only a very few of them can be discerned struggling painfully on the surface of society—*rari nantes in gurgite vasto.*

The efficacy of formalin as a cure for blood-poisoning is not yet conceded by the doctors. Some of them say that it is the salt-and-water which has been injected into the veins of the patients on whom the formalin solution has been tried that has done good, and that the formalin used was so much diluted as to be of no consequence. Happily it is not denied that a method of treatment has been discovered which is exceedingly efficacious in some cases of blood-poisoning. The public will not stickle for formalin if salt-and-water will work the cure.

John Alexander Dowie, the faith-cure apostle who has entrenched himself so securely in Chicago, and is planning a descent on New York next October, is likely to prove an interesting visitor to this town. He is an organizer, and abounds in method and foresight. He has ample means to do things in a large way. His plan is to bring 2000 (perhaps 4000) of his followers here, and give his kind of religion a careful and comprehensive introduction to the people of Manhattan. Every family on this island is to be visited; every dwelling supplied with Dowieite tracts; every soul, so far as possible, invited to the Dowieite meetings. These meetings are to be held daily in the Madison Square Garden, which has been hired for fifteen days. Special trains have been engaged to bring the Dowie multitude here, and lodgings are being engaged for their accommodation. Dowie is rich. He is in business, and makes money. He has founded a town which has grown in less than two years from a population of 400 to 8000. The Dowieites do not smoke nor drink nor employ doctors, and they all give a tenth of their incomes to the Church. They are busy now practising the music of their crusade and studying maps of Manhattan. Dowie frankly discloses his belief that in him the prophet Elijah lives again for the third time on earth. He is a remarkable citizen, and will doubtless carry out his plans.

The recent complaint of Mrs. Newdick of Kokomo, Indiana, made in the Mayor's court of that city, was that her husband had assaulted her. She was making bread, she said, and had her hands in the dough, when her husband called her to family prayers. She excused herself, but unsuccessfully, for her husband, with a man's disinclination to take no for an answer, knocked her down. The magistrate felt that Mr. Newdick had shown excess of zeal, and fined him $30. Family prayers, which used to be common in this country, are a rare observance nowadays. The reason for the lapse of the custom is not so much the decline of piety as that as life became fuller, and individual engagements and preferences were more and more respected, it became harder to get families together for worship. Family prayers belong to a time when the head of a family ruled it, not by general consent, but by authority. It was a time too when religious observances were more regarded than now, though probably not religion itself; when there were fewer trains to be caught, fewer factory bells, fewer school bells, fewer letters, fewer engagements and duties outside the household. It is like old times to read of family prayers, and of some one who found it inconvenient to be present. The institution is not dead, but it is rare now, and only prevails in exceptional households whose members are not in a hurry. And even in such families it only prevails nowadays by consent. Compulsion as a stimulant to devotion is pretty much obsolete, and Mr. Newdick of Kokomo should have known it.

The Anti-Trust Legislation to be Looked For

WE are at last in a position to define with confidence how much anti-trust legislation may be expected from the Fifty-seventh Congress. This legislation is embodied in four bills, one of which has been already passed, while two others will certainly and a fourth will probably become laws. Two of these measures we have already discussed in detail, but, in order to appreciate their importance, it may be well to compare them with certain alternative measures which have been proposed, but now appear to have no chance of enactment. The first of the four measures is the bill introduced at the request of Attorney-General Knox, to expedite the trust cases now pending in the Federal courts. This bill, after receiving a slight amendment in the House of Representatives, which amendment was accepted by the Senate, was passed by both Chambers, and sent to the President for his signature. The second measure appropriated $500,000 to aid the Department of Justice in prosecuting trust cases and in securing evidence against the trusts. This item has been incorporated in the Legislative Appropriation bill, which is now before a committee of conference, and its adoption is assured.

We come now to the Nelson amendment to the Department of Commerce bill, which is intended to enforce publicity upon the transactions of industrial corporations; and the Elkins bill, which aims to increase the powers of control already possessed by the Inter-State Commerce Commision over all corporations engaged in the business of common carriers. Although at the hour when we write the Nelson amendment has not been voted on in either Chamber, it has been unanimously accepted by the committee of conference on the Department of Commerce bill, and there has never been any doubt that it would be adopted by the Senate. We may now also take for granted that it will be passed by the House of Representatives, as neither Speaker Henderson nor the Committee on Rules will dare to sidetrack it, lest grave suspicion be cast upon their motives, in view of the exposure to which we have elsewhere referred of the attempt made by the Standard Oil Company to defeat the measure. The value of the Nelson amendment will be instantly understood if we mark the difference between its cardinal provision and that of the Littlefield bill, which passed the House of Representatives by a unanimous vote, and to which, naturally enough, as we have elsewhere noted, the Standard Oil Company offered no opposition. The Littlefield bill merely made it mandatory on corporations engaged in inter-State commerce, hereafter organized, to file returns covering their articles of incorporation, financial composition, condition, transactions, etc., with the Inter-State Commerce Commission. It is true that the bill gave this commission authority in its discretion to call for similar returns from existing corporations doing an inter-State business; but what guarantee would the people have that this discretion would be exercised? Obviously, it might be of vital moment to certain existing corporations to bribe members of the commission not to exercise their discretion, and it would, therefore, be an act of folly on the part of Congress to expose a number of Federal officials to tremendous temptations.

The Nelson amendment to the Department of Commerce bill, on the other hand, individualizes responsibility, and concentrates the attention of the country on a particular officer. It gives the Commissioner of Corporations, who is to be at the head of the new Bureau of Corporations in the Department of Commerce, power and authority to make, under the direction of the Secretary of Commerce and Labor, diligent investigation into the organization, conduct, and management of any corporation, joint stock company, or corporate combination — whether prospective or existing — engaged in commerce among the several States or with foreign nations, excepting common carriers, who are dealt with by existing laws, and, as we have said, by the Elkins bill.

How are the powers of the commissioner defined? He is to have and exercise precisely the same powers with respect to industrial corporations and combinations as are or shall be conferred on the Inter-State Commerce Commission by the act of February 4, 1887, and by any *amendments of that act* relating to common carriers, the words italicized plainly including the Elkins bill. That is to say, he will have the right to subpœna and compel the attendance and testimony of witnesses, and the production of documentary evidence, and to administer oaths under the obligations, liabilities, and penalties prescribed with regard to testimony before the Inter-State Commerce Commission. These powers should prove sufficient to compel the production of the testimony required, but, if they are evaded or defied, it should be easy to secure more drastic legislation from the Fifty-eighth Congress. The purpose of investing the Commissioner of Corporations with such extensive powers is that he may gather such information and data as will enable the President of the United States to make recommendations to Congress for legislation for the regulation of industrial corporations or combinations engaged in inter-State or foreign commerce, or both, and to report such data to the President from time to time as the latter shall signify a desire for it. The bill further provides that the information so obtained, or as much thereof as the President shall direct, shall be made public.

It will be manifest at a glance that by the Nelson amendment the whole responsibility for assuring the desired publicity is fixed upon President Roosevelt. He has but to order the new Secretary of Commerce, who will be virtually his clerk, to undertake the investigation of a particular corporation, and the order will be at once transmitted to the Secretary's subordinate, the Commissioner of Corporations, and will be executed by the latter. Should either of the two last-named officials refuse or delay to perform the duty imposed on him, or be guilty of any undue complaisance toward the corporation aimed at, or of any connivance at the suppression of testimony, it will be in the power of the President promptly to dismiss him. It is, practically, therefore, Mr. Roosevelt himself in whose hands this formidable engine for the enforcement of publicity will be placed. Nobody doubts the sincerity and inflexibility of his purpose to find out exactly what the great industrial corporations have done and are now doing, and thereby to ascertain whether they need regulation, and, if so, what kind of regulation, at the hands of Congress. We have said enough to demonstrate that, compared with the Nelson amendment, the Littlefield bill is a sham. Nor is it at all difficult to see why certain existing corporations, whose operations from the outset have been shrouded in mystery, should regard the former measure with an anxiety akin to desperation. Such combinations, on the other hand, as the United States Steel Corporation have absolutely nothing to fear from the Nelson amendment, and have made not the slightest effort to defeat it.

It is well known that the Senate has passed the Elkins bill, which is intended, as we have said, to enlarge the powers to regulate and control corporations engaged as common carriers, and especially to prevent the giving of rebates by such common carriers to industrial corporations, and thus assisting the latter to establish monopolies. There is a provision against rebates in the Littlefield bill, as well as the emasculated provision for publicity, and until very recently it was feared that Speaker Henderson and certain coadjutors of his in the House Committee on Rules intended to let the Elkins bill and the Littlefield bill pass each other in the corridor between the two Chambers, but never be consolidated into an act of Congress. This hippodrome performance is no longer practicable, in view of the exposure of the Standard Oil opposition. There is now no doubt that the House Committee on Inter-State and Foreign Commerce will promptly take up the Elkins bill, and report it favorably to the House. The Speaker has the power to refuse to recognize the bill and to provide for its consideration, but, although the term of his public service is now very near an end, it is most improbable that he will venture to defy public opinion.

Elihu Root on the Negro Problem

No more noteworthy speech has been heard in the United States for many years than that which was delivered before the Union League Club of New York city, by Mr. Elihu Root, Secretary of War. We need not remind our readers that Mr. Root is an eminent lawyer, and one of the two strong men in Mr. Roosevelt's Cabinet. The deliberate comments of such a man on any important topic could hardly fail to be interesting and profitable, and if on this occasion he commanded unusual attention, it was because he mooted and discussed the most momentous problem by which the Republic is confronted. What is to be done with the negro was the fateful question that he asked, and he did not for the moment undertake to answer it, but contented himself with pointing out that the answer given by the statesmen of the reconstruction period had proved unsatisfactory. The advocates of negro equality at the ballot-box will regard this as a portentous admission by one who has been a lifelong Republican, speaking to an association that from its foundation has been identified with the political party which not only emancipated the negro, but enfranchised him. Startling and almost epoch-making, as such a declaration may well seem when the circumstances under which it was uttered are considered, it provoked no protest from those to whom it was directly addressed, and it has since met with general, though not unanimous acquiescence, on the part of the Republican press.

Mr. Root did but give voice to a conviction which has long been held by Democrats at the North as well as at the South, but now for the first time we learn that the conviction is held also by many candid and thoughtful Republicans. That is to say, it is no longer possible for even the most loyal and stalwart representatives of Republicanism to shut their eyes to the falsity of the assumption made by the framers of the Fourteenth and Fifteenth Amendment to the Federal Constitution, the assumption, namely, that all which was needed to make the black man the equal of his white brother was equal political rights. It was taken for granted that, those rights conceded, the black man would quickly show himself qualified to use them, and to lift himself immeasurably in the social scale. The as-

sumption was based on hope and faith, rather than on knowledge—it was put forward, indeed, in defiance of history and observation—and events, as we have said, have shown it to have been ill founded. The country must face, Mr. Root acknowledged, the failure of the plan adopted in the reconstruction period. It certainly has not availed to give the blacks the suffrage. Something more or something else has to be done. Not for a moment would Mr. Root or any conscientious American disclaim our responsibility for the welfare of the colored people. Their fathers did not come here voluntarily. They were brought here against their will, and for upwards of two centuries their descendants were held here in bondage. At last we freed them. We gave them the suffrage, but we made no provision for their maintenance, such as the Czar Alexander II. did not forget to make for the emancipated serfs of Russia. The Federal government and our people as a whole have done little, very little, to assure to them an education. It is true that we established a freedmen's bureau. It is true that the Slater Fund exists, and that there are some other funds of the kind. But all such agencies have been of insignificant utility, in view of the immensity of the task. The burden of educating the blacks has been devolved almost entirely upon the impoverished Southern States, where by far the greater part of them reside.

Attention was directed by Mr. Root to another fact full of significance, the fact, namely, that we now approach the discussion of the negro problem under conditions materially changed from those that prevailed in the reconstruction period. At the present time the negro is regarded with less toleration at the South, and with less sympathy at the North. There is now a vehement outcry in the Southern States against the appointment of negroes to Federal offices by President Roosevelt, although under Presidents Hayes, Garfield, Harrison and McKinley, more negroes were appointed, yet nothing was said. Another outcry is now raised, because a few negro occupants of Federal office in Washington attend one of Mr. Roosevelt's official receptions. There has never been a time, as Mr. Root reminds us, since the civil war, when negroes have not held similar offices in the District of Columbia, and when they have not been permitted to attend Presidential receptions, and have availed themselves of the privilege. It is not Executive customs that have changed; it is public feeling and popular sentiment with reference to the negro at the North, as well as at the South. There is not an atom of doubt that a very large majority of Northern whites would now deprecate any attempt to employ the military power of the Federal government so to enforce the Fifteenth Amendment as to assure to the blacks in Mississippi and South Carolina the political predominance to which they are numerically entitled. The truth has been brought home by events to the heart and conscience of a large majority of whites in the Northern States that we did our fellow whites at the South a grievous wrong when we insisted upon giving the negro the suffrage. The suffrage is no inalienable right: the suffrage is a reward of merit. Had it been held out as a prize for education, thrift, and character, it might, and probably would, have operated as a powerful incentive. Bestowed gratuitously, it has proved worthless to the black man, and dangerous to his white neighbor.

While so much is acknowledged by thorough-going but clear-sighted and unprejudiced Republicans like Mr. Root, there is not even the germ of an agreement among them about a remedy. Nobody disputes that we ought to help the black man to learn a trade, and not condemn him to menial service or hard labor in the field. That is to say, fair-minded men would like to see applied on an extensive scale the system of technical education which Mr. Booker T. Washington has so earnestly recommended. At the North as well as at the South, however, there is a deep and growing distrust of the efficacy of a liberal education to qualify the colored race, viewed in the mass for political and social equality. The ancient pride of the Aryan race, founded on instinct and buttressed by experience, that pride of race which seemed suspended during the reconstruction period, has revived and resumed its old authority. Nearly forty years have elapsed since the negroes obtained the opportunities embodied in the suffrage, and yet they have not advanced a jot towards social equality or toward the demonstration of general fitness for political functions. Among the blacks, indeed, who had been reared under the régime of slavery, there were more who gave proof of high intelligence and sterling character during the decade following the civil war than can be pointed out to-day, notwithstanding the fact that Northern universities, including Harvard, have been opened to the blacks, and some of them have attained distinction therein.

If, then, negro suffrage has failed, and if the liberal education of negroes, so far as it has been carried, has fallen far short of the results expected, where are we to look for a solution of the problem? That it is a tremendous problem the last census shows. Not only did the United States contain 8,840,789 negroes in 1900, but the increase in ten years had been 1,352,001, or over eighteen per cent. It is obvious that, at this rate of expansion, not many decades can elapse before the colored inhabitants of the Republic will exceed twenty millions, most of whom will be concentrated in the States south of the Potomac and the Ohio. Can we marvel that the Southern whites regard with grave misgiving the ominous increase of this element of their population, or that they would gladly seek relief, if they could, in the wholesale deportation of the blacks? Compulsory deportation is, of course, impracticable. But it may be that one day the question will be seriously considered whether it might not be expedient for our Federal government to offer a very large sum of money to Mexico—say one or two hundred million dollars—for a cession of Chihuahua and two or three others of the northern and thinly-peopled Mexican States with a view of directing thither a voluntary and assisted immigration of Southern blacks. We set apart a large and fertile fraction of the Louisiana Purchase for the Indians in perpetuity, and neither the Indians nor we have had cause to regret the act. If the northern section of the Mexican Republic could be bought and erected into a Territory for the exclusive benefit of our colored people, and if it were distinctly understood that they not only would receive grants of land and cattle, but would enjoy educational facilities and a monopoly of political privileges, it is by no means incredible that a large body of negroes might be inclined to migrate thither. None of the solutions thus suggested has, as yet, been seriously considered at the North, but we are likely to witness a material change in this respect, now that Mr. Root has brought home to us the gravity of the problem.

Washington

SIMPLE and brave, his faith awoke
  Ploughmen to struggle with their fate;
Armies won battles when he spoke.
  And out of Chaos sprang the State!

ROBERT BRIDGES.

The Making Over of a Minx

PROBABLY the greatest difficulty formerly met in changing the spots of the leopard lay in the lack of the leopard's volition. With the great advance of modern surgery there can be little doubt that the spots might be changed, and the leopard come out a very different-looking animal, if it would only lend itself to the reform. If the leopard really wished to have its spots changed, it could not change them itself perhaps, but it could trust itself to the hands of a skilful operator, and the work could be done for it, with no immediate suffering on the leopard's part, and without much subsequent shock. It is possible, however, that the change would be only superficial, after all. It may be that the spots go all through the leopard, and that their redistribution on the leopard's skin would not affect them structurally. It may be that they penetrate the leopard's psychical, as well as its animal, economy, and that they reach the will itself, so that the leopard is essentially disabled from co-operation by liking them very well as they are. It may feel that since it came honestly by them, it is not answerable for any harm they may do, and that they actually do no great harm; if they do a little harm, incidentally, they afford, at the same time, a great deal of pleasure. It may observe that many are attracted by them, and that if it rearranged them, it might not make new admirers in place of the old whom it might alienate. It may ask, and not so very impiously, whether its spots were not disposed for some wise purpose just as it finds them, and whether it would not be a sort of flying in the face of Providence to wish them otherwise. This, of course, is supposing that the leopard is introspective, or that its human analogues are so.

Some such reflections as the foregoing will suggest themselves to the reader, if he is the reader we fancy him, of Mrs. Humphry Ward's fascinating story of *Lady Rose's Daughter*, now publishing in a popular magazine issued not many removes from these premises. It is safe to say (a good journalistic halt, while one takes breath for a fresh start, which we always like) that the great majority of serial readers, who are the real readers, the best readers, of fiction, have rarely been led with such interest along the course of any novel as this latest novel of Mrs. Ward's, which has for its great allure the figure of a clever and beautiful girl, exceptionally friendless, and exceptionally disadvantaged, in the race she runs, in many of the social things that make for success in the world. She is the child of a mother who left her husband to live with the man she loved, and Julie le Breton has grown up and come to her moral consciousness in the presence of a living protest against the validity of a certain commandment. That she remains practically good and pure, whatever she may theoretically be, is one of those miracles of nature by which children are preserved against the evils alike physical and moral of their parents. Her temptations lie in the line of intellectual and social ambition, so that when she becomes the companion of a very worldly old woman, who has a salon in London frequented by the best people of the several great worlds of the capital, she finds herself almost insensibly displacing her employer as the head of the salon, and drawing to herself the admiration which its foundress enjoyed. One might be sure that Lady Henry was not insensible of the change, and in her recognition and resentment of it she uses the girl with cruel and humiliating outrage before the people of her following, who are not long in ranging themselves in parties, with the immense majority on the side of Julie. But the old woman and the young girl have such need of each other

that it does not come to a hopeless quarrel between them until one night when Lady Henry is laid up with rheumatism, and has left word that she is not receiving that night. Then Julie almost involuntarily admits many of the most brilliant habitués of the salon, one after another, and has one of the most iridescent evenings known to the place. The gay talking and laughing make their way to Lady Henry's room, and she comes down, stick in hand, and fairly drives Julie's guests, her former friends, out-of-doors. That ends it, and Julie takes refuge with a pretty young duchess, who is much her friend, and sets her up in a house of her own. Here Julie attempts a salon of her own, but it fails on the very first night.

Her friend stands by her, and so do all her friends. She keeps making more and more friends, and as they nearly all have titles, or are by way of having them, it is not so bad. She lives in the society of people mostly related to her through her patrician mother, who had the courage of her class in leaving her husband to live with her lover, but it does not suffice for Julie, who is a woman at heart, after all, and is not satisfied even with the hope of an ultimate salon. She falls in love with a fearless and worthless young officer, whom her interest with statesmen has got appointed to an important post in the service, and whom she follows to Paris, where she is arrested on the brink of ruin, by the fine fellow who loves her. He is within a feeble life or two of being a duke, but he does not wish to be a duke, and he is really a fine fellow, with that measure of weakness which renders him captivable by such a girl as Julie, who is herself by no means always bad, but only ambitious, and is bad only when she forgets to be ambitious.

The rather awful problem which her author and her lover have on their hands at this reading, is how to effect her redemption. It will be one of the greatest triumphs of fiction if they can manage it probably. But can they, is the great question, and we shrink from conjecture; we would much rather wait and see. They get her safely back to London, but that ought only to be the beginning of their difficulty. Perhaps they will be equal to it. Mrs. Ward, at any rate, has never shown greater skill in the handling of material than in this bold and uncommon situation she has created. There is scarcely a more brilliant story than that of Julie le Breton up to the failure of her attempt at a salon after leaving Lady Henry's house, and setting up for herself. Having lived through a great many imaginary narratives, and assisted at a great many good and bad endings, we should ourselves have been easily appeased with a novel that went no farther than such a climax, with no definite ending at all. Hardly a figure up to that point has been feebly or erringly touched. It is our preference for low company, no doubt, that leaves us a little lost in the society studied; but we must own that they seem all very probable high politicians and patricians, with a mixture of human frailty in them that makes them the prey of a charm like that young girl's, for she appeals by the haplessness of her origin, as well as by her talent and beauty, and she has just so much wish to be good as saves her to the liking of her acquaintance. As we say, we should not ask more than to have her left with us at that great moment when she realizes how, after all, she cannot conquer the world except upon the world's terms. She certainly puts us in a quiver of sympathy for her first failure. But we fancy her more easily the creator than the creature of great passions, and we feel that her true drama is social and not personal, so that we should like better to keep on wondering how she will construct a world which she can rule, and what that world would be like, for it would not be like Bohemia.

But, doubtless, Mrs. Ward understands the need of the immense audience which she addresses, and which is formed in but small part of inexacting journalists. She is under a tacit promise to write a story, and not to present a situation from which the reader may imagine such a one as he pleases. So she must go on to the end with the creature she has invented, and win her or lose her at last. Which shall it be, for Julie le Breton: perdition or redemption? If she is redeemed, will it be against her nature, however much with her will? There is the rub; and through the abrasion we seem to find the question of the leopard and its spots: whether they can be changed, and whether it would like them if they were.

The Mix-up in Wireless Telegraphy

On the horizon are signs of war, a very up-to-date sort of a war, a war for right of way in the ether.

The amazing success of Signor Marconi, in crossing the Atlantic, has stirred up a host of rivals, and between this country and Europe there are now a dozen or twenty systems struggling for precedence. And the lawsuits have begun.

In this country the de Forest company is suing the Marconi company for a million dollars damages for certain statements said to have issued from the Marconi company. The latter replies by a suit for infringement against the de Forest company, and asking the latter company to remove itself from the earth. It is to be noted that if the Marconi company's claims are upheld, this will raise hob with any system employing the coherer principle as a receiver of the messages. The de Forest receiver operates on an exactly opposite principle, however, and there seems little likelihood that it will be shut out.

In Germany the Slaby-Arco and the Braun systems have had a clash, with a recent victory for the latter, that it does not infringe the Slaby-Arco devices. In France the government has practically confiscated wireless telegraphy, so that the stock-boomers there have not had much of a chance. Italy, proud of its native genius, seems to have taken up with Marconi, and the English government has also equipped many of its war-ships with Marconi instruments. In America the lead in this line seems to have been secured by the de Forest system, both the War Department and the Navy having, after competitive trials, given the contracts to the latter company.

But by far the most interesting point is the question of transoceanic signalling. Marconi's recent messages across the Atlantic were secured by means of what he calls a magnetic detector. For long-distance work, the old coherers broke down. This magnetic detector, which seems to be far more sensitive than any form of coherer, is the invention of Professor Rutherford, of Toronto, and was exhibited as far back as 1897. It seems to have been taken up independently by Sir Oliver Lodge, in England; by Marconi; and by Professor R. A. Fessenden, of Washington. Their patent applications, now pending, are in interference. It is said, however, that Professor Fessenden offers proof of his invention, or improvements, a year in advance of Marconi's application. If this is true, and Fessenden wins, the Marconi company can do business across the Atlantic only with Professor Fessenden's permission, for, so far, no other form of receiver has been shown capable of taking signals over such a distance.

At present the practical difference between all the different "systems" narrows down to the question of receivers. But Professor Ferdinand Braun, of Strassburg, Germany, announced last week that he had found a new method of sending the electric waves, in any desired volume, and directed to a given point of the compass. These are very broad claims, and further details are being awaited by scientific men with the deepest interest. Professor Pupin, of Columbia, credits Professor Braun with having done the most valuable work in wireless telegraphy after Marconi. Anything he has to say, therefore, will be respectfully listened to. The sparking method of producing the electric waves does seem a rather crude device, and we might hear any day of a new method which would quite revolutionize wireless.

Meanwhile, what is going to happen when a dozen different systems are shooting up poles and bombarding space with electric waves? It cannot but mean the most hopeless confusion. There can be no monopoly in wireless telegraphy. That is settled. The field is free to all comers. Anybody with a common alternating dynamo or an induction coil can set up for business, or to upset somebody else's business. Tuning, or syntony, is no doubt possible within limits, but at present these limits are vague. With any extensive use of wireless, there is bound to be a mix-up and a gay one.

What will the lawyers do? Nobody knows much about the ether, and nobody less than they. Will they ask the legislatures for wireless franchises? So far as any one can see now, that is the only thing that can make wireless telegraphy a practical business proposition. The alternative is that the government should take it over, as France has already done.

The Greater Grieg

It is the habit of musicians of a certain stamp to speak of Edvard Grieg with a slightly contemptuous lifting of the brows—an artist, they will concede, of charming and distinguished accomplishment, but restricted in scope and power. A popular legend accounts him to be peculiarly a poet of the shadow, uttering a beauty essentially dim and rare, remote and exquisitely fantastic, rather than broadly virile and of deep emotional significance; and this legend is operative, with all the force which the complacent utterance of a half-truth so easily exerts, in the most recent estimate of the Norwegian's genius: Mr. Daniel Gregory Mason's study of the composer in his "From Grieg to Brahms." "Grieg," affirms Mr. Mason with impressive assurance, "is never large nor heroic; he never wears the buskin. He has neither the depth of passion nor the intellectual grasp needed to make music in the grand style"—a view of his genius which we have no hesitation in declaring superficial, incomplete, and unjust. Grieg is not merely fragrant and exotic, piquant and fragilely lovely; he is all this, but he is very much more: he is also a poet of the tragic, of the largely passionate and elemental. No mere delicate lyrist wrote the "Death of Aase," or certain of the songs, or the superb C minor sonata for violin and piano, or portions of the piano concerto. Here is no dainty romanticist, no frail and lovely dreamer: the voice is the voice of a master of emotional utterance—here are passion, and pathos, and heroic ecstasy, and despair: here, in short, is a music-maker whose place is not, indeed, upon the summit, but certainly upon the upper slopes.

Venezuela's Fate

By William Thorp

DAY by day the newspapers are full of long accounts, more or less accurate, of the diplomatic hagglings at Washington between Mr. Bowen, on the one hand, and Sir Michael Herbert, Baron von Sternburg, and other European diplomats on the other. The profoundest interest has been taken by the newspapers and the public in the details of these negotiations, but to one who, like myself, has just returned from Venezuela and has had the opportunity of studying the problems of that country on the spot, it is impossible to feel excited as to whether there will be preferential treatment for the belligerent powers for the period of one month or three months, or whether a few thousand dollars will be paid down to them on the nail by Venezuela. The real situation, the real danger, is unperceived by the newspapers and the public.

It may be taken for granted that the custom-houses in Venezuela will be placed under international control as security for the payment of Venezuela's debts. This is inevitable, whether the matter be settled at Washington or The Hague. But what then? The difficulties and dangers of the situation will only be commencing. President Castro, at the present moment, is in the direst straits for the want of ready money. His career, from the moment he swooped down from the Andes and captured the government of the country, has been that of a bandit. No international obligations, no common principles of honesty, have stood in his way when he found it necessary to raise the ready cash. When the custom-houses are under the control of the powers and he is driven to desperation by the want of money, nothing is more probable than that he will come down to La Guayra, and the other ports, and take these avenues of wealth at the point of the Mauser.

I am not speaking without the book. During many weeks spent in Venezuela recently I had unbounded opportunity to make an intimate study of Castro in his palace at Caracas and during his holiday festivities at La Victoria, when he threw off the Presidential paint and became his natural self. It is impossible to conceive a more irresponsible person. He knows nothing of the obligations of statesmanship or the power of foreign countries. When I spent Christmas with him at La Victoria he told me that he was profoundly disappointed at his inability to fight the warships of the Germans, the British, and the Italians. "If Venezuela had a navy, however feeble," he said, "we would soon settle this matter one way or the other. We would sally out and attack them. If they had the courage to land troops, I would lead my brave soldiers against them, and rout them with terrible slaughter." On another occasion I met him at La Victoria in the middle of an open-air fiesta. He was dancing under the trees in a very lively and frolicsome fashion with the peasants of the neighborhood and some ladies he had brought with him from Caracas. I had to ask him whether he would apologize to the allies if they demanded an apology. I asked his factotum, General Linares Alcantara, to procure me an opportunity of speaking with the President, and showed him a cablegram which I had just received from Washington. "It is impossible," said Alcantara, with a gesture of despair; "the President dances. He does not do business. He has done no business for a week. He may do no business for another week. Perceive! I have here fifty telegrams from Mr. Bowen, from Washington, and from our government officials in Caracas. They are unopened. The President would not thank me to show them to him while he dances, and he has danced for a week."

Presently Castro perceived me, with an open cablegram in my hand, and he walked over to me, his partner hanging on his arm, and asked what it was about. I told him that the allies were reported to have demanded an apology from him.

Immediately he struck a Napoleonic attitude, waved his arms excitedly in the air, and declaimed: "General Castro never apologizes. He will not apologize. He has nothing to apologize for. He demands an apology from the allies."

The girl, still hanging on his arm, clapped him on the back, exclaiming, hysterically: "Viva Castro! Viva Venezuela! Bravissima Cipriano!" The crowd took up the cry, whirling around their partners in an excited fandango, and beating the empty bottles from which they had been drinking on the little iron tables which stood around.

This is the way important diplomatic questions are decided in Venezuela. I mention the incident merely in order to show the absolute irresponsibility of Castro and the possibility of his doing something very outrageous at any moment. Even if he adheres to the terms of the agreement which may be arrived at by Mr. Bowen on his behalf, or to the award which may be given at The Hague, there is the probability that he will be driven from power by another bandit like himself, who shall come from the recesses of the Hinterland with a ragamuffin army and seize the government precisely as he seized it. Nothing is likelier than the repudiation of the agreement by that second Amurath. The political adventurer in Venezuela sticks at nothing in order to get control of the finances, and in Venezuela the custom-houses are practically the only source of revenue.

In the face of such a repudiation of the compact by force of arms, there will obviously be only one course open to the creditor nations. They must enforce their command of the custom-houses by an international army of occupation, and must establish in Venezuela an institution similar to the Caisse de la Dette in Egypt. That will mean the end of Venezuela's existence as a sovereign power. Already we see that some of the powers are growing tired of interfering in the affairs of that country, just as they grew tired of playing active parts in the Egyptian drama. One power will be left in to finish the business and play towards Venezuela the part which England has played towards Egypt. The supremely important question is, which power? England already has colonies enough, and any proposition to enlarge her over-sea responsibilities would not meet with favor in the House of Commons or among the British public. Germany's ambitions to colonize in South America are well known, and were the theme of conversation everywhere when I was in Venezuela. Castro and his cabinet ministers talked of them freely. He said to me once that Germany was, in his opinion, the only power really anxious to seize territory in Venezuela, and in another interview which I had with him at La Victoria on Christmas day, he outlined to me a great scheme which he had just evolved for a defensive alliance of all the Central and South American powers, backed by the United States, for mutual protection against European aggression in the New World.

The captain of one of the British warships blockading the Venezuelan coasts told me he was convinced the ulterior motive of the Germans was to obtain the port of Guanta as a coaling-station, and he said the German officers had admitted as much to him. Guanta is an ideal spot for the purpose. It has an excellent harbor, and could be made impregnable with comparatively little trouble and expense.

Some of the German merchants with whom I conversed in Caracas freely admitted their opinion that the occupation of the custom-houses by the powers would only be the first scene of a greater international drama than the American public dreams of. "They take these custom-houses," said one of these merchants to me, "and they collect the money for a time. But presently the government must have money, and if it can only get money from the custom-houses, it will go down and take the custom-houses."

"And what then?" I asked. He shrugged his shoulders.

"Who can tell? We grow used to anything in this country. I have known twenty revolutions in fourteen years. These people are totally unfit to govern themselves, and there is no chance of their growing fit. The country is the richest in the world in its resources. But the only chance of its development is for it to be despotically governed by a foreign power as the English govern Egypt."

Now, in view of these great dangers of the future, is it not advisable for America to take long views and resolve firmly that if it becomes necessary for any one power to control Venezuela and practically make a colony of the country, she will be that power? All Americans are determined to uphold the Monroe doctrine, but the stern logic of facts is forcing them to perceive that the Monroe doctrine carries with it some unpleasant responsibilities. If Castro or another takes back the custom-houses, there will be nothing for it but the conquest of Venezuela. Shall the conqueror be Germany or America?

Of course, it would be an unpleasant situation to face, but the conquest of Venezuela would not be supremely difficult. An army of occupation could be recruited from the native Indians as easily as the Egyptian native army was recruited by British officers. The Indian cares nothing for whom he fights. He is dragged from his home in the hamlet or the forest by Castro's soldiers or by the revolutionists. A rifle is put in his hand, and he is told to march and to fight. He does exactly as he is bid, with the patient endurance of an ox. If he is captured by the other side, he is impressed into the ranks, and fights for them just as faithfully as he fought for his former masters. What does it matter to him for whom he fights? He knows nothing of the issue. He only knows that it seems to be his fate to fight for somebody. He would fight just as loyally for an American or German army of occupation as he does now for Castro and Matos.

Under foreign government, the periodical revolutions by which the country is exhausted could be easily repressed. They always start feebly, and an efficient mounted police force could nip them in the bud with promptness and decision. The task would not be so hard as the repression of dacoity by the British in Burmah, or the conquest of the Indians in the United States.

So far as the military aspect of the question goes, Venezuela is anybody's country. The military power at Castro's command is a slight and shifting quantity. It may seem an extraordinary thing to say, but it is perfectly true that any adventurer, with five hundred men who know how to shoot at his back, can make himself master of a country which is potentially the richest in the world. Castro did it with a slighter force, and those who know him are convinced that he will not long endure being robbed of the fruit of his victories by foreign nations who come down and take his custom-houses for reasons which are totally inexplicable to him. He, or another like him, will presently raise a Venezuelan situation far more serious than the present one, and America will then be faced with the momentous question which I have indicated.

Rural England

By Sydney Brooks

LONDON, *January 28, 1903.*

THE "decay of English agriculture" is a commonplace; and, like most commonplaces, is repeated and accepted without being analyzed or understood. Those who have faced and really grappled with this, the greatest and most terrifying of English problems, are few and far between. Their voices do not reach the powers that be, and the country, as a whole, with unswerving complacency regards the death-throes of British agriculture, the disappearance of the yeomen, the depopulation of the villages, and the dependence of the United Kingdom for five-sixths of its food-supply upon foreign lands, as facts, distressing, no doubt, but inevitable, irremediable, and in no sense vital. It is to wake England up to a sense of the terribly real dangers that underlie these phenomena that Mr. Rider Haggard has recently performed a task without parallel, to my knowledge, for its scope, laboriousness, and careful finish. Throughout 1901 and 1902 he and a companion travelled through the highways and byways of no less than twenty-seven English counties, inspecting, examining, cross-questioning, looking into everything that might throw light on the conditions and prospects of English agriculture. The results of his investigations are set forth in two volumes of six hundred pages each, which the Messrs. Longmans have published under the title of *Rural England*. I venture to say that so long as the English language lasts this book will last with it. Not only has it an immense and immediate utility to-day in bringing out, without the smallest coloring of the author's own views, the opinions of hundreds upon hundreds of experts of all classes on the state of English farming, but to the historian of the future, who wishes to portray rural England at the opening of the twentieth century and to show the complex sweep of the changes wrought by free trade, it will be not only invaluable, but essential. He will be as little able to get on without it as we of to-day are to picture English agriculture at the end of the eighteenth century without the help of Arthur Young. But it is not for posterity that Mr. Haggard writes. The reward he hopes for is less distant and less personal. It is that his labors may contribute their quota to a national awakening, may make England realize the perils into which she is drifting, and spur men on to call a halt before it is too late. Let me add, before passing on to the matter of the book, that it is written in the simplest and most workmanlike style, and by one who all his life and in many countries has been a practical farmer; that it is amply supplied with detailed and admirable maps and photographs; and that the insuppressible love of nature and country sights and sounds that separates the educated man from the uneducated finds an outlet here and there in some charming "landscapes" and paragraphs of rural lore. So far from being "dry," these volumes appeal with a force there is no escaping to every one, town or country bred, who has within him the slightest interest in the social and economic conditions of his day. Their plan is, roughly, that of the interview. Through the medium of the author's pen each man speaks for himself,—the large land-owner, the squire, the tenant farmer, the agent, the country parson, the doctor, the small holder, the laborer, "the optimist, the pessimist, and the moderate man." Nor is it merely legitimate farming that is here described. Every business that depends on the land, every class that lives on it, is passed in review—the market gardener, the fruit-grower, the dairyman, the stock raiser, and the poultryman no less than the grower of cereals. It is, I repeat, a prodigious undertaking most efficiently carried through. Mr. Haggard claims that his labors have been "not unlike those of a royal commission, faced single-handed and without the ample resources, assistance, and lordly leisure of such august bodies," and the claim is one that no one who has read the book will do other than ratify. Such a feat has been attempted before, but not for fifty years, not, that is, since the great depression of the seventies, and never on such an extensive scale.

And what an amazing paradox is here unfolded—that in what is still the richest country in the world farming should not pay; that with good soil and skilful workers—the average yield of an English acre in wheat is more than twice the yield of an American acre—agriculture, as Mr. Haggard puts it, should be "fighting against the mills of God"; that land should be going out of cultivation at the rate of over seventy thousand acres a year; that "parts of England are becoming as lonesome as the veldt of South Africa"; that the villages should be deserted at an ever-increasing speed; and, finally, that the government, in the face of all this, should do nothing. A few figures are needed to bring out the fulness of the paradox. Thirty years ago only a trifle over 13,000,000 acres were under permanent pasture; to-day there are nearly 30,000,000. Farm hands and laborers seem to be leaving the soil at the rate of 8000 a year. The rental value of land has fallen all over the country about 40 per cent. since 1875. A farm of 700 acres in Wiltshire, which Mr. Haggard mentions, sold in 1812 for $135,000, and in 1892 for $35,000. In 1874 it was rented at $3000 plus $980 tithe. Now it is let for $1250, and the landlord pays the tithe. Another farm, which up to 1870 paid a rent of $10,500, let in 1901 for $4125, tithe free. A third farm of 1500 acres, in capital order and with good buildings, that used to fetch $5 an acre, now only brings in $3, out of which the landlord has to pay $1 25 an acre for tithe, all the main, and one-half of the minor repairs. Instances such as this might be indefinitely multiplied. England pays away each year to foreign countries over $300,000,000 for grain and flour, about $150,000,000 for dead meat, about $130,000,000 for butter, cheese, and eggs, and nearly $50,000,000 for fruit and hops. Her own food-supply, if all foreign sources were cut off, as they would be if the British navy were to lose command of the sea, might at a pinch last from eight to ten weeks. Such are the main elements of the problem. The great land-owners, or such of them, at least, as have no outside income, are practically ruined, and forced to let their estates to shooting tenants, who, in nine cases out of ten, are totally indifferent to agriculture. The yeomen class has been virtually wiped out—seven-eighths of the farmers are tenants; and even with the utmost diligence, and cultivating every possible side issue, they are only just able to make both ends meet, and often not even that. The laborers are flocking to the towns in thousands, every year shows more land laid down to grass, and the country receives five-sixths of its food from abroad. Here is a national problem if ever there were one.

What are the causes of it? Firstly, of course, there is free trade. The whole wheat-growing world shoots its surplus supply into England without check; nor is there any guarantee that prices will not fall still lower. Secondly, there is the iniquitous system of differential rates practised by the English railway companies, in spite of Parliament and the law against the domestic and in favor of the foreign grower. Such a system can only make any one who has looked into it wonder that Englishmen have the hardihood to speak of "trusts" as a peculiarly American invention. Thirdly, there is that strong spirit of individualism which makes it almost helpless to expect that English farmers will ever learn the value, indeed the necessity, of co-operation, as the Italians, for instance, have learned it. Fourthly, there is the indifference of a town-bred legislature elected by urban votes. Mr. Haggard is perfectly right in insisting that "English governments look upon the land and its interests in a totally different light from that in which it is regarded by those of most other civilized nations. Here they cannot be brought to recognize that the matter is one of any real importance. Intoxicated with our recent, but now, it would seem, waning success as a trading nation, and for the most part owing their place and power to the votes of traders and dwellers in cities, to them the great questions of the prosperity of agriculture and of that which is dependent on it, the holding of the rural population to the fields and villages where their forefathers have dwelt for centuries, are things of small account. They will not face the fundamental facts that it is well we should grow all the food we can within the limits of our own shores, and that of this we could grow a much larger quantity than we do to-day; that men are *more* than money, and deteriorate when crowded into towns; and that without a continually renewed supply of men and women, healthy in mind and body, the greatness of the nation must dwindle. Other countries are wiser: they see and do their best to guard against the danger. Here, if we see it, we shrug our shoulders, say that any party or cabinet that attempted remedies would lose popularity in the cities, and leave things to take their chance."

A powerful indictment, but unquestionably a true one. And beyond all this there is the paralyzing shortage of labor. Wherever Mr. Haggard went he found the same complaint. There is little labor to be had, and what there is is incredibly inefficient. "The labor difficulty is the blackest cloud of the lot." "Unless something unforeseen occurs, farming must come to an end for lack of labor." "All the young men are draining from the land; no one who is fit for anything stops on it nowadays." "The present race of stalwart laborer is fast dying out, without any prospect of its replacement." "The next five years will leave us without a man." "When the old men die, and only the 'wasters' are left, what is to happen? The land is going to the devil." These are but half a dozen sample opinions from as many counties; they could be repeated *ad nauseam*. Mr. Haggard himself, in summing up his conclusions, declares that "it is now common for only the dullards, the vicious, or the wastrels to stay upon the land, because they are unfitted for any other life." And yet their wages are higher, the cost of living cheaper, and their accommodation better than ever before. Why do they go? For one thing, their wages, though as high as the farmer can pay, are not high enough. They can earn $7 50 in the cities, and not more than $4 50 in the country. In the city there is always a chance that they may rise to independence; on the land they begin and end as laborers. In the cities they have the usual Saturday half-holiday, and no Sunday work whatever; on a farm they must be always within hail. In the city employment is constant, in the country fitful. In the city there is light, amusement, glamour, life; in the village an unending round of dulness. The education system, arranged by townsmen for townsmen, tends to fill the country boy with an aversion for the soil.

The Book of Months

By E. F. Benson

AUGUST

I do not think that I have hitherto mentioned that since I came here in the spring the house in which Dick and Margery spent those few weeks together before he went out to South Africa has stood untenanted, and often during the past months I have wandered slowly by it, noting with a kind of pleasure, I think, that, at any rate, no one I knew lived there. The feeling was, I am aware, utterly unreasonable, but it was of the same childish and instinctive kind as that which prompts us to put away and not use, or at least not let others use, some little object which has been in any way closely connected with some one who is dead whom we have loved. I do not think this feeling is in the least defensible, for it implies that we cut the dead off in ever so small a degree from the living, and thus tend to keep alive the sting of death. For in that the dead have once been intertwined with our ordinary workaday lives, it is altogether a false sentiment which makes us separate them now, if we believe at all, as I do most truly, that they still are about and around us. All the same, it was with a certain surprise and shock that I saw in August that the sign-board that the house was to let was taken down, and that a few days later a furniture-van was drawn up at the door. In fact, this very natural and very proper event disturbed me to a degree which I was wholly unable to understand. It seemed dreadful somehow that others should be at home there (it never occurred to me at the time that it was highly unlikely that the house had stood vacant for two years), so wholly was it consecrated in my mind to those two. At the same time I realized my utter unreasonableness about the matter, and instead of trying to combat it, attempted to take a shorter cut and dismiss it as far as I could from the range of my conscious thoughts. Yet for weeks it lurked there in the shade, and as the weeks went on, though I never consciously dwelt on the thought, yet somehow the thought seemed to grow there in the dark of my mind, until I knew that all my subconscious brain was full of it. More especially I desired to remain in ignorance of who the intruders—for so I thought of them—were. As long as they remained utterly vague and unknown, I could feel no definite and incarnated resentment, but if once they were visualized I felt that the growth in the shadow might leap out with poisonous leaves into the sunlight of active and conscious thought.

I have tried to put incoherency coherently, but I feel I am drawing with definite outline that which was necessarily indefinite; yet in no other way except by words of definite meaning can one indicate any impression, however mistlike. Let me say at once that what I have said is overstated, in the sense that if one writes down the actual phantoms of a nightmare they are overstated, because to state them at all is to lose the pervading vagueness for hard outline. On the other hand, again, what I have written down is, I think, understated, since I try in vain to convey by words the vague and abiding disquiet I felt at the thought of the owner of the furniture-vans that unloaded at the door. Only, as I have said, this all lurked in the shadow, and though it grew, yet, by persistent refusal to think directly of it and by persistently endeavoring to continue in ignorance of who the new tenants were, the dark growth never emerged into sunlight. But it seems a curious irony of fate that so soon after I have written about the road to happiness this phantasmal ghost should arise to poison joy. This, at any rate, is not exaggerated language, for the thought of the house tenanted once more lay like a shadow over my spirits. I was wholly unable (or, at any rate, I thought I was, which comes to the same thing) to banish the shadow from my mind, and it haunted both waking and sleeping thoughts with a dull, never-ceasing weight. I, who hardly ever dream, and then only of astounding and mirthful adventure, groped nightly about ill-lit passages, which I believed to be passages in that house, in intolerable apprehension. Sometimes, so it seemed to me, certain rooms were vividly lit inside, and through cracks below the door or through the chink of the door ajar I saw that there were bright lights inside the rooms, which yet cast no filtering illumination into the passages through which I had to feel my way. At other times the whole house was wrapped in a misty obscurity, which was not the light of early morning nor yet the dusk of falling night, but something almost palpable to the touch: it was as if the gray veil of the future brushed across my eyes, some unseen hand stirring it, as if to lift it away, and in my dreams my eyes would strain into the darkness for the light that should show me what agencies moved about me. These dreams, which were very persistent and occurred in dim sequence many times during the night, always opened in the same way. On falling asleep I passed straight into the nebulous atmosphere I have tried to describe and was walking up to Margery's house. For the darkness, I never could see more of it than its square shape, a blot against the blotted sky: the door was always open, and the groping in the passages began. I was conscious always of many presences close around me, but the dusk hid them, and into the lighted rooms I never could enter, for it was somehow forbidden. Then one night an entirely new dream came, sandwiched between the dreams of dusk, and in that I was going along the road by the house not wrapped in obscurity, but in brilliant sunshine. Birds trilled in the bushes, flowers of extraordinary vividness grew in the hedgerows, and I thought, with an upleap of exaltation, that the passages would be blind no longer. Then I turned the corner and came on the house, and though I knew it was the right one, yet it had changed almost beyond recognition. The steps that led to the front door were cracked and moss-ridden, the creepers had so grown that they hung in curtains over the windows; an indescribable air of age had passed over it. But the room over the front door—Margery's room—was untouched by the gray hand of time: the walls were still smooth, and it seemed to me the bricks newly painted: the creepers were cut back from the window, which was wide open, and from inside came a voice singing. It sang a song that Margery always loved, and though the voice was like hers, yet it was not quite like.

It was with the wildest hopes and expectation that I entered the house; but, once again, though all was bright outside, the passages were again dark. But I groped my way up stairs, and saw that the door of Margery's room stood open, and there, framed in the misty obscurity, stood a figure that must be hers. Line for line it repeated that form I knew so well: the slight bend of the neck, the outward sweep of the shoulders, were all hers. And in that darkness I gazed and gazed, for the veil seemed to brush upwards against my eyes; but it did not lift, and in an agony I cried out, "Margery, Margery, is it you?" And my own voice, I suppose, awoke me, for I found myself seated up in bed, and the night outside was still very dark and hot, and I heard the hissing of steady rain on the shrubs.

So I lay down again, and must have gone to sleep immediately, for without conscious pause I was back in the dark passages as usual. But once again on that same night a new factor appeared in my dreams. For the presences, though still invisible, were inaudible no longer, and their footsteps passed about and around me, very close. For a long time I listened, but heard none that concerned me; but at last there came one which I knew to be Dick's, and with it went another that was Margery's, and they passed near me and went out—I suppose, to the garden. It never occurred to me to follow, for I was outside their lives somehow, and if we came near each other it was that they came near to me. After that the steps of many strangers passed and repassed, and then once more I heard Margery's footstep alone. But when it came close I knew it was not Margery's, but like it, as the singing voice was like hers. Then slowly, as at the hint of dawn, the dim passages began to grow bright, and I looked to see where Margery was. But the brightness, as it grew, showed me only the walls and furniture of my own room, and through the open window came in the pale light of early morning as the morning breeze flapped the blind.

Now by this time the dreams of the dark passages had lasted about a week, and the days between the nights had been full of a corresponding depression, for by night it was the darkness that troubled me, and by day that shadow of the new folk that were coming to live there. Then came that night which I have described, and simultaneously both the dream of the dark passages and the depression by day ceased entirely and altogether. I went back at once to the dreamless nights to which I was accustomed, and my days were once more a mosaic of happy hours. But the heaviness of those days and the ill-defined fear of those nights were so blackening to the spirit that at the time I soberly thought that some madness had begun to lay its finger on my brain, and now that I no longer fear that, I find myself wondering what could have induced this melancholy. The weather, it is true, was extremely hot and depressing, and for the whole week, it is also true, I was working against time at a piece of work I did not wish to do. Before I had been a day at it, I knew that it was distasteful; before I had been two at it, I felt sure it was not worth while to do it at all.

Now being temporarily bored with one's work is one thing; radical disapproval is another. It may easily happen that to bring about a situation rightly several chapters of what seem to me at the time (and very likely is) sorry stuff have to be hammered into shape. Due preparation for the situation has to be made without giving the situation away; only when it comes the reader should say to himself, "Of course it must be so; why didn't I think of it?" But radical disapproval is a far different matter. It is rank immorality to go on spending time and space over what is worthless or worse. And that rank immorality I committed. Then, when the work in question, the oppressive weather, and the disordered dreams, which began simultaneously, also, as they did, faded simultaneously, I felt that it was highly probable that they were all bound up together. Certainly it is more than possible that they all reacted on each other,—that the thunder in the skies led to a general depression that made my immorality sit heavy on me, and induced a gloom by day that was carried over into the night: again the fact that I slept in the shadows brought shadow into the day, and the fact that I spent the

hours unprofitably, and knew it, predisposed to gloomy visions. At the same time the persistence of the same dreams was curious, and the society that collects nightmares are at liberty to put it on a pin. Such however, is the record of what happened during the first week of August.

Thereafter came to me spoilt days,—spoilt not by outward agencies, but by fussy stupidity on my part. To the ordinary citizen such spoiling means nothing, for in all probability he will never experience it, and thus to him the trial of these three days are senseless. But, given that your household comprises only a plain (very plain) cook, and what would be called in London a general,—though such have no idea of campaign,—it will appeal to the minority to know that the question of what one wanted for ten days at Baireuth and perhaps a week's wandering in Germany was crucial. It was no use saying vaguely—as I suppose one does to a valet—"I shall be away for ten days; pack," but seriatim I had to think of all that I should conceivably want. The result was that early on the second day I found that I had packed away the necessaries of life, and had to unpack them all again. This and the subsequent repacking took the whole of the third day. Even then, since I had to leave at cockcrow to catch the evening boat to Ostend, there were many things insoluble. Were there baths at Baireuth, or should I take an india-rubber bath? Were there washerwomen, or should I take as much linen as there were days? *Seigneur, quelle vie!*

Now though I regret these pin-points of indecision, yet I defend them. For if one is going abroad for six months, all that is necessary to do is to put out every stitch and button you have on your bed to take with you and the grand portmanteaus advance. But for ten days or a fortnight surely such equipment is beyond the mark. Therefore one has to select. Here comes in the curse of an imaginative mind. One can easily picture circumstances even in the course of ten days in which one will want each single suit of clothes one possesses. For instance—there may quite easily be a cold spell of weather, and therefore it is necessary to take one suit of thick clothes: also to be worn on the night journey. But supposing one gets caught during this cold spell by a sudden storm? The cold spell continues, but the thick clothes are wet. Therefore one must take two suits of thick clothes. However, warm weather is more likely, and there must be at least two suits of flannels. Four suits. Then for emergencies of the social kind one must not be found defenceless, and some sort of tailed apparatus must come. Five suits. Dress clothes, six. Also, there is excellent trout-fishing not far from Baireuth, and I have been particularly told to bring a rod. That entails some knickerbockers and a Norfolk jacket. Seven suits.

At this point I paused: I was taking seven suits in order to clothe my unworthy body for a space of ten days in a Bavarian village. Yet where was the flaw? Of all things in the world I hate to be away from home and wanting something which I have forgotten to take or, which is worse, decided not to take. Time was when it was so simple to put in that article, but the opportunity is mine no longer, and I sigh for the undenuded wardrobes. I scorn to reproduce more of these indecisions—I would sooner reproduce French as spoken in the hot bath; and it will suffice to say that, having spent hours which will never return in process of careful selection, I eventually discarded selection altogether and filled all the portmanteaus I possess. However, in the future I shall waste no more time in thinking what I shall want on short journeys, for I know I shall end in taking all I have, and it saves trouble to begin with that.

I do not know whether we are all descended from gypsies, but certainly in most people something of the instinct which loves to wander, to make a journey merely for the joy of going, survives. True it is that punctual trains (the Southeastern, however, has a great deal of admirable romance and uncertainty about it) and well-appointed steamboats, which leave stone-jettied ports at regular and ascertainable times, have taken much of the unknown from travel, and so robbed this instinct of its fruition, but they cannot quite starve it. Even though you travel in a Pullman car, and sit on plush with your head among voluptuous gildings and gaze into looking-glasses which show you the country and the telegraph-posts reeling giddily backwards, yet you still travel, and, at any rate, if you are going where you have never been before, something new and unknown waits for you behind the advancing line of the horizon. Thus the one thing I never need on a journey is a book; it is sufficient entertainment for me merely to look out of the window and see new country, vale and glen, or plain and mountain peak, hurry to greet me in endless procession. So swiftly one moves that it is hardly possible to weary of what one sees before it is gone; every bend in the line may show something admirable. But, above all things, the headlong passage through the station of a large town delights me. First comes a mile of sordid house-backs built onto the line, then a short tunnel at which the engine screams, then a wider glance of the town, with perhaps a gray cathedral tower watching over it all; then, close against the window, slanting lines of people, like rain, on the gray tapering platform, the names of the stations hidden, like a plum in a bun from its own refreshment-room, in plasters of advertisement; the signal-box with its rows of gleaming semaphores; the mile of sordid house roofs again; and out into the green fields. Then at a stile going onto the line there wait a couple of children whom in all human probability you will never see again, waving their hats at the gay express. For a glimpse only you saw them, but they have their lives in front of them, fraught with momentousness to themselves at least, and perhaps to others. It is even possible that in years to come the line of your life may cross theirs, that tragedy or comedy is already weaving the ropes that will bring you together in love or death or laughter. For of all phrases "chance meeting" is the most illogical. If chance exists at all, nothing exists except chance. Your most careful plan may be spoiled by chance, as you will say. Then your careful plan was chance too, since chance can wreck it.

The backwaters of life, like the backwaters of streams, have an enormous fascination for me, for both are extraordinarily pleasing to the eye and restful to the mind. The great stream of progress hurries by them, while they nestle gently under shelter in sedate eddies, and sometimes sticks and straws from the stream get flung aside into them, and at once they join that slow, unhurrying circle. Such a backwater is Baywater; a tram line and an advertisement of Sunlight Soap are the only trails of modernity I noticed in the town, for the theatre stands apart from it, a mile away beneath the pine woods of the pleasant Bavarian hills. But otherwise it is a backwater of the purest type, not ancient and not modern any more than is a backwater in a stream, but merely existent and unhurrying. The inhabitants, we must suppose, buy and sell things from each other; some are richer than others, but apparently not much; and none, I should think, are either very rich or very poor. Some, also, are better-looking than others, but not much. Some rather wider awake, but all seem to have set as a seal on their foreheads a ruminating mediocrity in all points and qualities which the human mind is able to conceive. Apart from the festival it is impossible to imagine being either very happy or very unhappy in Baireuth—"very," in fact, is a word which is without meaning there. Yet here by a strange doing of fate is planted the cult of perhaps the most "very" mind that ever existed, for the brick theatre on the hillside is the casket which holds that heart of flame and song. Critics have beggared dictionaries to express their feelings about Wagner, and whether it is a synonym for "charlatan" they have searched for, or a synonym for "sublime," none have yet thought of levelling at him the charge of dulness or mediocrity. Indeed, to discuss him at all seems to imply that you are not in that calm frame of mind to which alone can discussion be profitable, and the violence which marks his music and drama seems at once to infect the mind of his critic. Strangest of all, even Tolstoi, who of all great writers seems to be almost utterly devoid of any sense of beauty, though in matters of sordidness and ugliness his art is worthy to stand by Shakespeare's, has allowed himself to be drawn into the mad circle, and has given us in his volume on Art a dozen pages which for sheer ineptitude of criticism, complete ignorance of his subject, and utter incompetence to deal with it must rank forever with the colossal failures of the world, such as the Panama Canal and the fall of Napoleon. But the calm frame of mind deserts me; discussion is not profitable.

It was after the second act of "Parsifal," and from the cool darkness of the theatre we streamed silently out into the brilliant sunshine of the late afternoon. The sun was near to its setting, and the whole plain below us was steeped and stupefied in the level rays. A blue haze of heat mist lay over the farther hills, emphasizing the enlacement of their ridges, which stood out like the muscles of some strong arm. But above the theatre were the quiet pine woods, hardly whispering, so still was the evening, and it was to them that my friend and I turned; for the poisonous enchantment of Klingsor had to be expelled, and we neither of us cared to join in shrill discussions about the exquisite phrasing of Kundry, since it was her seduction, not her phrases, that more occupied us. For an hour the evil flowers had bloomed, and that evil was not of the foul sort that makes one turn from it, but of the seemingly innocent welcome of maidens that were flowers, and of an evil woman who spoke not of evil things, but of sweet things,—a mother's love, and her own love for her who was gone. So we sat in the pine woods and let the fermenting vat of sin lose its effervescence, and waited till the sour-smelling bubbles broke no more on its iridescent surface. And the sun sank till it touched the hills, and where it touched they changed to semitransparent amber, and a crescent moon arose in the east and one bird fluted in the bush. Then the first trumpet from below sounded the *motif* of the Love-feast, and down we went. From the mad fires of the sunset we passed into the cool gloom of the theatre, and the doors were shut, and soon the curtain rose on the last act.

To be Continued.

Books and Bookmen

It is just thirteen years ago since Mr. Edwin A. Abbey began the famous series of drawings in Harper's Magazine illustrating the comedies of Shakespeare. The first of the series was in illustration of the "Merry Wives of Windsor," and appeared in the Christmas number of the Magazine in 1889. Curiously enough, Mr. Abbey began the series of drawings, which he is now engaged upon for the tragedies to complete the edition, in the last Christmas number. The tragedy chosen to inaugurate this series was "King Lear," for which Mr. Swinburne, the poet, wrote an introduction. The tragedies will comprise seventy drawings. The comedies, which were afterward published in four handsome volumes, contained one hundred and thirty-two drawings. "Their execution," Mr. Abbey told a visitor recently, "occupied me about ten years, and during that time I studied everything which would enable me to portray the characters and paint the backgrounds more faithfully. As you know, Shakespeare placed each of his comedies in different countries. In England we have the 'Merry Wives of Windsor.' I therefore visited the locale of his works. I went to Venice twice so that I might obtain the local coloring for an effective background to the 'Merchant of Venice' series. For 'The Tempest' I journeyed to the seacoast below Naples, and there painted out-of-doors the scenes I wished to represent. In the same way I studied the architecture, manners, and ways of the people of the periods, so as to insure as much historical accuracy as possible."

When the present series upon which Mr. Abbey is engaged is finished, we will have a complete Abbey Shakespeare. In art Mr. Abbey, it has been said, represents the sum of attainment in regard to the delineation of Shakespearian characters which on the stage is held by Sir Henry Irving. Mr. Abbey has two studios, one in his pleasant house in Tite Street, Chelsea, and the other at Fairford, in Gloucestershire. "But," he says, "I prefer the latter for its quiet and freedom from interruption. There I painted the majority of my 'Grail' panels for the Boston Public Library, and the bulk of my other work. Fairford has one drawback in the difficulty I experience in obtaining suitable models. Roughly speaking, I spend two-thirds of my time in the country and one-third in town."

Directly one enters the hall at Tite Street, a series of charming pictures meets the eye, and passing up the stairs to the studio at the top of the house there are on the walls innumerable black-and-white sketches of Shakespearian subjects. As the visitor entered the fine lofty room of the studio, Mr. Abbey was busy painting, but with that dignified courtesy which is characteristic of him he stopped his work to come and sit down by the fireside to talk to his visitor. Mr. Abbey was asked about his early training. "At the age of seventeen," he replied, "I entered the Academy in Philadelphia, and there I stayed until I was nineteen. The master was an Alsatian, who, though perhaps belonging to the old classic school, gave most valuable instruction to his pupils. As time goes on, I learn to value more highly the excellence of his teaching. I entered the publishing-house of Messrs. Harper & Brothers in my nineteenth year, and remained with them many years. In 1874 I exhibited a picture at the American Water-color Society, of which I became a member in 1874 or 1875. I continued from that time on to exhibit a picture annually at the Society. One of my earliest efforts was entitled 'The Coach Office.'" Digressing from his early reminiscences for a moment, Mr. Abbey laid down one of his leading principles. "All things being equal," he observed, "it is not the brilliant pupil who really succeeds best in the long-run. It is the one who has the power of taking infinite pains who gets eventually to the top of the tree, and not the pupil whose work depends upon a good dinner. For myself, I always fear the result of work which is done too easily, and I find that almost invariably I have to do it over again."

Mr. Abbey's career may be roughly divided into three distinct periods. In the first place, there was his connection with the Harpers. Then came his series of Shakespearian studies, which occupied a decade, and, lastly, "The Quest of the Holy Grail" for the Boston Public Library, which kept him busy for twelve years. In answer to the question, "Why did you choose the subject of the Holy Grail?" Mr. Abbey replied: "Because it is the one romance common to all Christendom. The legend, which originated either in Wales or Ireland, spread in various forms over France and Germany, and even as far as Scandinavia in the north and Spain in the south." Mr. Abbey dealt with the romance in a way that won the hearty approval of art critics. Speaking of the qualifications which must go to the masterly handling of so big a theme, Mr. Abbey observed, in discussing the decorative aspect of the work: "I consider that the arts of the painter, sculptor, and architect should accord with each other. Unfortunately, you find in many cases that the painter knows nothing of sculpture or architecture, and is therefore disqualified from completing his decoration to unify with the other qualities of the building. And it is equally essential that the architect and sculptor should be acquainted with the needs of the painter. In America we are just now studying this matter in the hope that the three arts will go hand in hand in the erection and beautifying of public buildings. To some extent this was accomplished in the Boston Public Library. We are now promoting an American Academy in Rome, of which I am one of the incorporators. The academy itself has been in existence for some time, but we hope to place it upon an enlarged and improved basis. It will be in touch with the American universities, such as Harvard and Yale, whose governing bodies are alive to its interests, and are cooperating in the provision of scholarships."

Mr. Abbey was made a member of the Royal Academy in 1898, just a year after the honor had been conferred upon his friend and fellow-countryman, Mr. J. S. Sargent. His principal pictures, apart from the Shakespearian and Grail series, have been exhibited at the Royal Academy. As an illustrator Mr. Abbey has done a great deal of very fine work in addition to his Shakespearian drawings, most of which at one time or another have been published by Messrs. Harper & Brothers. He has also been a diligent contributor to Harper's Magazine. Only last year a series of illustrations for "The Deserted Village" appeared in the Magazine, and was subsequently published in book form. The artistic treatment of the theme was characteristically fresh and unconventional. For example, Mr. Abbey pictured the line

"When every rood of ground maintain'd its man"

and gave us a scene that was undoubtedly present in the mind of Goldsmith as he discoursed on Sweet Auburn. The thatched cottage, the contented laborer, the pleasant-faced mother are all types that the poet loved. A volume in which Mr. Abbey collaborated in 1885, entitled *Sketching Rambles in Holland*, contained the following interesting dedication from the author, Mr. George H. Boughton, R.A.: "To Edwin A. Abbey, my fellow-rambler and fellow-sketcher, to whose delightful companionship may be set down any extra washes of couleur de rose that may be discovered in these pages by the cold sad cynic whose good fortune it has not been to ramble with such a perfect fellow-traveller, this writing is inscribed."

A recent visitor to Mr. E. F. Benson's bachelor quarters in the quaint old cathedral town of Winchester found a set of Meredith occupying a prominent place on the novelist's bookshelves. "I place Meredith quite at the top of living novelists," said Mr. Benson. "I have had the privilege of meeting him, and a most remarkable old man he is—old in years, but young in spirit, and still with an intellect as keen as ever." Mr. Meredith himself gave expression to this feeling of perennial youthfulness in an interview which appeared the other day in the Manchester *Guardian*. Referring to himself and his work, he said: "I suppose I should regard myself as getting old. I am seventy-four, but I don't feel as if I were growing old, either in heart or mind, but still look on life with a young man's eye. I have always hoped I should not grow old, as some do, with palsied intellect, living backward, regarding other people as anachronisms, because they themselves have lived on into other times and left their sympathies behind them with their years." It is not so long ago that Mr. Meredith, in conversation with a well-known publisher, spoke with enthusiasm of a novel he should like to write with an eye especially to the intellectual needs of the young men of the present day. Yet he has been writing for the youth of intellect since the beginning. *The Egoist*, *Richard Feverel*, *Beauchamp's Career*, *Rhoda Fleming*, *Evan Harrington*, *Harry Richmond* had more to say to the youth of their day than the works of any other novelist. They have more to say to the youth of to-day; and perhaps still more as life goes on. Mark Rutherford speaks eloquently in one of his books of his emotion in reading a certain writer. "Others may write about science and philosophy," he says, "this man writes about *me*." Of Meredith, this could probably be said with more truth than of any other novelist by the thinking young man. Robert Louis Stevenson was one of many such who have given remarkable testimony to the heart-searching qualities and self-interpretation of Meredith.

One of the most able and interesting analyses of Meredith's art we have seen is to be found in the sixth volume of the new *Encyclopædia Britannica*. The writer discovers that the secret of the brilliancy of Meredith's style is derived from the combination of the narrator with the creator, or — in its strict sense—the seer. The reader, by the transference of the interest from the audience to the stage, is transported into the very soul of the character, and made to feel as he feels and act as he acts. "In building up the mind's actions, creeds, and tragedies, or comedies, of his imaginary personalities, amid the selected circumstances, and inspiring them with the identical motives and educational influences of life itself, Mr. Meredith has spent an elaboration and profundity of thought, and an originality and vigor of analysis upon his novels which in explicitness go far beyond what had been previously attempted in fiction, and which gives to his works a philosophical value of no ordinary kind."

Correspondence

THE CANTEEN FROM THE NON-COMMISSIONED OFFICERS' SIDE.

SAN JUAN, P. R., *February 3, 1903.*

To the Editor of Harper's Weekly:

SIR,—Being a constant reader of your paper, in regard to the canteen question, I feel that I am justified in answering the gentleman who wrote a letter, published in your issue on the 3d of January.

From my point of view he does not know what he is talking about. He has never been a soldier, while I have had that experience. Although I am not a drinking man I heartily approve of the canteen. It is beneficial in many respects to the soldier, which I intend to name. First, it provides many little things that are not issued to the soldiers, such as vegetables, preserves, milk, and other things not provided in the government ration. I was a soldier in Battery O, Fifth United States Artillery, stationed at Fort Wadsworth, and many is the time I have relished these extras that I speak of, provided from the dividends of the canteen.

A soldier could only get credit for $3, and then he had to wait another month before he could get more. The W. C. T. U. did a very wrong thing when they abolished the canteen; since they have accomplished their purpose, I have seen dives of all sorts spring up like mushrooms, selling vile whiskey, vile beer, and all manner of intoxicants to the soldiers, giving them unlimited credit. When pay-day came around they were standing near the paymaster's table like a crowd of vultures, waiting for the soldier to receive his pay, and he had scarcely seen the color of it before it had vanished into the grog-seller's pocket; and still he is in debt; he has not paid for his wash, nor other more pressing debts; the liquor-seller hounds him for more money; in desperation, he takes his best suit of clothes, that he has kept for the various inspections, and gets a loan on it; this also goes to the saloon-keeper. When Saturday inspection comes around he has not got a decent uniform, consequently the officer in charge sentences him to the guard-house, and takes a month's pay from him besides. This is only one of many scenes that I have witnessed.

I have had men under me that, before the Canteen Bill was enacted, never left the fort. 'Tis true they took an occasional bottle of beer, but were never drunk. Now, those that have not been discharged dishonorably are habitual drunkards, because they were deprived of their occasional bottle. They now fill up, and come rolling in at all hours of the night, and raising all manner of disturbances until they are put in the guard-house.

When we were ordered to Porto Rico, and reached here, we established a post exchange, where we kept a sort of beverage called hop ale. It looked like and tasted like beer, but, no matter how much was taken, it never made a man intoxicated. They took that from us, and then the men filled up on the native rum, which can be bought for about thirty cents a bottle (this is the worst kind.)

We buried two men from this stuff, and they would have been living to-day if the canteen had not been denied them. One was a soldier that had served his country for over twenty-three years, and had come to Porto Rico to put in one more enlistment before retiring. But rum was his ruin.

Another came up to the fort, eyes popping out of his head, face bloated, and scarcely able to walk; he fell on his bunk, and sank into a drunken stupor, rolled out of bed upon the floor, and when some of the men picked him up was in a dying condition. These are all true, and I can give you the names, if necessary, and get any abundance of proof, that the canteen is beneficial to the soldier.

The W. C. T. U. is a noble body of women. They have done a lot of good, but I am afraid that they have done more harm than good to the soldiers at home and abroad. They are forever preaching about saving "mother's boy." I know a boy when he enlisted he was as innocent as a babe—never swore, never drank, never smoked, used to go to the canteen to get an occasional sandwich. When the canteen was abolished he visited one of those dens that spring up around the different forts, and after running up a bill of over $50, which he could not pay, he broke open the same saloon and stole a barrel of whiskey, and took to the woods. When found, he was in a dying condition. This is the sad ending of what was a mother's joy, but which turned to a cup of sorrow, through the "old maids" that call themselves "The Purity League" of the W. C. T. U.

In closing, I wish to ask the gentleman whom I am replying, is it not far better to keep the intoxicated soldier home, instead of letting him parade the streets and disgracing the uniform that he wears. Let the W. C. T. U. leave the soldiers alone. There is more work for them than they can accomplish without meddling with the soldiers, and taking their little extras from them, and when they give the canteen back to the army, there will be less dissatisfaction than there is at present.

Yours truly,

G. L. HISCOCK.

Formerly Corporal, Battery O, Fifth Artillery, United States Army.

A FOOT-NOTE TO MARK TWAIN ON CHRISTIAN SCIENCE.

BALTIMORE, *February 7, 1903.*

To the Editor of Harper's Weekly:

SIR,—While cheerfully conceding that "Mark Twain's" dissertation on Christian Science is, in the main, eminently sane and convincing, and a credit to the Presbyterian Church, I believe that on one point he is at fault—*i. e.*, in his likening the Christian Scientists, in his exercise of the curative power, to the engineer. It can scarcely be called a mere quibble to say that the power lies not in the engine, but in the properties of the coal and water. This being so, the healer is rather analogous to the discoverer and inventor, Watt and Stevenson. Watt discovered the power of steam; Stevenson invented the application of that power to locomotion. The faith healer discovered, or rediscovered, the curative possibilities of self-delusion. He also invented a method of applying it, without which the bald scientific fact that the imagination, under suitable stimulus, very powerfully affects physical conditions, would have been as practically valueless to mankind as the mere knowledge that hot steam will lift a teakettle lid. Any one could have told you that Watt's triumph lay in the application of the fact. And so with the faith healer.

The healer's art is the art of deceit; in plain Anglo-Saxon,—but why call names? But scientifically speaking, that is no discredit to him; he is merely working under psychological conditions, as the chemist works under chemical conditions, and the physician works under physiological conditions. If he lies, he lies efficaciously and helpfully. As long as human gullibility remains what it is, the proposition that he is a useful member of society is not entirely indefensible. If the reported cures are genuine—and Mark Twain seems to concede their genuineness—the *Aberglaube* machinery that the faith healer has invented is positively a boon to society,—to that portion of it, at all events, who do not know too much. And if this statement is tommy-rot, then there have been other writers of tommy rot with whom we do not mind being associated. For it is written, and approvingly read, "Where ignorance is bliss," etc.

Voltaire's famous criticism of the phrase "The Holy Roman Empire," to the effect that it was neither holy, nor Roman, nor an empire, has been emulated by some critic of Christian Science on the ground that it is neither Christian nor scientific. In the light of Mark Twain's luminous exposition of the psychological basis of Christian Science, the latter contention will have to be abandoned. It is as scientific as medicine.

If this conclusion goes—and the logic seems unassailable—the faith healer is lifted from the status of the mere vulgar quack to that of the scientific inventor. The fact that his invention is applied to sordid and selfish ends is beside the mark. The labors of most inventors are cheered by the prospect of making a pile when they "get the thing to work." Their interest in their work is usually no less selfish than scientific, and properly so—else why should we pity Eli Whitney and admire Mr. Vanderbilt? Why, then, should we heave bricks at the faith-curist? Because he is making money out of his invention? No, that seems hardly just. He is only doing something that nobody else had the gumption to do—or the gall. Our animus is rather referable to that ancient source of strife, the *odium theologicum*, which makes certain sects of Calvinists object to seeing Arminian theologians in their pulpits, whether they preach Arminian doctrine therein or not. Another source of our dislike is our democratic hatred of trusts and monopolies, whether in applied psychology or sugar. And lastly, and greatest of all, and in comparison with which all others are trivial, and in speaking of which flippancy were unforgivable, are the rage and indignation that choke a man when the thing is carried too far—when some poor, misguided parent sacrifices the life of the helpless little child on the altar of the "healer's" gain! If there is anything in equity to justify a legal "age of consent," it will justify a thousand times an age limit below which the practice of faith healing shall be a felony punishable by death.

I am, sir,

HERMAN SPENCER.

I perceive there is something wrong somewhere in our social formulas: what it is can only be discovered by men or women with greater insight than mine—if, indeed, they ever discover it—at least, in our time. "For who knoweth what is good for man in this life?—and who can tell a man what shall be after him under the sun?"

Thomas Hardy.

We live by desire to live; we live by choice; by will, by thought, by virtue, by the vivacity of the laws which we obey, and obeying share their life—or we die by sloth, by disobedience, by losing hold of life, which ebbs out of us.—*Emerson.*

The human heart is the world of poetry: the imagination is only its atmosphere. Fairies, and genii, and angels themselves are at best its insects, glancing with unsubstantial wings about its lower regions and less noble edifices.—*Landor.*

Men are God's trees and women are God's flowers.—*Tennyson.*

Finance

THE improvement in speculative sentiment, to which attention was called in this column last week, has grown. It has been reflected by advancing values, though not all stocks have risen uniformly. There was, indeed, an appreciable increase in activity, but the transactions in the half-dozen issues which were the "leaders" of the market probably equalled the total business done in the rest of the list. The market never broadens suddenly. The distribution of speculative activity widens gradually. After inertia in the speculative markets for weeks, the first step is not to convince observers of the wisdom of an aggressive position on one or the other side, but rather to prove the folly of pursuing, as in this instance, bear tactics. From showing that it is unwise to be a bear, the next step is obvious: it is wise to be a bull. Then comes the wisdom of having the courage of one's convictions, which means the change from the passive to the active, or to advance from merely thinking that stocks are too cheap, to buying them in order to sell them when they shall no longer be cheap. Wall Street, after becoming convinced that there was nothing on which to sell stocks, is studying whether to buy them at the moment or to wait for the favorable features of the situation to become more clearly defined. But from the very fact that public sentiment is leaning bullward, there has been the irrepressible effort, on the part of the professionals, to "discount" still stronger and more widespread convictions of the public in the future. This led to sharp advances in special stocks, which, owing to special reasons, were, so to speak, the ripest for an upward movement. At this writing the market, after a sharp advance, displays the hesitancy that always follows heavy profit-taking. That the "improvement" has culminated is altogether unlikely, and, barring unforeseen accidents of a disquieting or disastrous character, it would seem as though the bear position would be unwise for some time to come.

Primarily, the ease in money had the most to do with bringing about a more hopeful feeling. Two months ago he was considered reckless and ill-advised who ventured to prophesy that time money would be offered in abundance to the average borrower at less than 5 or even 6 per cent. The Lake Shore, with its splendid credit, could not borrow below what amounted to 5¼ per cent., or much more than bonds or stocks not one-half so gilt-edged as the pledged promise to pay of the Lake Shore road, netted to their holders. To-day, lenders are willing to put out their funds in quantity at 4¼ per cent. for six months. The Pennsylvania Railroad borrowed money on its notes at 4½ per cent. for six months. To be sure, foreign-exchange rates have again risen to within a fraction of the "gold-exporting point," but with easy money here, the operation contains nothing alarming, and if gold is actually shipped to Europe, authorities agree that the amount will not be great. In point of fact, the likelihood must be borne in mind that our exports of grain will "make" the necessary exchange to keep rates from rising to the level at which the gold-exporting operation can be profitably carried on. That we shall import gold from Europe later on is also among the possibilities. Moreover, in considering the course of our money-market in the future, Wall Street cannot fail to derive comfort from the prospects of the passage of the Aldrich currency bill. It concerns the present little, since the money-market is not in need of any relief. But some months hence, when the usual autumnal drain of cash for crop-moving purposes sets in, it will prevent the withdrawal of currency from circulation at the very time when it is most needed.

College Athletics and Character

PROFESSOR IRA N. HOLLIS, who discussed "Intercollegiate Athletics" some time ago in the *Atlantic Monthly*, has been for a good while a member of the athletic committee of Harvard College, and has necessarily devoted much attention to the conduct and effects of intercollegiate sports. He does not regard intercollegiate athletics in their present phase as an unmixed good, and he is very far from regarding them as an unmixed evil.

The basis for encouraging them he finds in the claims that they establish the physical vigor necessary to enable the mind to do its most effective work; that they stimulate out-door exercise all over the country; that they form an atmosphere of temperance and moderation in living, and thus restrain students from excesses; that they teach self-control and fairness; that they help to bring graduates and undergraduates of different universities into relations of friendship, and that they promote college loyalty. Discussing these claims he considers that the games which involve elaborate preparation and a tremendous strain on the system are of doubtful physical benefit. He thinks that the strain of some of the boat-races might well be modified by shortening the course, but he is ready, on the whole, to approve all forms of athletics which prevail in the colleges, except intercollegiate football. He has his doubts about football, which is, he says, in some respects superior to any other sport. Its hazards, its drudgery, its spectacular quality seem to him objectionable, and make him feel that the game is still on trial. Some of the roughness ought to be regulated out of it, he thinks, but considers that the game is improving.

As for the influence of the intercollegiate sports in stimulating the taste for out-door exercises, he thinks they do appeal to the imagination of small boys everywhere, and lead them away from mischief and into out-door games. But he is not sure whether the lively condition of college sport is the cause, or the effect, of a general craving for out-door life.

He finds that the moral influence of the athletes in colleges is good, that they set a fashion of clean living, and help to establish an atmosphere of democratic equality. He grants that athletics teach self-control; he censures organized cheering, and doubts if intercollegiate sports breed good-will between universities. "It is shocking," he says, "to hear what one university will say of another when there is a difference of opinion on some eligibility question."

How far intercollegiate sports have demonstrated their permanent value as part of a college education must be determined in the end by their effect upon character. That is Professor Hollis's conclusion, and most thoughtful people agree with him. "If they can be made to teach self-control and manliness to a large number of students without a sacrifice of the regular class-room work they are worth keeping and assisting." That is the gist of the whole matter. There is no result of training comparable in importance to character. You want your boy to start in his life's work with as good a body as he can develop, with a *mind* as well furnished as may be, but, above all, sound in heart, upright, stout to resist as well as strong to pursue.

IT is a matter of record that no part of any journal, here or abroad, is as widely quoted as the editorial "Comment" in HARPER'S WEEKLY.

The illustrated section follows the same lines—American progress, aggressiveness, optimism—why America leads and will lead as a nation and in individual effort. The issue of next week will have, among other features: The Election of New Cardinals, and the Possibility of American Representation; Proposed Underground Moving Sidewalk for New York; The New Plan for Cataloguing the Heavens, etc.

40 Pages **16 Pages of Editorial Comment, Double-Page Drawing in Color, and the usual Pictorial Record of Current Events.**

A Land Where It's Always Summer

By WILLIAM ELEROY CURTIS

With a Colored Map. Post 8vo, Cloth, $1.25

Chatty and entertaining, and gives us an interesting picture of scenery, history, and life. An appendix contains the official correspondence between the United States and Great Britain. The book is well worth reading for the glimpse it gives into the ways of South American politicians.

HARPER & BROTHERS, PUBLISHERS, N. Y.

Official Legal Notice

THE CITY OF NEW YORK
DEPARTMENT OF TAXES AND ASSESSMENTS, MAIN OFFICE, BOROUGH OF MANHATTAN
NO. 280 BROADWAY, STEWART BUILDING

January 12, 1903.

NOTICE IS HEREBY GIVEN, AS REQUIRED BY THE Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond, comprising The City of New York," will be open for examination and correction on the second Monday of January, and will remain open until the

1ST DAY OF APRIL, 1903

During the time that the books are open to public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, No. 280 Broadway.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-Seventh Street and Third Avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson Avenue and Fifth Street, Long Island City.

In the Borough of Richmond, at the office of the Department, Masonic Building, Stapleton.

Corporations in all the Boroughs must make applications only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the Borough where such person resides, and in the case of a non-resident carrying on business in The City of New York, at the office of the Department of the Borough where such place of business is located, between the hours of 10 A. M. and 2 P. M., except on Saturday, when all applications must be made between 10 A. M. and 12 noon.

It is one thing to indulge in playful rest, and another to be devoted to the pursuit of pleasure; and gayety of heart during the reaction after hard labor, and quickened by satisfaction in the accomplished duty or perfected result, is altogether compatible with, nay, even in some sort arises naturally out of, a deep internal seriousness of disposition.—*Ruskin.*

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

INFANTS THRIVE on cow's milk that is not subject to any change of composition. BORDEN'S EAGLE BRAND CONDENSED MILK is always the same in all climates and at all seasons. As a general household milk it is superior and is always available.—[*Adv.*]

TIME, said Franklin, is the stuff of Life. Telephone service saves time. *Verb. sap.* Rates for Residence Service in Manhattan from $48 a year. N. Y. Telephone Co, 15 Dey St., 111 West 38th St., 215 West 125th St.—[*Adv.*]

ABBOTT'S, the Original Angostura Bitters, has the call wherever an effective tonic for a run-down system is needed; builds up flesh and nerve tissue. Druggists.—[*Adv.*]

BEAR in mind that the Champagne you want is COOK'S IMPERIAL EXTRA DRY. Made in America; better than foreign makes.—[*Adv.*]

FOR coughs and colds PISO'S CURE is still the best and most pleasant remedy. 25 cents.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

THE GIBRALTAR OF THE INSURANCE WORLD.

THE company which has "The Strength of Gibraltar" has given one more proof, if proof were needed, that the assumption of the phrase was well warranted in the Annual Statement now before us.

During 1902 The Prudential *has* added over one hundred and eight million dollars to the amount of paid for insurance it had in force; it has added to its assets nearly twelve million dollars, to its income nearly five million dollars, and to its surplus funds more than two million five hundred thousand dollars.

It has now in force over eight hundred million dollars of life insurance, divided among nearly five million policies, representing, roughly speaking, about one million families.

This is really a magnificent showing for a company that has only a record of twenty seven years to look back upon; *certainly* nothing like it has ever before occurred in the history of American life insurance. In these days of keen competition, success can only be the result of enterprise, coupled with upright business management; and one does not need to go further than this cause to account for The Prudential's great success.—[*Adv.*]

ADVERTISEMENTS.

George Washington as a Father

See illustration on front page

SEVERAL writers have announced that Providence denied children to George Washington in order that he might become the father of his country. This divination of the counsels of Heaven is original with so many that it may be esteemed the general judgment. Yet neither the General nor Mrs. Washington expected their marriage to be childless; for the hopes of a lady who loves her lord may be plainly read between the lines of a letter, dated June 1, 1760, from the mistress of Mount Vernon to her sister Anna, Mrs. Burwell Bassett:

"I think myself in a better state of health than I have been for a long time. I don't doubt I shall present you a fine healthy girl again when I come down in the fall, which is as soon as Mr. Washington's business will suffer him to leave here."

Washington had known little of family life when, in 1759, he began his home at Mount Vernon. Away, at school, from home he did not see the death-bed of his father. He had mingled little with his younger brothers and sisters because he was absent at school, for most of the year. His latter youth had been occupied with distant surveys; and with his early manhood had come public missions in the wilderness. Then on the sea and in the West Indies with Lawrence Washington, his sick half-brother; at Fort Duquesne; and on the Ohio with Gist and Croghan:—all his life had been away from home. Even the home which he had seen at Mount Vernon had been a house of sorrow. There three of the children of Lawrence Washington had died. Lawrence himself was a constant invalid, and when he died the only daughter he left behind soon followed him to the grave; and then, apparently weary of such scenes, his widow married again and went to live elsewhere.

Five years afterwards, the fruit trees were in bud and the fields were green, and George Washington brought his wife and children to make Mount Vernon a happy home. Almost as soon as they arrived, May covered the hills with flowers.

His affection for the children was a father's true love. His "agony of prayer" beside the dying bed of "Patsy Custis," though unanswered, turned him for a while to religion. He kept his sagacity busy wherever the interests of John Parke were concerned, and his conduct in the upbringing of that somewhat wayward youth developed a lessening of rein and a softness of disposition that were never shown elsewhere than at home. John Parke was led with a tender hand through youth to marriage, and beyond, and had firm support on the path of honor and the ascent towards fame. Tutors attended him at home until he was over fifteen years of age, and then Rev. Mr. Boucher instructed, if not trained, him at his boarding-school in Annapolis. When home for the holidays Washington gave him abundant sport in fox-hunting, and the other manly athletics of the day; but insisted that when at school he should study with something like thoroughness. Instead of this, John Parke's "only books were woman's looks." The first news Washington had of him was that the youth, not then nineteen years of age, had courted, won, and was engaged to be married to the belle of Annapolis—the first-risen star of the splendid Maryland galaxy that yet lights the balls of the Naval Academy. He had won the heart and hand of Miss Nellie Calvert, the second daughter of Mr. Benedict Calvert, a descendant of Lord Baltimore.

It was a trying situation. A lad with the finest prospects of any boy in America might be ruined by a misstep. It is said in Alexandria that in his early manhood Washington never saw a colt that he was not able to control. Now he needed all his horse sense to break in and guide the boy he loved best of all the sons of men. He distrusted his own capacity in affairs of literature and scholarship, but he knew his boy and he knew that his stepson would need for a prosperous career all the sturdy strength that training gives; that he was not yet trained, and was disposed to resent training.

Washington never failed to ask ad-

when in doubt, and he asked the opinion of John Parke's teacher, Dr. Boucher. Dr. Boucher seems to have advised that the ocean be placed between the lovers, and that he be allowed to carry the young gentleman to Europe on a tour of education. The teacher believed that absence conquers love; but Washington saw in this plan a proposal to break the engagement; and for this nonage was not a valid plea in his code of honor. So he dismissed Mr. Boucher's plan with a curt reminder that John Parke was "by no means ripe for a tour of travel." He knew that, sometimes, a good method of training a colt is to drive him with a mate, and he wrote to the young lady's father.

He informed Mr. Calvert that the match would be acceptable to the family of Mr. Custis, who were pleased with the choice, but that the youth, inexperience, and unripe education of the young man were insuperable objections to the immediate completion of the marriage. He suggested, too, that if love cooled it had better do so before marriage than afterwards. That Mr. Custis must keep his tryst with his *fiancée* as a man of honor, and to help him to school a wandering fancy he would be kept at his books, and "so avoid the little flirtations that might divide his attention and so tend to lessen his first love." This course pleased Mr. Calvert. Washington, anticipating that if the lovers were neighbors, the magnetism of the lady would draw his stepson from his books, carried John Parke to New York, and placed him at King's College under charge of Rev. Dr. Cooper. The wireless telegraph of love's young dream kept New York and Annapolis in connection, and within a year Washington, whose wife yearned for a son's wife's sympathy in her mourning for her dead "Patsy," gave his consent to the marriage, and John Parke, nineteen years old, wedded Miss Eleanor Calvert, of Mount Airy.

The young couple went to housekeeping at Abingdon, beside the Potomac, a few miles below the land that is now the city of Washington. Visits between Abingdon and Mount Vernon were frequent, and it was said in the neighborhood that if any horse of the stables were started from Abingdon, and left to his own free will, it would be found in due time at the entrance to Mount Vernon. At Abingdon three children were born to Mr. and Mrs. John Parke Custis—Elizabeth (who married Mr. Law), in 1776, and Martha (who married Mr. Peter), in 1777, and Eleanor (who became an inmate of Washington's family), in 1779. Meanwhile John Parke, aided by the influence of his grandfather and the attractive freshness of young manhood, had been elected to the House of Burgesses of Virginia. As the Revolutionary War was advancing, he sent his wife and children to the home of her father at Mount Airy, and followed Washington to fight for independence. At Mount Airy, on the 30th of August, 1781, his first and only son was born and named for George Washington. On the march from the head of Elk towards Yorktown, John Parke had just time to stop and embrace his son. Then he tore himself away and hurried forward on a road he was fated never to retrace. The joyous news soon came to Mount Vernon and Mount Airy that Lord Cornwallis had surrendered to General Washington. Joy was soon dimmed, for the sad tidings came that John Parke was sick unto death in his aunt's house at Eltham. His wife hurried from Mount Airy and his mother from Mount Vernon, and met Washington, bowed with grief, beside the dying bed of the young soldier. Shadows clouded for the Washington family the glory of Yorktown.

As the breath left the body of the dying father, Washington threw his left arm around his wife and gave his right hand to the newly made widow, and said, amid sobs and tears, "From this moment I take the two youngest children for my own." So with the loss of his only son, he became the father of a son and daughter. At that time Nellie was about three years old, and the baby, George Washington, about three months. The two children soon came to Mount Vernon, where George Washington the younger was nursed by Mrs. Anderson, wife of the confidential steward.

The widowed Mrs. Custis resumed her residence at Abingdon, and when the period of her mourning was over she married, in the fall of 1783, Dr. David Stuart. So when

BERNHEIM BROS., Distillers, . . Louisville, Ky.

Washington came back to his home after he had surrendered his commission he found the mourning widow he had left in her weeds a happy bride. She had married a gentleman for whom Washington had high esteem, and to whom he gave no small advancement in the public service.

The renewed family at Mount Vernon had now, like the old one, several years of home-joys and quiet before its father was called away again into the busy world. The Christmas eve of 1783, when Washington arrived home after independence had been won, opened a season of calm delight for the father and mother and a halcyon time for the children. "I am solacing myself," wrote Washington to Lafayette. For a while at least he had few cares. These related to the amendment of his fortune, injured by his absence, and the improvement of the fortunes of his neighbors by promoting better navigation of the Potomac River which rolled by the base of his hills. He was in the prime of life, about fifty years of age, and his wife a few months younger; for he had been born in the February and she in the May of the same year. Little Nellie was about five years old; the baby, George Washington, having finished the first task of childhood, the cutting of his teeth, was toddling around with the prattle through which Nature introduces men to sober speech.

Soon came George A. Washington, the nephew of the General, to be his secretary and majordomo. Miss Frances Bassett, Mrs Washington's niece, was for months at a time an inmate of the Mount Vernon home. These young people were, of course, thrown continually into each other's society, and while they entertained the children, the children amused them. It will never be known how much courtship they mingled in the innocent pastimes they got up for Nellie and George; but it was not long before the little ones, as well as the elders, saw a wedding at Mount Vernon, and on the 15th of October, 1785, the General's nephew and his wife's niece were made man and wife by Rev. Spence Grayson. Washington gave the bride away, and could scarcely fail to have been impressed with the lesson that if absence conquers love, presence carries love on to marriage. Within fifteen years he put the lesson in practice to bring about another marriage dear to his heart.

The honeymoon of the new couple was a time of jubilee in the Old Virginia style. During the festivities the bridal party came twice to the Alexandria races, and dined on the first occasion with Colonel Dennie Ramsay, and on the next at the house of Mr. William Herbert. Both the dwellings still stand.

In those days Mount Vernon was always filled with company, and General Washington's expenses exceeded his income. On the 30th of June, 1785, he writes in his Journal "Din'd with Mrs. Washington only, which I believe is the first instance of it since my retirement from public life." Not long afterwards he writes, "Never till now have I experienced the want of money." He borrowed five hundred pounds, Virginia currency—about $2600—from Captain Conway, a merchant and shipmaster of Alexandria, and financial stringency ceased at Mount Vernon.

Meanwhile the life of Miss Nellie became especially pleasant. Both the General and Mrs. Washington vied in parental fondness for her. Young people came to Mount Vernon from all the country families round about. Between Mount Vernon and Abingdon, the residence of Mrs. Dr. Stuart, the mother of Nellie and George, there were almost daily visits. The twelve miles between the two seats were easily gotten over in carriages, and oftentimes, as both seats were on the riverside, General Washington's barge, rowed by stalwart colored men, made speedy connection over the bright waters of the Potomac River, and when the children were on board the dark crew wore white feathers in their hats. Midway to Alexandria, with its ships, and General Washington could tell them how he had seen it rise on the lines he had laid out with compass and chain in his boyhood.

So passed pleasant years, and then Mount Vernon was again abandoned for a period as long as that of the Revolutionary War. Washington became the head of the American state created by the Constitution he had

helped to form. The new Washington home was located first on Cherry and Pearl, and then on Rector Street, in New York, and then at the Morris "hired house" in Philadelphia. There, amid the decorous etiquette required by official position, Washington was as fatherly and kind to his children as he had been at Mount Vernon, to which all hoped soon to return. Mrs. Washington's Drawing Rooms and her Friday nights gave them an outlook on the world of fashion and politics from a place of ease.

Washington was not less careful in his supervision of young George Washington Custis, who was at school in Annapolis, than he was in that of his daughter. The General evidently had the untimely wooing of John Parke in mind, and feared that the Maryland belles might carry him off. He wrote to Mr. Boucher, the teacher, that he wished him to "prevent, as much as it can be done without too rigid a restraint, a devotion of his time to visitations of the families in Annapolis, which, when carried to excess or beyond a certain point, cannot fail to take his mind from study, and turn his thoughts to very different objects. Above all, let me request, if you should perceive any appearance of his attaching himself, by visits or otherwise, to any young lady of that place, that you would admonish him against the measure on account of his youth and incapability of appreciating all the requisites in a connection which in the common course of things can terminate with the death of one of the parties only; and if it is done without effect, to advise me thereof."

On the 22d of February, 1799, Washington's sixty-seventh birthday, Lawrence Lewis and Nellie Custis were married. He gave the bride away, and endowed the young couple generously from his lands.

George Washington Custis tried his patience to the utmost. Skilled in music, painting, literature, nothing came amiss to him; but he loved ease more than all the arts and sciences. "I can govern men, but I cannot govern boys," said Washington; but he loved George to the end.

The life of George Washington Parke Custis during the fifty years he lived after Washington's death was devoted to his memory. The townspeople of Alexandria, to whom he paid visits on every recurrence of the 22d of February, often saw tears on the cheek of the venerable man when the name of George Washington was mentioned. These silent tears were the son's tribute to Washington as a father.

An Experiment in Drama

See page 295

NEW YORK theatre-goers are having another opportunity of seeing an Elizabethan drama presented as nearly as possible as it used to be in Shakespeare's time. About eight years ago a similar experiment was made in the same theatre — Mrs. Osborn's Playhouse, then under a different name — and a little later the same play, Ben Jonson's "Silent Woman," was given with the furnishings of the old stage in Sander's Theatre, Cambridge. In London, several productions of old dramas under similar conditions have been given by the Elizabethan Stage Society. So any value from a dramatic point of view that could come from the new attempt to restore the surroundings of the old stage was to have improved upon what had already been seen in this line. This to some extent has been done. There has been for a long time a difference of opinion among those who know the time of the Elizabethans as to the exact details of a dramatic presentation at that period. Mr. Lea Short, who is directing the performances at Mrs. Osborn's Playhouse, accepts the usually recognized plan of having an audience of supers representing the "masters and 'prentices" in the pit, and puts the usual number of stage gentlewomen in the scenery boxes. He has added a doddering old man to change the placards on the stage after each scene, although it is extremely questionable whether such placards were used at all as late as Shakespeare's time. The real step forward is in the accuracy of the setting, which is based upon the old printed reproduction of the Swan Theatre.

The Cadillac Runabout

The Cadillac

The Automobile that Solves the Problem

Until the Cadillac was made, all automobile construction was more or less experimental. This machine is made on a new system developed from the experiences of all previous makers: the faults and weaknesses of the old methods have been avoided and a new ideal of motor travel developed that gives a perfect vehicle for comfort, speed, absolute safety, greatest durability, simplicity of operation, wide radius of travel, and reliability under all conditions of roads. You should not buy before examining this wonderful new machine. Price f. o. b. at factory, $750.

The new tonneau attachment, at an extra cost of $100, gives practically two motor vehicles in one, with a seating capacity of two or four, as required—a very graceful effect in either use. Write for illustrated booklet M.

Uncle Sam says it's all right

Uncle Sam, in the person of ten of his government officials, is always in charge of every department of our distillery. During the entire process of distillation, after the whiskey is stored in barrels in our warehouses, during the seven years it remains there, from the very grain we buy to the whiskey you get, Uncle Sam is constantly on the watch. We dare not take a gallon of our own whiskey from our own warehouse unless he says it's all right. And when he does say so, that whiskey goes direct to you, with all its original strength, richness and flavor, carrying a UNITED STATES REGISTERED DISTILLER'S GUARANTEE of PURITY and AGE, and saving the dealers' enormous profits. That's why HAYNER WHISKEY is the best for medicinal purposes. That's why it is preferred for other uses. That's why we have over a quarter of a million satisfied customers. That's why YOU should try it. Your money back if you're not satisfied.

Direct from our distillery to YOU

Saves Dealers' Profits! Prevents Adulteration!

YOU BUY GOLD

when you buy stock in

The Oregon Chief Gold Mining Company

Shipping Ore to Smelter, October 15, 1902.

The cuts shown are the best evidence we can offer in print that there is gold in the Oregon Chief and that the rock assays a high value. It only remains for capital to be raised to work the mine on a large, profitable scale.

Now we will tell you the history of our proposition and let you decide if there is not money in it for YOU.

This group of mines, consisting of seven full claims, situated in the Cable Cove District near Sumpter, Oregon, has been worked for a number of years by men with small capital, and to-day there are 1600 feet of tunnel work completed and ore enough blocked out to start a mill.

The Oregon Chief Gold Mining Company

was formed in 1902 and purchased the property outright. The Company is incorporated under the laws of Oregon and has a capital stock of $1,000,000, one-half of which is now offered to raise funds for further development work and erection of a mill.

A Special Founders allotment of 100,000 shares was offered on January 19th and quickly oversubscribed at 20 cents per share.

NOW a second block of 50,000 shares of Treasury stock (par value $1.00), fully paid and non-assessable, is offered at **twenty-five cents a share.**

In considering this proposition, bear in mind we guarantee every statement in our prospectus. We refer you to Dun or Bradstreet, or any bank in Baker City, Oregon.

Our officers have invested their money as well as their names.

President, J. T. Donnelly, Cashier First National Bank, Baker City, Oregon.

Vice-President, Hon. C. A. Johns, Ex-Mayor and Leading Attorney, Baker City, Oregon.

Treasurer, Wm. Pollman, President Chamber of Commerce, Baker City, Oregon.

Secretary, Fred S. Lack, Experienced Mining Engineer, Baker City, Oregon.

It is easy to investigate a proposition that men of this character are associated with.

We are arranging a trip for a party of Eastern investors to go in the early summer to the property, inspect the mines, the work accomplished and in process, the books of the Company, the men in charge of the business, and to get an exhaustive, complete, first-hand examination of the entire business. **With this party we will send at our expense any person who agrees to purchase for himself or for a pool which he represents 20,000 shares of stock, if the result of the investigation shows the property to be exactly as we state.**

The present allotment of 25-cent stock, we believe, will be quickly subscribed, as was the first block, and, in order that you may have an opportunity to investigate our proposition, fill out this coupon and mail at once. These will be filed in the order of the date postmarked on the envelope. Special terms for payment made on 1000 shares and over.

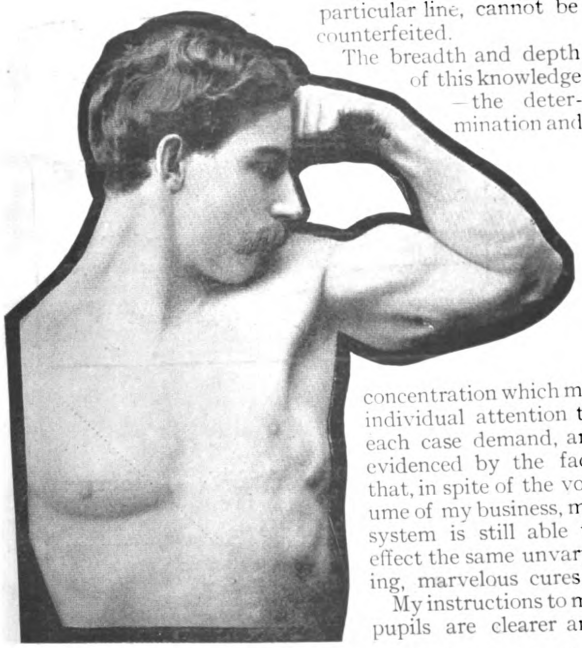
I Propose to More than Double My Fee

My system is built around Alois P. Swoboda. It depends upon me and my intimate knowledge of human ailments and their treatment. There is a limit to my personal effort. I cannot give individual attention to more than a limited number of pupils.

I must either restrict the number of my pupils or neglect some of them.

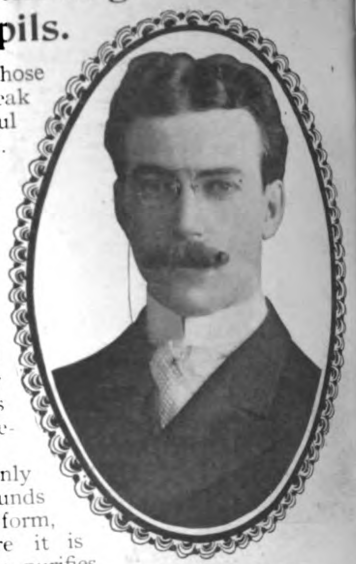
I will not neglect a pupil - I certainly have no intention of reducing my income; hence the increase.



My system has always been worth more than twice the amount I have charged and many times as much as any other system.

Out of a spirit of fairness to those to whom I have already stated my fee, I make this public announcement, so that they may either enroll themselves at once, or have no complaint at the future increase.

I cannot regard great, swelling muscles, or the ability to snap chains and lift horses, or even a knowledge of the Marquis of Queensbury Rules, as qualifying a man to keep in repair the most delicate of all organisms, the human system.



I am glad when a thinker begins to investigate the various systems for attaining physical excellence, for when a thinking man investigates, MY system is invariably selected. There is no other like it.

It is obviously impossible to imitate my instruction, not only because it differs according to the needs of each individual case, but also because my experience in the successful treatment of many thousands of different cases, my years of investigation and study along this particular line, cannot be counterfeited.

The breadth and depth of this knowledge—the determination and concentration which my individual attention to each case demand, are evidenced by the fact that, in spite of the volume of my business, my system is still able to effect the same unvarying, marvelous cures.

My instructions to my pupils are clearer and more effective than those of others, because I speak from years of successful experience. I KNOW. There is no guesswork.

Scientific physiological exercise is NOT a fad. Fads do not cure hopeless cases of constipation, indigestion, dyspepsia, neurasthenia, insomnia, and rheumatism, liver trouble, and nervous diseases of every description, etc.

My system not only does this, but it rounds out the ungraceful form, puts muscle where it is needed, cures obesity, purifies the blood, and, in fact, fits man, woman, or child to nature's perfect mould.

It is right living in condensed form. By it the evil effects of wrong living are neutralized and a splendid condition of robust mental and physical health assured.

This is done without distasteful dieting and without discomfort of any nature. It makes men strong, alert, and graceful. It gives women beauty of figure and grace of carriage, with a clear skin, bright eyes, and rosy cheeks.

My system is taught by mail only and with perfect success, requires no apparatus whatever and but a few minutes' time in your own room just before retiring, and it is the only one which does not overtax the heart.

There is no wasted effort, no wasted time, the instruction is entirely individual and will fit the exact requirements of YOUR CASE. I don't ask you to take my word for this; judge me by my works—they speak louder than words. Below is the unsolicited testimony of a man who knows through personal experience what the Swoboda system will do. This man is one of thousands. He has no earthly interest in me or my system beyond what it has done for him.

Here is a Letter Received from the Cashier of the German National Bank of Marietta, Ohio. It Tells an Interesting Story because it's True

Alois P. Swoboda, Chicago, Ill. Marietta, Ohio, Feb. 21, 1902.

Dear Sir—It gives me pleasure to be able to testify to the benefits I have derived from your system of physiological exercise.

Last winter I suffered all the time with neuralgia in back of head and neck. I began this winter with same trouble. After four weeks under your system, I was entirely free from neuralgia pains and have not had a return of them. I have not felt so well or enjoyed such good spirits in years as I have in the past few months, and I give your system the entire credit. It is great. Yours very truly,

(Signed) S. L. ANGLE.

If you want the names and addresses of others for personal investigation, I will gladly furnish them.

I shall be pleased to send you free valuable information and detailed outline of my system, its principles and effects, upon application. This information, which I furnish free, is very interesting and cannot be secured elsewhere at any price. Write at once.

ALOIS P. SWOBODA, 596 Unity, CHICAGO, ILL.

Go Where Comfort Is

You can't be comfortable at home, and it is useless to try.

To be comfortable you must go where comfort is—California.

In California—even in midwinter—wraps and overcoats are unnecessary. The sun shines bright and clear, and there is just enough "snap" in the air to make it invigorating; just enough warmth to tempt you to spend all day and every day out-of-doors.

In California—even in midwinter—you can hunt, bathe, and play golf. You can catch the biggest fish ever snared by hook and line. You can pick flowers, climb mountains, go a-picnicking, or stroll through the prettiest valleys in America; palms and orange groves all about you and the bluest of blue skies above you.

The way to go to California is via the

Golden State Limited

Newest, handsomest, and most luxuriously equipped of trans-continental trains.

Leaves Chicago daily at 7.45 P.M.; Kansas City at 10.40 A.M. Less than three days to Los Angeles. Through cars to Pasadena, Los Angeles, Santa Barbara, and San Francisco. Lowest altitudes and most southerly course of any line across the continent. Compartment and standard sleeping cars; dining, buffet-library, and observation cars. Electric lights; electric fans; bath; barber. Route: Rock Island and El Paso-Northeastern Systems, Chicago to El Paso; Southern Pacific Company, El Paso to Los Angeles and San Francisco.

Tickets and full information at all railroad ticket offices in the United States and Canada. Beautifully illustrated literature descriptive of California sent on receipt of six cents in stamps.

Monsignor Gaetano Bisleti

Monsignor Diomede Panici

Monsignor Nocella

The Election of New Cardinals

THE belief that new members of the Sacred College of Cardinals will be proclaimed at the consistory to be held in Rome on March 3 rests upon the fact that there are twelve vacant titles, and that a new Pope may have to be chosen at any time. In regular lines of promotion to the college are four classes of prelates: Archbishops or bishops of Italian sees, archbishops of sees outside of Italy, diplomats in nunciatures of the first rank, and members of the Curia not already in the college. There are four Italian archbishops who are not now cardinals. They are Mistrangelo of Florence, who may be named; Velluti-Zati of Pisa, who may be if Florence is not; Conforti of Ravenna, who might be advanced had he not succeeded to his see only last June; and Pulciano of Genoa, who stands little chance, because Genoese Catholics are of the liberal kind not much in favor at Rome. Of archbishops outside of Italy it may safely be said that no Frenchman will be honored, because of the French educational difficulties, and no German, unless it be Pritzen of Strasburg, named to spite the French government because of its hostility to the associations. Archbishop Walsh of Dublin may be named, for the Irish metropolis has generally had a cardinal archbishop. Four other possibilities are the archbishops of Grenada, Madrid, and Valencia, Spain, and of Warsaw, Poland, but the Emperor of Austria would be likely to veto a nomination of the last named, he being the only remaining sovereign possessing the power to veto cardinal nominations and papal elections. If an American cardinal be decided on, it might be Archbishop Ireland of St. Paul, but many think it more likely to be Archbishop Riordan of San Francisco, because of his success at The Hague in the Pious Fund case.

There are four nuncios of the first rank who may be promoted, but unless the pontiff is more liberal with jubilee honors than he is expected to be, only Monsignor Rinaldini at Madrid will be advanced. He has had a brilliant diplomatic career, and having now taken part in accession ceremonies of King Alfonso, precedent would indicate his recall to Rome, where he will make an ideal Secretary of State to some future Pope. The other three are Monsignor Taliani at Vienna, who has not served there long as yet, and for whose recall nobody can think of a reason; Monsignor Aiuti at Lisbon, but there is no likelihood of Portugal being honored at this time; and Monsignor Lorenzelli at Paris, who cannot succeed unless he fails outright and has to be recalled.

It is from the Curia that the college will be recruited at this time. Members of that body of administration who for various reasons stand nearest the honor are Monsignors Azevedo, Bisleti, Cavicchioni, Gasparri, Marzolini, Merry del Val, Nocella, Panici, the elder of the brothers, Pericola, Savelli-Spinola, and Vecia. Monsignor Azevedo is a Spaniard by birth, but he is majordomo of his Holiness—that is, head of the administration of the Vatican palace. He has spent many years there, but most of them as *Maestra di Gamera*—that is, steward, with office on the first landing of the pontifical stairway leading from the bronze door to the Court of St. Damasus, where he has been sought out by Americans craving an audience of the Pope. While in this office he wore the insignia of an order presented to him by Emperor William of Germany upon the occasion of the latter's visit to Rome. Monsignor Bisleti is the present steward, to whom Americans must apply for audiences. He comes of a noble family of Perugia, and was known as a boy by Leo when the latter was archbishop of that see. One or both men may be named, possibly both, and their appointments will be in a sense personal, because of long service and close friendship with the Supreme Pontiff. Monsignor Merry del Val, the present head of the Academy of Noble Ecclesiastics, might have come to Washington in place of Falconio had he not been Spanish. Cardinal Satolli left the head of the academy to come to Washington before he won the red hat, and Merry del Val may be required to do the same. If so, he can wait, for he is young. Monsignor Nocella is a fine Latin scholar, and served many of his threescore and fifteen years as Latin Secretary to Pius IX. and Leo XIII. Monsignor Pericola is just now a man of large influence in the Curia. He is in charge of the finances of the Holy Roman Church, succeeding in that position Monsignor Sanminiatelli, who was raised to the cardinalate; and while Cardinal Oreglia would be the nominal Pope, between Leo and his successor, Pericola, as auditor of the *Camera Apostolica*, would be the real one.

Monsignor Rinaldini

Monsignor De Azevedo

Monsignor Merry del Val

UNDERGROUND MOVING SIDEWALKS IN NEW YORK

The first one planned, of which the accompanying drawings are a model, is to run from Williamsburg to Brooklyn Bridge, a distance of about one mile. The reader is referred to an article on page 1071

An interesting phase of New York's transportation problem, the underground moving sidewalks by which the surface and elevated cars may be relieved, is shown in the accompanying drawings. The first one planned, of which the details are given in the article on page 1071, is to run from Williamsburg to Brooklyn Bridge, a distance of about one mile. The reader is referred to an article on page 1071 The fare will be one cent, and the speed will be from five to nine miles an hour.

UNDERGROUND MOVING SIDEWALKS IN NEW YORK

An interesting phase of New York's transportation problem is the proposal to construct underground moving sidewalks or platforms. The first one planned, of which the details are shown in the above drawing, is to go from Williamsburg to Bowling Green, and is to connect on the way with the surface and elevated cars. The fare will be one cent, and the speed will be from five to nine miles an hour. The reader is referred to an article on page 361

The Sand Desert between Tarim and Cherchen

Sven Hedin's Explorations

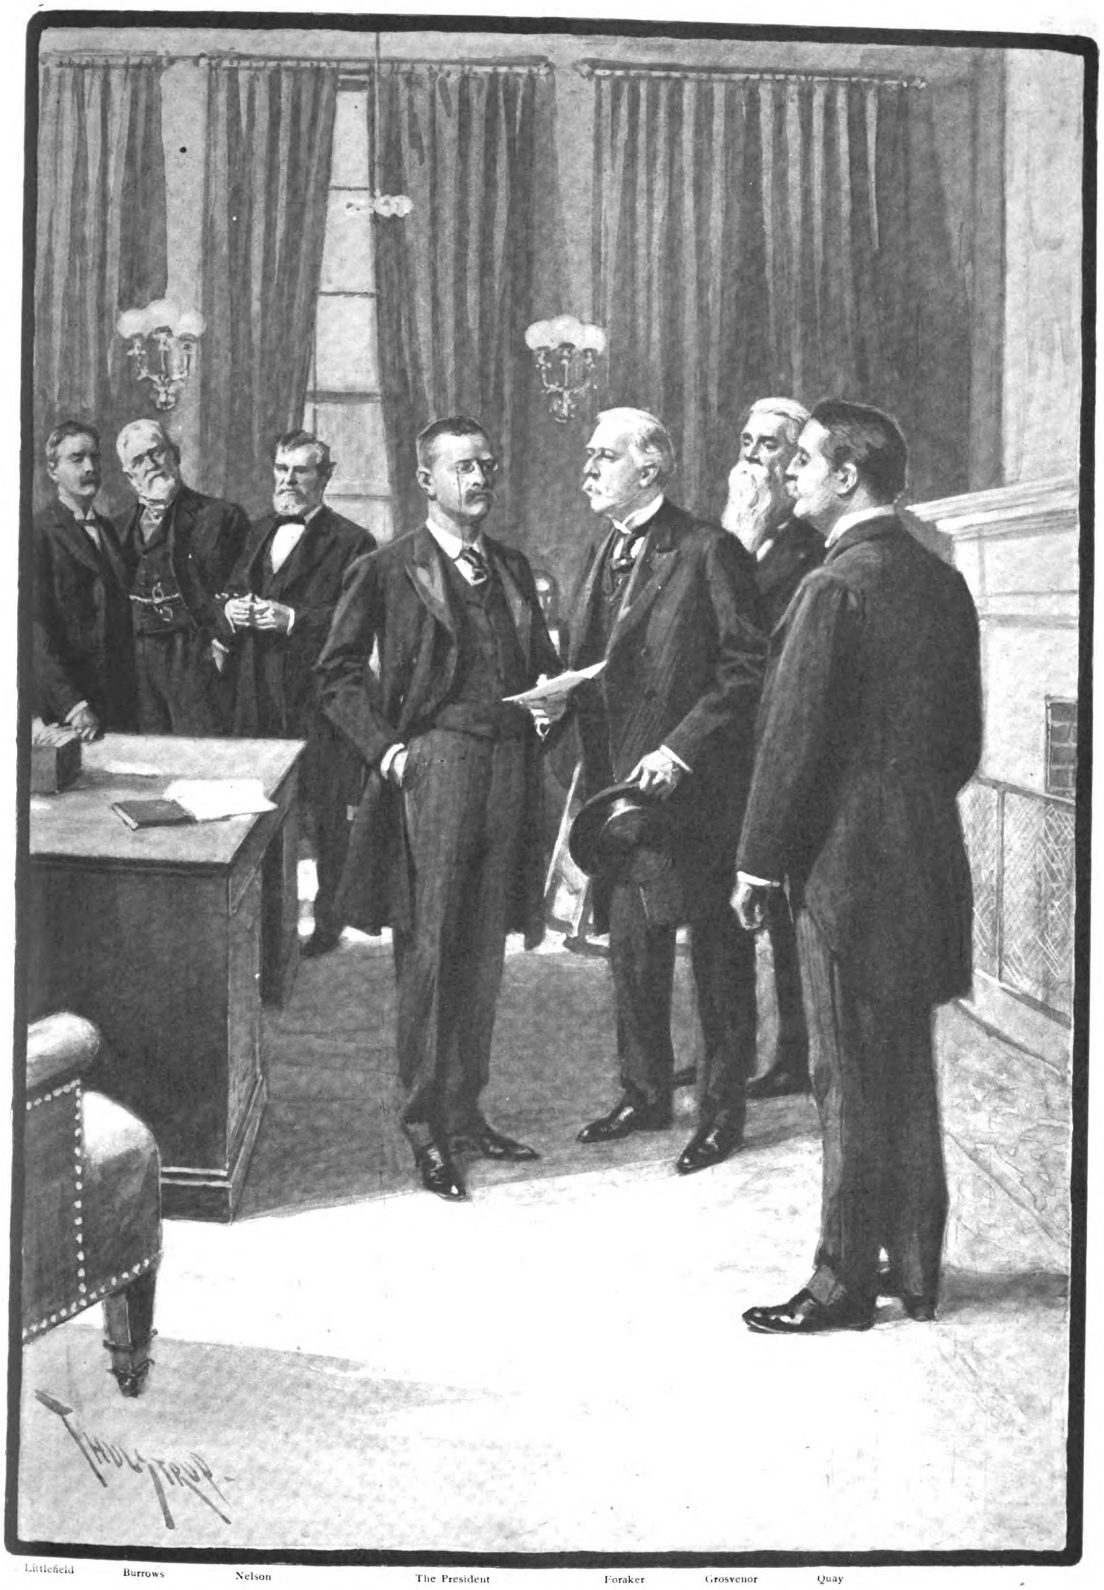
THE Swedish Riksdag, which has just assembled, will soon pass upon the request made to King Oscar last fall by the famous explorer Sven Hedin for a grant of $21,000 to publish the scientific results of his most recent explorations in Central Asia. The national budget contains an extraordinary appropriation for this purpose. It will pass probably without opposition.

Tibetan Nomads

Dr. Hedin is now making public from time to time some of the more popular features of his great work from 1899 to 1902. The scientific side consists of a great amount of cart graphic material, no less than 113 astronomical determinations, thousands of meteorological observations, vast collections of geological, archæological, and fauna specimens, and something like 3000 photographs. Dr. Hedin's work has been done chiefly in Central Asia and in Tibet. He has made three visits to Central Asia. His latest trip had two especial objects—first, to map the Tarim River and to solve the mystery about the so-called moving lake Lob Nor, and, second, to penetrate to Lhasa, the Sacred City of Tibet. He succeeded in the first, but failed in the second, although he got within four days of short marches to the great city.

Dr. Hedin went from the source to the mouth of the Tarim River, the greatest stream in Central Asia, and mapped its course. He found a series of chain lakes along the lower end of the river, a short distance from its banks, and then came to the old bed of Lob Nor. Baron von Richthofen first set forth the theory that Lob Nor had moved itself many miles across country to a new bed. Dr. Hedin found this to be true. It is a four days' journey around the new lake. The new lake and the old are on the same level, with a slight rise of land between.

The explorer found remains of temples, several pieces of Chinese manuscript, and other evidences that the shores of the lake had once been inhabited. Drawings of fishes which are precisely like the fish in Lob Nor to-day were found. In his memorable trips across the desert, characterized by great hardships, Dr. Hedin found the ruins of old cities, and evidences that the region had been watered once by streams and a system of canals.



Canoes on the Lower Tarim

The explorer went south through a large part of Tibet three times on his latest trip. He mapped mountain passes and streams, collected specimens, and when within fourteen days' march of Lhasa left his caravan and, with two companions, came within four days' journey of the Sacred City. At the city of Leh he dismissed his followers and passed over into India.

"Stop!"—An Incident on the Road to Lhasa

Frank D. Millet

Exhibit of American Art

"Forget-me-not."—By Frank D. Millet, N. A.

Alfred Parsons

By Two American Artists

ALFRED PARSONS and Frank D. Millet have filled one of the large rooms of the American Art Galleries with a collection of fifty-eight paintings. Mr. Parsons, of all living water-colorists, loves best to paint the garden and the garden flower. Some of his pictures are, frankly, studies of still life, and others, in which the landscape intrudes, as it were, are hardly more. Yet, Mr. Parsons is capable of painting very effective landscapes. Witness, in the present exhibition, number nine, "A Wild Rose-Bush by the Loddon, Berkshire," in which the rose-bush and its companion willows incline over a sluggish stream in a manner suggestive of Corot. Witness also number thirty, similar in subject and sentiment, though not in composition. Number thirty-six, "Cherry-Trees in the Autumn, Saintbury, Gloucestershire," showing a flock of sheep on a green hillside beneath wide-spreading trees half denuded of their brown leaves, is as charming as are his studies of sea-lavender in bloom on the shores of Devon, among the most satisfying compositions in the collection. Mr. Parsons is never more at home than in his Japanese studies, and the exhibition contains two of these, both worthy of the visitor's attention. Savoy has also claimed his attention, and some brilliant landscapes set against backgrounds of snow-clad mountains have resulted. For the rest, the exhibition is largely made up of English and French gardens, in which familiar flowers bloom in great masses of color and almost invite plucking. An example of one of the best of these is reproduced on this page.

On the opposite walls hang a group of twelve paintings by Frank D. Millet. Once, in "A Day Dream," the artist has reverted to the classic themes he once chose so often, but the majority of subjects belong to our own colonial period, and his "Forget-me-not." "The Proposal," showing an interior with a Puritan youth and maiden, "The Travelled Man," writing amid a litter of odds and ends from the four quarters of the earth, while a young woman in buff and blue looks on, are ambitious in subject and performance, but not more pleasing than the portraits and studies which complete the collection. Like Mr. Parsons, Mr. Millet always gives the impression of infinite pains. Nothing is slighted. It is all good academic work.

COMMENT

OBVIOUS and important are the advantages derived by Venezuela from the protocols signed at Washington, on February 13, by her representative, Mr. Bowen, on the one hand, and by the representatives of the three blockading powers on the other. Under the agreement embodied in those documents, the blockade was to be immediately raised, and the ships of war and merchant vessels belonging to Venezuela which have been captured are to be restored, except, of course, the gunboats that were destroyed. Venezuela also secures ample time in which to meet her pecuniary obligations. The three protocols agreed in referring to the international court of arbitration at The Hague the question whether the three blockading powers should have a preference over those powers which have forborne to enforce payment of their claims by acts of war. That is the only question that will be submitted to the Hague tribunal. All claims for the payment of which the protocols do not expressly provide are to be laid before mixed commissions, which in each of the three cases will consist of a Venezuelan and of a subject of the blockading power concerned, and in the event of a disagreement between the two, an umpire will be appointed by the President of the United States. The three mixed commissions will have jurisdiction of ordinary debts, by which we mean debts due to the holders of government bonds or of Venezuelan railway securities, and all debts growing out of contracts, and also of all claims based on alleged wrongs or grievances. As regards the last class of claims, the commissions will have to determine, first, whether the alleged injury took place, and, secondly, what amount of compensation is due.

It is, of course, understood that the sums which under the protocols are payable in cash, or in bills maturing at early dates, are not ordinary debts, but liquidated damages, for which the Caracas government acknowledges itself to be liable. Thus the two sums of $27,500 each to be paid to Great Britain and Italy respectively, the one when the protocol was signed, and the other sixty days thereafter, are offered and accepted as reparation for injuries suffered by British and Italian subjects. Venezuela also recognizes the validity of other Italian claims of the same class, amounting in the aggregate to more than half a million dollars, and agrees to pay these without submitting them to a mixed commission. Germany's claims of the same class, that is to say, claims arising from grievances suffered by German subjects, and amounting altogether to $340,000, are to be paid in five monthly instalments beginning March 15. As for the thirty per cent. of the customs revenue of La Guayra and Puerto Cabello, which is to be set aside for the payment of Venezuela's foreign creditors, it is agreed that the collection of this percentage shall begin on March 1, and that the proceeds thereof shall on April 1 and on the first of every following month be paid over to the representative of the British government at Caracas, who shall hold the said funds in trust to be distributed in pursuance of the decision rendered by the Hague tribunal concerning preferred creditors.

The history of the Venezuela affair led the country, especially official Washington, to suspect that Germany did not, in truth, accept the Monroe Doctrine, notwithstanding the Emperor's professions; and that it was the latter's intention (first) to make the Monroe Doctrine as unpopular as possible in Europe by forcing, or inducing, this country to take what Europe would consider an extreme position in defence of Latin-American debtor countries which are not able, or willing, to pay the claims against them; and (second) by the same process to put this country in the position of a guarantor of the debts due to Europe. By insisting on preferential treatment, Germany expected to force this government to support Mr. Bowen's refusals. The effort failed, but the intention was good. Germany would have liked to be able to say to Europe, "The position of the United States is that the Latin-American debtor shall not be forced to pay if he is willing to arbitrate, and if he is willing to arbitrate we must accept his own terms under pain of displeasing the United States." Then the German hope was that a new "concert of Europe" would say to the United States: "If you take that position you must also take its responsibilities, and you must stand as endorser of the debts of the wards whom you protect against their creditors." This is the meaning of German conduct as seen by those who are close to the negotiations between Mr. Bowen and the representatives of the allies.

The evidence of Germany's sub-intentions is abundant. If there had been no question except that of debt-collecting, England's alliance would not have been of such value as it was. If Germany had been perfectly fair, the pressure against Venezuela would not have been brought until the revolution had come to an end, and Castro's or some other government been firmly established. Moreover, the blockade would not have been set up so soon; the commander of the *Panther* would not have been so impolite at Maracaibo; and, in the negotiations which have taken place at Washington, the demand would not have been so exacting and an agreement so difficult to reach. Mr. Hay met the pressure upon this government with great skill. It is true that Germany has announced an offer, addressed to Venezuela long ago, to refer the controversy to The Hague. Nevertheless, it is thoroughly well understood in Washington that, ever since the present affair began, Germany has tried its utmost to avoid The Hague. This is explicable by the Emperor's well-understood hostility to the tribunal. He would dearly like to see it come to an inglorious end. But Mr. Hay and the President, after some hesitancy on the part of the latter, pushed him to The Hague on the general controversy. It is true that he escaped by suggestion the commission to which he has given so much trouble; but his differences with Mr. Bowen, aided by Mr. Bowen's differences with the British ambassador, once more directed the steps of the allies to The Hague. Although at once Germany began to make efforts to

escape submission to the tribunal, it is to the steady refusal of the President, under the prudent advice of Mr. Hay, to play arbitrator himself, that is due the chance of employing the tribunal at all.

The movement of Germany to escape the agreement to refer to The Hague the question of preferment is the most illuminating of all the Emperor's actions. Mr. Bowen having refused to recognize the right of the allies to a preference over other creditor nations, it was agreed that they should submit to The Hague, after Mr. Roosevelt's second refusal to act as arbitrator, the question of their right to insist upon the preference. The submission of this question to such a tribunal will necessarily be a great step in the development of international law. Do acts of war give to a nation resorting to force a right to demand a preference over other creditor nations, in the event of the debtor nation's surrender to force, and its promise to arrange for the payment of all its debts? Does the common-law rule, that the first to hale his debtor into court shall receive the reward of his diligence, apply in international proceedings? Is war to be thus encouraged? The decision of these interesting questions will form a precedent and will perhaps become a new rule of international law, one of those beneficent rules which, since the days of Grotius, and most frequently on the initiative of the United States, have so well marked the progress of civilization.

It is an interesting fact that Mr. Andrew Carnegie volunteered to advance without security $340,000, the whole sum needed to satisfy the German preliminary claim on Venezuela. As it happened, Mr. Bowen did not need to avail himself of the loan proposed, but the incident suggests a new and important field for the employment of large private wealth. It is evident that Mr. Carnegie might have averted the blockade if the three blockading powers would have specified the sums which they would be willing to accept by way of reparation for alleged grievances, and if President Castro would have consented to accept Mr. Carnegie's kind offices. Philanthropy has often been exhibited in palliating the sufferings caused by war, but now it is evident that a philanthropist, if he be rich enough, may sometimes prevent a war from breaking out. If Mr. Carnegie's offer had been made and accepted before the blockade began, a good many lives might have been saved. It is well known that Mr. Carnegie offered, if our government would give independence to the Filipinos, to pay into the Treasury the $20,000,000 which, under the Treaty of Paris, was given by the United States to Spain, and which is commonly regarded as the price of the Philippine archipelago. Used as on the two occasions named Mr. Carnegie has been disposed to use it, a colossal private fortune may become a political factor of great magnitude. Such a man, for instance, might suddenly and materially add to the strength of the American navy by presenting to the United States the four war-ships that are being built in Europe for Chile and Argentina, and which Germany has declined to buy, mainly on the ground of a lack of means. Such a man, had he been living in 1776, might, without impoverishing himself, have given to the thirteen British colonies more pecuniary aid than they received from the governments of France and Spain put together. No doubt the Rothschilds have long been recognized as political factors. They are not philanthropists, however; they lend money. Mr. Carnegie gives it.

Mr. Poultney Bigelow has quite convinced himself, and has tried to convince the members of the League for Political Education, that it is a very good thing for this country that the Venezuelan matter has ended so well, if it can be said to have ended; and that we are particularly fortunate that we found Germany in an acquiescent mood, and not inclined to fight about trifles. For, had Germany been at all inclined to fight, this good gentleman tells us, the "Americans would have got licked out of their boots before they got their wind." And he goes on to tell us in what way the Kaiser would be our undoing. The war would not be carried over the ocean to Germany; that much is certain; nor would it mean an invasion of our own coasts, the event which was so seriously apprehended at the beginning of the war with Spain, that the seaside hotels were deserted for the mountains. No; the war would be carried into the South-American continent, and would be fought out in Venezuela. Mr. Poultney Bigelow assures us that it would be quite an easy matter for Germany to land a hundred thousand well-drilled soldiers in Venezuela, and that after that it would be all up with the Monroe Doctrine and our influence in South America. But this good critic seems to know very little of the real problems of modern war. England, with her centuries of seamanship, did not find it so very easy to land a hundred thousand men in South Africa; and, what is more important, she did not find it quite an easy matter to keep them there. And this with an enemy diminutive in size, and with not even a rowboat for a fleet. While we are not so well supplied with first-class battle-ships as we might be, and much less well supplied than Germany, we could, nevertheless, put up some kind of a bluff at keeping those hundred thousand German troops from landing in Venezuela, and we could make their line of communication somewhat precarious if they elected to stay. And it is, of course, foolish to think that Germany could use her entire fleet to convoy her troops, while less than her entire fleet would not assure their safety. In fact, it would be in the last degree difficult to do as Mr. Bigelow suggests, and, when done, it would be useless. For unless our fleet were annihilated outright, Germany's commerce would be carried on at some risk, and the food-supply of the home country would be liable to curtailment; while we should certainly not let the matter rest, if we had to turn our entire national energies into that one channel and devote them to nothing else for a term of years. Altogether, it was a foolish lecture, foolishly conceived.

The passage of the act creating a Department of Commerce and Labor directs attention to the gradual evolution of the cabinet. The word "cabinet" does not occur in the Constitution, and only in one place — Article II., Section 2, Clause 1 and Clause 2 — are there references to "heads of departments" and "the principal officer in each of the Executive Departments." There is also a provision, Article I., Section 9, Clause 6, that a regular statement and account of the receipts and expenditures of all public money shall be published from time to time, but the Constitution does not state that this statement shall be made by a "Secretary of the Treasury." When Washington's first administration was organized in 1789, the cabinet council consisted of four officers, to wit: a Secretary of State, a Secretary of the Treasury, a Secretary of War, and an Attorney-General. There was a Postmaster-General, but he was not at first regarded as a member of the cabinet. Up to 1798 the management of the infant navy of the United States was intrusted to an official of the War Department, but in the year named the office of Secretary of the Navy was created. About fifty years passed before the next enlargement of the cabinet; the portfolio of the Secretary of the Interior was created in 1849, and functions previously discharged by the Departments of State, Treasury, and War were devolved upon the occupant of the new post. Forty years more elapsed before the Secretaryship of Agriculture was founded. The ninth and last seat in the cabinet will be taken by Mr. Cortelyou, who has risen from the post of stenographer in one of the Departments to be Secretary to the President, and who, it has been for some time understood, will become the first Secretary of Commerce. Even with nine members the American cabinet is smaller than its British prototype, or than President Loubet's.

We have, as yet, no Minister of the Colonies, though, unquestionably, the importance of the Philippines and of Porto Rico and Hawaii would justify the creation of such an office. We have no Minister of Railways and Telegraphs, either, because our Federal government does not engage in the railway or telegraph business. If it should ever acquire the telegraph lines, these would undoubtedly be managed by the Post-office Department, as they are in Great Britain. We scarcely need recall the fact that the order in which the cabinet offices were created has become a matter of great moment since the passage of the Federal statute regulating the succession to the Chief Magistracy in the event of the death or disability of both the President and Vice-President. In such a case the Presidency would devolve upon the Secretary of State, provided he were otherwise eligible; if he were dead, disabled, or constitutionally disqualified, on the Secretary of the Treasury; then on the Secretary of War, and so on, according to the date at which the office was authorized by Congress. Although this law has been on the statute-book for some years,

very few persons seem to be aware that if Mr. Roosevelt were to die before March 4, 1905, Mr. John Hay, who never held an elective office in his life, would become President of the United States.

To the bewilderment of those who had taken part in the opposition to the Alaska Boundary treaty which had been evinced in the Northwestern States, that agreement was ratified by the Senate, although subsequently twenty-five Senators co-operated in a vain attempt to get the ratification reconsidered. The original vote for confirmation seems to have taken the most vehement opponents of the treaty by surprise. Other Senators who had been looked upon as neutral were influenced, apparently, by a desire to avert a long debate which might have occupied the time of the Senate and prevented the ratification of the Panama Canal treaty and of the Cuban Reciprocity treaty during this session of Congress. At the hour when we write, it still seems almost certain that both of the conventions last named will be sanctioned. Mr. Morgan of Alabama has carried his opposition to the Canal treaty from the room of the Committee on Foreign Relations to the Senate-Chamber, but, although some of the amendments proposed by him are intrinsically commendable, the adoption of them would compel our State Department to resume negotiations with the Bogota government, and might defer the conclusion of an agreement for a long time to come. Nobody pretends that our negotiators secured from Colombia all that we should have liked to gain; but they got all they could. It is true that, while under the treaty the hundred-year lease is renewable at our option, nothing is said about the rental to be paid under the second lease. We will cross that bridge when we come to it. Before the United States have occupied the Isthmus for a hundred years, it is extremely probable that the State of Panama, which will profit immensely through the construction and operation of the waterway, will secede from the Colombian confederation and request admission to our Union. Such an outcome of the treaty seems to-day quite as probable as the eventual occupation of Egypt seemed to far-sighted persons when Lord Beaconsfield bought the Khedive's shares in the Suez Canal.

The selection of the members of the Alaska Boundary Commission is naturally awaited with much interest. We may take for granted that one at least, and probably two, of the three members to be appointed by King Edward VII. will be Canadians. So far as those members are concerned, they are not likely to be convinced of the soundness of our view of the right construction of the treaty of 1825 between Russia and Great Britain. It is equally probable that our construction of the treaty will be upheld by the three American members of the commission, who, it is predicted, will be Mr. Elihu Root, the present Secretary of War, Senator Henry Cabot Lodge of Massachusetts, and Mr. George Turner, who is now, and will be till the 4th of March next, one of the United States Senators from the State of Washington. The views of all three regarding the boundary are known, and so are the views of almost all Canadian jurists. There would, therefore, be scarcely any hope of an agreement but for the fact that a British jurist will be selected for one of the places in the gift of King Edward VII. To him the boundary question will be new, and he may be expected to approach it without prepossession. On the ability of the counsel for the United States to convince the British member of the commission seems to depend the chance of reaching any definite agreement. The commission is to sit in London, and for this with other reasons the appointment of commissioner is looked upon as one of the prizes at the disposal of President Roosevelt.

As an angel of peace, the Man of Birmingham must be written down a failure. The halo was lost somewhere between Mafeking and Kimberley, and the olive branch, somewhat bedraggled, is now withdrawn from business. We have already recorded the open declaration of war made by Christian De Wet, which, in view of that redoubtable hero's past performances, must have sent a cold shudder down the Man of Birmingham's back. It now appears that Louis Botha and Delarey are also on the war-path, while the Cape Dutch have with difficulty been restrained from mobbing Joseph and his brethren at Graaf Reinet, which has so many unpleasant memories already for the British lion. The trouble seems to have arisen in this way: Following very much the same train of reasoning which commended itself to Benedict Arnold during certain historic days up the Hudson, some of the Boer leaders went over to the British at various periods towards the end of the South-African war. It will be remembered that for these men De Wet reserves his deepest damnations, just as certain historic worthies did for Benedict Arnold, whose treason was far less damaging to their cause than that of the renegade Boers. These men have now been rewarded by Secretary Chamberlain with seats on the Legislative Council of the Transvaal and Orange River governments. And, with infinite tact, Secretary Chamberlain seems to have asked Delarey and Botha and De Wet to accept seats beside the men whom they regard as damnable traitors. The result was a foregone conclusion. The three heroes of the war refused point-blank to have anything to do with the Legislative Council, and are now the open and avowed enemies of the whole present system of things in South Africa. The English at the Cape have once more been clamoring to have the Constitution suspended, and to have government by martial law practically revived, though under civil forms; but a perpetual veto has been put on this course, chiefly by the Premiers of Canada and Australia, who are fearful of creating a precedent that might be used against themselves. The result of the whole thing will be to consolidate all the Cape Dutch, Transvaalers, and Free-Staters into a single strong anti-British party; and, judging from their prowess in war, we may anticipate at least a like effectiveness in the constitutional fight which will now rage, until the Afrikander element definitely gains the upper hand, as its numbers and stamina decree that it presently must. In a word, the real struggle for South Africa, far from being ended, is only beginning; and it can have but one result.

An attempt to minimize the threats of danger in China has been made by Mr. R. W. Rockhill, who went as special envoy to Peking during the negotiations which followed the Boxer uprising. Mr. Rockhill seems rather to miss the point, and apparently sees no Chinese question at all, beyond the mere matter of readjustment of tariff, and the abolition of certain internal duties which hinder free communication between the different parts of the interior. Mr. Rockhill speaks at some length of the negotiations, now pending at Shanghai, between the British and Chinese, as to the reduction of internal duties and the extension of certain trade privileges, as though the settlement of these details would bring love, joy, peace, and all the fruits of the spirit to the Celestial Kingdom. This seems to us a kind of color-blindness. The Boxer movement of 1900 had nothing in the world to do with internal-revenue duties. It had root and growth in a deep and fierce hatred of foreigners, partly due, perhaps, to over-zealous missionary enterprise, partly due to the position taken in civil disputes by native Chinese converts, but due in far greater measure to the habitual attitude of the powers, who assume that in every difference China must be in the wrong, and should be coerced by armed force. This fierce anti-foreign spirit has had little to still it in the last three years, with their invasions and slaughters of non-combatant Chinese and the open looting of Chinese property. On the contrary, it is quite certain that the flames of hatred for the foreign devil must have been fanned into a brighter blaze. All this Mr. Rockhill seems to ignore. He also ignores the persistent reports that China's one effective fighting general is massing a great band of men on the Mongolian frontier, openly co-operating with Prince Tuan, the fiercest of the Boxer leaders, and secretly co-operating also with Yung Lu, and perhaps with the Dowager Empress herself. In fact, the more we examine the views of Mr. Rockhill, the less genuine consolation or reassurance can we find in them.

Count Cassini has had incomparably better opportunities to see below the surface of things in China, and, with all due deference to Mr. Rockhill, has shown himself to be far more astute and subtle in dealing with political tangles. Count Cassini was, as he himself reminds us, for five years Russian minister at the court of Peking, and, what he himself is too modest to tell us, during these five years he practically built up in China that predominance which Russia at present possesses in the Celestial Kingdom. The secret treaty between Russia and China, with its string of conceded areas handed

over to Russia from one end of Manchuria to the other, is one evidence that Count Cassini knows his China exceedingly well; and, in truth, his presence at Washington is the reward of his admirable work at Peking. What does this first-class expert on Chinese matters say of the present menace of war in the Far East? He practically confirms the warning we recorded last week, endorsing what was said as to the fierce hatred of the foreigner, and the imminence of danger. Count Cassini asserts that a great additional element of menace lies in the fact that practically all the European nations, as well as America, are at this very moment importing arms into China, and that these arms are certain to be used against the very powers which imported them, should an uprising take place. The Count differs from the view we recorded in one most important particular; he believes that the Empress Dowager wishes well to the foreigners, and was instrumental in restraining Prince Tuan when the legations were besieged three years ago. This would seem to confirm the first form taken by the reports of danger in China, the statement that Tung Fu-Siang and Prince Tuan were causing an uprising, aimed against the court and the foreigners together, with the intention of placing Prince Tuan's son on the throne. But apart from this difference, the truth as to which can only be decided by the event, Count Cassini fully supports the gloomy view of the Chinese outlook which we recorded last week; and no man living is entitled to speak with greater authority on a question like this.

It is not without significance that Germany is beginning to worry about the matter of trusts and syndicates. Such organizations have played a conspicuous part in her inner development and in her trade relations for several years past. A special commission of the Reichstag is now at work investigating and then reporting on the existence, formation, and influence of trusts, domestic and foreign, upon the nation, with a view to possible legislation for their restriction or regulation. Another special commission, but made up of government officials, is busy on the same task. Both bodies are expected to visit this country in the course of their labors. A painstaking and unbiased work on trusts in Germany and elsewhere, written by Professor F. C. Huber, of Stuttgart, a noted economist, has just been published. It makes an amazing exhibit of the enormous recent growth of trusts in the empire. What is perhaps even more interesting are the speeches being made by Dr. Möller, the Minister of Commerce in Prussia, before leading chambers of commerce. Before a gathering of the prominent merchants and shippers of Bremen he declared, "Trusts and syndicates are a necessity." He elaborated this idea, and pointed to this country as a striking proof of its soundness, adding, "Germany will have to pay close attention to all these things, especially as they unfold themselves in America." Before the chamber of commerce in Hanover, Dr. Möller spoke even more plainly, saying: "The United States is hereafter Germany's most dangerous competitor in the world's markets. We must learn from them their business principles, above all the successful concentration of capital and manufacture, and must adapt it to our conditions." To further these aims, the imperial government is about to send two additional commercial experts here, one to Chicago and another to San Francisco. Professor Huber's book shows that already whole and important branches of German industry, such as beet sugar and alcohol, are completely under the control of trusts.

At the hour when we write the attempts to bring about a compromise on the Statehood bill seem to have definitely failed. The Republican supporters of Senator Quay's measure would have been willing to admit Oklahoma with or without Indian Territory as one State, and New Mexico and Arizona together as a second State. This proposal, however, was rejected by Senator Quay's Democratic allies, who rely upon Arizona to furnish two Democratic Senators. If the suggested fusion were adopted, the Democrats might get no Senator. Nobody denies that Senator Quay has strength enough to carry his bill, which, it must be remembered, has already passed the House, provided he can bring it to a vote. He has already attached it to two Appropriation bills, and on Saturday, February 14, he introduced a resolution that a day and hour prior to the 2d of March should be fixed for a final vote upon the bill and all amendments that are offered or may be pending thereto. It is generally believed that Senator Quay can force the Senate, either to vote on his bill or else postpone the adoption of the Panama Canal and Cuban reciprocity treaties, thus rendering a special session of the Senate after March 4 unavoidable. That from this point of view the situation is critical has been acknowledged by a member of the Senate steering committee, who was heard to express the conviction that something must soon give way. It remains to be seen whether the Quay bill, if passed in its original form, will not be vetoed by Mr. Roosevelt. He is understood to be impressed by the weight of the arguments against the admission of Arizona and New Mexico as separate States.

It will be a disgrace to the Fifty-seventh Congress should it adjourn *sine die* without passing some bill improving the currency of the Philippines, and without amending in one way or another the present Philippine tariff. There is no reason good in equity why the Philippines should not be treated as generously as Hawaii or Porto Rico. There is absolute free trade between the two last-named islands and the United States, and the result has been in each case an astonishing growth of prosperity. We are practically asking Governor-General Taft and his associates to make bricks without straw when we insist upon subjecting the Filipinos to oppressive tariff restrictions. The Philippine tariff bill as it was passed by the House reduced customs duties on all products of the Philippines to twenty-five per cent. of the Dingley rates. In the Senate Mr. Lodge has proposed to make the tariff on sugar and tobacco half of the Dingley rates, and to admit all other articles duty free. The sole excuse for the amendment is the assumption, founded, no doubt, on inquiry, that the bill cannot pass the Senate in the form which the House gave it. If that be true, the amendment should be adopted, for, even as amended, the bill will present a marked improvement on the existing state of things.
